MEMBERS Horizon Variable Separate Account
Notes to Financial Statements (Unaudited)

(1) Organization

In 2015, MEMBERS Life Insurance Company (the "Company") established the MEMBERS Horizon Variable Separate Account (the "Account"). The Account is a unit investment trust organized under the laws of the State of Iowa and registered with the Securities Exchange Commission ("SEC") under the Investment Company Act of 1940, as amended. The Account was established as a separate account of MEMBERS Life Insurance Company (the "Company") to receive and invest net premiums paid by the contract owners to the Company under two series: Series B and Series C.

The Account commenced operations effective July 11, 2016.

The Account is divided into a number of subaccounts and the contract owner makes elections from the subaccounts listed below in which to participate:

AIM Variable Insurance Funds
(Invesco Variable Insurance Funds)
Invesco V.I. Global Real Estate Fund
Invesco V.I. Small Cap Equity Fund

The Account may, in the future, include additional subaccounts. Each subaccount invests exclusively in shares of an underlying open-end management investment company that is registered with the SEC. Such registration does not involve supervision of the management or investment practices or policies of the companies or their funds by the SEC.

(1) Organization (continued)

The accompanying financial statements include only the contract owner assets, deposits, investment activity, and the contract transactions applicable to the variable portions of the contracts and exclude assets and activity for deposits for fixed dollar benefits, which are included in the general account of the Company. The net investment income and the realized and unrealized gains and losses from the assets for each subaccount are credited to or charged against that subaccount without regard to income, gains or losses from any other subaccount.

(2) Significant Accounting Policies

Basis of Presentation

The Account is an investment company and follows the accounting and reporting guidance in the Financial Accounting Standards Board ("FASB") Accounting Standards Codification Topic 946, *Financial Services-Investment Companies*.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America ("GAAP") requires management to make certain estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of income and expenses during the reporting period. Actual results could differ from those estimates.

Investment Valuation

Investments are made in shares of a fund and are recorded at fair value, determined by the net asset value per share of the respective fund. Investment transactions in each fund are recorded on the trade date. Realized gains and losses on redemptions of the shares of the fund are determined using the average cost basis. Income from dividends and gains from realized gain distributions from each fund are recorded on the ex-dividend date and are reinvested in that fund. The difference between cost and fair value of investments owned on the day of measurement is recorded as unrealized appreciation or depreciation of investments.

Federal Income Taxes

The operations of the Account are included in the consolidated federal income tax return of CUNA Mutual Holding Company ("CMHC"), the Account's ultimate parent, and its subsidiaries. The Company is taxed as a life insurance company under the provisions of the Internal Revenue Code ("IRC"). The Account's activities are included in the Company's taxable income. Under current provisions of the IRC, the Company does not expect to incur federal income taxes on recorded earnings or the realized capital gains attributed to the Account to the extent these earnings are credited to the contracts. Accordingly, no charge for income tax is currently recorded. If such taxes are incurred by the Company in the future, a charge to the Account may be assessed.

(3) Fees and Charges

Policy Charges

Surrender Charge: Series B and Series C version of the contract will be made available. The Series C will have no surrender charges. The Series B will have a five year surrender charge period. All reference to surrender charges apply to Series B version only. A surrender charge is assessed against a contract owner's account upon surrender or partial withdrawal of purchase payments in excess of the free annual withdrawal amount

For purchase payments withdrawn or surrendered within the first and second year of the contract, the charge is 9% of the amount of the payment withdrawn or surrendered for Series B. The surrender charge decreases by 1% for each of the following three years that has elapsed since the purchase payment was recorded. No surrender charge is assessed upon the withdrawal or surrender of the contract value in excess of aggregate purchase payments or on purchase payments made more than six years prior to the withdrawal or surrender.

(3) Fees and Charges (continued)

Subject to certain restrictions in each contract year, an amount equal to 10% of aggregate purchase payments (as of the time of withdrawal or surrender) may be surrendered without a surrender charge. The surrender charge also may be waived in certain circumstances as provided in the contracts. These charges are deducted by redeeming an appropriate number of units for each contract and are included in contract charges and fees on the accompanying Statements of Changes in Net Assets of the applicable subaccount.

Transfer Fee: No charge is generally made for transfers between subaccounts. However, the Company reserves the right to charge $25 for the 13th and each subsequent transfer during a contract year. These charges are deducted by redeeming an appropriate number of units for each contract and are included in contract charges and fees on the accompanying Statements of Changes in Net Assets of the applicable subaccount.

Premium Taxes: If state or other premium taxes are applicable to a contract, they will be deducted either: (a) from purchase payments as they are received, (b) from contract value upon surrender or partial withdrawal, (c) upon application of adjusted contract value to an annuity payment option, or (d) upon payment of a death benefit. The Company, however, reserves the right to deduct premium taxes at the time it pays such taxes. These charges are deducted by redeeming an appropriate number of units for each contract and are included in contract charges and fees on the accompanying Statements of Changes in Net Assets of the applicable subaccount.

Contract Charges

Mortality and Expense Risk Charge: The Company deducts a daily administrative fee from the assets of the Account to compensate it for certain expenses it incurs in administration of the contracts. The charge is deducted from the assets of the Account at an annual rate of 1.50% for Series B or 1.75% Series C. These charges are deducted by redeeming an appropriate number of units for each contract and are included in contract charges and fees on the accompanying Statements of Changes in Net Assets of the applicable subaccount.

(4) Fair Value

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value of assets and liabilities into three broad levels. The Account has categorized its financial instruments, based on the degree of subjectivity inherent in the valuation technique, as follows:

- Level 1: Inputs are directly observable and represent quoted prices for identical assets or liabilities in active markets the Account has the ability to access at the measurement date.
- Level 2: All significant inputs are observable, either directly or indirectly, other than quoted prices included in Level 1, for the asset or liability. This includes: (i) quoted prices for similar assets or liabilities in active markets, (ii) quoted prices for identical or similar assets or liabilities in markets that are not active and (iii) inputs other than quoted prices that are observable for the asset or liability, and (iv) inputs that are derived principally from or corroborated by observable market data by correlation or other means.
- Level 3: One or more significant inputs are unobservable and reflect the Account's estimates of the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk.

The hierarchy requires the use of market observable information when available for assessing fair value.

(4) Fair Value (continued)

The following table summarizes the Account's assets that are measured at fair value as of June 30, 2016. All of the Account's assets consist of Level 2 mutual funds that have daily quoted net asset values at which the Account could transact.

(1) The Total Return represents the total return for the periods indicated, including changes in the value of the underlying fund and expenses assessed through the reduction of unit values. These ratios do not include any expenses assessed through the redemption of units. The total return is calculated for each period shown and, accordingly, is not annualized for periods less than one year.

(2) The Investment Income Ratio represents dividends received by the subaccount, excluding capital gains distributions, divided by the average net assets for the period indicated. The recognition of investment income is determined by the timing of the declaration of dividends by the underlying fund in which the subaccount invests.

(3) The Expense Ratio represents the annualized contract expenses of the respective contract of the Account, consisting of mortality and expense risk charges, as defined in the Account Charges note. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying fund have been excluded.

(a) The Account commenced operations effective July 11, 2016.

AMERICAN FUNDS®

From Capital Group

American Funds Insurance Series®

Semi-annual report
for the six months ended
June 30, 2016

American Funds Insurance Series, from Capital Group, is the underlying investment vehicle for many variable annuities and insurance products. For 85 years, Capital has invested with a long-term focus based on thorough research and attention to risk. All the variable funds in American Funds Insurance Series may not be available in your product.

Investing for short periods makes losses more likely. Investments are not FDIC-insured, nor are they deposits of or guaranteed by a bank or any other entity, so they may lose value. For current information and month-end results, visit americanfunds.com/afis. For information about your insurance contract and month-end results, go to the website of the company that issued your contract.

Investing outside the United States may be subject to risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Investing in small-capitalization stocks can involve greater risk than is customarily associated with investing in stocks of larger, more established companies. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. High-yield bonds are subject to greater fluctuations in value and risk of loss of income and principal than investment-grade bonds. Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch as an indication of an issuer's creditworthiness. Futures contracts may not provide an effective hedge of the underlying securities because changes in the prices of futures contracts may not track those of the securities they are intended to hedge. In addition, the managed risk strategy may not effectively protect the funds from market declines and will limit the funds participation in market gains. The use of the managed risk strategy could cause the funds' returns to lag those of the applicable underlying funds in certain rising market conditions. Refer to the funds' prospectuses and the Risk Factors section of this report for more information on these and other risks associated with investing in the funds.

Financial statements

Fellow investors:

Market returns were mixed for the six months ended June 30, 2016. U.S. and emerging markets stocks closed higher while many European markets fell. Slowing global growth, aggressive action on the part of central banks, the possibility of another interest rate hike in the U.S. and the decision by British voters to leave the European Union created uncertainty for investors.

Global equity market returns were tepid in aggregate, as the MSCI World Index rose 0.66%* for the period, but there were pockets of strength and weakness. Emerging markets registered some of the best results as the MSCI EM (Emerging Markets) Index climbed 6.41%. Brazil (+46.34%), Russia (+20.43%), Indonesia (+15.79%) and South Africa (+15.64%) were among the biggest gainers. A rebound in commodity prices, expectations for political reform and economic stimulus measures fueled returns.

The MSCI USA Index advanced 3.58%, helped in part by stronger job and housing numbers.

Sluggish growth, deflationary pressures and the potential impact of a "Brexit" dampened returns in a number of European markets. Overall, the MSCI Europe Index declined 5.13%, with Italy (–20.89%), Ireland (–13.61%) and Spain (–11.45%) suffering double-digit losses. Elsewhere among developed markets, Japan slipped 5.58%, hindered by a strengthening yen and the effects of negative interest rates on its banking system.

In bond markets, U.S. investment-grade and high-yield corporates advanced 7.68% and 9.06%, respectively, as investors sought higher yields than those offered by U.S. Treasuries. Barclays Global Aggregate Index, a measure of global investment-grade bonds (rated BBB/Baa and above), rose 8.96%, while the Barclays U.S. Aggregate Index (which measures U.S. investment-grade bonds) improved 5.31%. The 10-year Treasury yield, which stood at 2.27% on December 31, 2015, dropped to 1.49% as weak employment data and the Brexit referendum lowered expectations of a rate hike by the Federal Reserve. U.S. dollar–denominated emerging markets bonds, as measured by the J.P. Morgan EMBI (Emerging Markets Bond Index) Global, rose 10.90% as their higher yields were popular in a low-rate environment.

The U.S. dollar depreciated against most currencies. In developed markets, gains were led by the Japanese yen (+17.26%), Canadian dollar (+6.96%) and Singapore dollar (+5.41%). The Swiss franc and euro also improved, up 2.75% and 2.27%, respectively. The British pound, however, declined 9.30% against the greenback.

* Country returns are based on MSCI indexes, which reflect reinvestment of distributions and dividends net of withholding taxes, except for the MSCI USA Index, which reflects dividends gross of withholding taxes. All market indexes referenced in this report are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index.

Among developing markets, the Brazilian real (+23.49%) and Russian ruble (+14.34%) finished strong, while the Mexican peso (–6.39%) and Chinese renminbi (–2.26%) fell. Currency returns are calculated by MSCI.

AFIS funds with exposure to U.S. equities and REITS fared well during the period. With the exception of Ultra-Short Bond Fund, which was hampered by low short-term interest rates, the series' bond funds all recorded positive returns. On May 1, 2016, the Cash Management Fund was converted to Ultra-Short Bond Fund in accordance with shareholder approval on December 4, 2015.

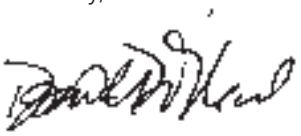
Looking ahead

The U.S. economy continues to show signs of slow improvement, even as many countries around the globe struggle with sluggish growth and low inflation. As the Fed adopts a more data-driven approach to rate hikes and central banks focus on lowering rates to inject liquidity into the global financial system, we could have a "lower-for-longer" rate environment. We will, of course, closely monitor the impact to security markets and currencies. We are also headed into the final innings of the U.S. presidential election cycle, and will be watching for changes in that arena. We may be in a low-return environment overall, but we will continue to actively seek securities that are particularly attractive due to their innovation, fundamentals or valuation levels.

Our investment approach – based on extensive research, a long-term outlook and close attention to valuation – has served investors well over time. We continue to have confidence this will remain the case, and thank you for your support.

We look forward to reporting to you again in six months' time.

Sincerely,



Donald D. O'Neal
Vice Chairman of the Board

Alan N. Berro
President

August 9, 2016

Summary investment portfolios

Summary investment portfolios are designed to streamline this report and help investors better focus on the funds' principal holdings. Ultra-Short Bond Fund,* Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund show a complete listing of portfolio holdings. See the inside back cover for details on how to obtain a complete schedule of portfolio holdings for each fund in the series.

Unless otherwise indicated, American Funds Insurance Series investment results are for Class 2 shares (Class P2 shares for managed risk funds). Class 2 shares began operations on April 30, 1997. Class 3 shares began operations on January 16, 2004. Class 4 shares began operations on December 14, 2012. Results encompassing periods prior to those dates assume a hypothetical investment in Class 1 shares and include the deduction of additional annual expenses (0.25% for Class 2 shares, 0.18% for Class 3 shares and 0.50% for Class 4 shares).

The variable annuities and life insurance contracts that use the series funds contain certain fees and expenses not reflected in this report. Investment results assume all distributions are reinvested and reflect applicable fees and expenses. The series investment adviser waived a portion of its management fees for all existing funds from September 1, 2004, through December 31, 2008, for U.S. Government/AAA-Rated Securities Fund from July 1, 2010, through December 31, 2010, and for Blue Chip Income and Growth Fund from February 1, 2014, through January 31, 2015. For the managed risk funds, the investment adviser is currently waiving a portion of its management fee equal to 0.05% of the funds' net assets and is currently reimbursing a portion of other expenses so that they will not exceed 0.28%. The waivers and reimbursements will be in effect through at least May 1, 2017, unless modified or terminated by the series board. After that time, the investment adviser may elect to extend, modify or terminate the reimbursements. The waivers may only be modified or terminated with the approval of the series board. Applicable fund results shown reflect the waivers and reimbursements, without which results would have been lower. See the Financial Highlights table in this report for details.

Although Capital Income Builder has a plan of distribution for Class 2 shares, fees for distribution services are not paid on amounts invested in the fund by the investment adviser and/or its affiliates. If fees for these services were charged on these assets, fund results would have been lower and expenses would have been higher. See the "Plans of distribution" section of the prospectus for information on the fees for distribution permitted to be charged by the funds.

Individual funds are listed in this report according to their risk potential, with managed risk funds listed last.

*Effective May 1, 2016, Cash Management Fund was converted to American Funds Insurance Series – Ultra-Short Bond Fund.℠

Asset Allocation Fund

Fund results shown are for past periods and are not predictive of results for future periods. Current and future results may be lower or higher than those shown. Unit prices and returns will vary, so investors may lose money. For current information and month-end results, visit americanfunds.com/afis. For information about your insurance contract and month-end results, go to the website of the company that issued your contract.

Asset Allocation Fund, a mix of stocks and bonds, rose 4.58% for the six months ended June 30, 2016. The Standard & Poor's 500 Composite Index, the benchmark for the fund's equity holdings, gained 3.84% over the same period, while the Barclays U.S. Aggregate Index, which measures investment-grade U.S. bonds (rated BBB/Baa and above) gained 5.31%. A blend of the two indexes, the 60%/40% S&P 500/Barclays U.S. Aggregate Index,* advanced 4.52%.

U.S. stocks posted modest returns in the first half of the year. There continues to be improvement in the U.S. economy, even though it was a challenging and volatile period for global markets. Bonds rose, driven by demand for safe-haven assets amid increased market volatility.

Stock selection in the information technology sector contributed most to the fund's returns. Stock selection in the health care sector was also additive. TSMC, one of the fund's biggest equity holdings, contributed most to the fund's relative returns.

The utilities and energy sectors were the greatest detractors to relative returns. An underweight position in the financials sector was the only sector to hamper results on an absolute basis.

On a country basis, holdings in Taiwan, the U.S. and China were primary contributors, while holdings in Japan and Sweden were the weakest.

The fund's fixed income holdings were led by an overweight position in high-yield corporate bonds. Issuers in the materials and industrials sectors were among the top five contributors. Federal agency mortgage-backed securities also accounted for gains.

The portfolio managers continue to evaluate the implications of a potentially stronger U.S. dollar and the spill-over effects of Brexit on the U.S. economy. The fund's cash position allows portfolio managers to remain flexible and better navigate a challenging environment by focusing on opportunities when stock prices are favorable.

This summary investment portfolio is designed to streamline the report and help investors better focus on the fund's principal holdings. See the inside back cover for details on how to obtain a complete schedule of portfolio holdings.

As permitted by U.S. Securities and Exchange Commission regulations, "Miscellaneous" securities include holdings in their first year of acquisition that have not previously been publicly disclosed.

"Other securities" includes all issues that are not disclosed separately in the summary investment portfolio, including loan participations and assignments, which may be subject to legal or contractual restrictions on resale. The total value of all such loans was $42,700,000, which represented .22% of the net assets of the fund. Some securities in "Other securities" (with an aggregate value of $8,538,000, an aggregate cost of $26,745,000, and which represented .04% of the net assets of the fund) were acquired from 3/10/2010 to 12/21/2015 through private placement transactions exempt from registration under the Securities Act of 1933, which may subject them to legal or contractual restrictions on resale.

Interest rate swaps

The fund has entered into interest rate swaps as shown in the following table. The average month-end notional amount of interest rate swaps while held was $388,417,000.

Pay/receive fixed rate	Clearinghouse	Floating rate index	Fixed rate	Expiration date	Notional (000)	Unrealized appreciation (depreciation) at 6/30/2016 (000)
Receive	LCH	3-month USD-LIBOR	0.921%	3/5/2017	$ 50,000	$ 86
Receive	LCH	3-month USD-LIBOR	1.929	9/29/2019	80,000	2,827
Receive	LCH	3-month USD-LIBOR	1.6365	10/16/2019	124,000	3,237
Pay	LCH	3-month USD-LIBOR	1.734	3/5/2020	23,000	(722)

[1]Security did not produce income during the last 12 months.
[2]Valued under fair value procedures adopted by authority of the board of trustees. The total value of all such securities, including those in "Miscellaneous" and "Other securities," was $438,289,000, which represented 2.24% of the net assets of the fund. This amount includes $408,609,000 related to certain securities trading outside the U.S. whose values were adjusted as a result of significant market movements following the close of local trading.
[3]A portion of this security was pledged as collateral. The total value of pledged collateral was $6,023,000, which represented .03% of the net assets of the fund.
[4]Index-linked bond whose principal amount moves with a government price index.
[5]Principal payments may be made periodically. Therefore, the effective maturity date may be earlier than the stated maturity date.
[6]Purchased on a TBA basis.
[7]Coupon rate may change periodically.
[8]Acquired in a transaction exempt from registration under Rule 144A or Section 4(2) of the Securities Act of 1933. May be resold in the U.S. in transactions exempt from registration, normally to qualified institutional buyers. The total value of all such securities, including those in "Other securities," was $1,228,034,000, which represented 6.28% of the net assets of the fund.

Key to abbreviations
ADR = American Depositary Receipts
LCH = LCH.Clearnet
LIBOR = London Interbank Offered Rate
TBA = To be announced

1. Organization

American Funds Insurance Series (the "series") is registered under the Investment Company Act of 1940 as an open-end, diversified management investment company with 28 different funds (the "funds"). Twenty-three funds in the series are covered in this report. The other five funds in the series are covered in a separate report. The assets of each fund are segregated, with each fund accounted for separately. Capital Research and Management Company ("CRMC") is the series' investment adviser. Milliman Financial Risk Management LLC ("Milliman FRM") is the subadviser for the risk management strategy for eight of the funds (the "managed risk funds"), five of which are covered in this report.

The managed risk funds covered in this report are Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund. The managed risk funds invest in other funds within the series (the "underlying funds") and employ Milliman FRM to implement the risk management strategy, which consists of using hedging instruments – primarily short positions on exchange-traded futures contracts – to attempt to stabilize the volatility of the funds around target volatility levels and reduce the downside exposure of the funds during periods of significant market declines.

Shareholders approved a proposal to reorganize the series from a Massachusetts business trust to a Delaware statutory trust. The reorganization may be completed in the next 12 months; however, the series reserves the right to delay the implementation.

The investment objectives for each fund covered in this report are as follows:

Global Growth Fund – Seeks to provide long-term growth of capital.

Global Small Capitalization Fund – Seeks to provide long-term growth of capital.

Growth Fund – Seeks to provide growth of capital.

International Fund – Seeks to provide long-term growth of capital.

New World Fund – Seeks long-term capital appreciation.

Blue Chip Income and Growth Fund – Seeks to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing.

Global Growth and Income Fund – Seeks to provide long-term growth of capital while providing current income.

Growth-Income Fund – Seeks to achieve long-term growth of capital and income.

International Growth and Income Fund – Seeks to provide long-term growth of capital while providing current income.

Capital Income Builder – Seeks to provide a level of current income that exceeds the average yield on U.S. stocks generally and to provide a growing stream of income over the years. Secondarily, seeks to provide growth of capital.

Asset Allocation Fund – Seeks to provide high total return consistent with preservation of capital over the long term.

Global Balanced Fund – Seeks the balanced accomplishment of three objectives: long-term growth of capital, conservation of principal and current income.

Bond Fund – Seeks to provide as high a level of current income as is consistent with the preservation of capital.

Global Bond Fund – Seeks to provide, over the long term, a high level of total return consistent with prudent investment management.

High-Income Bond Fund – Seeks to provide a high level of current income and, secondarily, capital appreciation.

Mortgage Fund – Seeks to provide current income and preservation of capital.

Ultra-Short Bond Fund – On May 1, 2016, the fund changed its name from Cash Management Fund to Ultra-Short Bond Fund in accordance with a resolution approved by shareholders on December 4, 2015, to convert the fund to an ultra-short-term bond fund. The fund seeks to provide current income, consistent with the maturity and quality standards applicable to the fund, and preservation of capital and liquidity.

U.S. Government/AAA-Rated Securities Fund – Seeks to provide a high level of current income consistent with preservation of capital.

Managed Risk Growth Fund – Seeks to provide growth of capital while seeking to manage volatility and provide downside protection.

Managed Risk International Fund – Seeks to provide long-term growth of capital while seeking to manage volatility and provide downside protection.

Managed Risk Blue Chip Income and Growth Fund – Seeks to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing, in each case while seeking to manage volatility and provide downside protection.

Managed Risk Growth-Income Fund – Seeks to achieve long-term growth of capital and income while seeking to manage volatility and provide downside protection.

Managed Risk Asset Allocation Fund – Seeks to provide high total return consistent with preservation of capital over the long term while seeking to manage volatility and provide downside protection.

Each fund in the series, except the managed risk funds, offers either three or four share classes (Classes 1, 2, 3 or 4); the managed risk funds offer two share classes (Classes P1 and P2). Holders of all share classes of each fund have equal pro rata rights to assets, dividends and liquidation proceeds of each fund held. Each share class of each fund has identical voting rights, except for the exclusive right to vote on matters affecting only its class. Share classes have different fees and expenses ("class-specific fees and expenses"), primarily due to different arrangements for certain distribution expenses. Differences in class-specific fees and expenses will result in differences in net investment income and, therefore, the payment of different per-share dividends by each class of each fund.

2. Significant accounting policies

Each fund is an investment company that applies the accounting and reporting guidance issued in Topic 946 by the U.S. Financial Accounting Standards Board. Each fund's financial statements have been prepared to comply with U.S. generally accepted accounting principles ("U.S. GAAP"). These principles require the series' investment adviser to make estimates and assumptions that affect reported amounts and disclosures. Actual results could differ from those estimates. Subsequent events, if any, have been evaluated through the date of issuance in the preparation of the financial statements. The funds follow the significant accounting policies described in this section, as well as the valuation policies described in the next section on valuation.

Security transactions and related investment income – Security transactions are recorded by the funds as of the date the trades are executed with brokers. Realized gains and losses from security transactions are determined based on the specific identified cost of the securities. In the event a security is purchased with a delayed payment date, the funds will segregate liquid assets sufficient to meet their payment obligations. Dividend income is recognized on the ex-dividend date and interest income is recognized on an accrual basis. Market discounts, premiums and original issue discounts on fixed-income securities are amortized daily over the expected life of the security.

Fees and expenses – The fees and expenses of the underlying funds held by the managed risk funds are not included in the fees and expenses reported for each of the managed risk funds; however, they are indirectly reflected in the valuation of each of the underlying funds. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables.

Class allocations – Income, fees and expenses (other than class-specific fees and expenses) and realized and unrealized gains and losses are allocated daily among the various share classes of each fund based on their relative net assets. Class-specific fees and expenses, such as distribution expenses, are accrued daily and charged directly to the respective share class of each fund.

Dividends and distributions to shareholders – Dividends and distributions to shareholders are recorded on each fund's ex-dividend date.

Currency translation – Assets and liabilities, including investment securities, denominated in currencies other than U.S. dollars are translated into U.S. dollars at the exchange rates supplied by one or more pricing vendors on the valuation date. Purchases and sales of investment securities and income and expenses are translated into U.S. dollars at the exchange rates on the dates of such transactions. The effects of changes in exchange rates on investment securities are included with the net realized gain or loss and net unrealized appreciation or depreciation on investments in the funds' statements of operations. The realized gain or loss and unrealized appreciation or depreciation resulting from all other transactions denominated in currencies other than U.S. dollars are disclosed separately.

3. Valuation

CRMC, the series' investment adviser, values the funds' investments at fair value as defined by U.S. GAAP. The net asset value of each share class of each fund is generally determined as of approximately 4:00 p.m. New York time each day the New York Stock Exchange is open.

Methods and inputs – The series' investment adviser uses the following methods and inputs to establish the fair value of each fund's assets and liabilities. Use of particular methods and inputs may vary over time based on availability and relevance as market and economic conditions evolve.

Equity securities are generally valued at the official closing price of, or the last reported sale price on, the exchange or market on which such securities are traded, as of the close of business on the day the securities are being valued or, lacking any sales, at the last available bid price. Prices for each security are taken from the principal exchange or market on which the security trades. The value of an underlying fund is based on its reported net asset value.

Fixed-income securities, including short-term securities, are generally valued at prices obtained from one or more pricing vendors. Vendors value such securities based on one or more of the inputs described in the following table. The table provides examples of inputs that are commonly relevant for valuing particular classes of fixed-income securities in which the funds are authorized to invest. However, these classifications are not exclusive and any of the inputs may be used to value any other class of fixed-income security.

Fixed-income class	Examples of standard inputs
All	Benchmark yields, transactions, bids, offers, quotations from dealers and trading systems, new issues, spreads and other relationships observed in the markets among comparable securities; and proprietary pricing models such as yield measures calculated using factors such as cash flows, financial or collateral performance and other reference data (collectively referred to as "standard inputs")
Corporate bonds & notes; convertible securities	Standard inputs and underlying equity of the issuer
Bonds & notes of governments & government agencies	Standard inputs and interest rate volatilities
Mortgage-backed; asset-backed obligations	Standard inputs and cash flows, prepayment information, default rates, delinquency and loss assumptions, collateral characteristics, credit enhancements and specific deal information
Municipal securities	Standard inputs and, for certain distressed securities, cash flows or liquidation values using a net present value calculation based on inputs that include, but are not limited to, financial statements and debt contracts

When the series' investment adviser deems it appropriate to do so (such as when vendor prices are unavailable or not deemed to be representative), fixed-income securities will be valued in good faith at the mean quoted bid and ask prices that are reasonably and timely available (or bid prices, if ask prices are not available) or at prices for securities of comparable maturity, quality and type.

Securities with both fixed-income and equity characteristics, or equity securities traded principally among fixed-income dealers, are generally valued in the manner described for either equity or fixed-income securities, depending on which method is deemed most appropriate by the series' investment adviser. The Government Cash Management Fund held by the managed risk funds is managed to maintain a $1.00 net asset value per share. The net asset value of each share class of each managed risk fund is calculated based on the reported net asset values of the underlying funds in which each fund invests.

Forward currency contracts are valued at the mean of representative quoted bid and ask prices, generally based on prices supplied by one or more pricing vendors. Interest rate swaps and credit default swaps are generally valued by pricing vendors based on market inputs that include the index and term of index, reset frequency, payer/receiver, currency and pay frequency. Exchange-traded futures are generally valued at the official settlement price of, or the last reported sale price on, the exchange or market on which such instruments are traded, as of the close of business on the day the futures are being valued or, lacking any sales, at the last available bid price. Prices for each future are taken from the exchange or market on which the security trades.

Securities and other assets for which representative market quotations are not readily available or are considered unreliable by the series' investment adviser are fair valued as determined in good faith under fair value guidelines adopted by authority of the series' board of trustees as further described. The investment adviser follows fair valuation guidelines, consistent with U.S. Securities and Exchange Commission rules and guidance, to consider relevant principles and factors when making fair value determinations. The investment adviser considers relevant indications of value that are reasonably and timely available to it in determining the fair value to be assigned to a particular security, such as the type and cost of the security; contractual or legal restrictions on resale of the security; relevant financial or business developments of the issuer; actively traded similar or related securities; conversion or exchange rights on the security; related corporate actions; significant events occurring after the close of trading in the security; and changes in overall market conditions. In addition, the closing prices of equity securities and futures that trade in markets outside U.S. time zones may be adjusted to reflect significant events that occur after the close of local trading but before the net asset value of each share class of each fund is determined. Fair valuations and valuations of investments and futures that are not actively trading involve judgment and may differ materially from valuations that would have been used had greater market activity occurred.

Processes and structure — The series' board of trustees has delegated authority to the series' investment adviser to make fair value determinations, subject to board oversight. The investment adviser has established a Joint Fair Valuation Committee (the "Fair Valuation Committee") to administer, implement and oversee the fair valuation process, and to make fair value decisions. The Fair Valuation Committee regularly reviews its own fair value decisions, as well as decisions made under its standing instructions to the investment adviser's valuation teams. The Fair Valuation Committee reviews changes in fair value measurements from period to period and may, as deemed appropriate, update the fair valuation guidelines to better reflect the results of back testing and address new or evolving issues. The Fair Valuation Committee reports any changes to the fair valuation guidelines to the board of trustees with supplemental information to support the changes. The series' board and audit committee also regularly review reports that describe fair value determinations and methods.

The series' investment adviser has also established a Fixed-Income Pricing Review Group to administer and oversee the fixed-income valuation process, including the use of fixed-income pricing vendors. This group regularly reviews pricing vendor information and market data. Pricing decisions, processes and controls over security valuation are also subject to additional internal reviews, including an annual control self-evaluation program facilitated by the investment adviser's compliance group.

Classifications — The series' investment adviser classifies the funds' assets and liabilities into three levels based on the inputs used to value the assets or liabilities. Level 1 values are based on quoted prices in active markets for identical securities. Level 2 values are based on significant observable market inputs, such as quoted prices for similar securities and quoted prices in inactive markets. Certain securities trading outside the U.S. may transfer between Level 1 and Level 2 due to valuation adjustments resulting from significant market movements following the close of local trading. Level 3 values are based on significant unobservable inputs that reflect the investment adviser's determination of assumptions that market participants might reasonably use in valuing the securities.

The valuation levels are not necessarily an indication of the risk or liquidity associated with the underlying investment. For example, U.S. government securities are reflected as Level 2 because the inputs used to determine fair value may not always be quoted prices in an active market. The following tables present the funds' valuation levels as of June 30, 2016 (dollars in thousands):

Global Growth Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk Asset Allocation Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

4. Risk factors

Investing in the funds may involve certain risks including, but not limited to, those described below.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by a fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental or governmental agency responses to economic conditions; and currency exchange, interest rate and commodity price fluctuations.

Issuer risks –The prices of, and the income generated by, securities held by a fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance and strategic initiatives such as mergers, acquisitions or dispositions, and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in income-oriented stocks – Income provided by a fund may be reduced by changes in the dividend policies of, and the capital resources available at, the companies in which the fund invests.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks maybe more volatile than stocks of larger, more established companies.

Investing outside the U.S. – Securities of issuers domiciled outside the U.S., or with significant operations or revenues outside the U.S., may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as the imposition of price controls or punitive taxes, that could adversely impact revenues. Securities markets in certain countries may be more volatile and/or less liquid than those in the U.S. Investments outside the U.S. may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the U.S. In addition, the value of investments outside the U.S. may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the U.S. may be heightened in connection with investments in emerging markets.

Investing in developing countries – Investing in countries with developing economies and/or markets may involve risks in addition to and greater than those generally associated with investing in developed countries. For instance, developing countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, there may be increased settlement risks for transactions in local securities.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, developing countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating a fund's net asset value. Additionally, there may be increased settlement risks for transactions in local securities.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by a fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in a fund having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which a fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The funds' investment adviser relies on its own credit analysts to research issuers and issues in seeking to mitigate various credit and default risks.

Investing in lower rated debt instruments — Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Investing in derivatives — The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional cash securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose a fund to losses in excess of its initial investment. Derivatives may be difficult for a fund to buy or sell at an opportune time or price and may be difficult to terminate or otherwise offset. A fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce a fund's returns and increase a fund's price volatility. A fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction.

Thinly traded securities — There may be little trading in the secondary market for particular bonds, other debt securities or derivatives, which may make them more difficult to value, acquire or sell.

Currency — The prices of, and the income generated by, most debt securities held by a fund may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of a fund's securities denominated in such currencies would generally fall and vice versa. U.S. dollar-denominated securities of foreign issuers may also be affected by changes in relative currency values.

Investing in mortgage-related securities and other asset-backed securities — Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as consumer loans or receivables. Such securities often involve risks that are different from or more acute than the risks associated with investing in other types of debt securities. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in a fund having to reinvest the proceeds in lower yielding securities, effectively reducing a fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing a fund's cash available for reinvestment in higher yielding securities.

Investing in future delivery contracts — Contracts for future delivery of mortgage-related securities, such as to be announced contracts and mortgage dollar rolls, involve a fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase a fund's market exposure, and the market price of the securities the fund contracts to repurchase could drop below their purchase price. While a fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions may increase the turnover rate of a fund.

Investing in inflation linked bonds — The values of inflation linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation linked bonds may also reduce a fund's distributable income during periods of extreme deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation linked securities may decline and result in losses to a fund.

Investing in securities backed by the U.S. government — Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates. Securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in repurchase agreements – Upon entering into a repurchase agreement, a fund purchases a security from a bank or broker-dealer, which simultaneously commits to repurchase the security within a specified time at the fund's cost with interest. The security purchased by the fund constitutes collateral for the seller's repurchase obligation. If the party agreeing to repurchase should default, the fund may seek to sell the security it holds as collateral. The fund may incur a loss if the value of the collateral securing the repurchase obligation has fallen below the repurchase price. The fund may also incur disposition costs and encounter procedural delays in connection with liquidating the collateral.

Interest rate risk – The values and liquidity of the securities held by a fund may be affected by changing interest rates. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. A fund may invest in variable and floating rate securities. Although such securities are generally less sensitive to interest rate changes, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as general interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, a fund may not be able to maintain a positive yield, and, given the historically low interest rate environment, risks associated with rising rates are currently heightened.

Credit and liquidity support – Changes in the credit quality of banks and financial institutions providing credit and liquidity support features with respect to securities held by a fund could cause the values of these securities to decline.

Asset allocation – A fund's percentage allocation to equity securities, debt securities and money market instruments could cause the fund to underperform relative to relevant benchmarks and other funds with similar investment objectives.

Nondiversification – As nondiversified funds, certain funds have the ability to invest a larger percentage of their assets in the securities of a smaller number of issuers than diversified funds. Although the funds do not intend to limit their investments to the securities of a small number of issuers, if they were to do so, poor performance by a single large holding would adversely impact the funds' investment results more than if the funds were invested in a larger number of issuers.

Management – The investment adviser to the funds actively manages the funds' investments. Consequently, the funds are subject to the risk that the methods and analyses employed by the investment adviser in this process may not produce the desired results. This could cause the funds to lose value or their investment results to lag relevant benchmarks or other funds with similar objectives.

Investing in the managed risk funds may involve additional risks including, but not limited to, those described below.

Fund structure – The managed risk funds invest in underlying funds and incur expenses related to those underlying funds. In addition, investors in the managed risk funds will incur fees to pay for certain expenses related to the operations of the managed risk funds. An investor holding the underlying fund directly would incur lower overall expenses but would not receive the benefit of the risk management strategy of the managed risk fund.

Management – The managed risk funds are subject to the risk that the methods employed by the subadviser in implementing the managed risk strategy may not produce the desired results. This could cause the managed risk funds to lose value or their investment results to lag relevant benchmarks or other funds with similar objectives.

Underlying fund risks – Because the managed risk funds' investments consist of individual underlying funds, the managed risk funds' risks are directly related to the risks of the respective underlying fund in which each managed fund invests. For this reason, it is important to understand the risks associated with investing both in the managed risk fund and the respective underlying fund.

Investing in futures contracts – In addition to the risks generally associated with investing in derivative instruments, futures contracts are subject to the creditworthiness of the clearing organizations, exchanges and futures commission merchants with which a fund transacts. Additionally, although futures require only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a futures contract could greatly exceed the initial amount invested. While futures contracts are generally liquid instruments, under certain market conditions, futures may be deemed to be illiquid. For example a fund may be temporarily prohibited from closing out its position in a futures contract if intraday price change limits or limits on trading volume imposed by the applicable futures exchange are triggered. If a fund is unable to close out a position on a futures contract, the fund would remain subject to the risk of adverse price movements until the fund is able to close out the futures position. The ability of a fund to successfully utilize futures contracts may depend in part upon the ability of the fund's investment adviser or subadviser to accurately forecast interest rates and other economic factors and to assess and predict the impact of such economic factors on the futures in which the fund invests. If the investment adviser or subadviser incorrectly forecasts economic developments or incorrectly predicts the impact of such developments on the futures in which it invests, a fund could be exposed to the risk of loss.

Hedging – There may be imperfect or even negative correlation between the prices of the futures contracts and the prices of the underlying securities. For example, futures contracts may not provide an effective hedge because changes in futures contract prices may not track those of the underlying securities or indexes they are intended to hedge. In addition, there are significant differences between the securities and futures markets that could result in an imperfect correlation between the markets, causing a given hedge not to achieve its objectives. The degree of imperfection of correlation depends on circumstances such as variations in speculative market demand for futures, including technical influences in futures trading, and differences between the financial instruments being hedged and the instruments underlying the standard contracts available for trading. A decision as to whether, when and how to hedge involves the exercise of skill and judgment, and even a well-conceived hedge may be unsuccessful to some degree because of market behavior or unexpected interest rate trends. In addition, the fund's investment in exchange-traded futures and their resulting costs could limit the fund's gains in rising markets relative to those of the underlying fund, or to those of unhedged funds in general.

Short positions – Losses from short positions in futures contracts occur when the underlying index increases in value. As the underlying index increases in value, the holder of the short position in the corresponding futures contract is required to pay the difference in value of the futures contract resulting from the increase in the index on a daily basis. Losses from a short position in an index futures contract could potentially be very large if the value of the underlying index rises dramatically in a short period of time.

5. Certain investment techniques

Index-linked bonds – Some of the funds have invested in index-linked bonds, which are fixed-income securities whose principal value is periodically adjusted to a government price index. Over the life of an index-linked bond, interest is paid on the adjusted principal value. Increases or decreases in the principal value of index-linked bonds are recorded as interest income in the fund's statement of operations.

Mortgage dollar rolls – Some of the funds have entered into mortgage dollar roll transactions in which the fund sells a mortgage-backed security to a counterparty and simultaneously enters into an agreement with the same counterparty to buy back a similar security on a specific future date at a predetermined price. Mortgage dollar rolls are accounted for as purchase and sale transactions, which may increase the funds' portfolio turnover rates.

Loan transactions – Some of the funds have entered into loan transactions in which the fund acquires a loan either through an agent, by assignment from another holder, or as a participation interest in another holder's portion of a loan. The loan is often administered by a financial institution that acts as agent for the holders of the loan, and the fund may be required to receive approval from the agent and/or borrower prior to the sale of the investment. The loan's interest rate and maturity date may change based on the terms of the loan, including potential early payments of principal.

Unfunded commitments – Asset Allocation Fund, Global Bond Fund and High-Income Bond Fund have participated in a transaction that involves unfunded commitments, which may obligate each fund to purchase additional shares of the applicable issuer. Under the terms of the commitments, which will expire no later than April 1, 2021, the maximum potential exposure of Asset Allocation Fund, Global Bond Fund and High-Income Bond Fund as of June 30, 2016 was $471,000, $109,000 and $719,000, respectively. Should such commitments become due in full, these amounts would represent less than 0.01% of the net assets of Asset Allocation Fund and 0.04% of the net assets of Global Bond Fund and High-Income Bond Fund, in each case as of June 30, 2016.

Short-term securities – The managed risk funds hold shares of the Government Cash Management Fund, a cash management vehicle offered by the Bank of New York Mellon ("BNY Mellon"), the funds' custodian bank. The Government Cash Management Fund is managed by the Dreyfus Corporation.

Forward currency contracts – Some of the funds have entered into forward currency contracts, which represent agreements to exchange currencies on specific future dates at predetermined rates. The series' investment adviser uses forward currency contracts to manage the fund's exposure to changes in exchange rates. Upon entering into these contracts, risks may arise from the potential inability of counterparties to meet the terms of their contracts and from possible movements in exchange rates.

On a daily basis, the series' investment adviser values forward currency contracts based on the applicable exchange rates and records unrealized appreciation or depreciation for open forward currency contracts in each fund's statement of assets and liabilities. Realized gains or losses are recorded at the time the forward contract is closed or offset by another contract with the same broker for the same settlement date and currency. Closed forward currency contracts that have not reached their settlement date are included in the respective receivables or payables for closed forward currency contracts in each fund's statement of assets and liabilities. Net realized gains or losses from closed forward currency contracts and net unrealized appreciation or depreciation from open forward currency contracts are recorded in each fund's statement of operations. As of June 30, 2016, Global Growth Fund, Global Small Capitalization

Fund, International Fund, New World Fund, Global Growth and Income Fund, Growth-Income Fund, International Growth and Income Fund, Global Balanced Fund, Bond Fund and Global Bond Fund had open forward currency contracts. As of June 30, 2016, High-Income Bond Fund did not have any open forward currency contracts. The average month-end notional amount of open forward currency contracts while held by High-Income Bond Fund was $2,585,000.

Interest rate swaps — Some of the funds have entered into interest rate swaps, which are agreements to exchange one stream of future interest payments for another based on a specified notional amount. Typically, interest rate swaps exchange a fixed interest rate for a payment that floats relative to a benchmark or vice versa. The series' investment adviser uses interest rate swaps to manage the interest rate sensitivity of the fund by increasing or decreasing the duration of the fund or a portion of the fund's portfolio. Risks may arise as a result of the series' investment adviser incorrectly anticipating changes in interest rates, increased volatility, reduced liquidity and the potential inability of counterparties to meet the terms of their agreements.

Upon entering into an interest rate swap contract, the fund is required to deposit cash, U.S. government securities or other liquid securities, which is known as "initial margin." Generally, the initial margin required for a particular interest rate swap is set and held as collateral by the clearinghouse on which the contract is cleared. The amount of initial margin required may be significantly modified from time to time by the clearinghouse during the term of the contract.

On a daily basis, the series' investment adviser records daily interest accruals related to the exchange of future payments as a receivable and payable in each fund's statement of assets and liabilities. Each fund also pays or receives a "variation margin" based on the increase or decrease in the value of the interest rate swaps, including accrued interest, and records variation margin on interest rate swaps in each fund's statement of assets and liabilities. Each fund records realized gains and losses on both the net accrued interest and any gain or loss recognized at the time the interest rate swap is closed or expires. Net realized gains or losses, as well as any net unrealized appreciation or depreciation, from interest rate swaps are recorded in each fund's statement of operations. As of June 30, 2016, Asset Allocation Fund, Bond Fund, Global Bond Fund, Mortgage Fund and U.S. Government/AAA-Rated Securities Fund had open interest rate swaps. As of June 30, 2016, High-Income Bond Fund did not have any open interest rate swaps. The average month-end notional amount of open interest rate swaps while held by High-Income Bond Fund was $31,888,000.

Credit default swap indices — Some of the funds have entered into centrally cleared credit default swap agreements on credit indices ("CDSI") that involve one party (the protection buyer) making a stream of payments to another party (the protection seller) in exchange for the right to receive a specified return upon the occurrence of a credit event, such as a default or restructuring, with respect to any of the underlying issuers (reference obligations) in the referenced index. The series' investment adviser uses credit default swaps to assume exposure to a diversified portfolio of credits or to hedge against existing credit risks.

CDSI are portfolios of credit instruments or exposures designed to be representative of some part of the credit market, such as the high-yield or investment-grade credit market. CDSI are generally traded using standardized terms, including a fixed spread and standard maturity dates, and reference all the names in the index. If there is a credit event, it is settled based on that name's weight in the index. The composition of the underlying issuers or obligations within a particular index may change periodically, usually every six months. A specified credit event may affect all or individual underlying reference obligations included in the index, and will be settled based upon the relative weighting of the affected obligation(s) within the index. The value of each CDSI can be used as a measure of the current payment/performance risk of the CDSI and represents the likelihood of an expected liability or profit should the notional amount of the CDSI be closed or sold as of the period end. An increasing value, as compared to the notional amount of the CDSI, represents a deterioration of the referenced indices' credit soundness and a greater likelihood of risk of default or other credit event occurring as defined under the terms of the agreement. When a fund provides sell protection, its maximum exposure is the notional amount of the credit default swap agreement.

Upon entering into a centrally cleared CDSI contract, the fund is required to deposit with a derivatives clearing member ("DCM") in a segregated account in the name of the DCM an amount of cash, U.S. government securities or other liquid securities, which is known as initial margin. Generally, the initial margin required for a particular credit default swap is set and held as collateral by the clearinghouse on which the contract is cleared. The amount of initial margin required may be significantly modified from time to time by the clearinghouse during the term of the contract. Securities deposited as initial margin are designated on the investment portfolio.

On a daily basis, interest accruals related to the exchange of future payments are recorded as a receivable and payable in each fund's statement of assets and liabilities. Each fund also pays or receives a variation margin based on the increase or decrease in the value of the centrally cleared swaps, and records variation margin in each fund's statement of assets and liabilities. Each fund records realized gains and losses on both the net accrued interest and any gain or loss recognized at the time the swap is closed or expires. Net realized gains or losses, as well as any net unrealized appreciation or depreciation, from credit default swaps are recorded in each fund's statement of operations. As of June 30, 2016, High-Income Bond Fund had open credit default swaps.

Futures contracts – The managed risk funds have entered into futures contracts, which provide for the future sale by one party and purchase by another party of a specified amount of a specific financial instrument for a specified price, date, time and place designated at the time the contract is made. Futures contracts are used to strategically manage portfolio volatility and downside equity risk.

Upon entering into futures contracts, and to maintain the fund's open positions in futures contracts, the fund is required to deposit with a futures broker, or FCM, in a segregated account in the name of the FCM an amount of cash, U.S. government securities, suitable money market instruments, or other liquid securities, known as "initial margin." The margin required for a particular futures contract is set by the exchange on which the contract is traded to serve as collateral, and may be significantly modified from time to time by the exchange during the term of the contract. When initial margin is deposited with brokers, a receivable is recorded in the fund's statement of assets and liabilities.

On a daily basis, each fund pays or receives variation margin based on the increase or decrease in the value of the futures contracts and records variation margin on futures contracts in each fund's statement of assets and liabilities. In addition, each fund segregates liquid assets equivalent to the fund's outstanding obligations under the contract in excess of the initial margin and variation margin, if any. Futures contracts may involve a risk of loss in excess of the variation margin shown on each fund's statement of assets and liabilities. Each fund records realized gains or losses at the time the futures contract is closed or expires. Net realized gains or losses and net unrealized appreciation or depreciation from futures contracts are recorded in each fund's statement of operations. As of June 30, 2016, Mortgage Fund, U.S. Government/AAA-Rated Securities Fund, Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund held futures contracts.

The following tables present the financial statement impacts resulting from the funds' use of forward currency contracts, interest rate swaps, credit default swaps and/or futures contracts as of June 30, 2016 (dollars in thousands):

			Global Growth Fund	Global Small Capitalization Fund	International Fund
Assets	**Risk type**	**Location on statements of assets and liabilities**			
Forward currency	Currency	Unrealized appreciation on open forward currency contracts	$ –	$4,683	$ 4,735

*Includes cumulative appreciation/depreciation on interest rate swaps, credit default swaps and/or futures contracts as reported in the applicable table(s) following each fund's investment portfolio. Only current day's variation margin is reported within the statements of assets and liabilities.

Collateral – Funds that invest in forward currency contracts, interest rate swaps, credit default swaps, futures contracts and/or future delivery contracts participate in a collateral program. For forward currency contracts, the program calls for the fund to either receive or pledge collateral based on the net gain or loss on unsettled forward currency contracts by counterparty. For interest rate swaps, credit default swaps and futures contracts, the program calls for the fund to pledge collateral for initial and variation margin by contract. For future delivery contracts, the program calls for the fund to either receive or pledge collateral based on the net gain or loss on unsettled contracts by certain counterparties. The purpose of the collateral is to cover potential losses that could occur in the event that either party cannot meet its contractual obligations.

Rights of offset – Funds that hold forward currency contracts have enforceable master netting agreements with certain counterparties, where amounts payable by each party to the other in the same currency (with the same settlement date and with the same counterparty) are settled net of each party's payment obligation. If an early termination date occurs under these agreements following an event of default or termination event, all obligations of each party to its counterparty are settled net through a single payment in a single currency ("close-out netting"). For financial reporting purposes, the funds do not offset financial assets and financial liabilities that are subject to these master netting arrangements in the statements of assets and liabilities.

The following tables present each fund's forward currency contracts by counterparty that are subject to master netting agreements but that are not offset in the funds' statements of assets and liabilities. The net amount column shows the impact of offsetting on the funds' statement of assets and liabilities as of June 30, 2016 if close-out netting was exercised (dollars in thousands):

Global Growth Fund

*Non-cash collateral is shown on a settlement basis.

6. Taxation and distributions

Federal income taxation – Each fund complies with the requirements under Subchapter M of the Internal Revenue Code applicable to mutual funds and intends to distribute substantially all of its net taxable income and net capital gains each year. The funds are not subject to income taxes to the extent such distributions are made. Therefore, no federal income tax provision is required.

As of and during the period ended June 30, 2016, none of the funds had a liability for any unrecognized tax benefits. Each fund recognizes interest and penalties, if any, related to unrecognized tax benefits as income tax expense in the statements of operations. During the period, none of the funds incurred any significant interest or penalties.

The funds are not subject to examination by U.S. federal tax authorities for tax years before 2012. Managed Risk Asset Allocation Fund is not subject to examination by U.S. federal tax authorities for tax years before 2012, the year the fund commenced operations. Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund and Managed Risk Growth-Income Fund are not subject to examination by U.S. federal tax authorities for tax years before 2013, the year the funds commenced operations. Capital Income Builder is not subject to examination by U.S. federal tax authorities for tax years before 2014, the year the fund commenced operations.

The funds are not subject to examination by state tax authorities for tax years before 2011. Global Balanced Fund and Mortgage Fund are not subject to examination by state tax authorities for tax years before 2011, the year the funds commenced operations. Managed Risk Asset Allocation Fund is not subject to examination by state tax authorities for tax years before 2012, the year the fund commenced operations. Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund and Managed Risk Growth-Income Fund are not subject to examination by state tax authorities for tax years before 2013, the year the funds commenced operations. Capital Income Builder is not subject to examination by state tax authorities for tax years before 2014, the year the fund commenced operations.

The following funds are not subject to examination by tax authorities outside the U.S. for the years indicated: Global Growth Fund, Global Small Capitalization Fund, International Fund, New World Fund and Global Growth and Income Fund for tax years before 2009; Growth Fund and Growth-Income Fund for tax years before 2010; International Growth and Income Fund and Global Balanced Fund for tax years before 2011; and Asset Allocation Fund, Bond Fund and Global Bond Fund for tax years before 2015. All other funds are not subject to examination by tax authorities outside the U.S.

Non-U.S. taxation — Dividend and interest income are recorded net of non-U.S. taxes paid. The funds may file withholding tax reclaims in certain jurisdictions to recover a portion of amounts previously withheld. As a result of recent rulings from European courts, some of the funds filed for additional reclaims related to prior years. These reclaims are recorded when the amount is known and there are no significant uncertainties on collectability. Gains realized by the funds on the sale of securities in certain countries are subject to non-U.S. taxes. The funds record a liability based on unrealized gains to provide for potential non-U.S. taxes payable upon the sale of these securities.

Distributions — Distributions paid to shareholders are based on net investment income and net realized gains determined on a tax basis, which may differ from net investment income and net realized gains for financial reporting purposes. These differences are due primarily to different treatment for items such as currency gains and losses; short-term capital gains and losses; capital losses related to sales of certain securities within 30 days of purchase; unrealized appreciation of certain investments in securities outside the U.S.; deferred expenses; cost of investments sold; non-U.S. taxes on capital gains; paydowns on fixed-income securities; net capital losses; net operating losses; amortization of premiums and discounts; and income on certain investments. The fiscal year in which amounts are distributed may differ from the year in which the net investment income and net realized gains are recorded by the funds for financial reporting purposes.

As indicated in the tables in this section, some of the funds had capital loss carryforwards available at December 31, 2015. These will be used to offset any capital gains realized by the funds in the current year or in subsequent years through the expiration dates. Funds with capital loss carryforwards will not make distributions from capital gains while a capital loss carryforward remains.

Under the Regulated Investment Company Modernization Act of 2010 (the "Act"), net capital losses recognized after December 31, 2010, may be carried forward indefinitely, and their character is retained as short-term and/or long-term losses. Previously, net capital losses were carried forward for eight years and treated as short-term losses. As a transition rule, the Act requires that post-enactment net capital losses be used before pre-enactment net capital losses.

Additional tax basis disclosures are as follows (dollars in thousands):

7. Fees and transactions

CRMC, the series' investment adviser, is the parent company of American Funds Distributors,® Inc. ("AFD"), the distributor of the series' shares, and American Funds Service Company® ("AFS"), the series' transfer agent. CRMC, AFD and AFS are considered related parties to the series.

Investment advisory services – The series has an investment advisory and service agreement with CRMC that provides for monthly fees accrued daily. These fees are based on annual rates that generally decrease as average net asset levels increase. CRMC receives investment advisory fees from the underlying funds held by the managed risk funds. Effective January 1, 2016, CRMC reduced the investment advisory services fee from an annual rate of 0.250% of average daily net assets to 0.150% of average daily net assets for the managed risk funds. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables. Subadvisory fees for the managed risk funds are paid by CRMC to Milliman FRM. The managed risk funds are not responsible for paying any subadvisory fees.

Investment advisory services waivers – The series' board of trustees approved an amended agreement for Asset Allocation Fund effective February 1, 2016, decreasing the annual rate on average daily net assets in excess of $21 billion to 0.240%. CRMC is waiving a portion of its investment advisory services fees for each of the managed risk funds. Investment advisory services fees are presented in each fund's statement of operations gross of the waivers from CRMC. For the six months ended June 30, 2016, total investment advisory services fees waived by CRMC were $833,000.

The range of rates and asset levels, and the current annualized rates of average net assets for each fund before and after any investment advisory services waivers (if applicable), are as follows:

Fund	Rates		Net asset level (in billions)		For the period ended June 30, 2016, before waiver	For the period ended June 30, 2016, after waiver

Distribution services – The series has plans of distribution for all share classes except Class 1. Under the plans, the board of trustees approves certain categories of expenses that are used to finance activities primarily intended to sell fund shares. The plans provide for payments to pay service fees to firms that have entered into agreements with the series. These payments, based on an annualized percentage of average daily net assets, range from 0.18% to 0.50% as noted in the table below. In some cases, the board of trustees has limited the amounts that may be paid to less than the maximum allowed by the plans.

Share class	Currently approved limits	Plan limits
Class 2	0.25%	0.25%
Class 3	0.18	0.18
Class 4	0.25	0.25
Class P1	0.00	0.25
Class P2	0.25	0.50

Insurance administrative services – The series has an insurance administrative services plan for Class 4, P1 and P2 shares. Under the plan, these share classes pay 0.25% of each insurance company's respective average daily net assets in each share class to compensate the insurance companies for services provided to their separate accounts and contractholders for which the shares of the fund are beneficially owned as underlying investments of such contractholders' annuities. These services include, but are not limited to, maintenance, shareholder communications and transactional services. The insurance companies are not related parties to the series.

Transfer agent services – The series has a shareholder services agreement with AFS under which the funds compensate AFS for providing transfer agent services to all of the funds' share classes. These services include recordkeeping, shareholder communications and transaction processing. In addition, the managed risk funds reimburse AFS for amounts paid to third parties for performing transfer agent services on behalf of fund shareholders.

Administrative services – The series has an administrative services agreement with CRMC to provide administrative services to all of the funds' share classes. The services include, but are not limited to, coordinating, monitoring, assisting and overseeing third parties that provide services to fund shareholders. Under the agreement, each share class of each fund, except the managed risk funds, pays an annual fee of 0.01% based on its respective average daily net assets to compensate CRMC for providing administrative services. For the

managed risk funds, CRMC receives administrative services fees of 0.01% of average daily net assets from Class 1 shares of the underlying funds for administrative services provided to the series.

Accounting and administrative services – The managed risk funds have a subadministration agreement with BNY Mellon under which the fund compensates BNY Mellon for providing accounting and administrative services to each of the managed risk funds' share classes. These services include, but are not limited to, fund accounting (including calculation of net asset value), financial reporting and tax services. BNY Mellon is not a related party to the managed risk funds.

Reimbursement of fees and expenses – CRMC is currently reimbursing a portion of other expenses for each of the managed risk funds so that each fund's expenses do not exceed 0.28% of its respective average daily net assets. Other expenses exclude investment advisory services and distribution services fees. For the six months ended June 30, 2016, total expenses reimbursed by CRMC were $289,000.

Class-specific expenses under the agreements described above were as follows (dollars in thousands):

Trustees' deferred compensation – Trustees who are unaffiliated with CRMC may elect to defer the cash payment of part or all of their compensation. These deferred amounts, which remain as liabilities of the funds, are treated as if invested in one or more of the American Funds. These amounts represent general, unsecured liabilities of the funds and vary according to the total returns of the selected funds. Trustees' compensation, shown on the accompanying financial statements, reflects current fees (either paid in cash or deferred) and a net increase in the value of the deferred amounts as follows (dollars in thousands):

	Current fees	Increase in value of deferred amounts	Total trustees' compensation

Affiliated officers and trustees – Officers and certain trustees of the series are or may be considered to be affiliated with CRMC, AFD and AFS. No affiliated officers or trustees received any compensation directly from any fund in the series.

Security transactions with related funds – The funds may purchase from, or sell securities to, other CRMC-managed funds (or funds managed by certain affiliates of CRMC) under procedures adopted by the fund's board of trustees. The funds involved in such transactions are considered related by virtue of having a common investment adviser (or affiliated investment advisers), common trustees and/or common officers. When such transactions occur, each transaction is executed at the current market price of the security and no brokerage commissions or fees are paid in accordance with Rule 17a-7 of the 1940 Act. During the six months ended June 30, 2016, such purchase and sale transactions occurred between Global Growth Fund and related funds in the amounts of $652,454,000 and $819,688,000, respectively.

8. Committed line of credit

Global Small Capitalization Fund and High-Income Bond Fund participate with other funds managed by CRMC in a $500 million credit facility (the "line of credit") to be utilized for temporary purposes to fund shareholder redemptions. Each fund has agreed to pay commitment fees on its pro-rata portion of the line of credit, which are reflected in other expenses in each fund's statement of operations. During the period, neither fund borrowed on this line of credit.

9. Capital share transactions

Capital share transactions in the funds were as follows (dollars and shares in thousands):

[1]Based on average shares outstanding.
[2]Unaudited.
[3]Based on operations for the period shown and, accordingly, is not representative of a full year.
[4]Not annualized.
[5]Annualized.
[6]The year ended December 31, 2014, reflects the impact of a corporate action event that resulted in a one-time increase to net investment income. If the corporate action event had not occurred, the net investment income per share and ratio of net income to average net assets would have been lower for all share classes.
[7]Class 4 shares were offered beginning December 14, 2012.
[8]All or a significant portion of assets in this class consisted of seed capital invested by CRMC and/or its affiliates. Certain fees (including, where applicable, fees for distribution services) are not charged or accrued on these seed capital assets. If such fees were paid by the fund on seed capital assets, fund expenses would have been higher and net income and total return would have been lower.
[9]Amount less than $1 million.
[10]For the period May 1, 2014, commencement of operations, through December 31, 2014.
[11]For the period May 2, 2011, commencement of operations, through December 31, 2011.
[12]Amount less than $.01.
[13]On May 1, 2016, the fund converted from a cash fund to an ultra-short-term bond fund and changed its name from Cash Management Fund to Ultra-Short Bond Fund.
[14]This column reflects the impact of certain waivers/reimbursements by CRMC. CRMC waived a portion of investment advisory services and reimbursed certain expenses for the managed risk funds.
[15]Ratio reflects weighted average net expense ratio of the underlying fund for the period presented. See Expense Example for further information regarding fees and expenses.
[16]For the period May 1, 2013, commencement of operations, through December 31, 2013.
[17]Amount less than .01%.
[18]For the period September 28, 2012, commencement of operations, through December 31, 2012.
[19]Refer to Note 5 for further information on mortgage dollar rolls.
[20]Amount less than 1%.

See Notes to Financial Statements

Expense example

unaudited

The funds in American Funds Insurance Series serve as the underlying investment vehicle for various insurance products. As an owner of an insurance contract that invests in one of the funds in the series, you incur two types of costs: (1) transaction costs, such as initial sales charges on purchase payments and contingent deferred sales charges on redemptions (loads), and (2) ongoing costs, including management fees, distribution and service (12b-1) fees, and other expenses. Additional fees are charged by the insurance companies related to the various benefits they provide. This example is intended to help you understand your ongoing costs (in dollars) of investing in the underlying funds so you can compare these costs with the ongoing costs of investing in other mutual funds that serve a similar function in other annuity products. The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire six-month period (January 1, 2016, through June 30, 2016).

Actual expenses:

The first line of each share class in the tables on the following pages provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the first line under the heading entitled "Expenses paid during period" to estimate the expenses you paid on your account during this period.

Hypothetical example for comparison purposes:

The second line of each share class in the tables on the following pages provides information about hypothetical account values and hypothetical expenses based on the actual expense ratio for the share class and an assumed rate of return of 5.00% per year before expenses, which is not the actual return of the share class. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the fund and other funds. To do so, compare this 5.00% hypothetical example with the 5.00% hypothetical examples that appear in the shareholder reports of the other funds.

Notes:

Additional fees are charged by the insurance companies related to the various benefits they provide. You can estimate the impact of these fees by adding the amount of the fees to the total estimated expenses you paid on your account during the period as calculated above. In addition, your ending account value would be lower by the amount of these fees.

Note that the expenses shown in the tables on the following pages are meant to highlight your ongoing costs only and do not reflect any transactional costs. Therefore, the second line of each share class in the tables is useful in comparing ongoing costs only and will not help you determine the relative total costs of owning different funds. In addition, if these transactional costs were included, your costs would have been higher.

	Beginning account value 1/1/2016	Ending account value 6/30/2016	Expenses paid during period[1]	Annualized expense ratio

[1]The "expenses paid during period" are equal to the "annualized expense ratio," multiplied by the average account value over the period, multiplied by the number of days in the period, and divided by 366 (to reflect the one-half year period).

[2]The "expenses paid during period" and "annualized expense ratio" do not include the expenses of the underlying funds in which each fund invests.

[3]The "effective expenses paid during period" are equal to the "effective annualized expense ratio," multiplied by the average account value over the period, multiplied by the number of days in the period, and divided by 366 (to reflect the period).

[4]The "effective annualized expense ratio" reflects the net annualized expense ratio of the class plus the class's pro-rata share of the weighted average expense ratio of the underlying funds in which it invests.

Investors should carefully consider investment objectives, risks, charges and expenses. This and other important information is contained in the series prospectuses and summary prospectuses, which can be obtained from your financial professional and should be read carefully before investing. You may also call American Funds Service Company (AFS) at (800) 421-4225 or visit the American Funds website at americanfunds.com.

"American Funds Proxy Voting Procedures and Principles" – which describes how we vote proxies relating to portfolio securities – is available on the American Funds website or upon request by calling AFS. The series files its proxy voting record with the U.S. Securities and Exchange Commission (SEC) for the 12 months ended June 30 by August 31. The proxy voting record is available free of charge on the SEC website at sec.gov and on the American Funds website.

Complete June 30, 2016, portfolios of American Funds Insurance Series investments are available free of charge by calling AFS or visiting the SEC website (where they are part of Form N-CSR).

American Funds Insurance Series files a complete list of its portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. This filing is available free of charge on the SEC website. You may also review or, for a fee, copy this filing at the SEC's Public Reference Room in Washington, D.C. Additional information regarding the operation of the Public Reference Room may be obtained by calling the SEC's Office of Investor Education and Advocacy at (800) SEC-0330. Additionally, the list of portfolio holdings is available by calling AFS.

This report is for the information of American Funds Insurance Series investors, but it also may be used as sales literature when preceded or accompanied by the current prospectuses or summary prospectuses for American Funds Insurance Series and the prospectus for the applicable insurance contract, which give details about charges, expenses, investment objectives and operating policies of the series. If used as sales material after September 30, 2016, this report must be accompanied by a statistical update for the most recently completed calendar quarter.

The American Funds Advantage℠

Since 1931, American Funds, part of Capital Group, has helped investors pursue long-term investment success. Our consistent approach – in combination with The Capital System℠ – has resulted in a superior long-term track record for American Funds Insurance Series®.

Aligned with investor success

We base our decisions on a long-term perspective, which we believe aligns our goals with the interests of our clients. American Funds Insurance Series (AFIS) portfolio managers average 26 years of investment experience, including 23 years at our company, reflecting a career commitment to our long-term approach.[1]

The Capital System℠

The Capital System combines individual accountability with teamwork. Funds using The Capital System are divided into portions that are managed independently by investment professionals with diverse backgrounds, ages and investment approaches. An extensive global research effort is the backbone of our system.

Superior long-term track record

Our AFIS equity funds have beaten their comparable Lipper indexes in 91% of 10-year periods and 100% of 20-year periods. Our AFIS fixed income funds have beaten comparable Lipper indexes in 55% of 10-year periods and 87% of 20-year periods.[2] We strive to keep management fees competitive. Over the past 20 years, most funds' fees have been below industry averages.[3]

[1] Portfolio manager experience as of November 2015.

[2]Based on Class 2 share results for rolling periods through December 31, 2015. Periods covered are the shorter of the fund's lifetime or since the inception date of the comparable Lipper index (except Global Small Capitalization Fund, for which the Lipper average was used). The comparable Lipper indexes are: Global Funds Index (Global Growth Fund), Growth Funds Index (Growth Fund), International Funds Index (International Fund), Emerging Markets Funds Index (New World Fund), Growth & Income Funds Index (Blue Chip Income and Growth Fund, Growth-Income Fund), Balanced Portfolio Funds Index (Asset Allocation Fund), Core Bond Funds Index (Bond Fund), High Yield Funds Index (High-Income Bond Fund) and General U.S. Government Funds Index (U.S. Government/ AAA-Rated Securities Fund).

[3]Based on management fees for the 20-year period ended December 31, 2015, versus comparable Lipper categories, excluding funds of funds.

AMERICAN FUNDS®

From Capital Group

American Funds Insurance Series®

Semi-annual report
for the six months ended
June 30, 2016

American Funds Insurance Series, from Capital Group, is the underlying investment vehicle for many variable annuities and insurance products. For 85 years, Capital has invested with a long-term focus based on thorough research and attention to risk. All the variable funds in American Funds Insurance Series may not be available in your product.

Investing for short periods makes losses more likely. Investments are not FDIC-insured, nor are they deposits of or guaranteed by a bank or any other entity, so they may lose value. For current information and month-end results, visit americanfunds.com/afis. For information about your insurance contract and month-end results, go to the website of the company that issued your contract.

Investing outside the United States may be subject to risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Investing in small-capitalization stocks can involve greater risk than is customarily associated with investing in stocks of larger, more established companies. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. High-yield bonds are subject to greater fluctuations in value and risk of loss of income and principal than investment-grade bonds. Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch as an indication of an issuer's creditworthiness. Futures contracts may not provide an effective hedge of the underlying securities because changes in the prices of futures contracts may not track those of the securities they are intended to hedge. In addition, the managed risk strategy may not effectively protect the funds from market declines and will limit the funds participation in market gains. The use of the managed risk strategy could cause the funds' returns to lag those of the applicable underlying funds in certain rising market conditions. Refer to the funds' prospectuses and the Risk Factors section of this report for more information on these and other risks associated with investing in the funds.

Fellow investors:

Market returns were mixed for the six months ended June 30, 2016. U.S. and emerging markets stocks closed higher while many European markets fell. Slowing global growth, aggressive action on the part of central banks, the possibility of another interest rate hike in the U.S. and the decision by British voters to leave the European Union created uncertainty for investors.

Global equity market returns were tepid in aggregate, as the MSCI World Index rose 0.66%* for the period, but there were pockets of strength and weakness. Emerging markets registered some of the best results as the MSCI EM (Emerging Markets) Index climbed 6.41%. Brazil (+46.34%), Russia (+20.43%), Indonesia (+15.79%) and South Africa (+15.64%) were among the biggest gainers. A rebound in commodity prices, expectations for political reform and economic stimulus measures fueled returns.

The MSCI USA Index advanced 3.58%, helped in part by stronger job and housing numbers.

Sluggish growth, deflationary pressures and the potential impact of a "Brexit" dampened returns in a number of European markets. Overall, the MSCI Europe Index declined 5.13%, with Italy (–20.89%), Ireland (–13.61%) and Spain (–11.45%) suffering double-digit losses. Elsewhere among developed markets, Japan slipped 5.58%, hindered by a strengthening yen and the effects of negative interest rates on its banking system.

In bond markets, U.S. investment-grade and high-yield corporates advanced 7.68% and 9.06%, respectively, as investors sought higher yields than those offered by U.S. Treasuries. Barclays Global Aggregate Index, a measure of global investment-grade bonds (rated BBB/Baa and above), rose 8.96%, while the Barclays U.S. Aggregate Index (which measures U.S. investment-grade bonds) improved 5.31%. The 10-year Treasury yield, which stood at 2.27% on December 31, 2015, dropped to 1.49% as weak employment data and the Brexit referendum lowered expectations of a rate hike by the Federal Reserve. U.S. dollar–denominated emerging markets bonds, as measured by the J.P. Morgan EMBI (Emerging Markets Bond Index) Global, rose 10.90% as their higher yields were popular in a low-rate environment.

The U.S. dollar depreciated against most currencies. In developed markets, gains were led by the Japanese yen (+17.26%), Canadian dollar (+6.96%) and Singapore dollar (+5.41%). The Swiss franc and euro also improved, up 2.75% and 2.27%, respectively. The British pound, however, declined 9.30% against the greenback.

* Country returns are based on MSCI indexes, which reflect reinvestment of distributions and dividends net of withholding taxes, except for the MSCI USA Index, which reflects dividends gross of withholding taxes. All market indexes referenced in this report are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index.

Among developing markets, the Brazilian real (+23.49%) and Russian ruble (+14.34%) finished strong, while the Mexican peso (–6.39%) and Chinese renminbi (–2.26%) fell. Currency returns are calculated by MSCI.

AFIS funds with exposure to U.S. equities and REITS fared well during the period. With the exception of Ultra-Short Bond Fund, which was hampered by low short-term interest rates, the series' bond funds all recorded positive returns. On May 1, 2016, the Cash Management Fund was converted to Ultra-Short Bond Fund in accordance with shareholder approval on December 4, 2015.

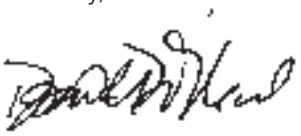
Looking ahead

The U.S. economy continues to show signs of slow improvement, even as many countries around the globe struggle with sluggish growth and low inflation. As the Fed adopts a more data-driven approach to rate hikes and central banks focus on lowering rates to inject liquidity into the global financial system, we could have a "lower-for-longer" rate environment. We will, of course, closely monitor the impact to security markets and currencies. We are also headed into the final innings of the U.S. presidential election cycle, and will be watching for changes in that arena. We may be in a low-return environment overall, but we will continue to actively seek securities that are particularly attractive due to their innovation, fundamentals or valuation levels.

Our investment approach – based on extensive research, a long-term outlook and close attention to valuation – has served investors well over time. We continue to have confidence this will remain the case, and thank you for your support.

We look forward to reporting to you again in six months' time.

Sincerely,



Donald D. O'Neal
Vice Chairman of the Board

Alan N. Berro
President

August 9, 2016

Summary investment portfolios

Summary investment portfolios are designed to streamline this report and help investors better focus on the funds' principal holdings. Ultra-Short Bond Fund,* Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund show a complete listing of portfolio holdings. See the inside back cover for details on how to obtain a complete schedule of portfolio holdings for each fund in the series.

Unless otherwise indicated, American Funds Insurance Series investment results are for Class 2 shares (Class P2 shares for managed risk funds). Class 2 shares began operations on April 30, 1997. Class 3 shares began operations on January 16, 2004. Class 4 shares began operations on December 14, 2012. Results encompassing periods prior to those dates assume a hypothetical investment in Class 1 shares and include the deduction of additional annual expenses (0.25% for Class 2 shares, 0.18% for Class 3 shares and 0.50% for Class 4 shares).

The variable annuities and life insurance contracts that use the series funds contain certain fees and expenses not reflected in this report. Investment results assume all distributions are reinvested and reflect applicable fees and expenses. The series investment adviser waived a portion of its management fees for all existing funds from September 1, 2004, through December 31, 2008, for U.S. Government/AAA-Rated Securities Fund from July 1, 2010, through December 31, 2010, and for Blue Chip Income and Growth Fund from February 1, 2014, through January 31, 2015. For the managed risk funds, the investment adviser is currently waiving a portion of its management fee equal to 0.05% of the funds' net assets and is currently reimbursing a portion of other expenses so that they will not exceed 0.28%. The waivers and reimbursements will be in effect through at least May 1, 2017, unless modified or terminated by the series board. After that time, the investment adviser may elect to extend, modify or terminate the reimbursements. The waivers may only be modified or terminated with the approval of the series board. Applicable fund results shown reflect the waivers and reimbursements, without which results would have been lower. See the Financial Highlights table in this report for details.

Although Capital Income Builder has a plan of distribution for Class 2 shares, fees for distribution services are not paid on amounts invested in the fund by the investment adviser and/or its affiliates. If fees for these services were charged on these assets, fund results would have been lower and expenses would have been higher. See the "Plans of distribution" section of the prospectus for information on the fees for distribution permitted to be charged by the funds.

Individual funds are listed in this report according to their risk potential, with managed risk funds listed last.

*Effective May 1, 2016, Cash Management Fund was converted to American Funds Insurance Series – Ultra-Short Bond Fund.℠

Bond Fund

Fund results shown are for past periods and are not predictive of results for future periods. Current and future results may be lower or higher than those shown. Unit prices and returns will vary, so investors may lose money. For current information and month-end results, visit americanfunds.com/afis. For information about your insurance contract and month-end results, go to the website of the company that issued your contract.

Bond Fund gained 5.46% for the six months ended June 30, 2016, outpacing its benchmark, the Barclays U.S. Aggregate Index, which rose 5.31%.

While the economic outlook for the U.S. remains cautiously optimistic, sluggish growth persists in Europe and China.

The portfolio benefited from an emphasis on intermediate rates and its more significant exposure to the end of the yield curve. A slightly long position in credit helped early in the period.

Fund results were helped by overall issuer selection, a larger concentration of high-yield corporates and lower exposure to Treasuries relative to the index. Mortgages represented a low percent of net assets as valuations are high and the portfolio managers do not see great opportunities there.

Any time there has been a significant economic dislocation in recent years, central banks have come to the rescue. Predicting future central bank behavior nonetheless remains a challenge. That being said, an interest rate hike from the Federal Reserve before the close of the year remains a possibility.

		Percent of net assets		
Largest holdings (by issuer)	U.S. Treasury	35.7%	United Mexican States Government	1.5%
	Freddie Mac	8.3	Enbridge Energy Partners	.9

	Net assets 100.00%		$10,623,003

This summary investment portfolio is designed to streamline the report and help investors better focus on the fund's principal holdings. See the inside back cover for details on how to obtain a complete schedule of portfolio holdings.

As permitted by U.S. Securities and Exchange Commission regulations, "Miscellaneous" securities include holdings in their first year of acquisition that have not previously been publicly disclosed.

"Other securities" includes all issues that are not disclosed separately in the summary investment portfolio. "Miscellaneous" and "Other securities" include securities which were valued under fair value procedures adopted by authority of the board of trustees. The total value of securities which were valued under fair value procedures was $1,027,000, which represented .01% of the net assets of the fund. "Other securities" also includes loan participations and assignments, which may be subject to legal or contractual restrictions on resale. The total value of all such loans was $12,204,000, which represented .11% of the net assets of the fund.

Forward currency contracts

The fund has entered into forward currency contracts as shown in the following table. The average month-end notional amount of open forward currency contracts while held was $266,639,000.

The following footnotes apply to either the individual securities noted or one or more of the securities aggregated and listed as a single line item.

[1]A portion of this security was pledged as collateral. The total value of pledged collateral was $26,769,000, which represented .25% of the net assets of the fund.
[2]Index-linked bond whose principal amount moves with a government price index.
[3]Principal payments may be made periodically. Therefore, the effective maturity date may be earlier than the stated maturity date.
[4]Purchased on a TBA basis.
[5]Coupon rate may change periodically.
[6]Acquired in a transaction exempt from registration under Rule 144A or Section 4(2) of the Securities Act of 1933. May be resold in the U.S. in transactions exempt from registration, normally to qualified institutional buyers. The total value of all such securities, including those in "Other securities," was $1,217,391,000, which represented 11.46% of the net assets of the fund.

1. Organization

American Funds Insurance Series (the "series") is registered under the Investment Company Act of 1940 as an open-end, diversified management investment company with 28 different funds (the "funds"). Twenty-three funds in the series are covered in this report. The other five funds in the series are covered in a separate report. The assets of each fund are segregated, with each fund accounted for separately. Capital Research and Management Company ("CRMC") is the series' investment adviser. Milliman Financial Risk Management LLC ("Milliman FRM") is the subadviser for the risk management strategy for eight of the funds (the "managed risk funds"), five of which are covered in this report.

The managed risk funds covered in this report are Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund. The managed risk funds invest in other funds within the series (the "underlying funds") and employ Milliman FRM to implement the risk management strategy, which consists of using hedging instruments – primarily short positions on exchange-traded futures contracts – to attempt to stabilize the volatility of the funds around target volatility levels and reduce the downside exposure of the funds during periods of significant market declines.

Shareholders approved a proposal to reorganize the series from a Massachusetts business trust to a Delaware statutory trust. The reorganization may be completed in the next 12 months; however, the series reserves the right to delay the implementation.

The investment objectives for each fund covered in this report are as follows:

Global Growth Fund – Seeks to provide long-term growth of capital.

Global Small Capitalization Fund – Seeks to provide long-term growth of capital.

Growth Fund – Seeks to provide growth of capital.

International Fund – Seeks to provide long-term growth of capital.

New World Fund – Seeks long-term capital appreciation.

Blue Chip Income and Growth Fund – Seeks to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing.

Global Growth and Income Fund – Seeks to provide long-term growth of capital while providing current income.

Growth-Income Fund – Seeks to achieve long-term growth of capital and income.

International Growth and Income Fund – Seeks to provide long-term growth of capital while providing current income.

Capital Income Builder – Seeks to provide a level of current income that exceeds the average yield on U.S. stocks generally and to provide a growing stream of income over the years. Secondarily, seeks to provide growth of capital.

Asset Allocation Fund – Seeks to provide high total return consistent with preservation of capital over the long term.

Global Balanced Fund – Seeks the balanced accomplishment of three objectives: long-term growth of capital, conservation of principal and current income.

Bond Fund – Seeks to provide as high a level of current income as is consistent with the preservation of capital.

Global Bond Fund – Seeks to provide, over the long term, a high level of total return consistent with prudent investment management.

High-Income Bond Fund – Seeks to provide a high level of current income and, secondarily, capital appreciation.

Mortgage Fund – Seeks to provide current income and preservation of capital.

Ultra-Short Bond Fund – On May 1, 2016, the fund changed its name from Cash Management Fund to Ultra-Short Bond Fund in accordance with a resolution approved by shareholders on December 4, 2015, to convert the fund to an ultra-short-term bond fund. The fund seeks to provide current income, consistent with the maturity and quality standards applicable to the fund, and preservation of capital and liquidity.

U.S. Government/AAA-Rated Securities Fund – Seeks to provide a high level of current income consistent with preservation of capital.

Managed Risk Growth Fund – Seeks to provide growth of capital while seeking to manage volatility and provide downside protection.

Managed Risk International Fund – Seeks to provide long-term growth of capital while seeking to manage volatility and provide downside protection.

Managed Risk Blue Chip Income and Growth Fund – Seeks to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing, in each case while seeking to manage volatility and provide downside protection.

Managed Risk Growth-Income Fund – Seeks to achieve long-term growth of capital and income while seeking to manage volatility and provide downside protection.

Managed Risk Asset Allocation Fund – Seeks to provide high total return consistent with preservation of capital over the long term while seeking to manage volatility and provide downside protection.

Each fund in the series, except the managed risk funds, offers either three or four share classes (Classes 1, 2, 3 or 4); the managed risk funds offer two share classes (Classes P1 and P2). Holders of all share classes of each fund have equal pro rata rights to assets, dividends and liquidation proceeds of each fund held. Each share class of each fund has identical voting rights, except for the exclusive right to vote on matters affecting only its class. Share classes have different fees and expenses ("class-specific fees and expenses"), primarily due to different arrangements for certain distribution expenses. Differences in class-specific fees and expenses will result in differences in net investment income and, therefore, the payment of different per-share dividends by each class of each fund.

2. Significant accounting policies

Each fund is an investment company that applies the accounting and reporting guidance issued in Topic 946 by the U.S. Financial Accounting Standards Board. Each fund's financial statements have been prepared to comply with U.S. generally accepted accounting principles ("U.S. GAAP"). These principles require the series' investment adviser to make estimates and assumptions that affect reported amounts and disclosures. Actual results could differ from those estimates. Subsequent events, if any, have been evaluated through the date of issuance in the preparation of the financial statements. The funds follow the significant accounting policies described in this section, as well as the valuation policies described in the next section on valuation.

Security transactions and related investment income – Security transactions are recorded by the funds as of the date the trades are executed with brokers. Realized gains and losses from security transactions are determined based on the specific identified cost of the securities. In the event a security is purchased with a delayed payment date, the funds will segregate liquid assets sufficient to meet their payment obligations. Dividend income is recognized on the ex-dividend date and interest income is recognized on an accrual basis. Market discounts, premiums and original issue discounts on fixed-income securities are amortized daily over the expected life of the security.

Fees and expenses – The fees and expenses of the underlying funds held by the managed risk funds are not included in the fees and expenses reported for each of the managed risk funds; however, they are indirectly reflected in the valuation of each of the underlying funds. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables.

Class allocations – Income, fees and expenses (other than class-specific fees and expenses) and realized and unrealized gains and losses are allocated daily among the various share classes of each fund based on their relative net assets. Class-specific fees and expenses, such as distribution expenses, are accrued daily and charged directly to the respective share class of each fund.

Dividends and distributions to shareholders – Dividends and distributions to shareholders are recorded on each fund's ex-dividend date.

Currency translation – Assets and liabilities, including investment securities, denominated in currencies other than U.S. dollars are translated into U.S. dollars at the exchange rates supplied by one or more pricing vendors on the valuation date. Purchases and sales of investment securities and income and expenses are translated into U.S. dollars at the exchange rates on the dates of such transactions. The effects of changes in exchange rates on investment securities are included with the net realized gain or loss and net unrealized appreciation or depreciation on investments in the funds' statements of operations. The realized gain or loss and unrealized appreciation or depreciation resulting from all other transactions denominated in currencies other than U.S. dollars are disclosed separately.

3. Valuation

CRMC, the series' investment adviser, values the funds' investments at fair value as defined by U.S. GAAP. The net asset value of each share class of each fund is generally determined as of approximately 4:00 p.m. New York time each day the New York Stock Exchange is open.

Methods and inputs – The series' investment adviser uses the following methods and inputs to establish the fair value of each fund's assets and liabilities. Use of particular methods and inputs may vary over time based on availability and relevance as market and economic conditions evolve.

Equity securities are generally valued at the official closing price of, or the last reported sale price on, the exchange or market on which such securities are traded, as of the close of business on the day the securities are being valued or, lacking any sales, at the last available bid price. Prices for each security are taken from the principal exchange or market on which the security trades. The value of an underlying fund is based on its reported net asset value.

Fixed-income securities, including short-term securities, are generally valued at prices obtained from one or more pricing vendors. Vendors value such securities based on one or more of the inputs described in the following table. The table provides examples of inputs that are commonly relevant for valuing particular classes of fixed-income securities in which the funds are authorized to invest. However, these classifications are not exclusive and any of the inputs may be used to value any other class of fixed-income security.

Fixed-income class	Examples of standard inputs
All	Benchmark yields, transactions, bids, offers, quotations from dealers and trading systems, new issues, spreads and other relationships observed in the markets among comparable securities; and proprietary pricing models such as yield measures calculated using factors such as cash flows, financial or collateral performance and other reference data (collectively referred to as "standard inputs")
Corporate bonds & notes; convertible securities	Standard inputs and underlying equity of the issuer
Bonds & notes of governments & government agencies	Standard inputs and interest rate volatilities
Mortgage-backed; asset-backed obligations	Standard inputs and cash flows, prepayment information, default rates, delinquency and loss assumptions, collateral characteristics, credit enhancements and specific deal information
Municipal securities	Standard inputs and, for certain distressed securities, cash flows or liquidation values using a net present value calculation based on inputs that include, but are not limited to, financial statements and debt contracts

When the series' investment adviser deems it appropriate to do so (such as when vendor prices are unavailable or not deemed to be representative), fixed-income securities will be valued in good faith at the mean quoted bid and ask prices that are reasonably and timely available (or bid prices, if ask prices are not available) or at prices for securities of comparable maturity, quality and type.

Securities with both fixed-income and equity characteristics, or equity securities traded principally among fixed-income dealers, are generally valued in the manner described for either equity or fixed-income securities, depending on which method is deemed most appropriate by the series' investment adviser. The Government Cash Management Fund held by the managed risk funds is managed to maintain a $1.00 net asset value per share. The net asset value of each share class of each managed risk fund is calculated based on the reported net asset values of the underlying funds in which each fund invests.

Forward currency contracts are valued at the mean of representative quoted bid and ask prices, generally based on prices supplied by one or more pricing vendors. Interest rate swaps and credit default swaps are generally valued by pricing vendors based on market inputs that include the index and term of index, reset frequency, payer/receiver, currency and pay frequency. Exchange-traded futures are generally valued at the official settlement price of, or the last reported sale price on, the exchange or market on which such instruments are traded, as of the close of business on the day the futures are being valued or, lacking any sales, at the last available bid price. Prices for each future are taken from the exchange or market on which the security trades.

Securities and other assets for which representative market quotations are not readily available or are considered unreliable by the series' investment adviser are fair valued as determined in good faith under fair value guidelines adopted by authority of the series' board of trustees as further described. The investment adviser follows fair valuation guidelines, consistent with U.S. Securities and Exchange Commission rules and guidance, to consider relevant principles and factors when making fair value determinations. The investment adviser considers relevant indications of value that are reasonably and timely available to it in determining the fair value to be assigned to a particular security, such as the type and cost of the security; contractual or legal restrictions on resale of the security; relevant financial or business developments of the issuer; actively traded similar or related securities; conversion or exchange rights on the security; related corporate actions; significant events occurring after the close of trading in the security; and changes in overall market conditions. In addition, the closing prices of equity securities and futures that trade in markets outside U.S. time zones may be adjusted to reflect significant events that occur after the close of local trading but before the net asset value of each share class of each fund is determined. Fair valuations and valuations of investments and futures that are not actively trading involve judgment and may differ materially from valuations that would have been used had greater market activity occurred.

Processes and structure — The series' board of trustees has delegated authority to the series' investment adviser to make fair value determinations, subject to board oversight. The investment adviser has established a Joint Fair Valuation Committee (the "Fair Valuation Committee") to administer, implement and oversee the fair valuation process, and to make fair value decisions. The Fair Valuation Committee regularly reviews its own fair value decisions, as well as decisions made under its standing instructions to the investment adviser's valuation teams. The Fair Valuation Committee reviews changes in fair value measurements from period to period and may, as deemed appropriate, update the fair valuation guidelines to better reflect the results of back testing and address new or evolving issues. The Fair Valuation Committee reports any changes to the fair valuation guidelines to the board of trustees with supplemental information to support the changes. The series' board and audit committee also regularly review reports that describe fair value determinations and methods.

The series' investment adviser has also established a Fixed-Income Pricing Review Group to administer and oversee the fixed-income valuation process, including the use of fixed-income pricing vendors. This group regularly reviews pricing vendor information and market data. Pricing decisions, processes and controls over security valuation are also subject to additional internal reviews, including an annual control self-evaluation program facilitated by the investment adviser's compliance group.

Classifications — The series' investment adviser classifies the funds' assets and liabilities into three levels based on the inputs used to value the assets or liabilities. Level 1 values are based on quoted prices in active markets for identical securities. Level 2 values are based on significant observable market inputs, such as quoted prices for similar securities and quoted prices in inactive markets. Certain securities trading outside the U.S. may transfer between Level 1 and Level 2 due to valuation adjustments resulting from significant market movements following the close of local trading. Level 3 values are based on significant unobservable inputs that reflect the investment adviser's determination of assumptions that market participants might reasonably use in valuing the securities.

The valuation levels are not necessarily an indication of the risk or liquidity associated with the underlying investment. For example, U.S. government securities are reflected as Level 2 because the inputs used to determine fair value may not always be quoted prices in an active market. The following tables present the funds' valuation levels as of June 30, 2016 (dollars in thousands):

Global Growth Fund

	Investment securities			
	Level 1	Level 2*	Level 3	Total

Managed Risk Growth Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk International Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk Blue Chip Income and Growth Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk Growth-Income Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk Asset Allocation Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

4. Risk factors

Investing in the funds may involve certain risks including, but not limited to, those described below.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by a fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental or governmental agency responses to economic conditions; and currency exchange, interest rate and commodity price fluctuations.

Issuer risks –The prices of, and the income generated by, securities held by a fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance and strategic initiatives such as mergers, acquisitions or dispositions, and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in income-oriented stocks – Income provided by a fund may be reduced by changes in the dividend policies of, and the capital resources available at, the companies in which the fund invests.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks maybe more volatile than stocks of larger, more established companies.

Investing outside the U.S. – Securities of issuers domiciled outside the U.S., or with significant operations or revenues outside the U.S., may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as the imposition of price controls or punitive taxes, that could adversely impact revenues. Securities markets in certain countries may be more volatile and/or less liquid than those in the U.S. Investments outside the U.S. may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the U.S. In addition, the value of investments outside the U.S. may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the U.S. may be heightened in connection with investments in emerging markets.

Investing in developing countries – Investing in countries with developing economies and/or markets may involve risks in addition to and greater than those generally associated with investing in developed countries. For instance, developing countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, there may be increased settlement risks for transactions in local securities.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, developing countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating a fund's net asset value. Additionally, there may be increased settlement risks for transactions in local securities.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by a fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in a fund having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which a fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The funds' investment adviser relies on its own credit analysts to research issuers and issues in seeking to mitigate various credit and default risks.

Investing in lower rated debt instruments — Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Investing in derivatives — The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional cash securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose a fund to losses in excess of its initial investment. Derivatives may be difficult for a fund to buy or sell at an opportune time or price and may be difficult to terminate or otherwise offset. A fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce a fund's returns and increase a fund's price volatility. A fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction.

Thinly traded securities — There may be little trading in the secondary market for particular bonds, other debt securities or derivatives, which may make them more difficult to value, acquire or sell.

Currency — The prices of, and the income generated by, most debt securities held by a fund may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of a fund's securities denominated in such currencies would generally fall and vice versa. U.S. dollar-denominated securities of foreign issuers may also be affected by changes in relative currency values.

Investing in mortgage-related securities and other asset-backed securities — Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as consumer loans or receivables. Such securities often involve risks that are different from or more acute than the risks associated with investing in other types of debt securities. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in a fund having to reinvest the proceeds in lower yielding securities, effectively reducing a fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing a fund's cash available for reinvestment in higher yielding securities.

Investing in future delivery contracts — Contracts for future delivery of mortgage-related securities, such as to be announced contracts and mortgage dollar rolls, involve a fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase a fund's market exposure, and the market price of the securities the fund contracts to repurchase could drop below their purchase price. While a fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions may increase the turnover rate of a fund.

Investing in inflation linked bonds — The values of inflation linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation linked bonds may also reduce a fund's distributable income during periods of extreme deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation linked securities may decline and result in losses to a fund.

Investing in securities backed by the U.S. government — Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates. Securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in repurchase agreements – Upon entering into a repurchase agreement, a fund purchases a security from a bank or broker-dealer, which simultaneously commits to repurchase the security within a specified time at the fund's cost with interest. The security purchased by the fund constitutes collateral for the seller's repurchase obligation. If the party agreeing to repurchase should default, the fund may seek to sell the security it holds as collateral. The fund may incur a loss if the value of the collateral securing the repurchase obligation has fallen below the repurchase price. The fund may also incur disposition costs and encounter procedural delays in connection with liquidating the collateral.

Interest rate risk – The values and liquidity of the securities held by a fund may be affected by changing interest rates. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. A fund may invest in variable and floating rate securities. Although such securities are generally less sensitive to interest rate changes, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as general interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, a fund may not be able to maintain a positive yield, and, given the historically low interest rate environment, risks associated with rising rates are currently heightened.

Credit and liquidity support – Changes in the credit quality of banks and financial institutions providing credit and liquidity support features with respect to securities held by a fund could cause the values of these securities to decline.

Asset allocation – A fund's percentage allocation to equity securities, debt securities and money market instruments could cause the fund to underperform relative to relevant benchmarks and other funds with similar investment objectives.

Nondiversification – As nondiversified funds, certain funds have the ability to invest a larger percentage of their assets in the securities of a smaller number of issuers than diversified funds. Although the funds do not intend to limit their investments to the securities of a small number of issuers, if they were to do so, poor performance by a single large holding would adversely impact the funds' investment results more than if the funds were invested in a larger number of issuers.

Management – The investment adviser to the funds actively manages the funds' investments. Consequently, the funds are subject to the risk that the methods and analyses employed by the investment adviser in this process may not produce the desired results. This could cause the funds to lose value or their investment results to lag relevant benchmarks or other funds with similar objectives.

Investing in the managed risk funds may involve additional risks including, but not limited to, those described below.

Fund structure – The managed risk funds invest in underlying funds and incur expenses related to those underlying funds. In addition, investors in the managed risk funds will incur fees to pay for certain expenses related to the operations of the managed risk funds. An investor holding the underlying fund directly would incur lower overall expenses but would not receive the benefit of the risk management strategy of the managed risk fund.

Management – The managed risk funds are subject to the risk that the methods employed by the subadviser in implementing the managed risk strategy may not produce the desired results. This could cause the managed risk funds to lose value or their investment results to lag relevant benchmarks or other funds with similar objectives.

Underlying fund risks – Because the managed risk funds' investments consist of individual underlying funds, the managed risk funds' risks are directly related to the risks of the respective underlying fund in which each managed fund invests. For this reason, it is important to understand the risks associated with investing both in the managed risk fund and the respective underlying fund.

Investing in futures contracts – In addition to the risks generally associated with investing in derivative instruments, futures contracts are subject to the creditworthiness of the clearing organizations, exchanges and futures commission merchants with which a fund transacts. Additionally, although futures require only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a futures contract could greatly exceed the initial amount invested. While futures contracts are generally liquid instruments, under certain market conditions, futures may be deemed to be illiquid. For example a fund may be temporarily prohibited from closing out its position in a futures contract if intraday price change limits or limits on trading volume imposed by the applicable futures exchange are triggered. If a fund is unable to close out a position on a futures contract, the fund would remain subject to the risk of adverse price movements until the fund is able to close out the futures position. The ability of a fund to successfully utilize futures contracts may depend in part upon the ability of the fund's investment adviser or subadviser to accurately forecast interest rates and other economic factors and to assess and predict the impact of such economic factors on the futures in which the fund invests. If the investment adviser or subadviser incorrectly forecasts economic developments or incorrectly predicts the impact of such developments on the futures in which it invests, a fund could be exposed to the risk of loss.

Hedging – There may be imperfect or even negative correlation between the prices of the futures contracts and the prices of the underlying securities. For example, futures contracts may not provide an effective hedge because changes in futures contract prices may not track those of the underlying securities or indexes they are intended to hedge. In addition, there are significant differences between the securities and futures markets that could result in an imperfect correlation between the markets, causing a given hedge not to achieve its objectives. The degree of imperfection of correlation depends on circumstances such as variations in speculative market demand for futures, including technical influences in futures trading, and differences between the financial instruments being hedged and the instruments underlying the standard contracts available for trading. A decision as to whether, when and how to hedge involves the exercise of skill and judgment, and even a well-conceived hedge may be unsuccessful to some degree because of market behavior or unexpected interest rate trends. In addition, the fund's investment in exchange-traded futures and their resulting costs could limit the fund's gains in rising markets relative to those of the underlying fund, or to those of unhedged funds in general.

Short positions – Losses from short positions in futures contracts occur when the underlying index increases in value. As the underlying index increases in value, the holder of the short position in the corresponding futures contract is required to pay the difference in value of the futures contract resulting from the increase in the index on a daily basis. Losses from a short position in an index futures contract could potentially be very large if the value of the underlying index rises dramatically in a short period of time.

5. Certain investment techniques

Index-linked bonds – Some of the funds have invested in index-linked bonds, which are fixed-income securities whose principal value is periodically adjusted to a government price index. Over the life of an index-linked bond, interest is paid on the adjusted principal value. Increases or decreases in the principal value of index-linked bonds are recorded as interest income in the fund's statement of operations.

Mortgage dollar rolls – Some of the funds have entered into mortgage dollar roll transactions in which the fund sells a mortgage-backed security to a counterparty and simultaneously enters into an agreement with the same counterparty to buy back a similar security on a specific future date at a predetermined price. Mortgage dollar rolls are accounted for as purchase and sale transactions, which may increase the funds' portfolio turnover rates.

Loan transactions – Some of the funds have entered into loan transactions in which the fund acquires a loan either through an agent, by assignment from another holder, or as a participation interest in another holder's portion of a loan. The loan is often administered by a financial institution that acts as agent for the holders of the loan, and the fund may be required to receive approval from the agent and/or borrower prior to the sale of the investment. The loan's interest rate and maturity date may change based on the terms of the loan, including potential early payments of principal.

Unfunded commitments – Asset Allocation Fund, Global Bond Fund and High-Income Bond Fund have participated in a transaction that involves unfunded commitments, which may obligate each fund to purchase additional shares of the applicable issuer. Under the terms of the commitments, which will expire no later than April 1, 2021, the maximum potential exposure of Asset Allocation Fund, Global Bond Fund and High-Income Bond Fund as of June 30, 2016 was $471,000, $109,000 and $719,000, respectively. Should such commitments become due in full, these amounts would represent less than 0.01% of the net assets of Asset Allocation Fund and 0.04% of the net assets of Global Bond Fund and High-Income Bond Fund, in each case as of June 30, 2016.

Short-term securities – The managed risk funds hold shares of the Government Cash Management Fund, a cash management vehicle offered by the Bank of New York Mellon ("BNY Mellon"), the funds' custodian bank. The Government Cash Management Fund is managed by the Dreyfus Corporation.

Forward currency contracts – Some of the funds have entered into forward currency contracts, which represent agreements to exchange currencies on specific future dates at predetermined rates. The series' investment adviser uses forward currency contracts to manage the fund's exposure to changes in exchange rates. Upon entering into these contracts, risks may arise from the potential inability of counterparties to meet the terms of their contracts and from possible movements in exchange rates.

On a daily basis, the series' investment adviser values forward currency contracts based on the applicable exchange rates and records unrealized appreciation or depreciation for open forward currency contracts in each fund's statement of assets and liabilities. Realized gains or losses are recorded at the time the forward contract is closed or offset by another contract with the same broker for the same settlement date and currency. Closed forward currency contracts that have not reached their settlement date are included in the respective receivables or payables for closed forward currency contracts in each fund's statement of assets and liabilities. Net realized gains or losses from closed forward currency contracts and net unrealized appreciation or depreciation from open forward currency contracts are recorded in each fund's statement of operations. As of June 30, 2016, Global Growth Fund, Global Small Capitalization

Fund, International Fund, New World Fund, Global Growth and Income Fund, Growth-Income Fund, International Growth and Income Fund, Global Balanced Fund, Bond Fund and Global Bond Fund had open forward currency contracts. As of June 30, 2016, High-Income Bond Fund did not have any open forward currency contracts. The average month-end notional amount of open forward currency contracts while held by High-Income Bond Fund was $2,585,000.

Interest rate swaps — Some of the funds have entered into interest rate swaps, which are agreements to exchange one stream of future interest payments for another based on a specified notional amount. Typically, interest rate swaps exchange a fixed interest rate for a payment that floats relative to a benchmark or vice versa. The series' investment adviser uses interest rate swaps to manage the interest rate sensitivity of the fund by increasing or decreasing the duration of the fund or a portion of the fund's portfolio. Risks may arise as a result of the series' investment adviser incorrectly anticipating changes in interest rates, increased volatility, reduced liquidity and the potential inability of counterparties to meet the terms of their agreements.

Upon entering into an interest rate swap contract, the fund is required to deposit cash, U.S. government securities or other liquid securities, which is known as "initial margin." Generally, the initial margin required for a particular interest rate swap is set and held as collateral by the clearinghouse on which the contract is cleared. The amount of initial margin required may be significantly modified from time to time by the clearinghouse during the term of the contract.

On a daily basis, the series' investment adviser records daily interest accruals related to the exchange of future payments as a receivable and payable in each fund's statement of assets and liabilities. Each fund also pays or receives a "variation margin" based on the increase or decrease in the value of the interest rate swaps, including accrued interest, and records variation margin on interest rate swaps in each fund's statement of assets and liabilities. Each fund records realized gains and losses on both the net accrued interest and any gain or loss recognized at the time the interest rate swap is closed or expires. Net realized gains or losses, as well as any net unrealized appreciation or depreciation, from interest rate swaps are recorded in each fund's statement of operations. As of June 30, 2016, Asset Allocation Fund, Bond Fund, Global Bond Fund, Mortgage Fund and U.S. Government/AAA-Rated Securities Fund had open interest rate swaps. As of June 30, 2016, High-Income Bond Fund did not have any open interest rate swaps. The average month-end notional amount of open interest rate swaps while held by High-Income Bond Fund was $31,888,000.

Credit default swap indices — Some of the funds have entered into centrally cleared credit default swap agreements on credit indices ("CDSI") that involve one party (the protection buyer) making a stream of payments to another party (the protection seller) in exchange for the right to receive a specified return upon the occurrence of a credit event, such as a default or restructuring, with respect to any of the underlying issuers (reference obligations) in the referenced index. The series' investment adviser uses credit default swaps to assume exposure to a diversified portfolio of credits or to hedge against existing credit risks.

CDSI are portfolios of credit instruments or exposures designed to be representative of some part of the credit market, such as the high-yield or investment-grade credit market. CDSI are generally traded using standardized terms, including a fixed spread and standard maturity dates, and reference all the names in the index. If there is a credit event, it is settled based on that name's weight in the index. The composition of the underlying issuers or obligations within a particular index may change periodically, usually every six months. A specified credit event may affect all or individual underlying reference obligations included in the index, and will be settled based upon the relative weighting of the affected obligation(s) within the index. The value of each CDSI can be used as a measure of the current payment/performance risk of the CDSI and represents the likelihood of an expected liability or profit should the notional amount of the CDSI be closed or sold as of the period end. An increasing value, as compared to the notional amount of the CDSI, represents a deterioration of the referenced indices' credit soundness and a greater likelihood of risk of default or other credit event occurring as defined under the terms of the agreement. When a fund provides sell protection, its maximum exposure is the notional amount of the credit default swap agreement.

Upon entering into a centrally cleared CDSI contract, the fund is required to deposit with a derivatives clearing member ("DCM") in a segregated account in the name of the DCM an amount of cash, U.S. government securities or other liquid securities, which is known as initial margin. Generally, the initial margin required for a particular credit default swap is set and held as collateral by the clearinghouse on which the contract is cleared. The amount of initial margin required may be significantly modified from time to time by the clearinghouse during the term of the contract. Securities deposited as initial margin are designated on the investment portfolio.

On a daily basis, interest accruals related to the exchange of future payments are recorded as a receivable and payable in each fund's statement of assets and liabilities. Each fund also pays or receives a variation margin based on the increase or decrease in the value of the centrally cleared swaps, and records variation margin in each fund's statement of assets and liabilities. Each fund records realized gains and losses on both the net accrued interest and any gain or loss recognized at the time the swap is closed or expires. Net realized gains or losses, as well as any net unrealized appreciation or depreciation, from credit default swaps are recorded in each fund's statement of operations. As of June 30, 2016, High-Income Bond Fund had open credit default swaps.

Futures contracts – The managed risk funds have entered into futures contracts, which provide for the future sale by one party and purchase by another party of a specified amount of a specific financial instrument for a specified price, date, time and place designated at the time the contract is made. Futures contracts are used to strategically manage portfolio volatility and downside equity risk.

Upon entering into futures contracts, and to maintain the fund's open positions in futures contracts, the fund is required to deposit with a futures broker, or FCM, in a segregated account in the name of the FCM an amount of cash, U.S. government securities, suitable money market instruments, or other liquid securities, known as "initial margin." The margin required for a particular futures contract is set by the exchange on which the contract is traded to serve as collateral, and may be significantly modified from time to time by the exchange during the term of the contract. When initial margin is deposited with brokers, a receivable is recorded in the fund's statement of assets and liabilities.

On a daily basis, each fund pays or receives variation margin based on the increase or decrease in the value of the futures contracts and records variation margin on futures contracts in each fund's statement of assets and liabilities. In addition, each fund segregates liquid assets equivalent to the fund's outstanding obligations under the contract in excess of the initial margin and variation margin, if any. Futures contracts may involve a risk of loss in excess of the variation margin shown on each fund's statement of assets and liabilities. Each fund records realized gains or losses at the time the futures contract is closed or expires. Net realized gains or losses and net unrealized appreciation or depreciation from futures contracts are recorded in each fund's statement of operations. As of June 30, 2016, Mortgage Fund, U.S. Government/AAA-Rated Securities Fund, Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund held futures contracts.

The following tables present the financial statement impacts resulting from the funds' use of forward currency contracts, interest rate swaps, credit default swaps and/or futures contracts as of June 30, 2016 (dollars in thousands):

			Global Growth Fund	Global Small Capitalization Fund	International Fund
Assets	**Risk type**	**Location on statements of assets and liabilities**			
Forward currency	Currency	Unrealized appreciation on open forward currency contracts	$ –	$4,683	$ 4,735

*Includes cumulative appreciation/depreciation on interest rate swaps, credit default swaps and/or futures contracts as reported in the applicable table(s) following each fund's investment portfolio. Only current day's variation margin is reported within the statements of assets and liabilities.

Collateral – Funds that invest in forward currency contracts, interest rate swaps, credit default swaps, futures contracts and/or future delivery contracts participate in a collateral program. For forward currency contracts, the program calls for the fund to either receive or pledge collateral based on the net gain or loss on unsettled forward currency contracts by counterparty. For interest rate swaps, credit default swaps and futures contracts, the program calls for the fund to pledge collateral for initial and variation margin by contract. For future delivery contracts, the program calls for the fund to either receive or pledge collateral based on the net gain or loss on unsettled contracts by certain counterparties. The purpose of the collateral is to cover potential losses that could occur in the event that either party cannot meet its contractual obligations.

Rights of offset – Funds that hold forward currency contracts have enforceable master netting agreements with certain counterparties, where amounts payable by each party to the other in the same currency (with the same settlement date and with the same counterparty) are settled net of each party's payment obligation. If an early termination date occurs under these agreements following an event of default or termination event, all obligations of each party to its counterparty are settled net through a single payment in a single currency ("close-out netting"). For financial reporting purposes, the funds do not offset financial assets and financial liabilities that are subject to these master netting arrangements in the statements of assets and liabilities.

The following tables present each fund's forward currency contracts by counterparty that are subject to master netting agreements but that are not offset in the funds' statements of assets and liabilities. The net amount column shows the impact of offsetting on the funds' statement of assets and liabilities as of June 30, 2016 if close-out netting was exercised (dollars in thousands):

Global Growth Fund

Counterparty	Gross amounts recognized in the statement of assets and liabilities	Gross amounts not offset in the statement of assets and liabilities and subject to a master netting agreement			Net amount
		Available to offset	Non-cash collateral*	Cash collateral

6. Taxation and distributions

Federal income taxation – Each fund complies with the requirements under Subchapter M of the Internal Revenue Code applicable to mutual funds and intends to distribute substantially all of its net taxable income and net capital gains each year. The funds are not subject to income taxes to the extent such distributions are made. Therefore, no federal income tax provision is required.

As of and during the period ended June 30, 2016, none of the funds had a liability for any unrecognized tax benefits. Each fund recognizes interest and penalties, if any, related to unrecognized tax benefits as income tax expense in the statements of operations. During the period, none of the funds incurred any significant interest or penalties.

The funds are not subject to examination by U.S. federal tax authorities for tax years before 2012. Managed Risk Asset Allocation Fund is not subject to examination by U.S. federal tax authorities for tax years before 2012, the year the fund commenced operations. Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund and Managed Risk Growth-Income Fund are not subject to examination by U.S. federal tax authorities for tax years before 2013, the year the funds commenced operations. Capital Income Builder is not subject to examination by U.S. federal tax authorities for tax years before 2014, the year the fund commenced operations.

The funds are not subject to examination by state tax authorities for tax years before 2011. Global Balanced Fund and Mortgage Fund are not subject to examination by state tax authorities for tax years before 2011, the year the funds commenced operations. Managed Risk Asset Allocation Fund is not subject to examination by state tax authorities for tax years before 2012, the year the fund commenced operations. Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund and Managed Risk Growth-Income Fund are not subject to examination by state tax authorities for tax years before 2013, the year the funds commenced operations. Capital Income Builder is not subject to examination by state tax authorities for tax years before 2014, the year the fund commenced operations.

The following funds are not subject to examination by tax authorities outside the U.S. for the years indicated: Global Growth Fund, Global Small Capitalization Fund, International Fund, New World Fund and Global Growth and Income Fund for tax years before 2009; Growth Fund and Growth-Income Fund for tax years before 2010; International Growth and Income Fund and Global Balanced Fund for tax years before 2011; and Asset Allocation Fund, Bond Fund and Global Bond Fund for tax years before 2015. All other funds are not subject to examination by tax authorities outside the U.S.

Non-U.S. taxation — Dividend and interest income are recorded net of non-U.S. taxes paid. The funds may file withholding tax reclaims in certain jurisdictions to recover a portion of amounts previously withheld. As a result of recent rulings from European courts, some of the funds filed for additional reclaims related to prior years. These reclaims are recorded when the amount is known and there are no significant uncertainties on collectability. Gains realized by the funds on the sale of securities in certain countries are subject to non-U.S. taxes. The funds record a liability based on unrealized gains to provide for potential non-U.S. taxes payable upon the sale of these securities.

Distributions — Distributions paid to shareholders are based on net investment income and net realized gains determined on a tax basis, which may differ from net investment income and net realized gains for financial reporting purposes. These differences are due primarily to different treatment for items such as currency gains and losses; short-term capital gains and losses; capital losses related to sales of certain securities within 30 days of purchase; unrealized appreciation of certain investments in securities outside the U.S.; deferred expenses; cost of investments sold; non-U.S. taxes on capital gains; paydowns on fixed-income securities; net capital losses; net operating losses; amortization of premiums and discounts; and income on certain investments. The fiscal year in which amounts are distributed may differ from the year in which the net investment income and net realized gains are recorded by the funds for financial reporting purposes.

As indicated in the tables in this section, some of the funds had capital loss carryforwards available at December 31, 2015. These will be used to offset any capital gains realized by the funds in the current year or in subsequent years through the expiration dates. Funds with capital loss carryforwards will not make distributions from capital gains while a capital loss carryforward remains.

Under the Regulated Investment Company Modernization Act of 2010 (the "Act"), net capital losses recognized after December 31, 2010, may be carried forward indefinitely, and their character is retained as short-term and/or long-term losses. Previously, net capital losses were carried forward for eight years and treated as short-term losses. As a transition rule, the Act requires that post-enactment net capital losses be used before pre-enactment net capital losses.

7. Fees and transactions

CRMC, the series' investment adviser, is the parent company of American Funds Distributors,® Inc. ("AFD"), the distributor of the series' shares, and American Funds Service Company® ("AFS"), the series' transfer agent. CRMC, AFD and AFS are considered related parties to the series.

Investment advisory services – The series has an investment advisory and service agreement with CRMC that provides for monthly fees accrued daily. These fees are based on annual rates that generally decrease as average net asset levels increase. CRMC receives investment advisory fees from the underlying funds held by the managed risk funds. Effective January 1, 2016, CRMC reduced the investment advisory services fee from an annual rate of 0.250% of average daily net assets to 0.150% of average daily net assets for the managed risk funds. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables. Subadvisory fees for the managed risk funds are paid by CRMC to Milliman FRM. The managed risk funds are not responsible for paying any subadvisory fees.

Investment advisory services waivers – The series' board of trustees approved an amended agreement for Asset Allocation Fund effective February 1, 2016, decreasing the annual rate on average daily net assets in excess of $21 billion to 0.240%. CRMC is waiving a portion of its investment advisory services fees for each of the managed risk funds. Investment advisory services fees are presented in each fund's statement of operations gross of the waivers from CRMC. For the six months ended June 30, 2016, total investment advisory services fees waived by CRMC were $833,000.

The range of rates and asset levels, and the current annualized rates of average net assets for each fund before and after any investment advisory services waivers (if applicable), are as follows:

Fund	Rates		Net asset level (in billions)		For the period ended June 30, 2016, before waiver	For the period ended June 30, 2016, after waiver

Distribution services – The series has plans of distribution for all share classes except Class 1. Under the plans, the board of trustees approves certain categories of expenses that are used to finance activities primarily intended to sell fund shares. The plans provide for payments to pay service fees to firms that have entered into agreements with the series. These payments, based on an annualized percentage of average daily net assets, range from 0.18% to 0.50% as noted in the table below. In some cases, the board of trustees has limited the amounts that may be paid to less than the maximum allowed by the plans.

Share class	Currently approved limits	Plan limits
Class 2	0.25%	0.25%
Class 3	0.18	0.18
Class 4	0.25	0.25
Class P1	0.00	0.25
Class P2	0.25	0.50

Insurance administrative services – The series has an insurance administrative services plan for Class 4, P1 and P2 shares. Under the plan, these share classes pay 0.25% of each insurance company's respective average daily net assets in each share class to compensate the insurance companies for services provided to their separate accounts and contractholders for which the shares of the fund are beneficially owned as underlying investments of such contractholders' annuities. These services include, but are not limited to, maintenance, shareholder communications and transactional services. The insurance companies are not related parties to the series.

Transfer agent services – The series has a shareholder services agreement with AFS under which the funds compensate AFS for providing transfer agent services to all of the funds' share classes. These services include recordkeeping, shareholder communications and transaction processing. In addition, the managed risk funds reimburse AFS for amounts paid to third parties for performing transfer agent services on behalf of fund shareholders.

Administrative services – The series has an administrative services agreement with CRMC to provide administrative services to all of the funds' share classes. The services include, but are not limited to, coordinating, monitoring, assisting and overseeing third parties that provide services to fund shareholders. Under the agreement, each share class of each fund, except the managed risk funds, pays an annual fee of 0.01% based on its respective average daily net assets to compensate CRMC for providing administrative services. For the

managed risk funds, CRMC receives administrative services fees of 0.01% of average daily net assets from Class 1 shares of the underlying funds for administrative services provided to the series.

Accounting and administrative services – The managed risk funds have a subadministration agreement with BNY Mellon under which the fund compensates BNY Mellon for providing accounting and administrative services to each of the managed risk funds' share classes. These services include, but are not limited to, fund accounting (including calculation of net asset value), financial reporting and tax services. BNY Mellon is not a related party to the managed risk funds.

Reimbursement of fees and expenses – CRMC is currently reimbursing a portion of other expenses for each of the managed risk funds so that each fund's expenses do not exceed 0.28% of its respective average daily net assets. Other expenses exclude investment advisory services and distribution services fees. For the six months ended June 30, 2016, total expenses reimbursed by CRMC were $289,000.

Class-specific expenses under the agreements described above were as follows (dollars in thousands):

Trustees' deferred compensation – Trustees who are unaffiliated with CRMC may elect to defer the cash payment of part or all of their compensation. These deferred amounts, which remain as liabilities of the funds, are treated as if invested in one or more of the American Funds. These amounts represent general, unsecured liabilities of the funds and vary according to the total returns of the selected funds. Trustees' compensation, shown on the accompanying financial statements, reflects current fees (either paid in cash or deferred) and a net increase in the value of the deferred amounts as follows (dollars in thousands):

	Current fees	Increase in value of deferred amounts	Total trustees' compensation

Affiliated officers and trustees – Officers and certain trustees of the series are or may be considered to be affiliated with CRMC, AFD and AFS. No affiliated officers or trustees received any compensation directly from any fund in the series.

Security transactions with related funds – The funds may purchase from, or sell securities to, other CRMC-managed funds (or funds managed by certain affiliates of CRMC) under procedures adopted by the fund's board of trustees. The funds involved in such transactions are considered related by virtue of having a common investment adviser (or affiliated investment advisers), common trustees and/or common officers. When such transactions occur, each transaction is executed at the current market price of the security and no brokerage commissions or fees are paid in accordance with Rule 17a-7 of the 1940 Act. During the six months ended June 30, 2016, such purchase and sale transactions occurred between Global Growth Fund and related funds in the amounts of $652,454,000 and $819,688,000, respectively.

8. Committed line of credit

Global Small Capitalization Fund and High-Income Bond Fund participate with other funds managed by CRMC in a $500 million credit facility (the "line of credit") to be utilized for temporary purposes to fund shareholder redemptions. Each fund has agreed to pay commitment fees on its pro-rata portion of the line of credit, which are reflected in other expenses in each fund's statement of operations. During the period, neither fund borrowed on this line of credit.

9. Capital share transactions

Capital share transactions in the funds were as follows (dollars and shares in thousands):

Global Growth Fund

	Sales*		Reinvestments of dividends and distributions		Repurchases*		Net increase (decrease)

[1]Based on average shares outstanding.
[2]Unaudited.
[3]Based on operations for the period shown and, accordingly, is not representative of a full year.
[4]Not annualized.
[5]Annualized.
[6]The year ended December 31, 2014, reflects the impact of a corporate action event that resulted in a one-time increase to net investment income. If the corporate action event had not occurred, the net investment income per share and ratio of net income to average net assets would have been lower for all share classes.
[7]Class 4 shares were offered beginning December 14, 2012.
[8]All or a significant portion of assets in this class consisted of seed capital invested by CRMC and/or its affiliates. Certain fees (including, where applicable, fees for distribution services) are not charged or accrued on these seed capital assets. If such fees were paid by the fund on seed capital assets, fund expenses would have been higher and net income and total return would have been lower.
[9]Amount less than $1 million.
[10]For the period May 1, 2014, commencement of operations, through December 31, 2014.
[11]For the period May 2, 2011, commencement of operations, through December 31, 2011.
[12]Amount less than $.01.
[13]On May 1, 2016, the fund converted from a cash fund to an ultra-short-term bond fund and changed its name from Cash Management Fund to Ultra-Short Bond Fund.
[14]This column reflects the impact of certain waivers/reimbursements by CRMC. CRMC waived a portion of investment advisory services and reimbursed certain expenses for the managed risk funds.
[15]Ratio reflects weighted average net expense ratio of the underlying fund for the period presented. See Expense Example for further information regarding fees and expenses.
[16]For the period May 1, 2013, commencement of operations, through December 31, 2013.
[17]Amount less than .01%.
[18]For the period September 28, 2012, commencement of operations, through December 31, 2012.
[19]Refer to Note 5 for further information on mortgage dollar rolls.
[20]Amount less than 1%.

See Notes to Financial Statements

Expense example

unaudited

The funds in American Funds Insurance Series serve as the underlying investment vehicle for various insurance products. As an owner of an insurance contract that invests in one of the funds in the series, you incur two types of costs: (1) transaction costs, such as initial sales charges on purchase payments and contingent deferred sales charges on redemptions (loads), and (2) ongoing costs, including management fees, distribution and service (12b-1) fees, and other expenses. Additional fees are charged by the insurance companies related to the various benefits they provide. This example is intended to help you understand your ongoing costs (in dollars) of investing in the underlying funds so you can compare these costs with the ongoing costs of investing in other mutual funds that serve a similar function in other annuity products. The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire six-month period (January 1, 2016, through June 30, 2016).

Actual expenses:

The first line of each share class in the tables on the following pages provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the first line under the heading entitled "Expenses paid during period" to estimate the expenses you paid on your account during this period.

Hypothetical example for comparison purposes:

The second line of each share class in the tables on the following pages provides information about hypothetical account values and hypothetical expenses based on the actual expense ratio for the share class and an assumed rate of return of 5.00% per year before expenses, which is not the actual return of the share class. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the fund and other funds. To do so, compare this 5.00% hypothetical example with the 5.00% hypothetical examples that appear in the shareholder reports of the other funds.

Notes:

Additional fees are charged by the insurance companies related to the various benefits they provide. You can estimate the impact of these fees by adding the amount of the fees to the total estimated expenses you paid on your account during the period as calculated above. In addition, your ending account value would be lower by the amount of these fees.

Note that the expenses shown in the tables on the following pages are meant to highlight your ongoing costs only and do not reflect any transactional costs. Therefore, the second line of each share class in the tables is useful in comparing ongoing costs only and will not help you determine the relative total costs of owning different funds. In addition, if these transactional costs were included, your costs would have been higher.

	Beginning account value 1/1/2016	Ending account value 6/30/2016	Expenses paid during period[1]	Annualized expense ratio

[1]The "expenses paid during period" are equal to the "annualized expense ratio," multiplied by the average account value over the period, multiplied by the number of days in the period, and divided by 366 (to reflect the one-half year period).

[2]The "expenses paid during period" and "annualized expense ratio" do not include the expenses of the underlying funds in which each fund invests.

[3]The "effective expenses paid during period" are equal to the "effective annualized expense ratio," multiplied by the average account value over the period, multiplied by the number of days in the period, and divided by 366 (to reflect the period).

[4]The "effective annualized expense ratio" reflects the net annualized expense ratio of the class plus the class's pro-rata share of the weighted average expense ratio of the underlying funds in which it invests.

Investors should carefully consider investment objectives, risks, charges and expenses. This and other important information is contained in the series prospectuses and summary prospectuses, which can be obtained from your financial professional and should be read carefully before investing. You may also call American Funds Service Company (AFS) at (800) 421-4225 or visit the American Funds website at americanfunds.com.

"American Funds Proxy Voting Procedures and Principles" – which describes how we vote proxies relating to portfolio securities – is available on the American Funds website or upon request by calling AFS. The series files its proxy voting record with the U.S. Securities and Exchange Commission (SEC) for the 12 months ended June 30 by August 31. The proxy voting record is available free of charge on the SEC website at sec.gov and on the American Funds website.

Complete June 30, 2016, portfolios of American Funds Insurance Series investments are available free of charge by calling AFS or visiting the SEC website (where they are part of Form N-CSR).

American Funds Insurance Series files a complete list of its portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. This filing is available free of charge on the SEC website. You may also review or, for a fee, copy this filing at the SEC's Public Reference Room in Washington, D.C. Additional information regarding the operation of the Public Reference Room may be obtained by calling the SEC's Office of Investor Education and Advocacy at (800) SEC-0330. Additionally, the list of portfolio holdings is available by calling AFS.

This report is for the information of American Funds Insurance Series investors, but it also may be used as sales literature when preceded or accompanied by the current prospectuses or summary prospectuses for American Funds Insurance Series and the prospectus for the applicable insurance contract, which give details about charges, expenses, investment objectives and operating policies of the series. If used as sales material after September 30, 2016, this report must be accompanied by a statistical update for the most recently completed calendar quarter.

The American Funds Advantage℠

Since 1931, American Funds, part of Capital Group, has helped investors pursue long-term investment success. Our consistent approach – in combination with The Capital System℠ – has resulted in a superior long-term track record for American Funds Insurance Series®.

Aligned with investor success

We base our decisions on a long-term perspective, which we believe aligns our goals with the interests of our clients. American Funds Insurance Series (AFIS) portfolio managers average 26 years of investment experience, including 23 years at our company, reflecting a career commitment to our long-term approach.[1]

The Capital System℠

The Capital System combines individual accountability with teamwork. Funds using The Capital System are divided into portions that are managed independently by investment professionals with diverse backgrounds, ages and investment approaches. An extensive global research effort is the backbone of our system.

Superior long-term track record

Our AFIS equity funds have beaten their comparable Lipper indexes in 91% of 10-year periods and 100% of 20-year periods. Our AFIS fixed income funds have beaten comparable Lipper indexes in 55% of 10-year periods and 87% of 20-year periods.[2] We strive to keep management fees competitive. Over the past 20 years, most funds' fees have been below industry averages.[3]

[1] Portfolio manager experience as of November 2015.

[2]Based on Class 2 share results for rolling periods through December 31, 2015. Periods covered are the shorter of the fund's lifetime or since the inception date of the comparable Lipper index (except Global Small Capitalization Fund, for which the Lipper average was used). The comparable Lipper indexes are: Global Funds Index (Global Growth Fund), Growth Funds Index (Growth Fund), International Funds Index (International Fund), Emerging Markets Funds Index (New World Fund), Growth & Income Funds Index (Blue Chip Income and Growth Fund, Growth-Income Fund), Balanced Portfolio Funds Index (Asset Allocation Fund), Core Bond Funds Index (Bond Fund), High Yield Funds Index (High-Income Bond Fund) and General U.S. Government Funds Index (U.S. Government/ AAA-Rated Securities Fund).

[3]Based on management fees for the 20-year period ended December 31, 2015, versus comparable Lipper categories, excluding funds of funds.

AMERICAN FUNDS®

From Capital Group

American Funds Insurance Series®

Semi-annual report
for the six months ended
June 30, 2016

American Funds Insurance Series, from Capital Group, is the underlying investment vehicle for many variable annuities and insurance products. For 85 years, Capital has invested with a long-term focus based on thorough research and attention to risk. All the variable funds in American Funds Insurance Series may not be available in your product.

Investing for short periods makes losses more likely. Investments are not FDIC-insured, nor are they deposits of or guaranteed by a bank or any other entity, so they may lose value. For current information and month-end results, visit americanfunds.com/afis. For information about your insurance contract and month-end results, go to the website of the company that issued your contract.

Investing outside the United States may be subject to risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Investing in small-capitalization stocks can involve greater risk than is customarily associated with investing in stocks of larger, more established companies. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. High-yield bonds are subject to greater fluctuations in value and risk of loss of income and principal than investment-grade bonds. Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch as an indication of an issuer's creditworthiness. Futures contracts may not provide an effective hedge of the underlying securities because changes in the prices of futures contracts may not track those of the securities they are intended to hedge. In addition, the managed risk strategy may not effectively protect the funds from market declines and will limit the funds participation in market gains. The use of the managed risk strategy could cause the funds' returns to lag those of the applicable underlying funds in certain rising market conditions. Refer to the funds' prospectuses and the Risk Factors section of this report for more information on these and other risks associated with investing in the funds.

Fellow investors:

Market returns were mixed for the six months ended June 30, 2016. U.S. and emerging markets stocks closed higher while many European markets fell. Slowing global growth, aggressive action on the part of central banks, the possibility of another interest rate hike in the U.S. and the decision by British voters to leave the European Union created uncertainty for investors.

Global equity market returns were tepid in aggregate, as the MSCI World Index rose 0.66%* for the period, but there were pockets of strength and weakness. Emerging markets registered some of the best results as the MSCI EM (Emerging Markets) Index climbed 6.41%. Brazil (+46.34%), Russia (+20.43%), Indonesia (+15.79%) and South Africa (+15.64%) were among the biggest gainers. A rebound in commodity prices, expectations for political reform and economic stimulus measures fueled returns.

The MSCI USA Index advanced 3.58%, helped in part by stronger job and housing numbers.

Sluggish growth, deflationary pressures and the potential impact of a "Brexit" dampened returns in a number of European markets. Overall, the MSCI Europe Index declined 5.13%, with Italy (–20.89%), Ireland (–13.61%) and Spain (–11.45%) suffering double-digit losses. Elsewhere among developed markets, Japan slipped 5.58%, hindered by a strengthening yen and the effects of negative interest rates on its banking system.

In bond markets, U.S. investment-grade and high-yield corporates advanced 7.68% and 9.06%, respectively, as investors sought higher yields than those offered by U.S. Treasuries. Barclays Global Aggregate Index, a measure of global investment-grade bonds (rated BBB/Baa and above), rose 8.96%, while the Barclays U.S. Aggregate Index (which measures U.S. investment-grade bonds) improved 5.31%. The 10-year Treasury yield, which stood at 2.27% on December 31, 2015, dropped to 1.49% as weak employment data and the Brexit referendum lowered expectations of a rate hike by the Federal Reserve. U.S. dollar–denominated emerging markets bonds, as measured by the J.P. Morgan EMBI (Emerging Markets Bond Index) Global, rose 10.90% as their higher yields were popular in a low-rate environment.

The U.S. dollar depreciated against most currencies. In developed markets, gains were led by the Japanese yen (+17.26%), Canadian dollar (+6.96%) and Singapore dollar (+5.41%). The Swiss franc and euro also improved, up 2.75% and 2.27%, respectively. The British pound, however, declined 9.30% against the greenback.

* Country returns are based on MSCI indexes, which reflect reinvestment of distributions and dividends net of withholding taxes, except for the MSCI USA Index, which reflects dividends gross of withholding taxes. All market indexes referenced in this report are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index.

Among developing markets, the Brazilian real (+23.49%) and Russian ruble (+14.34%) finished strong, while the Mexican peso (–6.39%) and Chinese renminbi (–2.26%) fell. Currency returns are calculated by MSCI.

AFIS funds with exposure to U.S. equities and REITS fared well during the period. With the exception of Ultra-Short Bond Fund, which was hampered by low short-term interest rates, the series' bond funds all recorded positive returns. On May 1, 2016, the Cash Management Fund was converted to Ultra-Short Bond Fund in accordance with shareholder approval on December 4, 2015.

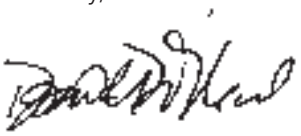
Looking ahead

The U.S. economy continues to show signs of slow improvement, even as many countries around the globe struggle with sluggish growth and low inflation. As the Fed adopts a more data-driven approach to rate hikes and central banks focus on lowering rates to inject liquidity into the global financial system, we could have a "lower-for-longer" rate environment. We will, of course, closely monitor the impact to security markets and currencies. We are also headed into the final innings of the U.S. presidential election cycle, and will be watching for changes in that arena. We may be in a low-return environment overall, but we will continue to actively seek securities that are particularly attractive due to their innovation, fundamentals or valuation levels.

Our investment approach – based on extensive research, a long-term outlook and close attention to valuation – has served investors well over time. We continue to have confidence this will remain the case, and thank you for your support.

We look forward to reporting to you again in six months' time.

Sincerely,



Donald D. O'Neal
Vice Chairman of the Board

Alan N. Berro
President

August 9, 2016

Summary investment portfolios

Summary investment portfolios are designed to streamline this report and help investors better focus on the funds' principal holdings. Ultra-Short Bond Fund,* Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund show a complete listing of portfolio holdings. See the inside back cover for details on how to obtain a complete schedule of portfolio holdings for each fund in the series.

Unless otherwise indicated, American Funds Insurance Series investment results are for Class 2 shares (Class P2 shares for managed risk funds). Class 2 shares began operations on April 30, 1997. Class 3 shares began operations on January 16, 2004. Class 4 shares began operations on December 14, 2012. Results encompassing periods prior to those dates assume a hypothetical investment in Class 1 shares and include the deduction of additional annual expenses (0.25% for Class 2 shares, 0.18% for Class 3 shares and 0.50% for Class 4 shares).

The variable annuities and life insurance contracts that use the series funds contain certain fees and expenses not reflected in this report. Investment results assume all distributions are reinvested and reflect applicable fees and expenses. The series investment adviser waived a portion of its management fees for all existing funds from September 1, 2004, through December 31, 2008, for U.S. Government/AAA-Rated Securities Fund from July 1, 2010, through December 31, 2010, and for Blue Chip Income and Growth Fund from February 1, 2014, through January 31, 2015. For the managed risk funds, the investment adviser is currently waiving a portion of its management fee equal to 0.05% of the funds' net assets and is currently reimbursing a portion of other expenses so that they will not exceed 0.28%. The waivers and reimbursements will be in effect through at least May 1, 2017, unless modified or terminated by the series board. After that time, the investment adviser may elect to extend, modify or terminate the reimbursements. The waivers may only be modified or terminated with the approval of the series board. Applicable fund results shown reflect the waivers and reimbursements, without which results would have been lower. See the Financial Highlights table in this report for details.

Although Capital Income Builder has a plan of distribution for Class 2 shares, fees for distribution services are not paid on amounts invested in the fund by the investment adviser and/or its affiliates. If fees for these services were charged on these assets, fund results would have been lower and expenses would have been higher. See the "Plans of distribution" section of the prospectus for information on the fees for distribution permitted to be charged by the funds.

Individual funds are listed in this report according to their risk potential, with managed risk funds listed last.

*Effective May 1, 2016, Cash Management Fund was converted to American Funds Insurance Series – Ultra-Short Bond Fund.℠

Growth Fund

Fund results shown are for past periods and are not predictive of results for future periods. Current and future results may be lower or higher than those shown. Unit prices and returns will vary, so investors may lose money. For current information and month-end results, visit americanfunds.com/afis. For information about your insurance contract and month-end results, go to the website of the company that issued your contract.

Growth Fund gained 0.95% for the six months ended June 30, 2016. Standard & Poor's 500 Composite Index, a market capitalization-weighted index based on the results of 500 widely held common stocks, rose 3.84%.

The beginning of 2016 was volatile amid weaker global economic growth. Central banks have focused on accommodative monetary policies to stimulate economies, but this has not helped. Post-Brexit, concerns of a potential economic downturn in Europe have increased amid a slowdown in China and Japan.

Stock selection in the information technology, consumer discretionary and energy sectors contributed most to the fund in relative terms. Consumer discretionary company, Ulta Salon, and energy company, Concho Resources, were among the top five contributors to relative returns.

Early in the year, investments in the health care sector hurt, with Regeneron Pharmaceuticals, Incyte and Vertex Pharmaceuticals among the top five detractors to relative returns. Over the year, a reduction in biotechnology holdings and an increase in investments in Medtronic and UnitedHealth Group were beneficial.

Overall, the fund's modest holdings outside the U.S. added relative value. Canada, Taiwan and the Netherlands were primary contributors, while the U.S., the U.K. and Japan were the main detractors.

The fund's portfolio managers will continue to look closely at sectors that have been under pressure recently such as energy, as well as investment opportunities in defensive sectors such as consumer staples that offer value and the potential for growth.

Growth Fund

This summary investment portfolio is designed to streamline the report and help investors better focus on the fund's principal holdings. See the inside back cover for details on how to obtain a complete schedule of portfolio holdings.

As permitted by U.S. Securities and Exchange Commission regulations, "Miscellaneous" securities include holdings in their first year of acquisition that have not previously been publicly disclosed.

"Other securities" includes all issues that are not disclosed separately in the summary investment portfolio.

Investments in affiliates

A company is an affiliate of the fund under the Investment Company Act of 1940 if the fund's holdings in that company represent 5% or more of the outstanding voting shares. The value of the fund's affiliated-company holdings is included in the value of "Other securities" under the respective industry sectors. Further details on such holdings and related transactions during the six months ended June 30, 2016, appear below.

	Beginning shares	Additions	Reductions	Ending shares	Dividend income (000)	Value of affiliates at 6/30/2016 (000)
KGen Power Corp.[1,2,4]	3,166,128	–	–	3,166,128	$ –	$1,437
Oshkosh Corp.[5]	4,947,000	–	2,752,541	2,194,459	1,709	–
					$1,709	$1,437

The following footnotes apply to either the individual securities noted or one or more of the securities aggregated and listed as a single line item.

[1]Security did not produce income during the last 12 months.
[2]Valued under fair value procedures adopted by authority of the board of trustees. The total value of all such securities, including those in "Miscellaneous" and "Other securities," was $1,311,684,000, which represented 6.21% of the net assets of the fund. This amount includes $1,297,142,000 related to certain securities trading outside the U.S. whose values were adjusted as a result of significant market movements following the close of local trading.
[3]Acquired in a transaction exempt from registration under Section 4(2) of the Securities Act of 1933. May be resold in the U.S. in transactions exempt from registration, normally to qualified institutional buyers. The total value of all such securities, including those in "Other securities," was $300,436,000, which represented 1.42% of the net assets of the fund.
[4]Acquired through a private placement transaction exempt from registration under the Securities Act of 1933. May be subject to legal or contractual restrictions on resale. Further details on these holdings appear below.
[5]Unaffiliated issuer at 6/30/2016.

Private placement securities	Acquisition date	Cost (000)	Value (000)	Percent of net assets
KGen Power Corp.	12/19/2006	$ 1,203	$ 1,437	.01%
Other securities	5/22/2015	10,650	13,104	.06
Total private placement securities		11,853	14,541	.07%

1. Organization

American Funds Insurance Series (the "series") is registered under the Investment Company Act of 1940 as an open-end, diversified management investment company with 28 different funds (the "funds"). Twenty-three funds in the series are covered in this report. The other five funds in the series are covered in a separate report. The assets of each fund are segregated, with each fund accounted for separately. Capital Research and Management Company ("CRMC") is the series' investment adviser. Milliman Financial Risk Management LLC ("Milliman FRM") is the subadviser for the risk management strategy for eight of the funds (the "managed risk funds"), five of which are covered in this report.

The managed risk funds covered in this report are Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund. The managed risk funds invest in other funds within the series (the "underlying funds") and employ Milliman FRM to implement the risk management strategy, which consists of using hedging instruments – primarily short positions on exchange-traded futures contracts – to attempt to stabilize the volatility of the funds around target volatility levels and reduce the downside exposure of the funds during periods of significant market declines.

Shareholders approved a proposal to reorganize the series from a Massachusetts business trust to a Delaware statutory trust. The reorganization may be completed in the next 12 months; however, the series reserves the right to delay the implementation.

The investment objectives for each fund covered in this report are as follows:

Global Growth Fund – Seeks to provide long-term growth of capital.

Global Small Capitalization Fund – Seeks to provide long-term growth of capital.

Growth Fund – Seeks to provide growth of capital.

International Fund – Seeks to provide long-term growth of capital.

New World Fund – Seeks long-term capital appreciation.

Blue Chip Income and Growth Fund – Seeks to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing.

Global Growth and Income Fund – Seeks to provide long-term growth of capital while providing current income.

Growth-Income Fund – Seeks to achieve long-term growth of capital and income.

International Growth and Income Fund – Seeks to provide long-term growth of capital while providing current income.

Capital Income Builder – Seeks to provide a level of current income that exceeds the average yield on U.S. stocks generally and to provide a growing stream of income over the years. Secondarily, seeks to provide growth of capital.

Asset Allocation Fund – Seeks to provide high total return consistent with preservation of capital over the long term.

Global Balanced Fund – Seeks the balanced accomplishment of three objectives: long-term growth of capital, conservation of principal and current income.

Bond Fund – Seeks to provide as high a level of current income as is consistent with the preservation of capital.

Global Bond Fund – Seeks to provide, over the long term, a high level of total return consistent with prudent investment management.

High-Income Bond Fund – Seeks to provide a high level of current income and, secondarily, capital appreciation.

Mortgage Fund – Seeks to provide current income and preservation of capital.

Ultra-Short Bond Fund – On May 1, 2016, the fund changed its name from Cash Management Fund to Ultra-Short Bond Fund in accordance with a resolution approved by shareholders on December 4, 2015, to convert the fund to an ultra-short-term bond fund. The fund seeks to provide current income, consistent with the maturity and quality standards applicable to the fund, and preservation of capital and liquidity.

U.S. Government/AAA-Rated Securities Fund – Seeks to provide a high level of current income consistent with preservation of capital.

Managed Risk Growth Fund – Seeks to provide growth of capital while seeking to manage volatility and provide downside protection.

Managed Risk International Fund – Seeks to provide long-term growth of capital while seeking to manage volatility and provide downside protection.

Managed Risk Blue Chip Income and Growth Fund – Seeks to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing, in each case while seeking to manage volatility and provide downside protection.

Managed Risk Growth-Income Fund – Seeks to achieve long-term growth of capital and income while seeking to manage volatility and provide downside protection.

Managed Risk Asset Allocation Fund – Seeks to provide high total return consistent with preservation of capital over the long term while seeking to manage volatility and provide downside protection.

Each fund in the series, except the managed risk funds, offers either three or four share classes (Classes 1, 2, 3 or 4); the managed risk funds offer two share classes (Classes P1 and P2). Holders of all share classes of each fund have equal pro rata rights to assets, dividends and liquidation proceeds of each fund held. Each share class of each fund has identical voting rights, except for the exclusive right to vote on matters affecting only its class. Share classes have different fees and expenses ("class-specific fees and expenses"), primarily due to different arrangements for certain distribution expenses. Differences in class-specific fees and expenses will result in differences in net investment income and, therefore, the payment of different per-share dividends by each class of each fund.

2. Significant accounting policies

Each fund is an investment company that applies the accounting and reporting guidance issued in Topic 946 by the U.S. Financial Accounting Standards Board. Each fund's financial statements have been prepared to comply with U.S. generally accepted accounting principles ("U.S. GAAP"). These principles require the series' investment adviser to make estimates and assumptions that affect reported amounts and disclosures. Actual results could differ from those estimates. Subsequent events, if any, have been evaluated through the date of issuance in the preparation of the financial statements. The funds follow the significant accounting policies described in this section, as well as the valuation policies described in the next section on valuation.

Security transactions and related investment income – Security transactions are recorded by the funds as of the date the trades are executed with brokers. Realized gains and losses from security transactions are determined based on the specific identified cost of the securities. In the event a security is purchased with a delayed payment date, the funds will segregate liquid assets sufficient to meet their payment obligations. Dividend income is recognized on the ex-dividend date and interest income is recognized on an accrual basis. Market discounts, premiums and original issue discounts on fixed-income securities are amortized daily over the expected life of the security.

Fees and expenses – The fees and expenses of the underlying funds held by the managed risk funds are not included in the fees and expenses reported for each of the managed risk funds; however, they are indirectly reflected in the valuation of each of the underlying funds. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables.

Class allocations – Income, fees and expenses (other than class-specific fees and expenses) and realized and unrealized gains and losses are allocated daily among the various share classes of each fund based on their relative net assets. Class-specific fees and expenses, such as distribution expenses, are accrued daily and charged directly to the respective share class of each fund.

Dividends and distributions to shareholders – Dividends and distributions to shareholders are recorded on each fund's ex-dividend date.

Currency translation – Assets and liabilities, including investment securities, denominated in currencies other than U.S. dollars are translated into U.S. dollars at the exchange rates supplied by one or more pricing vendors on the valuation date. Purchases and sales of investment securities and income and expenses are translated into U.S. dollars at the exchange rates on the dates of such transactions. The effects of changes in exchange rates on investment securities are included with the net realized gain or loss and net unrealized appreciation or depreciation on investments in the funds' statements of operations. The realized gain or loss and unrealized appreciation or depreciation resulting from all other transactions denominated in currencies other than U.S. dollars are disclosed separately.

3. Valuation

CRMC, the series' investment adviser, values the funds' investments at fair value as defined by U.S. GAAP. The net asset value of each share class of each fund is generally determined as of approximately 4:00 p.m. New York time each day the New York Stock Exchange is open.

Methods and inputs – The series' investment adviser uses the following methods and inputs to establish the fair value of each fund's assets and liabilities. Use of particular methods and inputs may vary over time based on availability and relevance as market and economic conditions evolve.

Equity securities are generally valued at the official closing price of, or the last reported sale price on, the exchange or market on which such securities are traded, as of the close of business on the day the securities are being valued or, lacking any sales, at the last available bid price. Prices for each security are taken from the principal exchange or market on which the security trades. The value of an underlying fund is based on its reported net asset value.

Fixed-income securities, including short-term securities, are generally valued at prices obtained from one or more pricing vendors. Vendors value such securities based on one or more of the inputs described in the following table. The table provides examples of inputs that are commonly relevant for valuing particular classes of fixed-income securities in which the funds are authorized to invest. However, these classifications are not exclusive and any of the inputs may be used to value any other class of fixed-income security.

Fixed-income class	Examples of standard inputs
All	Benchmark yields, transactions, bids, offers, quotations from dealers and trading systems, new issues, spreads and other relationships observed in the markets among comparable securities; and proprietary pricing models such as yield measures calculated using factors such as cash flows, financial or collateral performance and other reference data (collectively referred to as "standard inputs")
Corporate bonds & notes; convertible securities	Standard inputs and underlying equity of the issuer
Bonds & notes of governments & government agencies	Standard inputs and interest rate volatilities
Mortgage-backed; asset-backed obligations	Standard inputs and cash flows, prepayment information, default rates, delinquency and loss assumptions, collateral characteristics, credit enhancements and specific deal information
Municipal securities	Standard inputs and, for certain distressed securities, cash flows or liquidation values using a net present value calculation based on inputs that include, but are not limited to, financial statements and debt contracts

When the series' investment adviser deems it appropriate to do so (such as when vendor prices are unavailable or not deemed to be representative), fixed-income securities will be valued in good faith at the mean quoted bid and ask prices that are reasonably and timely available (or bid prices, if ask prices are not available) or at prices for securities of comparable maturity, quality and type.

Securities with both fixed-income and equity characteristics, or equity securities traded principally among fixed-income dealers, are generally valued in the manner described for either equity or fixed-income securities, depending on which method is deemed most appropriate by the series' investment adviser. The Government Cash Management Fund held by the managed risk funds is managed to maintain a $1.00 net asset value per share. The net asset value of each share class of each managed risk fund is calculated based on the reported net asset values of the underlying funds in which each fund invests.

Forward currency contracts are valued at the mean of representative quoted bid and ask prices, generally based on prices supplied by one or more pricing vendors. Interest rate swaps and credit default swaps are generally valued by pricing vendors based on market inputs that include the index and term of index, reset frequency, payer/receiver, currency and pay frequency. Exchange-traded futures are generally valued at the official settlement price of, or the last reported sale price on, the exchange or market on which such instruments are traded, as of the close of business on the day the futures are being valued or, lacking any sales, at the last available bid price. Prices for each future are taken from the exchange or market on which the security trades.

Securities and other assets for which representative market quotations are not readily available or are considered unreliable by the series' investment adviser are fair valued as determined in good faith under fair value guidelines adopted by authority of the series' board of trustees as further described. The investment adviser follows fair valuation guidelines, consistent with U.S. Securities and Exchange Commission rules and guidance, to consider relevant principles and factors when making fair value determinations. The investment adviser considers relevant indications of value that are reasonably and timely available to it in determining the fair value to be assigned to a particular security, such as the type and cost of the security; contractual or legal restrictions on resale of the security; relevant financial or business developments of the issuer; actively traded similar or related securities; conversion or exchange rights on the security; related corporate actions; significant events occurring after the close of trading in the security; and changes in overall market conditions. In addition, the closing prices of equity securities and futures that trade in markets outside U.S. time zones may be adjusted to reflect significant events that occur after the close of local trading but before the net asset value of each share class of each fund is determined. Fair valuations and valuations of investments and futures that are not actively trading involve judgment and may differ materially from valuations that would have been used had greater market activity occurred.

Processes and structure — The series' board of trustees has delegated authority to the series' investment adviser to make fair value determinations, subject to board oversight. The investment adviser has established a Joint Fair Valuation Committee (the "Fair Valuation Committee") to administer, implement and oversee the fair valuation process, and to make fair value decisions. The Fair Valuation Committee regularly reviews its own fair value decisions, as well as decisions made under its standing instructions to the investment adviser's valuation teams. The Fair Valuation Committee reviews changes in fair value measurements from period to period and may, as deemed appropriate, update the fair valuation guidelines to better reflect the results of back testing and address new or evolving issues. The Fair Valuation Committee reports any changes to the fair valuation guidelines to the board of trustees with supplemental information to support the changes. The series' board and audit committee also regularly review reports that describe fair value determinations and methods.

The series' investment adviser has also established a Fixed-Income Pricing Review Group to administer and oversee the fixed-income valuation process, including the use of fixed-income pricing vendors. This group regularly reviews pricing vendor information and market data. Pricing decisions, processes and controls over security valuation are also subject to additional internal reviews, including an annual control self-evaluation program facilitated by the investment adviser's compliance group.

Classifications — The series' investment adviser classifies the funds' assets and liabilities into three levels based on the inputs used to value the assets or liabilities. Level 1 values are based on quoted prices in active markets for identical securities. Level 2 values are based on significant observable market inputs, such as quoted prices for similar securities and quoted prices in inactive markets. Certain securities trading outside the U.S. may transfer between Level 1 and Level 2 due to valuation adjustments resulting from significant market movements following the close of local trading. Level 3 values are based on significant unobservable inputs that reflect the investment adviser's determination of assumptions that market participants might reasonably use in valuing the securities.

The valuation levels are not necessarily an indication of the risk or liquidity associated with the underlying investment. For example, U.S. government securities are reflected as Level 2 because the inputs used to determine fair value may not always be quoted prices in an active market. The following tables present the funds' valuation levels as of June 30, 2016 (dollars in thousands):

Global Growth Fund

	Investment securities			
	Level 1	Level 2*	Level 3	Total

Managed Risk International Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk Blue Chip Income and Growth Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk Growth-Income Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk Asset Allocation Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

4. Risk factors

Investing in the funds may involve certain risks including, but not limited to, those described below.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by a fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental or governmental agency responses to economic conditions; and currency exchange, interest rate and commodity price fluctuations.

Issuer risks –The prices of, and the income generated by, securities held by a fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance and strategic initiatives such as mergers, acquisitions or dispositions, and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in income-oriented stocks – Income provided by a fund may be reduced by changes in the dividend policies of, and the capital resources available at, the companies in which the fund invests.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks maybe more volatile than stocks of larger, more established companies.

Investing outside the U.S. – Securities of issuers domiciled outside the U.S., or with significant operations or revenues outside the U.S., may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as the imposition of price controls or punitive taxes, that could adversely impact revenues. Securities markets in certain countries may be more volatile and/or less liquid than those in the U.S. Investments outside the U.S. may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the U.S. In addition, the value of investments outside the U.S. may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the U.S. may be heightened in connection with investments in emerging markets.

Investing in developing countries – Investing in countries with developing economies and/or markets may involve risks in addition to and greater than those generally associated with investing in developed countries. For instance, developing countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, there may be increased settlement risks for transactions in local securities.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, developing countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating a fund's net asset value. Additionally, there may be increased settlement risks for transactions in local securities.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by a fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in a fund having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which a fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The funds' investment adviser relies on its own credit analysts to research issuers and issues in seeking to mitigate various credit and default risks.

Investing in lower rated debt instruments — Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Investing in derivatives — The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional cash securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose a fund to losses in excess of its initial investment. Derivatives may be difficult for a fund to buy or sell at an opportune time or price and may be difficult to terminate or otherwise offset. A fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce a fund's returns and increase a fund's price volatility. A fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction.

Thinly traded securities — There may be little trading in the secondary market for particular bonds, other debt securities or derivatives, which may make them more difficult to value, acquire or sell.

Currency — The prices of, and the income generated by, most debt securities held by a fund may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of a fund's securities denominated in such currencies would generally fall and vice versa. U.S. dollar-denominated securities of foreign issuers may also be affected by changes in relative currency values.

Investing in mortgage-related securities and other asset-backed securities — Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as consumer loans or receivables. Such securities often involve risks that are different from or more acute than the risks associated with investing in other types of debt securities. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in a fund having to reinvest the proceeds in lower yielding securities, effectively reducing a fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing a fund's cash available for reinvestment in higher yielding securities.

Investing in future delivery contracts — Contracts for future delivery of mortgage-related securities, such as to be announced contracts and mortgage dollar rolls, involve a fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase a fund's market exposure, and the market price of the securities the fund contracts to repurchase could drop below their purchase price. While a fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions may increase the turnover rate of a fund.

Investing in inflation linked bonds — The values of inflation linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation linked bonds may also reduce a fund's distributable income during periods of extreme deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation linked securities may decline and result in losses to a fund.

Investing in securities backed by the U.S. government — Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates. Securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in repurchase agreements – Upon entering into a repurchase agreement, a fund purchases a security from a bank or broker-dealer, which simultaneously commits to repurchase the security within a specified time at the fund's cost with interest. The security purchased by the fund constitutes collateral for the seller's repurchase obligation. If the party agreeing to repurchase should default, the fund may seek to sell the security it holds as collateral. The fund may incur a loss if the value of the collateral securing the repurchase obligation has fallen below the repurchase price. The fund may also incur disposition costs and encounter procedural delays in connection with liquidating the collateral.

Interest rate risk – The values and liquidity of the securities held by a fund may be affected by changing interest rates. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. A fund may invest in variable and floating rate securities. Although such securities are generally less sensitive to interest rate changes, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as general interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, a fund may not be able to maintain a positive yield, and, given the historically low interest rate environment, risks associated with rising rates are currently heightened.

Credit and liquidity support – Changes in the credit quality of banks and financial institutions providing credit and liquidity support features with respect to securities held by a fund could cause the values of these securities to decline.

Asset allocation – A fund's percentage allocation to equity securities, debt securities and money market instruments could cause the fund to underperform relative to relevant benchmarks and other funds with similar investment objectives.

Nondiversification – As nondiversified funds, certain funds have the ability to invest a larger percentage of their assets in the securities of a smaller number of issuers than diversified funds. Although the funds do not intend to limit their investments to the securities of a small number of issuers, if they were to do so, poor performance by a single large holding would adversely impact the funds' investment results more than if the funds were invested in a larger number of issuers.

Management – The investment adviser to the funds actively manages the funds' investments. Consequently, the funds are subject to the risk that the methods and analyses employed by the investment adviser in this process may not produce the desired results. This could cause the funds to lose value or their investment results to lag relevant benchmarks or other funds with similar objectives.

Investing in the managed risk funds may involve additional risks including, but not limited to, those described below.

Fund structure – The managed risk funds invest in underlying funds and incur expenses related to those underlying funds. In addition, investors in the managed risk funds will incur fees to pay for certain expenses related to the operations of the managed risk funds. An investor holding the underlying fund directly would incur lower overall expenses but would not receive the benefit of the risk management strategy of the managed risk fund.

Management – The managed risk funds are subject to the risk that the methods employed by the subadviser in implementing the managed risk strategy may not produce the desired results. This could cause the managed risk funds to lose value or their investment results to lag relevant benchmarks or other funds with similar objectives.

Underlying fund risks – Because the managed risk funds' investments consist of individual underlying funds, the managed risk funds' risks are directly related to the risks of the respective underlying fund in which each managed fund invests. For this reason, it is important to understand the risks associated with investing both in the managed risk fund and the respective underlying fund.

Investing in futures contracts – In addition to the risks generally associated with investing in derivative instruments, futures contracts are subject to the creditworthiness of the clearing organizations, exchanges and futures commission merchants with which a fund transacts. Additionally, although futures require only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a futures contract could greatly exceed the initial amount invested. While futures contracts are generally liquid instruments, under certain market conditions, futures may be deemed to be illiquid. For example a fund may be temporarily prohibited from closing out its position in a futures contract if intraday price change limits or limits on trading volume imposed by the applicable futures exchange are triggered. If a fund is unable to close out a position on a futures contract, the fund would remain subject to the risk of adverse price movements until the fund is able to close out the futures position. The ability of a fund to successfully utilize futures contracts may depend in part upon the ability of the fund's investment adviser or subadviser to accurately forecast interest rates and other economic factors and to assess and predict the impact of such economic factors on the futures in which the fund invests. If the investment adviser or subadviser incorrectly forecasts economic developments or incorrectly predicts the impact of such developments on the futures in which it invests, a fund could be exposed to the risk of loss.

Hedging – There may be imperfect or even negative correlation between the prices of the futures contracts and the prices of the underlying securities. For example, futures contracts may not provide an effective hedge because changes in futures contract prices may not track those of the underlying securities or indexes they are intended to hedge. In addition, there are significant differences between the securities and futures markets that could result in an imperfect correlation between the markets, causing a given hedge not to achieve its objectives. The degree of imperfection of correlation depends on circumstances such as variations in speculative market demand for futures, including technical influences in futures trading, and differences between the financial instruments being hedged and the instruments underlying the standard contracts available for trading. A decision as to whether, when and how to hedge involves the exercise of skill and judgment, and even a well-conceived hedge may be unsuccessful to some degree because of market behavior or unexpected interest rate trends. In addition, the fund's investment in exchange-traded futures and their resulting costs could limit the fund's gains in rising markets relative to those of the underlying fund, or to those of unhedged funds in general.

Short positions – Losses from short positions in futures contracts occur when the underlying index increases in value. As the underlying index increases in value, the holder of the short position in the corresponding futures contract is required to pay the difference in value of the futures contract resulting from the increase in the index on a daily basis. Losses from a short position in an index futures contract could potentially be very large if the value of the underlying index rises dramatically in a short period of time.

5. Certain investment techniques

Index-linked bonds – Some of the funds have invested in index-linked bonds, which are fixed-income securities whose principal value is periodically adjusted to a government price index. Over the life of an index-linked bond, interest is paid on the adjusted principal value. Increases or decreases in the principal value of index-linked bonds are recorded as interest income in the fund's statement of operations.

Mortgage dollar rolls – Some of the funds have entered into mortgage dollar roll transactions in which the fund sells a mortgage-backed security to a counterparty and simultaneously enters into an agreement with the same counterparty to buy back a similar security on a specific future date at a predetermined price. Mortgage dollar rolls are accounted for as purchase and sale transactions, which may increase the funds' portfolio turnover rates.

Loan transactions – Some of the funds have entered into loan transactions in which the fund acquires a loan either through an agent, by assignment from another holder, or as a participation interest in another holder's portion of a loan. The loan is often administered by a financial institution that acts as agent for the holders of the loan, and the fund may be required to receive approval from the agent and/or borrower prior to the sale of the investment. The loan's interest rate and maturity date may change based on the terms of the loan, including potential early payments of principal.

Unfunded commitments – Asset Allocation Fund, Global Bond Fund and High-Income Bond Fund have participated in a transaction that involves unfunded commitments, which may obligate each fund to purchase additional shares of the applicable issuer. Under the terms of the commitments, which will expire no later than April 1, 2021, the maximum potential exposure of Asset Allocation Fund, Global Bond Fund and High-Income Bond Fund as of June 30, 2016 was $471,000, $109,000 and $719,000, respectively. Should such commitments become due in full, these amounts would represent less than 0.01% of the net assets of Asset Allocation Fund and 0.04% of the net assets of Global Bond Fund and High-Income Bond Fund, in each case as of June 30, 2016.

Short-term securities – The managed risk funds hold shares of the Government Cash Management Fund, a cash management vehicle offered by the Bank of New York Mellon ("BNY Mellon"), the funds' custodian bank. The Government Cash Management Fund is managed by the Dreyfus Corporation.

Forward currency contracts – Some of the funds have entered into forward currency contracts, which represent agreements to exchange currencies on specific future dates at predetermined rates. The series' investment adviser uses forward currency contracts to manage the fund's exposure to changes in exchange rates. Upon entering into these contracts, risks may arise from the potential inability of counterparties to meet the terms of their contracts and from possible movements in exchange rates.

On a daily basis, the series' investment adviser values forward currency contracts based on the applicable exchange rates and records unrealized appreciation or depreciation for open forward currency contracts in each fund's statement of assets and liabilities. Realized gains or losses are recorded at the time the forward contract is closed or offset by another contract with the same broker for the same settlement date and currency. Closed forward currency contracts that have not reached their settlement date are included in the respective receivables or payables for closed forward currency contracts in each fund's statement of assets and liabilities. Net realized gains or losses from closed forward currency contracts and net unrealized appreciation or depreciation from open forward currency contracts are recorded in each fund's statement of operations. As of June 30, 2016, Global Growth Fund, Global Small Capitalization

Fund, International Fund, New World Fund, Global Growth and Income Fund, Growth-Income Fund, International Growth and Income Fund, Global Balanced Fund, Bond Fund and Global Bond Fund had open forward currency contracts. As of June 30, 2016, High-Income Bond Fund did not have any open forward currency contracts. The average month-end notional amount of open forward currency contracts while held by High-Income Bond Fund was $2,585,000.

Interest rate swaps — Some of the funds have entered into interest rate swaps, which are agreements to exchange one stream of future interest payments for another based on a specified notional amount. Typically, interest rate swaps exchange a fixed interest rate for a payment that floats relative to a benchmark or vice versa. The series' investment adviser uses interest rate swaps to manage the interest rate sensitivity of the fund by increasing or decreasing the duration of the fund or a portion of the fund's portfolio. Risks may arise as a result of the series' investment adviser incorrectly anticipating changes in interest rates, increased volatility, reduced liquidity and the potential inability of counterparties to meet the terms of their agreements.

Upon entering into an interest rate swap contract, the fund is required to deposit cash, U.S. government securities or other liquid securities, which is known as "initial margin." Generally, the initial margin required for a particular interest rate swap is set and held as collateral by the clearinghouse on which the contract is cleared. The amount of initial margin required may be significantly modified from time to time by the clearinghouse during the term of the contract.

On a daily basis, the series' investment adviser records daily interest accruals related to the exchange of future payments as a receivable and payable in each fund's statement of assets and liabilities. Each fund also pays or receives a "variation margin" based on the increase or decrease in the value of the interest rate swaps, including accrued interest, and records variation margin on interest rate swaps in each fund's statement of assets and liabilities. Each fund records realized gains and losses on both the net accrued interest and any gain or loss recognized at the time the interest rate swap is closed or expires. Net realized gains or losses, as well as any net unrealized appreciation or depreciation, from interest rate swaps are recorded in each fund's statement of operations. As of June 30, 2016, Asset Allocation Fund, Bond Fund, Global Bond Fund, Mortgage Fund and U.S. Government/AAA-Rated Securities Fund had open interest rate swaps. As of June 30, 2016, High-Income Bond Fund did not have any open interest rate swaps. The average month-end notional amount of open interest rate swaps while held by High-Income Bond Fund was $31,888,000.

Credit default swap indices — Some of the funds have entered into centrally cleared credit default swap agreements on credit indices ("CDSI") that involve one party (the protection buyer) making a stream of payments to another party (the protection seller) in exchange for the right to receive a specified return upon the occurrence of a credit event, such as a default or restructuring, with respect to any of the underlying issuers (reference obligations) in the referenced index. The series' investment adviser uses credit default swaps to assume exposure to a diversified portfolio of credits or to hedge against existing credit risks.

CDSI are portfolios of credit instruments or exposures designed to be representative of some part of the credit market, such as the high-yield or investment-grade credit market. CDSI are generally traded using standardized terms, including a fixed spread and standard maturity dates, and reference all the names in the index. If there is a credit event, it is settled based on that name's weight in the index. The composition of the underlying issuers or obligations within a particular index may change periodically, usually every six months. A specified credit event may affect all or individual underlying reference obligations included in the index, and will be settled based upon the relative weighting of the affected obligation(s) within the index. The value of each CDSI can be used as a measure of the current payment/performance risk of the CDSI and represents the likelihood of an expected liability or profit should the notional amount of the CDSI be closed or sold as of the period end. An increasing value, as compared to the notional amount of the CDSI, represents a deterioration of the referenced indices' credit soundness and a greater likelihood of risk of default or other credit event occurring as defined under the terms of the agreement. When a fund provides sell protection, its maximum exposure is the notional amount of the credit default swap agreement.

Upon entering into a centrally cleared CDSI contract, the fund is required to deposit with a derivatives clearing member ("DCM") in a segregated account in the name of the DCM an amount of cash, U.S. government securities or other liquid securities, which is known as initial margin. Generally, the initial margin required for a particular credit default swap is set and held as collateral by the clearinghouse on which the contract is cleared. The amount of initial margin required may be significantly modified from time to time by the clearinghouse during the term of the contract. Securities deposited as initial margin are designated on the investment portfolio.

On a daily basis, interest accruals related to the exchange of future payments are recorded as a receivable and payable in each fund's statement of assets and liabilities. Each fund also pays or receives a variation margin based on the increase or decrease in the value of the centrally cleared swaps, and records variation margin in each fund's statement of assets and liabilities. Each fund records realized gains and losses on both the net accrued interest and any gain or loss recognized at the time the swap is closed or expires. Net realized gains or losses, as well as any net unrealized appreciation or depreciation, from credit default swaps are recorded in each fund's statement of operations. As of June 30, 2016, High-Income Bond Fund had open credit default swaps.

Futures contracts – The managed risk funds have entered into futures contracts, which provide for the future sale by one party and purchase by another party of a specified amount of a specific financial instrument for a specified price, date, time and place designated at the time the contract is made. Futures contracts are used to strategically manage portfolio volatility and downside equity risk.

Upon entering into futures contracts, and to maintain the fund's open positions in futures contracts, the fund is required to deposit with a futures broker, or FCM, in a segregated account in the name of the FCM an amount of cash, U.S. government securities, suitable money market instruments, or other liquid securities, known as "initial margin." The margin required for a particular futures contract is set by the exchange on which the contract is traded to serve as collateral, and may be significantly modified from time to time by the exchange during the term of the contract. When initial margin is deposited with brokers, a receivable is recorded in the fund's statement of assets and liabilities.

On a daily basis, each fund pays or receives variation margin based on the increase or decrease in the value of the futures contracts and records variation margin on futures contracts in each fund's statement of assets and liabilities. In addition, each fund segregates liquid assets equivalent to the fund's outstanding obligations under the contract in excess of the initial margin and variation margin, if any. Futures contracts may involve a risk of loss in excess of the variation margin shown on each fund's statement of assets and liabilities. Each fund records realized gains or losses at the time the futures contract is closed or expires. Net realized gains or losses and net unrealized appreciation or depreciation from futures contracts are recorded in each fund's statement of operations. As of June 30, 2016, Mortgage Fund, U.S. Government/AAA-Rated Securities Fund, Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund held futures contracts.

The following tables present the financial statement impacts resulting from the funds' use of forward currency contracts, interest rate swaps, credit default swaps and/or futures contracts as of June 30, 2016 (dollars in thousands):

			Global Growth Fund	Global Small Capitalization Fund	International Fund
Assets	**Risk type**	**Location on statements of assets and liabilities**

*Includes cumulative appreciation/depreciation on interest rate swaps, credit default swaps and/or futures contracts as reported in the applicable table(s) following each fund's investment portfolio. Only current day's variation margin is reported within the statements of assets and liabilities.

Collateral – Funds that invest in forward currency contracts, interest rate swaps, credit default swaps, futures contracts and/or future delivery contracts participate in a collateral program. For forward currency contracts, the program calls for the fund to either receive or pledge collateral based on the net gain or loss on unsettled forward currency contracts by counterparty. For interest rate swaps, credit default swaps and futures contracts, the program calls for the fund to pledge collateral for initial and variation margin by contract. For future delivery contracts, the program calls for the fund to either receive or pledge collateral based on the net gain or loss on unsettled contracts by certain counterparties. The purpose of the collateral is to cover potential losses that could occur in the event that either party cannot meet its contractual obligations.

Rights of offset – Funds that hold forward currency contracts have enforceable master netting agreements with certain counterparties, where amounts payable by each party to the other in the same currency (with the same settlement date and with the same counterparty) are settled net of each party's payment obligation. If an early termination date occurs under these agreements following an event of default or termination event, all obligations of each party to its counterparty are settled net through a single payment in a single currency ("close-out netting"). For financial reporting purposes, the funds do not offset financial assets and financial liabilities that are subject to these master netting arrangements in the statements of assets and liabilities.

The following tables present each fund's forward currency contracts by counterparty that are subject to master netting agreements but that are not offset in the funds' statements of assets and liabilities. The net amount column shows the impact of offsetting on the funds' statement of assets and liabilities as of June 30, 2016 if close-out netting was exercised (dollars in thousands):

Global Growth Fund

Counterparty	Gross amounts recognized in the statement of assets and liabilities	Gross amounts not offset in the statement of assets and liabilities and subject to a master netting agreement			Net amount
		Available to offset	Non-cash collateral*	Cash collateral

6. Taxation and distributions

Federal income taxation – Each fund complies with the requirements under Subchapter M of the Internal Revenue Code applicable to mutual funds and intends to distribute substantially all of its net taxable income and net capital gains each year. The funds are not subject to income taxes to the extent such distributions are made. Therefore, no federal income tax provision is required.

As of and during the period ended June 30, 2016, none of the funds had a liability for any unrecognized tax benefits. Each fund recognizes interest and penalties, if any, related to unrecognized tax benefits as income tax expense in the statements of operations. During the period, none of the funds incurred any significant interest or penalties.

The funds are not subject to examination by U.S. federal tax authorities for tax years before 2012. Managed Risk Asset Allocation Fund is not subject to examination by U.S. federal tax authorities for tax years before 2012, the year the fund commenced operations. Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund and Managed Risk Growth-Income Fund are not subject to examination by U.S. federal tax authorities for tax years before 2013, the year the funds commenced operations. Capital Income Builder is not subject to examination by U.S. federal tax authorities for tax years before 2014, the year the fund commenced operations.

The funds are not subject to examination by state tax authorities for tax years before 2011. Global Balanced Fund and Mortgage Fund are not subject to examination by state tax authorities for tax years before 2011, the year the funds commenced operations. Managed Risk Asset Allocation Fund is not subject to examination by state tax authorities for tax years before 2012, the year the fund commenced operations. Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund and Managed Risk Growth-Income Fund are not subject to examination by state tax authorities for tax years before 2013, the year the funds commenced operations. Capital Income Builder is not subject to examination by state tax authorities for tax years before 2014, the year the fund commenced operations.

The following funds are not subject to examination by tax authorities outside the U.S. for the years indicated: Global Growth Fund, Global Small Capitalization Fund, International Fund, New World Fund and Global Growth and Income Fund for tax years before 2009; Growth Fund and Growth-Income Fund for tax years before 2010; International Growth and Income Fund and Global Balanced Fund for tax years before 2011; and Asset Allocation Fund, Bond Fund and Global Bond Fund for tax years before 2015. All other funds are not subject to examination by tax authorities outside the U.S.

Non-U.S. taxation — Dividend and interest income are recorded net of non-U.S. taxes paid. The funds may file withholding tax reclaims in certain jurisdictions to recover a portion of amounts previously withheld. As a result of recent rulings from European courts, some of the funds filed for additional reclaims related to prior years. These reclaims are recorded when the amount is known and there are no significant uncertainties on collectability. Gains realized by the funds on the sale of securities in certain countries are subject to non-U.S. taxes. The funds record a liability based on unrealized gains to provide for potential non-U.S. taxes payable upon the sale of these securities.

Distributions — Distributions paid to shareholders are based on net investment income and net realized gains determined on a tax basis, which may differ from net investment income and net realized gains for financial reporting purposes. These differences are due primarily to different treatment for items such as currency gains and losses; short-term capital gains and losses; capital losses related to sales of certain securities within 30 days of purchase; unrealized appreciation of certain investments in securities outside the U.S.; deferred expenses; cost of investments sold; non-U.S. taxes on capital gains; paydowns on fixed-income securities; net capital losses; net operating losses; amortization of premiums and discounts; and income on certain investments. The fiscal year in which amounts are distributed may differ from the year in which the net investment income and net realized gains are recorded by the funds for financial reporting purposes.

As indicated in the tables in this section, some of the funds had capital loss carryforwards available at December 31, 2015. These will be used to offset any capital gains realized by the funds in the current year or in subsequent years through the expiration dates. Funds with capital loss carryforwards will not make distributions from capital gains while a capital loss carryforward remains.

Under the Regulated Investment Company Modernization Act of 2010 (the "Act"), net capital losses recognized after December 31, 2010, may be carried forward indefinitely, and their character is retained as short-term and/or long-term losses. Previously, net capital losses were carried forward for eight years and treated as short-term losses. As a transition rule, the Act requires that post-enactment net capital losses be used before pre-enactment net capital losses.

7. Fees and transactions

CRMC, the series' investment adviser, is the parent company of American Funds Distributors,® Inc. ("AFD"), the distributor of the series' shares, and American Funds Service Company® ("AFS"), the series' transfer agent. CRMC, AFD and AFS are considered related parties to the series.

Investment advisory services – The series has an investment advisory and service agreement with CRMC that provides for monthly fees accrued daily. These fees are based on annual rates that generally decrease as average net asset levels increase. CRMC receives investment advisory fees from the underlying funds held by the managed risk funds. Effective January 1, 2016, CRMC reduced the investment advisory services fee from an annual rate of 0.250% of average daily net assets to 0.150% of average daily net assets for the managed risk funds. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables. Subadvisory fees for the managed risk funds are paid by CRMC to Milliman FRM. The managed risk funds are not responsible for paying any subadvisory fees.

Investment advisory services waivers – The series' board of trustees approved an amended agreement for Asset Allocation Fund effective February 1, 2016, decreasing the annual rate on average daily net assets in excess of $21 billion to 0.240%. CRMC is waiving a portion of its investment advisory services fees for each of the managed risk funds. Investment advisory services fees are presented in each fund's statement of operations gross of the waivers from CRMC. For the six months ended June 30, 2016, total investment advisory services fees waived by CRMC were $833,000.

The range of rates and asset levels, and the current annualized rates of average net assets for each fund before and after any investment advisory services waivers (if applicable), are as follows:

Fund	Rates		Net asset level (in billions)		For the period ended June 30, 2016, before waiver	For the period ended June 30, 2016, after waiver

Distribution services – The series has plans of distribution for all share classes except Class 1. Under the plans, the board of trustees approves certain categories of expenses that are used to finance activities primarily intended to sell fund shares. The plans provide for payments to pay service fees to firms that have entered into agreements with the series. These payments, based on an annualized percentage of average daily net assets, range from 0.18% to 0.50% as noted in the table below. In some cases, the board of trustees has limited the amounts that may be paid to less than the maximum allowed by the plans.

Share class	Currently approved limits	Plan limits
Class 2	0.25%	0.25%
Class 3	0.18	0.18
Class 4	0.25	0.25
Class P1	0.00	0.25
Class P2	0.25	0.50

Insurance administrative services – The series has an insurance administrative services plan for Class 4, P1 and P2 shares. Under the plan, these share classes pay 0.25% of each insurance company's respective average daily net assets in each share class to compensate the insurance companies for services provided to their separate accounts and contractholders for which the shares of the fund are beneficially owned as underlying investments of such contractholders' annuities. These services include, but are not limited to, maintenance, shareholder communications and transactional services. The insurance companies are not related parties to the series.

Transfer agent services – The series has a shareholder services agreement with AFS under which the funds compensate AFS for providing transfer agent services to all of the funds' share classes. These services include recordkeeping, shareholder communications and transaction processing. In addition, the managed risk funds reimburse AFS for amounts paid to third parties for performing transfer agent services on behalf of fund shareholders.

Administrative services – The series has an administrative services agreement with CRMC to provide administrative services to all of the funds' share classes. The services include, but are not limited to, coordinating, monitoring, assisting and overseeing third parties that provide services to fund shareholders. Under the agreement, each share class of each fund, except the managed risk funds, pays an annual fee of 0.01% based on its respective average daily net assets to compensate CRMC for providing administrative services. For the

managed risk funds, CRMC receives administrative services fees of 0.01% of average daily net assets from Class 1 shares of the underlying funds for administrative services provided to the series.

Accounting and administrative services – The managed risk funds have a subadministration agreement with BNY Mellon under which the fund compensates BNY Mellon for providing accounting and administrative services to each of the managed risk funds' share classes. These services include, but are not limited to, fund accounting (including calculation of net asset value), financial reporting and tax services. BNY Mellon is not a related party to the managed risk funds.

Reimbursement of fees and expenses – CRMC is currently reimbursing a portion of other expenses for each of the managed risk funds so that each fund's expenses do not exceed 0.28% of its respective average daily net assets. Other expenses exclude investment advisory services and distribution services fees. For the six months ended June 30, 2016, total expenses reimbursed by CRMC were $289,000.

Class-specific expenses under the agreements described above were as follows (dollars in thousands):

Trustees' deferred compensation – Trustees who are unaffiliated with CRMC may elect to defer the cash payment of part or all of their compensation. These deferred amounts, which remain as liabilities of the funds, are treated as if invested in one or more of the American Funds. These amounts represent general, unsecured liabilities of the funds and vary according to the total returns of the selected funds. Trustees' compensation, shown on the accompanying financial statements, reflects current fees (either paid in cash or deferred) and a net increase in the value of the deferred amounts as follows (dollars in thousands):

	Current fees	Increase in value of deferred amounts	Total trustees' compensation

Affiliated officers and trustees – Officers and certain trustees of the series are or may be considered to be affiliated with CRMC, AFD and AFS. No affiliated officers or trustees received any compensation directly from any fund in the series.

Security transactions with related funds – The funds may purchase from, or sell securities to, other CRMC-managed funds (or funds managed by certain affiliates of CRMC) under procedures adopted by the fund's board of trustees. The funds involved in such transactions are considered related by virtue of having a common investment adviser (or affiliated investment advisers), common trustees and/or common officers. When such transactions occur, each transaction is executed at the current market price of the security and no brokerage commissions or fees are paid in accordance with Rule 17a-7 of the 1940 Act. During the six months ended June 30, 2016, such purchase and sale transactions occurred between Global Growth Fund and related funds in the amounts of $652,454,000 and $819,688,000, respectively.

8. Committed line of credit

Global Small Capitalization Fund and High-Income Bond Fund participate with other funds managed by CRMC in a $500 million credit facility (the "line of credit") to be utilized for temporary purposes to fund shareholder redemptions. Each fund has agreed to pay commitment fees on its pro-rata portion of the line of credit, which are reflected in other expenses in each fund's statement of operations. During the period, neither fund borrowed on this line of credit.

9. Capital share transactions

Capital share transactions in the funds were as follows (dollars and shares in thousands):

Global Growth Fund

	Sales*		Reinvestments of dividends and distributions		Repurchases*		Net increase (decrease)

[1]Based on average shares outstanding.
[2]Unaudited.
[3]Based on operations for the period shown and, accordingly, is not representative of a full year.
[4]Not annualized.
[5]Annualized.
[6]The year ended December 31, 2014, reflects the impact of a corporate action event that resulted in a one-time increase to net investment income. If the corporate action event had not occurred, the net investment income per share and ratio of net income to average net assets would have been lower for all share classes.
[7]Class 4 shares were offered beginning December 14, 2012.
[8]All or a significant portion of assets in this class consisted of seed capital invested by CRMC and/or its affiliates. Certain fees (including, where applicable, fees for distribution services) are not charged or accrued on these seed capital assets. If such fees were paid by the fund on seed capital assets, fund expenses would have been higher and net income and total return would have been lower.
[9]Amount less than $1 million.
[10]For the period May 1, 2014, commencement of operations, through December 31, 2014.
[11]For the period May 2, 2011, commencement of operations, through December 31, 2011.
[12]Amount less than $.01.
[13]On May 1, 2016, the fund converted from a cash fund to an ultra-short-term bond fund and changed its name from Cash Management Fund to Ultra-Short Bond Fund.
[14]This column reflects the impact of certain waivers/reimbursements by CRMC. CRMC waived a portion of investment advisory services and reimbursed certain expenses for the managed risk funds.
[15]Ratio reflects weighted average net expense ratio of the underlying fund for the period presented. See Expense Example for further information regarding fees and expenses.
[16]For the period May 1, 2013, commencement of operations, through December 31, 2013.
[17]Amount less than .01%.
[18]For the period September 28, 2012, commencement of operations, through December 31, 2012.
[19]Refer to Note 5 for further information on mortgage dollar rolls.
[20]Amount less than 1%.

See Notes to Financial Statements

Expense example

unaudited

The funds in American Funds Insurance Series serve as the underlying investment vehicle for various insurance products. As an owner of an insurance contract that invests in one of the funds in the series, you incur two types of costs: (1) transaction costs, such as initial sales charges on purchase payments and contingent deferred sales charges on redemptions (loads), and (2) ongoing costs, including management fees, distribution and service (12b-1) fees, and other expenses. Additional fees are charged by the insurance companies related to the various benefits they provide. This example is intended to help you understand your ongoing costs (in dollars) of investing in the underlying funds so you can compare these costs with the ongoing costs of investing in other mutual funds that serve a similar function in other annuity products. The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire six-month period (January 1, 2016, through June 30, 2016).

Actual expenses:

The first line of each share class in the tables on the following pages provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the first line under the heading entitled "Expenses paid during period" to estimate the expenses you paid on your account during this period.

Hypothetical example for comparison purposes:

The second line of each share class in the tables on the following pages provides information about hypothetical account values and hypothetical expenses based on the actual expense ratio for the share class and an assumed rate of return of 5.00% per year before expenses, which is not the actual return of the share class. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the fund and other funds. To do so, compare this 5.00% hypothetical example with the 5.00% hypothetical examples that appear in the shareholder reports of the other funds.

Notes:

Additional fees are charged by the insurance companies related to the various benefits they provide. You can estimate the impact of these fees by adding the amount of the fees to the total estimated expenses you paid on your account during the period as calculated above. In addition, your ending account value would be lower by the amount of these fees.

Note that the expenses shown in the tables on the following pages are meant to highlight your ongoing costs only and do not reflect any transactional costs. Therefore, the second line of each share class in the tables is useful in comparing ongoing costs only and will not help you determine the relative total costs of owning different funds. In addition, if these transactional costs were included, your costs would have been higher.

	Beginning account value 1/1/2016	Ending account value 6/30/2016	Expenses paid during period[1]	Annualized expense ratio

[1]The "expenses paid during period" are equal to the "annualized expense ratio," multiplied by the average account value over the period, multiplied by the number of days in the period, and divided by 366 (to reflect the one-half year period).

[2]The "expenses paid during period" and "annualized expense ratio" do not include the expenses of the underlying funds in which each fund invests.

[3]The "effective expenses paid during period" are equal to the "effective annualized expense ratio," multiplied by the average account value over the period, multiplied by the number of days in the period, and divided by 366 (to reflect the period).

[4]The "effective annualized expense ratio" reflects the net annualized expense ratio of the class plus the class's pro-rata share of the weighted average expense ratio of the underlying funds in which it invests.

Investors should carefully consider investment objectives, risks, charges and expenses. This and other important information is contained in the series prospectuses and summary prospectuses, which can be obtained from your financial professional and should be read carefully before investing. You may also call American Funds Service Company (AFS) at (800) 421-4225 or visit the American Funds website at americanfunds.com.

"American Funds Proxy Voting Procedures and Principles" – which describes how we vote proxies relating to portfolio securities – is available on the American Funds website or upon request by calling AFS. The series files its proxy voting record with the U.S. Securities and Exchange Commission (SEC) for the 12 months ended June 30 by August 31. The proxy voting record is available free of charge on the SEC website at sec.gov and on the American Funds website.

Complete June 30, 2016, portfolios of American Funds Insurance Series investments are available free of charge by calling AFS or visiting the SEC website (where they are part of Form N-CSR).

American Funds Insurance Series files a complete list of its portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. This filing is available free of charge on the SEC website. You may also review or, for a fee, copy this filing at the SEC's Public Reference Room in Washington, D.C. Additional information regarding the operation of the Public Reference Room may be obtained by calling the SEC's Office of Investor Education and Advocacy at (800) SEC-0330. Additionally, the list of portfolio holdings is available by calling AFS.

This report is for the information of American Funds Insurance Series investors, but it also may be used as sales literature when preceded or accompanied by the current prospectuses or summary prospectuses for American Funds Insurance Series and the prospectus for the applicable insurance contract, which give details about charges, expenses, investment objectives and operating policies of the series. If used as sales material after September 30, 2016, this report must be accompanied by a statistical update for the most recently completed calendar quarter.

The American Funds Advantage℠

Since 1931, American Funds, part of Capital Group, has helped investors pursue long-term investment success. Our consistent approach – in combination with The Capital System℠ – has resulted in a superior long-term track record for American Funds Insurance Series®.

Aligned with investor success

We base our decisions on a long-term perspective, which we believe aligns our goals with the interests of our clients. American Funds Insurance Series (AFIS) portfolio managers average 26 years of investment experience, including 23 years at our company, reflecting a career commitment to our long-term approach.[1]

The Capital System℠

The Capital System combines individual accountability with teamwork. Funds using The Capital System are divided into portions that are managed independently by investment professionals with diverse backgrounds, ages and investment approaches. An extensive global research effort is the backbone of our system.

Superior long-term track record

Our AFIS equity funds have beaten their comparable Lipper indexes in 91% of 10-year periods and 100% of 20-year periods. Our AFIS fixed income funds have beaten comparable Lipper indexes in 55% of 10-year periods and 87% of 20-year periods.[2] We strive to keep management fees competitive. Over the past 20 years, most funds' fees have been below industry averages.[3]

[1] Portfolio manager experience as of November 2015.

[2]Based on Class 2 share results for rolling periods through December 31, 2015. Periods covered are the shorter of the fund's lifetime or since the inception date of the comparable Lipper index (except Global Small Capitalization Fund, for which the Lipper average was used). The comparable Lipper indexes are: Global Funds Index (Global Growth Fund), Growth Funds Index (Growth Fund), International Funds Index (International Fund), Emerging Markets Funds Index (New World Fund), Growth & Income Funds Index (Blue Chip Income and Growth Fund, Growth-Income Fund), Balanced Portfolio Funds Index (Asset Allocation Fund), Core Bond Funds Index (Bond Fund), High Yield Funds Index (High-Income Bond Fund) and General U.S. Government Funds Index (U.S. Government/ AAA-Rated Securities Fund).

[3]Based on management fees for the 20-year period ended December 31, 2015, versus comparable Lipper categories, excluding funds of funds.

AMERICAN FUNDS®

From Capital Group

American Funds Insurance Series®

Semi-annual report
for the six months ended
June 30, 2016

American Funds Insurance Series, from Capital Group, is the underlying investment vehicle for many variable annuities and insurance products. For 85 years, Capital has invested with a long-term focus based on thorough research and attention to risk. All the variable funds in American Funds Insurance Series may not be available in your product.

Investing for short periods makes losses more likely. Investments are not FDIC-insured, nor are they deposits of or guaranteed by a bank or any other entity, so they may lose value. For current information and month-end results, visit americanfunds.com/afis. For information about your insurance contract and month-end results, go to the website of the company that issued your contract.

Investing outside the United States may be subject to risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Investing in small-capitalization stocks can involve greater risk than is customarily associated with investing in stocks of larger, more established companies. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. High-yield bonds are subject to greater fluctuations in value and risk of loss of income and principal than investment-grade bonds. Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch as an indication of an issuer's creditworthiness. Futures contracts may not provide an effective hedge of the underlying securities because changes in the prices of futures contracts may not track those of the securities they are intended to hedge. In addition, the managed risk strategy may not effectively protect the funds from market declines and will limit the funds participation in market gains. The use of the managed risk strategy could cause the funds' returns to lag those of the applicable underlying funds in certain rising market conditions. Refer to the funds' prospectuses and the Risk Factors section of this report for more information on these and other risks associated with investing in the funds.

Fellow investors:

Market returns were mixed for the six months ended June 30, 2016. U.S. and emerging markets stocks closed higher while many European markets fell. Slowing global growth, aggressive action on the part of central banks, the possibility of another interest rate hike in the U.S. and the decision by British voters to leave the European Union created uncertainty for investors.

Global equity market returns were tepid in aggregate, as the MSCI World Index rose 0.66%* for the period, but there were pockets of strength and weakness. Emerging markets registered some of the best results as the MSCI EM (Emerging Markets) Index climbed 6.41%. Brazil (+46.34%), Russia (+20.43%), Indonesia (+15.79%) and South Africa (+15.64%) were among the biggest gainers. A rebound in commodity prices, expectations for political reform and economic stimulus measures fueled returns.

The MSCI USA Index advanced 3.58%, helped in part by stronger job and housing numbers.

Sluggish growth, deflationary pressures and the potential impact of a "Brexit" dampened returns in a number of European markets. Overall, the MSCI Europe Index declined 5.13%, with Italy (–20.89%), Ireland (–13.61%) and Spain (–11.45%) suffering double-digit losses. Elsewhere among developed markets, Japan slipped 5.58%, hindered by a strengthening yen and the effects of negative interest rates on its banking system.

In bond markets, U.S. investment-grade and high-yield corporates advanced 7.68% and 9.06%, respectively, as investors sought higher yields than those offered by U.S. Treasuries. Barclays Global Aggregate Index, a measure of global investment-grade bonds (rated BBB/Baa and above), rose 8.96%, while the Barclays U.S. Aggregate Index (which measures U.S. investment-grade bonds) improved 5.31%. The 10-year Treasury yield, which stood at 2.27% on December 31, 2015, dropped to 1.49% as weak employment data and the Brexit referendum lowered expectations of a rate hike by the Federal Reserve. U.S. dollar–denominated emerging markets bonds, as measured by the J.P. Morgan EMBI (Emerging Markets Bond Index) Global, rose 10.90% as their higher yields were popular in a low-rate environment.

The U.S. dollar depreciated against most currencies. In developed markets, gains were led by the Japanese yen (+17.26%), Canadian dollar (+6.96%) and Singapore dollar (+5.41%). The Swiss franc and euro also improved, up 2.75% and 2.27%, respectively. The British pound, however, declined 9.30% against the greenback.

* Country returns are based on MSCI indexes, which reflect reinvestment of distributions and dividends net of withholding taxes, except for the MSCI USA Index, which reflects dividends gross of withholding taxes. All market indexes referenced in this report are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index.

Among developing markets, the Brazilian real (+23.49%) and Russian ruble (+14.34%) finished strong, while the Mexican peso (–6.39%) and Chinese renminbi (–2.26%) fell. Currency returns are calculated by MSCI.

AFIS funds with exposure to U.S. equities and REITS fared well during the period. With the exception of Ultra-Short Bond Fund, which was hampered by low short-term interest rates, the series' bond funds all recorded positive returns. On May 1, 2016, the Cash Management Fund was converted to Ultra-Short Bond Fund in accordance with shareholder approval on December 4, 2015.

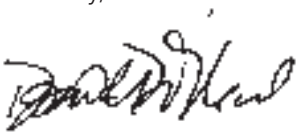
Looking ahead

The U.S. economy continues to show signs of slow improvement, even as many countries around the globe struggle with sluggish growth and low inflation. As the Fed adopts a more data-driven approach to rate hikes and central banks focus on lowering rates to inject liquidity into the global financial system, we could have a "lower-for-longer" rate environment. We will, of course, closely monitor the impact to security markets and currencies. We are also headed into the final innings of the U.S. presidential election cycle, and will be watching for changes in that arena. We may be in a low-return environment overall, but we will continue to actively seek securities that are particularly attractive due to their innovation, fundamentals or valuation levels.

Our investment approach – based on extensive research, a long-term outlook and close attention to valuation – has served investors well over time. We continue to have confidence this will remain the case, and thank you for your support.

We look forward to reporting to you again in six months' time.

Sincerely,



Donald D. O'Neal
Vice Chairman of the Board

Alan N. Berro
President

Summary investment portfolios

Summary investment portfolios are designed to streamline this report and help investors better focus on the funds' principal holdings. Ultra-Short Bond Fund,* Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund show a complete listing of portfolio holdings. See the inside back cover for details on how to obtain a complete schedule of portfolio holdings for each fund in the series.

Unless otherwise indicated, American Funds Insurance Series investment results are for Class 2 shares (Class P2 shares for managed risk funds). Class 2 shares began operations on April 30, 1997. Class 3 shares began operations on January 16, 2004. Class 4 shares began operations on December 14, 2012. Results encompassing periods prior to those dates assume a hypothetical investment in Class 1 shares and include the deduction of additional annual expenses (0.25% for Class 2 shares, 0.18% for Class 3 shares and 0.50% for Class 4 shares).

The variable annuities and life insurance contracts that use the series funds contain certain fees and expenses not reflected in this report. Investment results assume all distributions are reinvested and reflect applicable fees and expenses. The series investment adviser waived a portion of its management fees for all existing funds from September 1, 2004, through December 31, 2008, for U.S. Government/AAA-Rated Securities Fund from July 1, 2010, through December 31, 2010, and for Blue Chip Income and Growth Fund from February 1, 2014, through January 31, 2015. For the managed risk funds, the investment adviser is currently waiving a portion of its management fee equal to 0.05% of the funds' net assets and is currently reimbursing a portion of other expenses so that they will not exceed 0.28%. The waivers and reimbursements will be in effect through at least May 1, 2017, unless modified or terminated by the series board. After that time, the investment adviser may elect to extend, modify or terminate the reimbursements. The waivers may only be modified or terminated with the approval of the series board. Applicable fund results shown reflect the waivers and reimbursements, without which results would have been lower. See the Financial Highlights table in this report for details.

Although Capital Income Builder has a plan of distribution for Class 2 shares, fees for distribution services are not paid on amounts invested in the fund by the investment adviser and/or its affiliates. If fees for these services were charged on these assets, fund results would have been lower and expenses would have been higher. See the "Plans of distribution" section of the prospectus for information on the fees for distribution permitted to be charged by the funds.

Individual funds are listed in this report according to their risk potential, with managed risk funds listed last.

*Effective May 1, 2016, Cash Management Fund was converted to American Funds Insurance Series – Ultra-Short Bond Fund.℠

High-Income Bond Fund

Fund results shown are for past periods and are not predictive of results for future periods. Current and future results may be lower or higher than those shown. Unit prices and returns will vary, so investors may lose money. For current information and month-end results, visit americanfunds.com/afis. For information about your insurance contract and month-end results, go to the website of the company that issued your contract.

High-Income Bond Fund gained 8.77% for the six months ended June 30, 2016. The fund's benchmark, the Barclays U.S. Corporate High Yield 2% Issuer Capped Index, increased 9.06%.

High-yield markets bottomed in mid-February – as did other markets, particularly commodities. Since then, there has been a strong and broad recovery in high yield, with the biggest bounce in commodities-related sectors. The fund took advantage of that bounce by holding and adding to energy positions. Default rates have been modestly rising and are expected to continue to rise, particularly in the commodity-related space.

The fund's portfolio managers are less optimistic than they were in the early part of the year. Bonds that were considered cheap are now in a fair value range. Portfolio managers are reassessing positions in riskier segments. This has led to a higher credit quality portfolio in the past few months. Yield spreads are slightly above long-term averages – in the category of fair value spreads – but higher within commodities.

The economy will likely continue its weak growth, which is a challenge for high-yield companies. The Federal Reserve's continuing low rates are a reflection of a sluggish economy. Despite a modest widening of spreads, positive returns are still possible. As long as there's some growth, the fund's portfolio managers are cautiously optimistic about the economic road ahead.

This summary investment portfolio is designed to streamline the report and help investors better focus on the fund's principal holdings. See the inside back cover for details on how to obtain a complete schedule of portfolio holdings.

As permitted by U.S. Securities and Exchange Commission regulations, "Miscellaneous" securities include holdings in their first year of acquisition that have not previously been publicly disclosed.

"Other securities" includes all issues that are not disclosed separately in the summary investment portfolio. "Miscellaneous" and "Other securities" include securities which were valued under fair value procedures adopted by authority of the board of trustees. The total value of securities which were valued under fair value procedures was $21,223,000, which represented 1.21% of the net assets of the fund. Some securities in "Other securities" (with an aggregate value of $5,947,000, an aggregate cost of $13,197,000, and which represented .34% of the net assets of the fund) were acquired from 3/10/2010 to 8/22/2014 through private placement transactions exempt from registration under the Securities Act of 1933, which may subject them to legal or contractual restrictions on resale.

Credit default swaps

The fund has entered into a credit default swap as shown in the following table. The average month-end notional amount of credit default swaps while held was $19,963,000.

Centrally cleared credit default swaps on credit indices — sell protection

Referenced index	Clearinghouse	Receive fixed rate	Expiration date	Notional (000)	Value (000)	Upfront premiums received (000)	Unrealized appreciation at 6/30/2016 (000)
CDX.NA.HY.26	ICE	5.00%	6/20/2021	$15,000	$485	$306	$179

The following footnotes apply to either the individual securities noted or one or more of the securities aggregated and listed as a single line item.

[1]Acquired in a transaction exempt from registration under Rule 144A or Section 4(2) of the Securities Act of 1933. May be resold in the U.S. in transactions exempt from registration, normally to qualified institutional buyers. The total value of all such securities, including those in "Other securities," was $798,290,000, which represented 45.59% of the net assets of the fund.
[2]Coupon rate may change periodically.
[3]Loan participations and assignments; may be subject to legal or contractual restrictions on resale. The total value of all such loans, including those in "Other securities," was $94,632,000, which represented 5.40% of the net assets of the fund.
[4]Principal payments may be made periodically. Therefore, the effective maturity date may be earlier than the stated maturity date.
[5]Payment in kind; the issuer has the option of paying additional securities in lieu of cash.
[6]A portion of this security was pledged as collateral. The total value of pledged collateral was $820,000, which represented .05% of the net assets of the fund.

Notes to financial statements

unaudited

1. Organization

American Funds Insurance Series (the "series") is registered under the Investment Company Act of 1940 as an open-end, diversified management investment company with 28 different funds (the "funds"). Twenty-three funds in the series are covered in this report. The other five funds in the series are covered in a separate report. The assets of each fund are segregated, with each fund accounted for separately. Capital Research and Management Company ("CRMC") is the series' investment adviser. Milliman Financial Risk Management LLC ("Milliman FRM") is the subadviser for the risk management strategy for eight of the funds (the "managed risk funds"), five of which are covered in this report.

The managed risk funds covered in this report are Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund. The managed risk funds invest in other funds within the series (the "underlying funds") and employ Milliman FRM to implement the risk management strategy, which consists of using hedging instruments – primarily short positions on exchange-traded futures contracts – to attempt to stabilize the volatility of the funds around target volatility levels and reduce the downside exposure of the funds during periods of significant market declines.

Shareholders approved a proposal to reorganize the series from a Massachusetts business trust to a Delaware statutory trust. The reorganization may be completed in the next 12 months; however, the series reserves the right to delay the implementation.

The investment objectives for each fund covered in this report are as follows:

Global Growth Fund – Seeks to provide long-term growth of capital.

Global Small Capitalization Fund – Seeks to provide long-term growth of capital.

Growth Fund – Seeks to provide growth of capital.

International Fund – Seeks to provide long-term growth of capital.

New World Fund – Seeks long-term capital appreciation.

Blue Chip Income and Growth Fund – Seeks to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing.

Global Growth and Income Fund – Seeks to provide long-term growth of capital while providing current income.

Growth-Income Fund – Seeks to achieve long-term growth of capital and income.

International Growth and Income Fund – Seeks to provide long-term growth of capital while providing current income.

Capital Income Builder – Seeks to provide a level of current income that exceeds the average yield on U.S. stocks generally and to provide a growing stream of income over the years. Secondarily, seeks to provide growth of capital.

Asset Allocation Fund – Seeks to provide high total return consistent with preservation of capital over the long term.

Global Balanced Fund – Seeks the balanced accomplishment of three objectives: long-term growth of capital, conservation of principal and current income.

Bond Fund – Seeks to provide as high a level of current income as is consistent with the preservation of capital.

Global Bond Fund – Seeks to provide, over the long term, a high level of total return consistent with prudent investment management.

High-Income Bond Fund – Seeks to provide a high level of current income and, secondarily, capital appreciation.

Mortgage Fund – Seeks to provide current income and preservation of capital.

Ultra-Short Bond Fund – On May 1, 2016, the fund changed its name from Cash Management Fund to Ultra-Short Bond Fund in accordance with a resolution approved by shareholders on December 4, 2015, to convert the fund to an ultra-short-term bond fund. The fund seeks to provide current income, consistent with the maturity and quality standards applicable to the fund, and preservation of capital and liquidity.

U.S. Government/AAA-Rated Securities Fund – Seeks to provide a high level of current income consistent with preservation of capital.

Managed Risk Growth Fund – Seeks to provide growth of capital while seeking to manage volatility and provide downside protection.

Managed Risk International Fund – Seeks to provide long-term growth of capital while seeking to manage volatility and provide downside protection.

Managed Risk Blue Chip Income and Growth Fund – Seeks to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing, in each case while seeking to manage volatility and provide downside protection.

Managed Risk Growth-Income Fund – Seeks to achieve long-term growth of capital and income while seeking to manage volatility and provide downside protection.

Managed Risk Asset Allocation Fund – Seeks to provide high total return consistent with preservation of capital over the long term while seeking to manage volatility and provide downside protection.

Each fund in the series, except the managed risk funds, offers either three or four share classes (Classes 1, 2, 3 or 4); the managed risk funds offer two share classes (Classes P1 and P2). Holders of all share classes of each fund have equal pro rata rights to assets, dividends and liquidation proceeds of each fund held. Each share class of each fund has identical voting rights, except for the exclusive right to vote on matters affecting only its class. Share classes have different fees and expenses ("class-specific fees and expenses"), primarily due to different arrangements for certain distribution expenses. Differences in class-specific fees and expenses will result in differences in net investment income and, therefore, the payment of different per-share dividends by each class of each fund.

2. Significant accounting policies

Each fund is an investment company that applies the accounting and reporting guidance issued in Topic 946 by the U.S. Financial Accounting Standards Board. Each fund's financial statements have been prepared to comply with U.S. generally accepted accounting principles ("U.S. GAAP"). These principles require the series' investment adviser to make estimates and assumptions that affect reported amounts and disclosures. Actual results could differ from those estimates. Subsequent events, if any, have been evaluated through the date of issuance in the preparation of the financial statements. The funds follow the significant accounting policies described in this section, as well as the valuation policies described in the next section on valuation.

Security transactions and related investment income – Security transactions are recorded by the funds as of the date the trades are executed with brokers. Realized gains and losses from security transactions are determined based on the specific identified cost of the securities. In the event a security is purchased with a delayed payment date, the funds will segregate liquid assets sufficient to meet their payment obligations. Dividend income is recognized on the ex-dividend date and interest income is recognized on an accrual basis. Market discounts, premiums and original issue discounts on fixed-income securities are amortized daily over the expected life of the security.

Fees and expenses – The fees and expenses of the underlying funds held by the managed risk funds are not included in the fees and expenses reported for each of the managed risk funds; however, they are indirectly reflected in the valuation of each of the underlying funds. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables.

Class allocations – Income, fees and expenses (other than class-specific fees and expenses) and realized and unrealized gains and losses are allocated daily among the various share classes of each fund based on their relative net assets. Class-specific fees and expenses, such as distribution expenses, are accrued daily and charged directly to the respective share class of each fund.

Dividends and distributions to shareholders – Dividends and distributions to shareholders are recorded on each fund's ex-dividend date.

Currency translation – Assets and liabilities, including investment securities, denominated in currencies other than U.S. dollars are translated into U.S. dollars at the exchange rates supplied by one or more pricing vendors on the valuation date. Purchases and sales of investment securities and income and expenses are translated into U.S. dollars at the exchange rates on the dates of such transactions. The effects of changes in exchange rates on investment securities are included with the net realized gain or loss and net unrealized appreciation or depreciation on investments in the funds' statements of operations. The realized gain or loss and unrealized appreciation or depreciation resulting from all other transactions denominated in currencies other than U.S. dollars are disclosed separately.

3. Valuation

CRMC, the series' investment adviser, values the funds' investments at fair value as defined by U.S. GAAP. The net asset value of each share class of each fund is generally determined as of approximately 4:00 p.m. New York time each day the New York Stock Exchange is open.

Methods and inputs – The series' investment adviser uses the following methods and inputs to establish the fair value of each fund's assets and liabilities. Use of particular methods and inputs may vary over time based on availability and relevance as market and economic conditions evolve.

Equity securities are generally valued at the official closing price of, or the last reported sale price on, the exchange or market on which such securities are traded, as of the close of business on the day the securities are being valued or, lacking any sales, at the last available bid price. Prices for each security are taken from the principal exchange or market on which the security trades. The value of an underlying fund is based on its reported net asset value.

Fixed-income securities, including short-term securities, are generally valued at prices obtained from one or more pricing vendors. Vendors value such securities based on one or more of the inputs described in the following table. The table provides examples of inputs that are commonly relevant for valuing particular classes of fixed-income securities in which the funds are authorized to invest. However, these classifications are not exclusive and any of the inputs may be used to value any other class of fixed-income security.

Fixed-income class	Examples of standard inputs
All	Benchmark yields, transactions, bids, offers, quotations from dealers and trading systems, new issues, spreads and other relationships observed in the markets among comparable securities; and proprietary pricing models such as yield measures calculated using factors such as cash flows, financial or collateral performance and other reference data (collectively referred to as "standard inputs")
Corporate bonds & notes; convertible securities	Standard inputs and underlying equity of the issuer
Bonds & notes of governments & government agencies	Standard inputs and interest rate volatilities
Mortgage-backed; asset-backed obligations	Standard inputs and cash flows, prepayment information, default rates, delinquency and loss assumptions, collateral characteristics, credit enhancements and specific deal information
Municipal securities	Standard inputs and, for certain distressed securities, cash flows or liquidation values using a net present value calculation based on inputs that include, but are not limited to, financial statements and debt contracts

When the series' investment adviser deems it appropriate to do so (such as when vendor prices are unavailable or not deemed to be representative), fixed-income securities will be valued in good faith at the mean quoted bid and ask prices that are reasonably and timely available (or bid prices, if ask prices are not available) or at prices for securities of comparable maturity, quality and type.

Securities with both fixed-income and equity characteristics, or equity securities traded principally among fixed-income dealers, are generally valued in the manner described for either equity or fixed-income securities, depending on which method is deemed most appropriate by the series' investment adviser. The Government Cash Management Fund held by the managed risk funds is managed to maintain a $1.00 net asset value per share. The net asset value of each share class of each managed risk fund is calculated based on the reported net asset values of the underlying funds in which each fund invests.

Forward currency contracts are valued at the mean of representative quoted bid and ask prices, generally based on prices supplied by one or more pricing vendors. Interest rate swaps and credit default swaps are generally valued by pricing vendors based on market inputs that include the index and term of index, reset frequency, payer/receiver, currency and pay frequency. Exchange-traded futures are generally valued at the official settlement price of, or the last reported sale price on, the exchange or market on which such instruments are traded, as of the close of business on the day the futures are being valued or, lacking any sales, at the last available bid price. Prices for each future are taken from the exchange or market on which the security trades.

Securities and other assets for which representative market quotations are not readily available or are considered unreliable by the series' investment adviser are fair valued as determined in good faith under fair value guidelines adopted by authority of the series' board of trustees as further described. The investment adviser follows fair valuation guidelines, consistent with U.S. Securities and Exchange Commission rules and guidance, to consider relevant principles and factors when making fair value determinations. The investment adviser considers relevant indications of value that are reasonably and timely available to it in determining the fair value to be assigned to a particular security, such as the type and cost of the security; contractual or legal restrictions on resale of the security; relevant financial or business developments of the issuer; actively traded similar or related securities; conversion or exchange rights on the security; related corporate actions; significant events occurring after the close of trading in the security; and changes in overall market conditions. In addition, the closing prices of equity securities and futures that trade in markets outside U.S. time zones may be adjusted to reflect significant events that occur after the close of local trading but before the net asset value of each share class of each fund is determined. Fair valuations and valuations of investments and futures that are not actively trading involve judgment and may differ materially from valuations that would have been used had greater market activity occurred.

Processes and structure — The series' board of trustees has delegated authority to the series' investment adviser to make fair value determinations, subject to board oversight. The investment adviser has established a Joint Fair Valuation Committee (the "Fair Valuation Committee") to administer, implement and oversee the fair valuation process, and to make fair value decisions. The Fair Valuation Committee regularly reviews its own fair value decisions, as well as decisions made under its standing instructions to the investment adviser's valuation teams. The Fair Valuation Committee reviews changes in fair value measurements from period to period and may, as deemed appropriate, update the fair valuation guidelines to better reflect the results of back testing and address new or evolving issues. The Fair Valuation Committee reports any changes to the fair valuation guidelines to the board of trustees with supplemental information to support the changes. The series' board and audit committee also regularly review reports that describe fair value determinations and methods.

The series' investment adviser has also established a Fixed-Income Pricing Review Group to administer and oversee the fixed-income valuation process, including the use of fixed-income pricing vendors. This group regularly reviews pricing vendor information and market data. Pricing decisions, processes and controls over security valuation are also subject to additional internal reviews, including an annual control self-evaluation program facilitated by the investment adviser's compliance group.

Classifications — The series' investment adviser classifies the funds' assets and liabilities into three levels based on the inputs used to value the assets or liabilities. Level 1 values are based on quoted prices in active markets for identical securities. Level 2 values are based on significant observable market inputs, such as quoted prices for similar securities and quoted prices in inactive markets. Certain securities trading outside the U.S. may transfer between Level 1 and Level 2 due to valuation adjustments resulting from significant market movements following the close of local trading. Level 3 values are based on significant unobservable inputs that reflect the investment adviser's determination of assumptions that market participants might reasonably use in valuing the securities.

The valuation levels are not necessarily an indication of the risk or liquidity associated with the underlying investment. For example, U.S. government securities are reflected as Level 2 because the inputs used to determine fair value may not always be quoted prices in an active market. The following tables present the funds' valuation levels as of June 30, 2016 (dollars in thousands):

Global Growth Fund

	Investment securities			
	Level 1	Level 2*	Level 3	Total

Managed Risk International Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk Blue Chip Income and Growth Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk Growth-Income Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

Managed Risk Asset Allocation Fund

At June 30, 2016, all of the fund's investments were classified as Level 1.

4. Risk factors

Investing in the funds may involve certain risks including, but not limited to, those described below.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by a fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental or governmental agency responses to economic conditions; and currency exchange, interest rate and commodity price fluctuations.

Issuer risks –The prices of, and the income generated by, securities held by a fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance and strategic initiatives such as mergers, acquisitions or dispositions, and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in income-oriented stocks – Income provided by a fund may be reduced by changes in the dividend policies of, and the capital resources available at, the companies in which the fund invests.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks maybe more volatile than stocks of larger, more established companies.

Investing outside the U.S. – Securities of issuers domiciled outside the U.S., or with significant operations or revenues outside the U.S., may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as the imposition of price controls or punitive taxes, that could adversely impact revenues. Securities markets in certain countries may be more volatile and/or less liquid than those in the U.S. Investments outside the U.S. may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the U.S. In addition, the value of investments outside the U.S. may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the U.S. may be heightened in connection with investments in emerging markets.

Investing in developing countries – Investing in countries with developing economies and/or markets may involve risks in addition to and greater than those generally associated with investing in developed countries. For instance, developing countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, there may be increased settlement risks for transactions in local securities.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, developing countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating a fund's net asset value. Additionally, there may be increased settlement risks for transactions in local securities.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by a fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in a fund having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which a fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The funds' investment adviser relies on its own credit analysts to research issuers and issues in seeking to mitigate various credit and default risks.

Investing in lower rated debt instruments — Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Investing in derivatives — The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional cash securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose a fund to losses in excess of its initial investment. Derivatives may be difficult for a fund to buy or sell at an opportune time or price and may be difficult to terminate or otherwise offset. A fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce a fund's returns and increase a fund's price volatility. A fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction.

Thinly traded securities — There may be little trading in the secondary market for particular bonds, other debt securities or derivatives, which may make them more difficult to value, acquire or sell.

Currency — The prices of, and the income generated by, most debt securities held by a fund may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of a fund's securities denominated in such currencies would generally fall and vice versa. U.S. dollar-denominated securities of foreign issuers may also be affected by changes in relative currency values.

Investing in mortgage-related securities and other asset-backed securities — Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as consumer loans or receivables. Such securities often involve risks that are different from or more acute than the risks associated with investing in other types of debt securities. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in a fund having to reinvest the proceeds in lower yielding securities, effectively reducing a fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing a fund's cash available for reinvestment in higher yielding securities.

Investing in future delivery contracts — Contracts for future delivery of mortgage-related securities, such as to be announced contracts and mortgage dollar rolls, involve a fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase a fund's market exposure, and the market price of the securities the fund contracts to repurchase could drop below their purchase price. While a fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions may increase the turnover rate of a fund.

Investing in inflation linked bonds — The values of inflation linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation linked bonds may also reduce a fund's distributable income during periods of extreme deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation linked securities may decline and result in losses to a fund.

Investing in securities backed by the U.S. government — Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates. Securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in repurchase agreements – Upon entering into a repurchase agreement, a fund purchases a security from a bank or broker-dealer, which simultaneously commits to repurchase the security within a specified time at the fund's cost with interest. The security purchased by the fund constitutes collateral for the seller's repurchase obligation. If the party agreeing to repurchase should default, the fund may seek to sell the security it holds as collateral. The fund may incur a loss if the value of the collateral securing the repurchase obligation has fallen below the repurchase price. The fund may also incur disposition costs and encounter procedural delays in connection with liquidating the collateral.

Interest rate risk – The values and liquidity of the securities held by a fund may be affected by changing interest rates. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. A fund may invest in variable and floating rate securities. Although such securities are generally less sensitive to interest rate changes, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as general interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, a fund may not be able to maintain a positive yield, and, given the historically low interest rate environment, risks associated with rising rates are currently heightened.

Credit and liquidity support – Changes in the credit quality of banks and financial institutions providing credit and liquidity support features with respect to securities held by a fund could cause the values of these securities to decline.

Asset allocation – A fund's percentage allocation to equity securities, debt securities and money market instruments could cause the fund to underperform relative to relevant benchmarks and other funds with similar investment objectives.

Nondiversification – As nondiversified funds, certain funds have the ability to invest a larger percentage of their assets in the securities of a smaller number of issuers than diversified funds. Although the funds do not intend to limit their investments to the securities of a small number of issuers, if they were to do so, poor performance by a single large holding would adversely impact the funds' investment results more than if the funds were invested in a larger number of issuers.

Management – The investment adviser to the funds actively manages the funds' investments. Consequently, the funds are subject to the risk that the methods and analyses employed by the investment adviser in this process may not produce the desired results. This could cause the funds to lose value or their investment results to lag relevant benchmarks or other funds with similar objectives.

Investing in the managed risk funds may involve additional risks including, but not limited to, those described below.

Fund structure – The managed risk funds invest in underlying funds and incur expenses related to those underlying funds. In addition, investors in the managed risk funds will incur fees to pay for certain expenses related to the operations of the managed risk funds. An investor holding the underlying fund directly would incur lower overall expenses but would not receive the benefit of the risk management strategy of the managed risk fund.

Management – The managed risk funds are subject to the risk that the methods employed by the subadviser in implementing the managed risk strategy may not produce the desired results. This could cause the managed risk funds to lose value or their investment results to lag relevant benchmarks or other funds with similar objectives.

Underlying fund risks – Because the managed risk funds' investments consist of individual underlying funds, the managed risk funds' risks are directly related to the risks of the respective underlying fund in which each managed fund invests. For this reason, it is important to understand the risks associated with investing both in the managed risk fund and the respective underlying fund.

Investing in futures contracts – In addition to the risks generally associated with investing in derivative instruments, futures contracts are subject to the creditworthiness of the clearing organizations, exchanges and futures commission merchants with which a fund transacts. Additionally, although futures require only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a futures contract could greatly exceed the initial amount invested. While futures contracts are generally liquid instruments, under certain market conditions, futures may be deemed to be illiquid. For example a fund may be temporarily prohibited from closing out its position in a futures contract if intraday price change limits or limits on trading volume imposed by the applicable futures exchange are triggered. If a fund is unable to close out a position on a futures contract, the fund would remain subject to the risk of adverse price movements until the fund is able to close out the futures position. The ability of a fund to successfully utilize futures contracts may depend in part upon the ability of the fund's investment adviser or subadviser to accurately forecast interest rates and other economic factors and to assess and predict the impact of such economic factors on the futures in which the fund invests. If the investment adviser or subadviser incorrectly forecasts economic developments or incorrectly predicts the impact of such developments on the futures in which it invests, a fund could be exposed to the risk of loss.

Hedging – There may be imperfect or even negative correlation between the prices of the futures contracts and the prices of the underlying securities. For example, futures contracts may not provide an effective hedge because changes in futures contract prices may not track those of the underlying securities or indexes they are intended to hedge. In addition, there are significant differences between the securities and futures markets that could result in an imperfect correlation between the markets, causing a given hedge not to achieve its objectives. The degree of imperfection of correlation depends on circumstances such as variations in speculative market demand for futures, including technical influences in futures trading, and differences between the financial instruments being hedged and the instruments underlying the standard contracts available for trading. A decision as to whether, when and how to hedge involves the exercise of skill and judgment, and even a well-conceived hedge may be unsuccessful to some degree because of market behavior or unexpected interest rate trends. In addition, the fund's investment in exchange-traded futures and their resulting costs could limit the fund's gains in rising markets relative to those of the underlying fund, or to those of unhedged funds in general.

Short positions – Losses from short positions in futures contracts occur when the underlying index increases in value. As the underlying index increases in value, the holder of the short position in the corresponding futures contract is required to pay the difference in value of the futures contract resulting from the increase in the index on a daily basis. Losses from a short position in an index futures contract could potentially be very large if the value of the underlying index rises dramatically in a short period of time.

5. Certain investment techniques

Index-linked bonds – Some of the funds have invested in index-linked bonds, which are fixed-income securities whose principal value is periodically adjusted to a government price index. Over the life of an index-linked bond, interest is paid on the adjusted principal value. Increases or decreases in the principal value of index-linked bonds are recorded as interest income in the fund's statement of operations.

Mortgage dollar rolls – Some of the funds have entered into mortgage dollar roll transactions in which the fund sells a mortgage-backed security to a counterparty and simultaneously enters into an agreement with the same counterparty to buy back a similar security on a specific future date at a predetermined price. Mortgage dollar rolls are accounted for as purchase and sale transactions, which may increase the funds' portfolio turnover rates.

Loan transactions – Some of the funds have entered into loan transactions in which the fund acquires a loan either through an agent, by assignment from another holder, or as a participation interest in another holder's portion of a loan. The loan is often administered by a financial institution that acts as agent for the holders of the loan, and the fund may be required to receive approval from the agent and/or borrower prior to the sale of the investment. The loan's interest rate and maturity date may change based on the terms of the loan, including potential early payments of principal.

Unfunded commitments – Asset Allocation Fund, Global Bond Fund and High-Income Bond Fund have participated in a transaction that involves unfunded commitments, which may obligate each fund to purchase additional shares of the applicable issuer. Under the terms of the commitments, which will expire no later than April 1, 2021, the maximum potential exposure of Asset Allocation Fund, Global Bond Fund and High-Income Bond Fund as of June 30, 2016 was $471,000, $109,000 and $719,000, respectively. Should such commitments become due in full, these amounts would represent less than 0.01% of the net assets of Asset Allocation Fund and 0.04% of the net assets of Global Bond Fund and High-Income Bond Fund, in each case as of June 30, 2016.

Short-term securities – The managed risk funds hold shares of the Government Cash Management Fund, a cash management vehicle offered by the Bank of New York Mellon ("BNY Mellon"), the funds' custodian bank. The Government Cash Management Fund is managed by the Dreyfus Corporation.

Forward currency contracts – Some of the funds have entered into forward currency contracts, which represent agreements to exchange currencies on specific future dates at predetermined rates. The series' investment adviser uses forward currency contracts to manage the fund's exposure to changes in exchange rates. Upon entering into these contracts, risks may arise from the potential inability of counterparties to meet the terms of their contracts and from possible movements in exchange rates.

On a daily basis, the series' investment adviser values forward currency contracts based on the applicable exchange rates and records unrealized appreciation or depreciation for open forward currency contracts in each fund's statement of assets and liabilities. Realized gains or losses are recorded at the time the forward contract is closed or offset by another contract with the same broker for the same settlement date and currency. Closed forward currency contracts that have not reached their settlement date are included in the respective receivables or payables for closed forward currency contracts in each fund's statement of assets and liabilities. Net realized gains or losses from closed forward currency contracts and net unrealized appreciation or depreciation from open forward currency contracts are recorded in each fund's statement of operations. As of June 30, 2016, Global Growth Fund, Global Small Capitalization

Fund, International Fund, New World Fund, Global Growth and Income Fund, Growth-Income Fund, International Growth and Income Fund, Global Balanced Fund, Bond Fund and Global Bond Fund had open forward currency contracts. As of June 30, 2016, High-Income Bond Fund did not have any open forward currency contracts. The average month-end notional amount of open forward currency contracts while held by High-Income Bond Fund was $2,585,000.

Interest rate swaps — Some of the funds have entered into interest rate swaps, which are agreements to exchange one stream of future interest payments for another based on a specified notional amount. Typically, interest rate swaps exchange a fixed interest rate for a payment that floats relative to a benchmark or vice versa. The series' investment adviser uses interest rate swaps to manage the interest rate sensitivity of the fund by increasing or decreasing the duration of the fund or a portion of the fund's portfolio. Risks may arise as a result of the series' investment adviser incorrectly anticipating changes in interest rates, increased volatility, reduced liquidity and the potential inability of counterparties to meet the terms of their agreements.

Upon entering into an interest rate swap contract, the fund is required to deposit cash, U.S. government securities or other liquid securities, which is known as "initial margin." Generally, the initial margin required for a particular interest rate swap is set and held as collateral by the clearinghouse on which the contract is cleared. The amount of initial margin required may be significantly modified from time to time by the clearinghouse during the term of the contract.

On a daily basis, the series' investment adviser records daily interest accruals related to the exchange of future payments as a receivable and payable in each fund's statement of assets and liabilities. Each fund also pays or receives a "variation margin" based on the increase or decrease in the value of the interest rate swaps, including accrued interest, and records variation margin on interest rate swaps in each fund's statement of assets and liabilities. Each fund records realized gains and losses on both the net accrued interest and any gain or loss recognized at the time the interest rate swap is closed or expires. Net realized gains or losses, as well as any net unrealized appreciation or depreciation, from interest rate swaps are recorded in each fund's statement of operations. As of June 30, 2016, Asset Allocation Fund, Bond Fund, Global Bond Fund, Mortgage Fund and U.S. Government/AAA-Rated Securities Fund had open interest rate swaps. As of June 30, 2016, High-Income Bond Fund did not have any open interest rate swaps. The average month-end notional amount of open interest rate swaps while held by High-Income Bond Fund was $31,888,000.

Credit default swap indices — Some of the funds have entered into centrally cleared credit default swap agreements on credit indices ("CDSI") that involve one party (the protection buyer) making a stream of payments to another party (the protection seller) in exchange for the right to receive a specified return upon the occurrence of a credit event, such as a default or restructuring, with respect to any of the underlying issuers (reference obligations) in the referenced index. The series' investment adviser uses credit default swaps to assume exposure to a diversified portfolio of credits or to hedge against existing credit risks.

CDSI are portfolios of credit instruments or exposures designed to be representative of some part of the credit market, such as the high-yield or investment-grade credit market. CDSI are generally traded using standardized terms, including a fixed spread and standard maturity dates, and reference all the names in the index. If there is a credit event, it is settled based on that name's weight in the index. The composition of the underlying issuers or obligations within a particular index may change periodically, usually every six months. A specified credit event may affect all or individual underlying reference obligations included in the index, and will be settled based upon the relative weighting of the affected obligation(s) within the index. The value of each CDSI can be used as a measure of the current payment/performance risk of the CDSI and represents the likelihood of an expected liability or profit should the notional amount of the CDSI be closed or sold as of the period end. An increasing value, as compared to the notional amount of the CDSI, represents a deterioration of the referenced indices' credit soundness and a greater likelihood of risk of default or other credit event occurring as defined under the terms of the agreement. When a fund provides sell protection, its maximum exposure is the notional amount of the credit default swap agreement.

Upon entering into a centrally cleared CDSI contract, the fund is required to deposit with a derivatives clearing member ("DCM") in a segregated account in the name of the DCM an amount of cash, U.S. government securities or other liquid securities, which is known as initial margin. Generally, the initial margin required for a particular credit default swap is set and held as collateral by the clearinghouse on which the contract is cleared. The amount of initial margin required may be significantly modified from time to time by the clearinghouse during the term of the contract. Securities deposited as initial margin are designated on the investment portfolio.

On a daily basis, interest accruals related to the exchange of future payments are recorded as a receivable and payable in each fund's statement of assets and liabilities. Each fund also pays or receives a variation margin based on the increase or decrease in the value of the centrally cleared swaps, and records variation margin in each fund's statement of assets and liabilities. Each fund records realized gains and losses on both the net accrued interest and any gain or loss recognized at the time the swap is closed or expires. Net realized gains or losses, as well as any net unrealized appreciation or depreciation, from credit default swaps are recorded in each fund's statement of operations. As of June 30, 2016, High-Income Bond Fund had open credit default swaps.

Futures contracts – The managed risk funds have entered into futures contracts, which provide for the future sale by one party and purchase by another party of a specified amount of a specific financial instrument for a specified price, date, time and place designated at the time the contract is made. Futures contracts are used to strategically manage portfolio volatility and downside equity risk.

Upon entering into futures contracts, and to maintain the fund's open positions in futures contracts, the fund is required to deposit with a futures broker, or FCM, in a segregated account in the name of the FCM an amount of cash, U.S. government securities, suitable money market instruments, or other liquid securities, known as "initial margin." The margin required for a particular futures contract is set by the exchange on which the contract is traded to serve as collateral, and may be significantly modified from time to time by the exchange during the term of the contract. When initial margin is deposited with brokers, a receivable is recorded in the fund's statement of assets and liabilities.

On a daily basis, each fund pays or receives variation margin based on the increase or decrease in the value of the futures contracts and records variation margin on futures contracts in each fund's statement of assets and liabilities. In addition, each fund segregates liquid assets equivalent to the fund's outstanding obligations under the contract in excess of the initial margin and variation margin, if any. Futures contracts may involve a risk of loss in excess of the variation margin shown on each fund's statement of assets and liabilities. Each fund records realized gains or losses at the time the futures contract is closed or expires. Net realized gains or losses and net unrealized appreciation or depreciation from futures contracts are recorded in each fund's statement of operations. As of June 30, 2016, Mortgage Fund, U.S. Government/AAA-Rated Securities Fund, Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund held futures contracts.

The following tables present the financial statement impacts resulting from the funds' use of forward currency contracts, interest rate swaps, credit default swaps and/or futures contracts as of June 30, 2016 (dollars in thousands):

			Global Growth Fund	Global Small Capitalization Fund	International Fund
Assets	**Risk type**	**Location on statements of assets and liabilities**			
Forward currency	Currency	Unrealized appreciation on open forward currency contracts	$ –	$4,683	$ 4,735

*Includes cumulative appreciation/depreciation on interest rate swaps, credit default swaps and/or futures contracts as reported in the applicable table(s) following each fund's investment portfolio. Only current day's variation margin is reported within the statements of assets and liabilities.

Collateral – Funds that invest in forward currency contracts, interest rate swaps, credit default swaps, futures contracts and/or future delivery contracts participate in a collateral program. For forward currency contracts, the program calls for the fund to either receive or pledge collateral based on the net gain or loss on unsettled forward currency contracts by counterparty. For interest rate swaps, credit default swaps and futures contracts, the program calls for the fund to pledge collateral for initial and variation margin by contract. For future delivery contracts, the program calls for the fund to either receive or pledge collateral based on the net gain or loss on unsettled contracts by certain counterparties. The purpose of the collateral is to cover potential losses that could occur in the event that either party cannot meet its contractual obligations.

Rights of offset – Funds that hold forward currency contracts have enforceable master netting agreements with certain counterparties, where amounts payable by each party to the other in the same currency (with the same settlement date and with the same counterparty) are settled net of each party's payment obligation. If an early termination date occurs under these agreements following an event of default or termination event, all obligations of each party to its counterparty are settled net through a single payment in a single currency ("close-out netting"). For financial reporting purposes, the funds do not offset financial assets and financial liabilities that are subject to these master netting arrangements in the statements of assets and liabilities.

The following tables present each fund's forward currency contracts by counterparty that are subject to master netting agreements but that are not offset in the funds' statements of assets and liabilities. The net amount column shows the impact of offsetting on the funds' statement of assets and liabilities as of June 30, 2016 if close-out netting was exercised (dollars in thousands):

Global Growth Fund

*Non-cash collateral is shown on a settlement basis.

6. Taxation and distributions

Federal income taxation – Each fund complies with the requirements under Subchapter M of the Internal Revenue Code applicable to mutual funds and intends to distribute substantially all of its net taxable income and net capital gains each year. The funds are not subject to income taxes to the extent such distributions are made. Therefore, no federal income tax provision is required.

As of and during the period ended June 30, 2016, none of the funds had a liability for any unrecognized tax benefits. Each fund recognizes interest and penalties, if any, related to unrecognized tax benefits as income tax expense in the statements of operations. During the period, none of the funds incurred any significant interest or penalties.

The funds are not subject to examination by U.S. federal tax authorities for tax years before 2012. Managed Risk Asset Allocation Fund is not subject to examination by U.S. federal tax authorities for tax years before 2012, the year the fund commenced operations. Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund and Managed Risk Growth-Income Fund are not subject to examination by U.S. federal tax authorities for tax years before 2013, the year the funds commenced operations. Capital Income Builder is not subject to examination by U.S. federal tax authorities for tax years before 2014, the year the fund commenced operations.

The funds are not subject to examination by state tax authorities for tax years before 2011. Global Balanced Fund and Mortgage Fund are not subject to examination by state tax authorities for tax years before 2011, the year the funds commenced operations. Managed Risk Asset Allocation Fund is not subject to examination by state tax authorities for tax years before 2012, the year the fund commenced operations. Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund and Managed Risk Growth-Income Fund are not subject to examination by state tax authorities for tax years before 2013, the year the funds commenced operations. Capital Income Builder is not subject to examination by state tax authorities for tax years before 2014, the year the fund commenced operations.

The following funds are not subject to examination by tax authorities outside the U.S. for the years indicated: Global Growth Fund, Global Small Capitalization Fund, International Fund, New World Fund and Global Growth and Income Fund for tax years before 2009; Growth Fund and Growth-Income Fund for tax years before 2010; International Growth and Income Fund and Global Balanced Fund for tax years before 2011; and Asset Allocation Fund, Bond Fund and Global Bond Fund for tax years before 2015. All other funds are not subject to examination by tax authorities outside the U.S.

Non-U.S. taxation — Dividend and interest income are recorded net of non-U.S. taxes paid. The funds may file withholding tax reclaims in certain jurisdictions to recover a portion of amounts previously withheld. As a result of recent rulings from European courts, some of the funds filed for additional reclaims related to prior years. These reclaims are recorded when the amount is known and there are no significant uncertainties on collectability. Gains realized by the funds on the sale of securities in certain countries are subject to non-U.S. taxes. The funds record a liability based on unrealized gains to provide for potential non-U.S. taxes payable upon the sale of these securities.

Distributions — Distributions paid to shareholders are based on net investment income and net realized gains determined on a tax basis, which may differ from net investment income and net realized gains for financial reporting purposes. These differences are due primarily to different treatment for items such as currency gains and losses; short-term capital gains and losses; capital losses related to sales of certain securities within 30 days of purchase; unrealized appreciation of certain investments in securities outside the U.S.; deferred expenses; cost of investments sold; non-U.S. taxes on capital gains; paydowns on fixed-income securities; net capital losses; net operating losses; amortization of premiums and discounts; and income on certain investments. The fiscal year in which amounts are distributed may differ from the year in which the net investment income and net realized gains are recorded by the funds for financial reporting purposes.

As indicated in the tables in this section, some of the funds had capital loss carryforwards available at December 31, 2015. These will be used to offset any capital gains realized by the funds in the current year or in subsequent years through the expiration dates. Funds with capital loss carryforwards will not make distributions from capital gains while a capital loss carryforward remains.

Under the Regulated Investment Company Modernization Act of 2010 (the "Act"), net capital losses recognized after December 31, 2010, may be carried forward indefinitely, and their character is retained as short-term and/or long-term losses. Previously, net capital losses were carried forward for eight years and treated as short-term losses. As a transition rule, the Act requires that post-enactment net capital losses be used before pre-enactment net capital losses.

7. Fees and transactions

CRMC, the series' investment adviser, is the parent company of American Funds Distributors,® Inc. ("AFD"), the distributor of the series' shares, and American Funds Service Company® ("AFS"), the series' transfer agent. CRMC, AFD and AFS are considered related parties to the series.

Investment advisory services – The series has an investment advisory and service agreement with CRMC that provides for monthly fees accrued daily. These fees are based on annual rates that generally decrease as average net asset levels increase. CRMC receives investment advisory fees from the underlying funds held by the managed risk funds. Effective January 1, 2016, CRMC reduced the investment advisory services fee from an annual rate of 0.250% of average daily net assets to 0.150% of average daily net assets for the managed risk funds. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables. Subadvisory fees for the managed risk funds are paid by CRMC to Milliman FRM. The managed risk funds are not responsible for paying any subadvisory fees.

Investment advisory services waivers – The series' board of trustees approved an amended agreement for Asset Allocation Fund effective February 1, 2016, decreasing the annual rate on average daily net assets in excess of $21 billion to 0.240%. CRMC is waiving a portion of its investment advisory services fees for each of the managed risk funds. Investment advisory services fees are presented in each fund's statement of operations gross of the waivers from CRMC. For the six months ended June 30, 2016, total investment advisory services fees waived by CRMC were $833,000.

The range of rates and asset levels, and the current annualized rates of average net assets for each fund before and after any investment advisory services waivers (if applicable), are as follows:

Fund	Rates		Net asset level (in billions)		For the period ended June 30, 2016, before waiver	For the period ended June 30, 2016, after waiver

Distribution services – The series has plans of distribution for all share classes except Class 1. Under the plans, the board of trustees approves certain categories of expenses that are used to finance activities primarily intended to sell fund shares. The plans provide for payments to pay service fees to firms that have entered into agreements with the series. These payments, based on an annualized percentage of average daily net assets, range from 0.18% to 0.50% as noted in the table below. In some cases, the board of trustees has limited the amounts that may be paid to less than the maximum allowed by the plans.

Share class	Currently approved limits	Plan limits
Class 2	0.25%	0.25%
Class 3	0.18	0.18
Class 4	0.25	0.25
Class P1	0.00	0.25
Class P2	0.25	0.50

Insurance administrative services – The series has an insurance administrative services plan for Class 4, P1 and P2 shares. Under the plan, these share classes pay 0.25% of each insurance company's respective average daily net assets in each share class to compensate the insurance companies for services provided to their separate accounts and contractholders for which the shares of the fund are beneficially owned as underlying investments of such contractholders' annuities. These services include, but are not limited to, maintenance, shareholder communications and transactional services. The insurance companies are not related parties to the series.

Transfer agent services – The series has a shareholder services agreement with AFS under which the funds compensate AFS for providing transfer agent services to all of the funds' share classes. These services include recordkeeping, shareholder communications and transaction processing. In addition, the managed risk funds reimburse AFS for amounts paid to third parties for performing transfer agent services on behalf of fund shareholders.

Administrative services – The series has an administrative services agreement with CRMC to provide administrative services to all of the funds' share classes. The services include, but are not limited to, coordinating, monitoring, assisting and overseeing third parties that provide services to fund shareholders. Under the agreement, each share class of each fund, except the managed risk funds, pays an annual fee of 0.01% based on its respective average daily net assets to compensate CRMC for providing administrative services. For the

managed risk funds, CRMC receives administrative services fees of 0.01% of average daily net assets from Class 1 shares of the underlying funds for administrative services provided to the series.

Accounting and administrative services – The managed risk funds have a subadministration agreement with BNY Mellon under which the fund compensates BNY Mellon for providing accounting and administrative services to each of the managed risk funds' share classes. These services include, but are not limited to, fund accounting (including calculation of net asset value), financial reporting and tax services. BNY Mellon is not a related party to the managed risk funds.

Reimbursement of fees and expenses – CRMC is currently reimbursing a portion of other expenses for each of the managed risk funds so that each fund's expenses do not exceed 0.28% of its respective average daily net assets. Other expenses exclude investment advisory services and distribution services fees. For the six months ended June 30, 2016, total expenses reimbursed by CRMC were $289,000.

Class-specific expenses under the agreements described above were as follows (dollars in thousands):

Trustees' deferred compensation – Trustees who are unaffiliated with CRMC may elect to defer the cash payment of part or all of their compensation. These deferred amounts, which remain as liabilities of the funds, are treated as if invested in one or more of the American Funds. These amounts represent general, unsecured liabilities of the funds and vary according to the total returns of the selected funds. Trustees' compensation, shown on the accompanying financial statements, reflects current fees (either paid in cash or deferred) and a net increase in the value of the deferred amounts as follows (dollars in thousands):

	Current fees	Increase in value of deferred amounts	Total trustees' compensation
Global Growth Fund	$22	$1	$ 23

Affiliated officers and trustees – Officers and certain trustees of the series are or may be considered to be affiliated with CRMC, AFD and AFS. No affiliated officers or trustees received any compensation directly from any fund in the series.

Security transactions with related funds – The funds may purchase from, or sell securities to, other CRMC-managed funds (or funds managed by certain affiliates of CRMC) under procedures adopted by the fund's board of trustees. The funds involved in such transactions are considered related by virtue of having a common investment adviser (or affiliated investment advisers), common trustees and/or common officers. When such transactions occur, each transaction is executed at the current market price of the security and no brokerage commissions or fees are paid in accordance with Rule 17a-7 of the 1940 Act. During the six months ended June 30, 2016, such purchase and sale transactions occurred between Global Growth Fund and related funds in the amounts of $652,454,000 and $819,688,000, respectively.

8. Committed line of credit

Global Small Capitalization Fund and High-Income Bond Fund participate with other funds managed by CRMC in a $500 million credit facility (the "line of credit") to be utilized for temporary purposes to fund shareholder redemptions. Each fund has agreed to pay commitment fees on its pro-rata portion of the line of credit, which are reflected in other expenses in each fund's statement of operations. During the period, neither fund borrowed on this line of credit.

9. Capital share transactions

Capital share transactions in the funds were as follows (dollars and shares in thousands):

[1]Based on average shares outstanding.
[2]Unaudited.
[3]Based on operations for the period shown and, accordingly, is not representative of a full year.
[4]Not annualized.
[5]Annualized.
[6]The year ended December 31, 2014, reflects the impact of a corporate action event that resulted in a one-time increase to net investment income. If the corporate action event had not occurred, the net investment income per share and ratio of net income to average net assets would have been lower for all share classes.
[7]Class 4 shares were offered beginning December 14, 2012.
[8]All or a significant portion of assets in this class consisted of seed capital invested by CRMC and/or its affiliates. Certain fees (including, where applicable, fees for distribution services) are not charged or accrued on these seed capital assets. If such fees were paid by the fund on seed capital assets, fund expenses would have been higher and net income and total return would have been lower.
[9]Amount less than $1 million.
[10]For the period May 1, 2014, commencement of operations, through December 31, 2014.
[11]For the period May 2, 2011, commencement of operations, through December 31, 2011.
[12]Amount less than $.01.
[13]On May 1, 2016, the fund converted from a cash fund to an ultra-short-term bond fund and changed its name from Cash Management Fund to Ultra-Short Bond Fund.
[14]This column reflects the impact of certain waivers/reimbursements by CRMC. CRMC waived a portion of investment advisory services and reimbursed certain expenses for the managed risk funds.
[15]Ratio reflects weighted average net expense ratio of the underlying fund for the period presented. See Expense Example for further information regarding fees and expenses.
[16]For the period May 1, 2013, commencement of operations, through December 31, 2013.
[17]Amount less than .01%.
[18]For the period September 28, 2012, commencement of operations, through December 31, 2012.
[19]Refer to Note 5 for further information on mortgage dollar rolls.
[20]Amount less than 1%.

See Notes to Financial Statements

Expense example

unaudited

The funds in American Funds Insurance Series serve as the underlying investment vehicle for various insurance products. As an owner of an insurance contract that invests in one of the funds in the series, you incur two types of costs: (1) transaction costs, such as initial sales charges on purchase payments and contingent deferred sales charges on redemptions (loads), and (2) ongoing costs, including management fees, distribution and service (12b-1) fees, and other expenses. Additional fees are charged by the insurance companies related to the various benefits they provide. This example is intended to help you understand your ongoing costs (in dollars) of investing in the underlying funds so you can compare these costs with the ongoing costs of investing in other mutual funds that serve a similar function in other annuity products. The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire six-month period (January 1, 2016, through June 30, 2016).

Actual expenses:

The first line of each share class in the tables on the following pages provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the first line under the heading entitled "Expenses paid during period" to estimate the expenses you paid on your account during this period.

Hypothetical example for comparison purposes:

The second line of each share class in the tables on the following pages provides information about hypothetical account values and hypothetical expenses based on the actual expense ratio for the share class and an assumed rate of return of 5.00% per year before expenses, which is not the actual return of the share class. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the fund and other funds. To do so, compare this 5.00% hypothetical example with the 5.00% hypothetical examples that appear in the shareholder reports of the other funds.

Notes:

Additional fees are charged by the insurance companies related to the various benefits they provide. You can estimate the impact of these fees by adding the amount of the fees to the total estimated expenses you paid on your account during the period as calculated above. In addition, your ending account value would be lower by the amount of these fees.

Note that the expenses shown in the tables on the following pages are meant to highlight your ongoing costs only and do not reflect any transactional costs. Therefore, the second line of each share class in the tables is useful in comparing ongoing costs only and will not help you determine the relative total costs of owning different funds. In addition, if these transactional costs were included, your costs would have been higher.

[1]The "expenses paid during period" are equal to the "annualized expense ratio," multiplied by the average account value over the period, multiplied by the number of days in the period, and divided by 366 (to reflect the one-half year period).

[2]The "expenses paid during period" and "annualized expense ratio" do not include the expenses of the underlying funds in which each fund invests.

[3]The "effective expenses paid during period" are equal to the "effective annualized expense ratio," multiplied by the average account value over the period, multiplied by the number of days in the period, and divided by 366 (to reflect the period).

[4]The "effective annualized expense ratio" reflects the net annualized expense ratio of the class plus the class's pro-rata share of the weighted average expense ratio of the underlying funds in which it invests.

Investors should carefully consider investment objectives, risks, charges and expenses. This and other important information is contained in the series prospectuses and summary prospectuses, which can be obtained from your financial professional and should be read carefully before investing. You may also call American Funds Service Company (AFS) at (800) 421-4225 or visit the American Funds website at americanfunds.com.

"American Funds Proxy Voting Procedures and Principles" – which describes how we vote proxies relating to portfolio securities – is available on the American Funds website or upon request by calling AFS. The series files its proxy voting record with the U.S. Securities and Exchange Commission (SEC) for the 12 months ended June 30 by August 31. The proxy voting record is available free of charge on the SEC website at sec.gov and on the American Funds website.

Complete June 30, 2016, portfolios of American Funds Insurance Series investments are available free of charge by calling AFS or visiting the SEC website (where they are part of Form N-CSR).

American Funds Insurance Series files a complete list of its portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. This filing is available free of charge on the SEC website. You may also review or, for a fee, copy this filing at the SEC's Public Reference Room in Washington, D.C. Additional information regarding the operation of the Public Reference Room may be obtained by calling the SEC's Office of Investor Education and Advocacy at (800) SEC-0330. Additionally, the list of portfolio holdings is available by calling AFS.

This report is for the information of American Funds Insurance Series investors, but it also may be used as sales literature when preceded or accompanied by the current prospectuses or summary prospectuses for American Funds Insurance Series and the prospectus for the applicable insurance contract, which give details about charges, expenses, investment objectives and operating policies of the series. If used as sales material after September 30, 2016, this report must be accompanied by a statistical update for the most recently completed calendar quarter.

The American Funds Advantage℠

Since 1931, American Funds, part of Capital Group, has helped investors pursue long-term investment success. Our consistent approach – in combination with The Capital System℠ – has resulted in a superior long-term track record for American Funds Insurance Series®.

Aligned with investor success

We base our decisions on a long-term perspective, which we believe aligns our goals with the interests of our clients. American Funds Insurance Series (AFIS) portfolio managers average 26 years of investment experience, including 23 years at our company, reflecting a career commitment to our long-term approach.[1]

The Capital System℠

The Capital System combines individual accountability with teamwork. Funds using The Capital System are divided into portions that are managed independently by investment professionals with diverse backgrounds, ages and investment approaches. An extensive global research effort is the backbone of our system.

Superior long-term track record

Our AFIS equity funds have beaten their comparable Lipper indexes in 91% of 10-year periods and 100% of 20-year periods. Our AFIS fixed income funds have beaten comparable Lipper indexes in 55% of 10-year periods and 87% of 20-year periods.[2] We strive to keep management fees competitive. Over the past 20 years, most funds' fees have been below industry averages.[3]

[1] Portfolio manager experience as of November 2015.

[2]Based on Class 2 share results for rolling periods through December 31, 2015. Periods covered are the shorter of the fund's lifetime or since the inception date of the comparable Lipper index (except Global Small Capitalization Fund, for which the Lipper average was used). The comparable Lipper indexes are: Global Funds Index (Global Growth Fund), Growth Funds Index (Growth Fund), International Funds Index (International Fund), Emerging Markets Funds Index (New World Fund), Growth & Income Funds Index (Blue Chip Income and Growth Fund, Growth-Income Fund), Balanced Portfolio Funds Index (Asset Allocation Fund), Core Bond Funds Index (Bond Fund), High Yield Funds Index (High-Income Bond Fund) and General U.S. Government Funds Index (U.S. Government/ AAA-Rated Securities Fund).

[3]Based on management fees for the 20-year period ended December 31, 2015, versus comparable Lipper categories, excluding funds of funds.

AMERICAN FUNDS®

From Capital Group

American Funds Insurance Series®

Semi-annual report
for the six months ended
June 30, 2015

American Funds Insurance Series, from Capital Group, is the underlying investment vehicle for many variable annuities and insurance products. For more than 80 years, Capital has invested with a long-term focus based on thorough research and attention to risk. All the variable funds in American Funds Insurance Series may not be available in your product.

Investing for short periods makes losses more likely. Investments are not FDIC-insured, nor are they deposits of or guaranteed by a bank or any other entity, so they may lose value. For current information and month-end results, visit americanfunds.com/afis. For information about your insurance contract and month-end results, go to the website of the company that issued your contract.

Investing outside the United States may be subject to risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Investing in small-capitalization stocks can involve greater risk than is customarily associated with investing in stocks of larger, more established companies. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. High-yield bonds are subject to greater fluctuations in value and risk of loss of income and principal than investment-grade bonds. Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch as an indication of an issuer's creditworthiness. Futures contracts may not provide an effective hedge of the underlying securities because changes in the prices of futures contracts may not track those of the securities they are intended to hedge. In addition, the managed risk strategy may not effectively protect the funds from market declines and will limit the funds' participation in market gains. The use of the managed risk strategy could cause the funds' returns to lag those of the applicable underlying funds in certain rising market conditions. Refer to the funds' prospectuses and the Risk Factors section of this report for more information on these and other risks associated with investing in the funds.

Fellow investors:

Investors set aside concerns about China's slowing economy and the Greek debt crisis such that we had a mild increase in the U.S. stock market during the six months ended June 30, 2015. With the long-anticipated increase in U.S. interest rates likely to happen this fall, interest-rate sensitive investments – such as dividend-paying companies and bonds – fared less well than growth-oriented stocks because prices of income-focused investments often fall when rates rise.

Generally, developed markets saw the best results, with gains in most major markets in the MSCI ACWI (All Country World Index) including the U.S. (+1.70%), United Kingdom (+2.00%), Germany (+2.23%), France (+5.02%) and Hong Kong (+11.90%). Buoyed by economic stimulus measures, Japan's stock market advanced 13.62%.

The specter of rising interest rates in the U.S. and declining commodity prices hurt some emerging markets, including Mexico (–1.62%), Brazil (–8.70%) and Malaysia (–9.36%). Not surprisingly, Greece was down the most, losing 25.66%. Despite the impact of falling oil prices and sanctions over its actions in Ukraine, Russian stocks rebounded and had the best return of any market, climbing 27.59%. After a breathtaking rise and headline-grabbing decline, China finished the period up 14.65%. Country returns are based on MSCI indexes, which reflect reinvestment of distributions and dividends net of withholding taxes, except for the MSCI USA Index, which reflects dividends gross of withholding taxes. All market indexes referenced in this report are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index.

In bond markets, investment-grade securities declined as investors initially sought higher yields than those offered by U.S. Treasuries. Barclays U.S. Aggregate Index fell 0.10% and Barclays Global Aggregate Index was down 3.08%. The 10-year U.S. Treasury yield, which was 2.17% at December 31, dropped to 1.68% at the end of January before rising to end the period at 2.35%. The Barclays U.S. Corporate High Yield 2% Issuer Capped Index gained 2.53%, and the JPMorgan Emerging Markets Bond Index Global rose 1.76%.

The U.S. dollar appreciated against almost all currencies. In developed markets, only the Swiss franc (+6.3%), Israeli shekel (+3.2%) and British pound (+0.9%) advanced.

The euro and Canadian dollar were down 7.9% and 7.2%, respectively, while the Japanese yen was off 2.0%. Among developing market currencies, only the Russian ruble (+7.7%) and Taiwanese dollar (+2.4%) had gains above 1.0%. Weakest were the Ukrainian hryvnia, which was down 24.7% (after declining 47.9% in 2014), Brazilian real (–14.4%) and Turkish lira (–12.7%). Currency returns are calculated by MSCI.

All but one of the AFIS equity funds recorded gains during the six-month period, with growth-oriented funds faring better than those that focus on dividend-paying investments. With the uncertainty around interest rates, two of the series' bond funds declined, while Cash Management Fund was again hampered by low short-term interest rates.

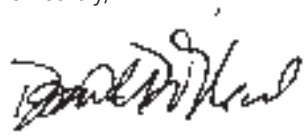
Looking ahead

The U.S. economy has continued to show signs of improvement. Unemployment has steadily declined, ending the period at 5.3%, the lowest level since April 2008. Consumer confidence has picked up, with auto sales through June the highest since 2005, helped by lower gas prices and affordable loans.

The probable interest rate increase later this year could trigger some market volatility, but we will not panic in such an event, and will evaluate whether good investment opportunities are being created. Our investment approach, based on extensive research, a long-term horizon, and close attention to valuation, has served our retirement investors very well over time. We continue to have confidence this will remain the case, and thank you for your support.

We look forward to reporting to you again at year-end.

Sincerely,



Donald D. O'Neal
Vice Chairman of the Board

Alan N. Berro
President

August 7, 2015

It is with deep sadness that we note the passing of Jim Rothenberg, who served as Chairman of the Board of The Capital Group Companies, parent company of the investment adviser to the American Funds Insurance Series. Jim was an admired colleague, insightful investor and forceful advocate for our funds' shareholders. We will greatly miss his leadership, which was marked by a deep sense of fairness and a staunch commitment to our firm and those it serves.

Summary investment portfolios

Summary investment portfolios are designed to streamline this report and help investors better focus on the funds' principal holdings. Cash Management Fund, Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund show a complete listing of portfolio holdings. See the inside back cover for details on how to obtain a complete schedule of portfolio holdings for each fund in the series.

Unless otherwise indicated, American Funds Insurance Series investment results are for Class 2 shares (Class P2 shares for managed risk funds). Class 2 shares began operations on April 30, 1997. Class 3 shares began operations on January 16, 2004. Class 4 shares began operations on December 14, 2012. Results encompassing periods prior to those dates assume a hypothetical investment in Class 1 shares and include the deduction of additional annual expenses (0.25% for Class 2 shares, 0.18% for Class 3 shares and 0.50% for Class 4 shares).

The variable annuities and life insurance contracts that use the series funds contain certain fees and expenses not reflected in this report. Investment results assume all distributions are reinvested and reflect applicable fees and expenses. The series investment adviser waived a portion of its management fees for all existing funds from September 1, 2004, through December 31, 2008, for U.S. Government/AAA-Rated Securities Fund from July 1, 2010, through December 31, 2010, and for Blue Chip Income and Growth Fund from February 1, 2014, through January 31, 2015. For the managed risk funds, the investment adviser is currently waiving a portion of its management fee equal to 0.15% of the funds' net assets. In addition, the investment adviser is currently reimbursing a portion of the other expenses. Investment results and net expense ratios shown reflect the waivers and reimbursements, without which the results would have been lower and the expenses would have been higher. The waivers and reimbursements will be in effect through at least May 1, 2016. The adviser may elect at its discretion to extend, modify or terminate the reimbursements at that time. The waivers may only be modified or terminated with the approval of the series board. See the Financial Highlights table in this report for details.

Although Capital Income Builder has a plan of distribution for Class 2 shares and Global Balanced Fund has a plan of distribution and an insurance administrative services plan for Class 4 shares, fees for distribution and/or insurance administrative services are not paid on amounts invested in the funds by the investment adviser and/or its affiliates. If fees for these services were charged on these assets, fund results would have been lower and expenses would have been higher. See the "Plans of distribution" and the "Fund expenses" sections of the prospectus for information on the fees for distribution and/or insurance administrative services, respectively, permitted to be charged by the funds.

Individual funds are listed in this report according to their risk potential, with managed risk funds listed last.

International Fund

Fund results shown are for past periods and are not predictive of results for future periods. Current and future results may be lower or higher than those shown. Unit prices and returns will vary, so investors may lose money. For current information and month-end results, visit americanfunds.com/afis. For information about your insurance contract and month-end results, go to the website of the company that issued your contract.

International Fund increased 5.40% for the six months ended June 30, 2015, outpacing its benchmark, the MSCI ACWI (All Country World Index) ex USA,* which rose 4.03%.

The global economic picture was mixed. Supported by the European Central Bank's quantitative easing program, Europe's economic indicators were a pleasant surprise — except for Greece. Japan, while no longer in deflation, still struggled to ignite its economy. China's growth rate slowed further, but its government has many levers at its disposal to help improve the economy. After a strong 2014, India disappointed. Several Latin American economies were hurt by the low price of oil and other commodities.

Netherlands-based consumer discretionary company Altice was a highlight, along with Japanese information technology firms Murata Manufacturing and Nintendo. Investments in Macau gaming companies Sands China, GEG and Melco Crown Entertainment detracted, hurt by the Chinese government's continuing anticorruption efforts.

Uncertainty about the Federal Reserve's plans for interest rate hikes is making some investors cautious, but U.S. equities should "climb the wall of worry" as long as the underlying economy remains supportive. If the Greek debt crisis is resolved, then European markets should also have room to move higher. Managers expect the U.S. and Europe will thus be able to provide an engine of growth that extends to other markets. While we seek to invest in companies that we believe can prosper in any market environment, we emphasize companies that are economically sensitive when we have strong conviction the economy is going to experience a robust recovery.

This summary investment portfolio is designed to streamline the report and help investors better focus on the funds principal holdings. See the inside back cover for details on how to obtain a complete schedule of portfolio holdings.

As permitted by U.S. Securities and Exchange Commission regulations, "Miscellaneous" securities include holdings in their first year of acquisition that have not previously been publicly disclosed.

"Other securities" includes all issues that are not disclosed separately in the summary investment portfolio, including securities which were valued under fair value procedures adopted by authority of the board of trustees. The total value of securities, which were valued under fair value procedures, was $7,815,000, which represented .10% of the net assets of the fund. "Other securities" also includes securities which were pledged as collateral. The total value of pledged collateral was $687,000, which represented less than .01% of the net assets of the fund.

Forward currency contracts

The fund has entered into forward currency contracts as shown in the following table. The average notional amount of open forward currency contracts was $181,323,000 over the prior 12-month period.

	Settlement date	Counterparty	Contract amount Receive (000)	Contract amount Deliver (000)	Unrealized appreciation (depreciation) at 6/30/2015 (000)
Sales:					
Australian dollars	7/28/2015	UBS AG	$5,403	A$7,000	$ 11
British pounds	7/16/2015	UBS AG	$77,783	£50,000	(770)
Euros	7/15/2015	Bank of America, N.A.	$26,348	€23,445	205
Japanese yen	7/8/2015	Barclays Bank PLC	$11,428	¥1,413,000	(118)
Japanese yen	7/15/2015	UBS AG	$19,005	¥2,348,000	(184)
Japanese yen	7/24/2015	Barclays Bank PLC	$42,641	¥5,269,000	(425)
					$(1,281)

The following footnotes apply to either the individual securities noted or one or more of the securities aggregated and listed as a single line item.

[1]Security did not produce income during the last 12 months.
[2]Acquired in a transaction exempt from registration under Rule 144A or Section 4(2) of the Securities Act of 1933. May be resold in the U.S. in transactions exempt from registration, normally to qualified institutional buyers. The total value of all such securities, including those in "Other securities," was $382,562,000, which represented 4.71% of the net assets of the fund.

Notes to financial statements

1. Organization

American Funds Insurance Series (the "series") is registered under the Investment Company Act of 1940 as an open-end, diversified management investment company with 28 different funds (the "funds"). Twenty-three funds in the series are covered in this report. The other five funds in the series are covered in a separate report. The assets of each fund are segregated, with each fund accounted for separately. Capital Research and Management Company ("CRMC") is the series' investment adviser. Milliman Financial Risk Management LLC ("Milliman") is the subadviser for the risk management strategy for eight of the funds (the "managed risk funds"), five of which are covered in this report.

The managed risk funds covered in this report are Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund, Managed Risk Growth-Income Fund and Managed Risk Asset Allocation Fund. The managed risk funds invest in other funds within the series (the "underlying funds") and employ Milliman to implement the risk management strategy, which consists of using hedging instruments – primarily short positions on exchange-traded futures contracts – to attempt to stabilize the volatility of the funds around target volatility levels and reduce the downside exposure of the funds during periods of significant market declines.

Shareholders approved a proposal to reorganize the series from a Massachusetts business trust to a Delaware statutory trust. The reorganization may be completed in the next 12 months; however, the series reserves the right to delay the implementation.

The investment objectives for each fund covered in this report are as follows:

Global Growth Fund – Seeks long-term growth of capital through investments in common stocks of companies located around the world.

Global Small Capitalization Fund – Seeks long-term growth of capital through investments in smaller companies in the U.S. and around the world.

Growth Fund – Seeks to invest in a wide range of companies that appear to offer superior opportunities for growth of capital.

International Fund – Seeks long-term growth of capital through investments in common stocks of companies located around the world.

New World Fund – Seeks long-term capital appreciation by investing in common stocks and bonds with significant exposure to countries that have developing economies and/or markets.

Blue Chip Income and Growth Fund – Seeks to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing through investments in quality common stocks.

Global Growth and Income Fund – Seeks long-term growth of capital while providing current income. It invests on a global basis in a diversified portfolio consisting primarily of common stocks and other equity securities.

Growth-Income Fund – Seeks long-term growth of capital and income by investing in common stocks or other securities of companies located in the U.S. and around the world.

International Growth and Income Fund – Seeks to provide long-term growth of capital and current income by investing primarily in the stocks of larger, well-established companies outside the U.S., including countries that have developing economies and/or markets.

Capital Income Builder – Seeks to provide a level of current income exceeding the average yield on U.S. stocks generally and to provide a growing stream of income over the years.

Asset Allocation Fund – Seeks high total return (including income and capital gains) consistent with the preservation of capital over the long term by investing primarily in common stocks and fixed-income securities.

Global Balanced Fund – Seeks long-term growth of capital, conservation of principal and current income by investing in equity and debt securities in the U.S. and around the world.

Bond Fund – Seeks a high level of current income as is consistent with preservation of capital by investing primarily in bonds.

Global Bond Fund – Seeks a high level of total return consistent with prudent investment management by investing primarily in a global portfolio of investment-grade bonds.

High-Income Bond Fund – Seeks a high level of current income and, secondarily, capital appreciation through a diversified portfolio consisting primarily of lower rated, higher risk corporate bonds.

Mortgage Fund – Seeks to provide current income and preservation of capital by investing primarily in mortgage-related securities.

U.S. Government/AAA-Rated Securities Fund – Seeks to provide a high level of current income consistent with preservation of capital by investing primarily in securities guaranteed or sponsored by the U.S. government and the highest quality corporate bonds.

Cash Management Fund – Seeks to provide income on cash reserves while preserving capital and maintaining liquidity.

Managed Risk Growth Fund – Seeks to provide growth of capital while seeking to manage volatility and provide downside protection.

Managed Risk International Fund – Seeks to provide long-term growth of capital while seeking to manage volatility and provide downside protection.

Managed Risk Blue Chip Income and Growth Fund – Seeks to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing, in each case while seeking to manage volatility and provide downside protection.

Managed Risk Growth-Income Fund – Seeks to provide long-term growth of capital and income while seeking to manage volatility and provide downside protection.

Managed Risk Asset Allocation Fund – Seeks to provide high total return consistent with preservation of capital over the long term while seeking to manage volatility and provide downside protection.

Each fund in the series, except the managed risk funds, offers either three or four share classes (Classes 1, 2, 3 or 4); the managed risk funds offer two share classes (Classes P1 and P2). Holders of all share classes of each fund have equal pro rata rights to assets, dividends and liquidation proceeds of each fund held. Each share class of each fund has identical voting rights, except for the exclusive right to vote on matters affecting only its class. Share classes have different fees and expenses ("class-specific fees and expenses"), primarily due to different arrangements for certain distribution expenses. Differences in class-specific fees and expenses will result in differences in net investment income and, therefore, the payment of different per-share dividends by each class of each fund.

2. Significant accounting policies

Each fund is an investment company that applies the accounting and reporting guidance issued in Topic 946 by the U.S. Financial Accounting Standards Board. Each fund's financial statements have been prepared to comply with U.S. generally accepted accounting principles ("U.S. GAAP"). These principles require the series' investment adviser to make estimates and assumptions that affect reported amounts and disclosures. Actual results could differ from those estimates. Subsequent events, if any, have been evaluated through the date of issuance in the preparation of the financial statements. The funds follow the significant accounting policies described in this section, as well as the valuation policies described in the next section on valuation.

Security transactions and related investment income – Security transactions are recorded by the funds as of the date the trades are executed with brokers. Realized gains and losses from security transactions are determined based on the specific identified cost of the securities. In the event a security is purchased with a delayed payment date, the funds will segregate liquid assets sufficient to meet their payment obligations. Dividend income is recognized on the ex-dividend date and interest income is recognized on an accrual basis. Market discounts, premiums and original issue discounts on fixed-income securities are amortized daily over the expected life of the security.

Fees and expenses – The fees and expenses of the underlying funds held by the managed risk funds are not included in the fees and expenses reported for each of the managed risk funds; however, they are indirectly reflected in the valuation of each of the underlying funds. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables.

Class allocations – Income, fees and expenses (other than class-specific fees and expenses) and realized and unrealized gains and losses are allocated daily among the various share classes of each fund based on their relative net assets. Class-specific fees and expenses, such as distribution expenses, are accrued daily and charged directly to the respective share class of each fund.

Dividends and distributions to shareholders – Dividends and distributions to shareholders are recorded on each fund's ex-dividend date.

Currency translation – Assets and liabilities, including investment securities, denominated in currencies other than U.S. dollars are translated into U.S. dollars at the exchange rates supplied by one or more pricing vendors on the valuation date. Purchases and sales of investment securities and income and expenses are translated into U.S. dollars at the exchange rates on the dates of such transactions. The effects of changes in exchange rates on investment securities are included with the net realized gain or loss and net unrealized appreciation or depreciation on investments in the funds' statements of operations. The realized gain or loss and unrealized appreciation or depreciation resulting from all other transactions denominated in currencies other than U.S. dollars are disclosed separately.

3. Valuation

CRMC, the series' investment adviser, values the funds' investments at fair value as defined by U.S. GAAP. The net asset value of each share class of each fund is generally determined as of approximately 4:00 p.m. New York time each day the New York Stock Exchange is open.

Methods and inputs – The series' investment adviser uses the following methods and inputs to establish the fair value of each fund's assets and liabilities. Use of particular methods and inputs may vary over time based on availability and relevance as market and economic conditions evolve.

Equity securities are generally valued at the official closing price of, or the last reported sale price on, the exchange or market on which such securities are traded, as of the close of business on the day the securities are being valued or, lacking any sales, at the last available bid price. Prices for each security are taken from the principal exchange or market on which the security trades. The value of an underlying fund is based on its reported net asset value.

Fixed-income securities, including short-term securities, are generally valued at prices obtained from one or more pricing vendors. Vendors value such securities based on one or more of the inputs described in the following table. The table provides examples of inputs that are commonly relevant for valuing particular classes of fixed-income securities in which the funds are authorized to invest. However, these classifications are not exclusive and any of the inputs may be used to value any other class of fixed-income security.

Fixed-income class	Examples of standard inputs
All	Benchmark yields, transactions, bids, offers, quotations from dealers and trading systems, new issues, spreads and other relationships observed in the markets among comparable securities; and proprietary pricing models such as yield measures calculated using factors such as cash flows, financial or collateral performance and other reference data (collectively referred to as "standard inputs")
Corporate bonds & notes; convertible securities	Standard inputs and underlying equity of the issuer
Bonds & notes of governments & government agencies	Standard inputs and interest rate volatilities
Mortgage-backed; asset-backed obligations	Standard inputs and cash flows, prepayment information, default rates, delinquency and loss assumptions, collateral characteristics, credit enhancements and specific deal information
Municipal securities	Standard inputs and, for certain distressed securities, cash flows or liquidation values using a net present value calculation based on inputs that include, but are not limited to, financial statements and debt contracts

When the series' investment adviser deems it appropriate to do so (such as when vendor prices are unavailable or not deemed to be representative), fixed-income securities will be valued in good faith at the mean quoted bid and ask prices that are reasonably and timely available (or bid prices, if ask prices are not available) or at prices for securities of comparable maturity, quality and type.

Securities with both fixed-income and equity characteristics, or equity securities traded principally among fixed-income dealers, are generally valued in the manner described for either equity or fixed-income securities, depending on which method is deemed most appropriate by the series' investment adviser. The Government Cash Management Fund held by the managed risk funds is managed to maintain a $1.00 net asset value per share. The net asset value of each share class of each managed risk fund is calculated based on the reported net asset values of the underlying funds in which each fund invests.

Forward currency contracts are valued at the mean of representative quoted bid and ask prices, generally based on prices supplied by one or more pricing vendors. Interest rate swaps and credit default swaps are generally valued by pricing vendors based on market inputs that include the index and term of index, reset frequency, payer/receiver, currency and pay frequency. Exchange-traded futures are generally valued at the official settlement price of, or the last reported sale price on, the exchange or market on which such instruments are traded, as of the close of business on the day the futures are being valued or, lacking any sales, at the last available bid price. Prices for each future are taken from the exchange or market on which the security trades.

Securities and other assets for which representative market quotations are not readily available or are considered unreliable by the series' investment adviser are fair valued as determined in good faith under fair value guidelines adopted by authority of the series' board of trustees as further described. The investment adviser follows fair valuation guidelines, consistent with U.S. Securities and Exchange Commission rules and guidance, to consider relevant principles and factors when making fair value determinations. The investment adviser considers relevant indications of value that are reasonably and timely available to it in determining the fair value to be assigned to a particular security, such as the type and cost of the security; contractual or legal restrictions on resale of the security; relevant financial or business developments of the issuer; actively traded similar or related securities; conversion or exchange rights on the security; related corporate actions; significant events occurring after the close of trading in the security; and changes in overall market conditions. In addition, the closing prices of equity securities and futures that trade in markets outside U.S. time zones may be adjusted to reflect significant events that occur after the close of local trading but before the net asset value of each share class of each fund is determined. Fair valuations and valuations of investments and futures that are not actively trading involve judgment and may differ materially from valuations that would have been used had greater market activity occurred.

Processes and structure — The series' board of trustees has delegated authority to the series' investment adviser to make fair value determinations, subject to board oversight. The investment adviser has established a Joint Fair Valuation Committee (the "Fair Valuation Committee") to administer, implement and oversee the fair valuation process, and to make fair value decisions. The Fair Valuation Committee regularly reviews its own fair value decisions, as well as decisions made under its standing instructions to the investment adviser's valuation teams. The Fair Valuation Committee reviews changes in fair value measurements from period to period and may, as deemed appropriate, update the fair valuation guidelines to better reflect the results of back testing and address new or evolving issues. The Fair Valuation Committee reports any changes to the fair valuation guidelines to the board of trustees with supplemental information to support the changes. The series' board and audit committee also regularly review reports that describe fair value determinations and methods.

The series' investment adviser has also established a Fixed-Income Pricing Review Group to administer and oversee the fixed-income valuation process, including the use of fixed-income pricing vendors. This group regularly reviews pricing vendor information and market data. Pricing decisions, processes and controls over security valuation are also subject to additional internal reviews, including an annual control self-evaluation program facilitated by the investment adviser's compliance group.

Classifications — The series' investment adviser classifies the funds' assets and liabilities into three levels based on the inputs used to value the assets or liabilities. Level 1 values are based on quoted prices in active markets for identical securities. Level 2 values are based on significant observable market inputs, such as quoted prices for similar securities and quoted prices in inactive markets. Certain securities trading outside the U.S. may transfer between Level 1 and Level 2 due to valuation adjustments resulting from significant market movements following the close of local trading. Level 3 values are based on significant unobservable inputs that reflect the investment adviser's determination of assumptions that market participants might reasonably use in valuing the securities.

The valuation levels are not necessarily an indication of the risk or liquidity associated with the underlying investment. For example, U.S. government securities are reflected as Level 2 because the inputs used to determine fair value may not always be quoted prices in an active market. The following tables present the funds' valuation levels as of June 30, 2015 (dollars in thousands):

Global Growth Fund

The following table reconciles the valuation of the fund's Level 3 investment securities and related transactions for the six months ended June 30, 2015 (dollars in thousands):

	Beginning value at 1/1/2015	Transfers into Level 3[2]	Purchases	Sales	Net realized loss[3]	Unrealized appreciation[3]	Transfers out of Level 3[2]	Ending value at 6/30/2015
Investment securities	$14,115	$3,152	$22,274	$(6,458)	$(1,175)	$727	$–	$32,635
Net unrealized depreciation during the period on Level 3 investment securities held at June 30, 2015[3]								$ (533)

[2]Transfers into or out of Level 3 are based on the beginning market value of the quarter in which they occurred.
[3]Net realized loss and unrealized appreciation (depreciation) are included in the related amounts on investments in the statement of operations.

Unobservable inputs – The significant unobservable inputs used to value the fund's Level 3 investments include financial multiples of publicly traded comparable companies, estimates of recovery allocation and financial performance, and calculated discounts for lack of marketability. The following table provides additional information used by the fund's investment adviser to fair value securities with significant unobservable inputs (dollars in thousands):

	Value at 6/30/2015	Valuation techniques	Unobservable input(s)	Range	Impact to valuation from an increase in input*
Bonds, notes & other debt instruments	$29,702	Unchanged vendor price	N/A	N/A	N/A
		Cost	N/A	N/A	N/A
		Trading of similar issues adjusted for DLOM	DLOM	0%-5%	Decrease
		Estimated recovery	Recovery allocation	N/A	Increase
Common stocks	2,933	Enterprise valuation	EV/EBITDA multiple	6.0x	Increase
	$32,635				

*This column represents the directional change in fair value of the Level 3 securities that would result in an increase from the corresponding input. A decrease to the unobservable input would have the opposite effect. Significant increases and decreases in these inputs in isolation could result in significantly higher or lower fair value measurements.

Key to abbreviations
EV = Enterprise value
EBITDA = Earnings before income taxes, depreciation and amortization
DLOM = Discount for lack of marketability

Mortgage Fund
At June 30, 2015, all of the fund's investments were classified as Level 2.

U.S. Government/AAA-Rated Securities Fund
At June 30, 2015, all of the fund's investments were classified as Level 2.

Cash Management Fund
At June 30, 2015, all of the fund's investment securities were classified as Level 2.

Managed Risk Growth Fund
At June 30, 2015, all of the fund's investments were classified as Level 1.

Managed Risk International Fund
At June 30, 2015, all of the fund's investments were classified as Level 1.

Managed Risk Blue Chip Income and Growth Fund
At June 30, 2015, all of the fund's investments were classified as Level 1.

Managed Risk Growth-Income Fund
At June 30, 2015, all of the fund's investments were classified as Level 1.

Managed Risk Asset Allocation Fund
At June 30, 2015, all of the fund's investments were classified as Level 1.

4. Risk factors

Investing in the funds may involve certain risks including, but not limited to, those described below.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by a fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental or governmental agency responses to economic conditions; and currency exchange, interest rate and commodity price fluctuations.

Issuer risks –The prices of, and the income generated by, securities held by a fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance and strategic initiatives such as mergers, acquisitions or dispositions, and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in income-oriented stocks – Income provided by a fund may be reduced by changes in the dividend policies of, and the capital resources available at, the companies in which the fund invests.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks maybe more volatile than stocks of larger, more established companies.

Investing outside the U.S. – Securities of issuers domiciled outside the U.S., or with significant operations or revenues outside the U.S., may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as the imposition of price controls or punitive taxes, that could adversely impact revenues. Securities markets in certain countries may be more volatile and/or less liquid than those in the U.S. Investments outside the U.S. may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the U.S. In addition, the value of investments outside the U.S. may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the U.S. may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, developing countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating a fund's net asset value. Additionally, there may be increased settlement risks for transactions in local securities.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by a fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities. Rising interest rates will generally cause the prices of bonds and other debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in a fund having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which a fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The funds' investment adviser relies on its own credit analysts to research issuers and issues in seeking to mitigate various credit and default risks.

Investing in lower rated debt instruments – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds, or bonds rated Ba1 or BB+ or below by Nationally Recognized Statistical Rating Organizations.

Thinly traded securities – There may be little trading in the secondary market for particular bonds or other debt securities, which may make them more difficult to value, acquire or sell.

Currency – The prices of, and the income generated by, most debt securities held by a fund may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of a fund's securities denominated in such currencies would generally fall and vice versa. U.S. dollar-denominated securities of foreign issuers may also be affected by changes in relative currency values.

Investing in mortgage-related securities and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as consumer loans or receivables. Such securities often involve risks that are different from or more acute than the risks associated with investing in other types of debt securities. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in a fund having to reinvest the proceeds in lower yielding securities, effectively reducing a fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing a fund's cash available for reinvestment in higher yielding securities.

Investing in future delivery contracts – Contracts for future delivery of mortgage-related securities, such as to be announced contracts and mortgage dollar rolls, involve a fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase a fund's market exposure, and the market price of the securities the fund contracts to repurchase could drop below their purchase price. While a fund can preserve capital and generate gains through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions may increase the turnover rate of a fund.

Investing in interest rate swaps –The use of interest rate swaps involves the risk that the investment adviser will not accurately predict anticipated changes in interest rates, which may result in losses to a fund. Interest rate swaps also involve the possible failure of a counterparty to perform in accordance with the terms of the swap agreement. If a counterparty defaults on its obligations under a swap agreement, a fund may lose any amount it expected to receive from the counterparty, potentially including amounts in excess of a fund's initial investment.

Investing in inflation linked bonds – The values of inflation linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation linked bonds may also reduce a fund's distributable income during periods of extreme deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation linked securities may decline and result in losses to a fund.

Investing in securities backed by the U.S. government – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates. Securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in money market securities – The values and liquidity of the securities held by a fund may be affected by changing interest rates, changes in the credit quality of the issuers, changes in credit ratings of the securities and general market conditions. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall.

Low interest rate environment – During periods of extremely low short-term interest rates, a fund may not be able to maintain a positive yield.

Credit and liquidity support – Changes in the credit quality of banks and financial institutions providing credit and liquidity support features with respect to securities held by a fund could cause the values of these securities to decline.

Asset allocation – A fund's percentage allocation to equity securities, debt securities and money market instruments could cause the fund to underperform relative to relevant benchmarks and other funds with similar investment objectives.

Nondiversification – As nondiversified funds, certain funds have the ability to invest a larger percentage of their assets in the securities of a smaller number of issuers than diversified funds. Although the funds do not intend to limit their investments to the securities of a small number of issuers, if they were to do so, poor performance by a single large holding would adversely impact the funds' investment results more than if the funds were invested in a larger number of issuers.

Management – The investment adviser to the funds actively manages the funds' investments. Consequently, the funds are subject to the risk that the methods and analyses employed by the investment adviser in this process may not produce the desired results. This could cause the funds to lose value or their investment results to lag relevant benchmarks or other funds with similar objectives.

Investing in the managed risk funds may involve additional risks including, but not limited to, those described below.

Fund structure – The managed risk funds invest in underlying funds and incur expenses related to those underlying funds. In addition, investors in the managed risk funds will incur fees to pay for certain expenses related to the operations of the managed risk funds. An investor holding the underlying fund directly would incur lower overall expenses but would not receive the benefit of the risk management strategy of the managed risk fund.

Management – The managed risk funds are subject to the risk that the methods employed by the subadviser in implementing the managed risk strategy may not produce the desired results. This could cause the managed risk funds to lose value or their investment results to lag relevant benchmarks or other funds with similar objectives.

Underlying fund risks – Because the managed risk funds' investments consist of individual underlying funds, the managed risk funds' risks are directly related to the risks of the respective underlying fund in which each managed fund invests. For this reason, it is important to understand the risks associated with investing both in the managed risk fund and the respective underlying fund.

Investing in futures – A futures contract is considered a derivative because it derives its value from the price of the underlying security or financial index. Losses on futures contracts may exceed the amount invested. The prices of futures contracts can be volatile, and futures contracts may be illiquid.

Futures exchanges may limit the amount of fluctuation permitted in certain futures contract prices during a single trading day. The daily limit establishes the maximum amount that the price of a futures contract may vary either up or down from the previous day's settlement price at the end of the current trading session. Once the daily limit has been reached in a futures contract subject to the limit, no more trades may be made on that day at a price beyond that limit. The daily limit governs only price movements during a particular trading day and therefore does not limit potential losses because the limit may work to prevent the liquidation of unfavorable positions. For example, futures prices have occasionally moved to the daily limit for several consecutive trading days with little or no trading, thereby preventing prompt liquidation of positions and subjecting some holders of futures contracts to substantial losses.

There can be no assurance that a liquid market will exist at a time when the fund seeks to close out a futures position, and the fund would remain obligated to meet margin requirements until the position is closed. In addition, there can be no assurance that an active secondary market will continue to exist.

Initial margin is held at the clearinghouse or exchange for such futures contract, and variation margin is held intraday at the fund's futures commission merchant ("FCM") that buys or sells such futures contract. Any such amounts are subject to the risk that the party holding such cash defaults on its obligations during the time it is in possession of such cash and is unable to fund its obligation to, or on behalf of, the fund.

Hedging – Futures contracts may not provide an effective hedge of the underlying securities because changes in the prices of futures contracts may not track those of the securities they are intended to hedge. In addition, the risk management strategy may not effectively protect the managed risk funds from market declines and will limit the managed risk funds' participation in market gains. The use of the risk management strategy could cause a managed risk fund to underperform as compared to the underlying fund in certain rising market conditions.

Short positions – Losses from short positions in futures contracts occur when the underlying index increases in value. As the underlying index increases in value, the holder of the short position in the corresponding futures contract is required to pay the difference in value of the futures contract resulting from the increase in the index on a daily basis. Losses from a short position in an index futures contract could potentially be very large if the value of the underlying index rises dramatically in a short period of time.

5. Certain investment techniques

Index-linked bonds – Some of the funds have invested in index-linked bonds, which are fixed-income securities whose principal value is periodically adjusted to a government price index. Over the life of an index-linked bond, interest is paid on the adjusted principal value. Increases or decreases in the principal value of index-linked bonds are recorded as interest income in the fund's statement of operations.

Mortgage dollar rolls – Some of the funds have entered into mortgage dollar roll transactions in which the fund sells a mortgage-backed security to a counterparty and simultaneously enters into an agreement with the same counterparty to buy back a similar security on a specific future date at a predetermined price. Mortgage dollar rolls are accounted for as purchase and sale transactions, which may increase the funds' portfolio turnover rates.

Loan transactions – Some of the funds have entered into loan transactions in which the fund acquires a loan either through an agent, by assignment from another holder, or as a participation interest in another holder's portion of a loan. The loan is often administered by a financial institution that acts as agent for the holders of the loan, and the fund may be required to receive approval from the agent and/or borrower prior to the sale of the investment. The loan's interest rate and maturity date may change based on the terms of the loan, including potential early payments of principal.

Short-term securities – The managed risk funds hold shares of the Government Cash Management Fund, a cash management vehicle offered by the Bank of New York Mellon ("BNY Mellon"), the funds' custodian bank. The Government Cash Management Fund is managed by the Dreyfus Corporation.

Unfunded commitments – Some of the funds have participated in transactions that involve unfunded commitments, which may obligate them to lend additional sums based upon the terms of the loan agreement. As of June 30, 2015, the maximum exposure of unfunded loan commitments for Asset Allocation Fund, Global Bond Fund and High-Income Bond Fund was $10,686,000, $2,533,000 and $13,150,000, respectively, which would represent 0.06%, 0.10% and 0.65%, respectively, of the net assets of each fund should such commitments become due. Unrealized appreciation of $82,000, $19,000 and $101,000, respectively, is included in other payables in each fund's statement of assets and liabilities and net unrealized appreciation on investments in each fund's statement of operations.

Forward currency contracts – Some of the funds have entered into forward currency contracts, which represent agreements to exchange currencies on specific future dates at predetermined rates. The series' investment adviser uses forward currency contracts to manage the fund's exposure to changes in exchange rates. Upon entering into these contracts, risks may arise from the potential inability of counterparties to meet the terms of their contracts and from possible movements in exchange rates.

On a daily basis, the series' investment adviser values forward currency contracts based on the applicable exchange rates and records unrealized appreciation or depreciation for open forward currency contracts in each fund's statement of assets and liabilities. Realized gains or losses are recorded at the time the forward contract is closed or offset by another contract with the same broker for the same settlement date and currency. Closed forward currency contracts that have not reached their settlement date are included in the respective receivables or payables for closed forward currency contracts in each fund's statement of assets and liabilities. Net realized

gains or losses from closed forward currency contracts and net unrealized appreciation or depreciation from open forward currency contracts are recorded in each fund's statement of operations. As of June 30, 2015, Global Growth Fund, Global Small Capitalization Fund, International Fund, New World Fund, Global Growth and Income Fund, Global Balanced Fund, Bond Fund, Global Bond Fund and High-Income Bond Fund had open forward currency contracts.

Interest rate swaps – Some of the funds have entered into interest rate swaps, which are agreements to exchange one stream of future interest payments for another based on a specified notional amount. Typically, interest rate swaps exchange a fixed interest rate for a payment that floats relative to a benchmark or vice versa. The series' investment adviser uses interest rate swaps to manage the interest rate sensitivity of the fund by increasing or decreasing the duration of the fund or a portion of the fund's portfolio. Risks may arise as a result of the series' investment adviser incorrectly anticipating changes in interest rates, increased volatility, reduced liquidity and the potential inability of counterparties to meet the terms of their agreements.

Upon entering into an interest rate swap contract, the fund is required to deposit cash, U.S. government securities or other liquid securities, which is known as initial margin. Generally, the initial margin required for a particular interest rate swap is set and held as collateral by the clearinghouse on which the contract is cleared. The amount of initial margin required may be significantly modified from time to time by the clearinghouse during the term of the contract.

On a daily basis, the series' investment adviser records daily interest accruals related to the exchange of future payments as a receivable and payable in each fund's statement of assets and liabilities. Each fund also pays or receives a variation margin based on the increase or decrease in the value of the interest rate swaps, including accrued interest, and records variation margin on interest rate swaps in the statement of assets and liabilities. Each fund records realized gains and losses on both the net accrued interest and any gain or loss recognized at the time the interest rate swap is closed or expires. Net realized gains or losses, as well as any net unrealized appreciation or depreciation, from interest rate swaps are recorded in each fund's statement of operations. As of June 30, 2015, Asset Allocation Fund, Bond Fund, Global Bond Fund, High-Income Bond Fund, Mortgage Fund and U.S. Government/AAA-Rated Securities Fund had open interest rate swaps.

Credit default swap indices – Some of the funds have entered into centrally cleared credit default swap agreements on credit indices ("CDSI") that involve one party (the protection buyer) making a stream of payments to another party (the protection seller) in exchange for the right to receive a specified return upon the occurrence of a credit event, such as a default or restructuring, with respect to any of the underlying issuers (reference obligations) in the referenced index. The series' investment adviser uses credit default swaps to assume exposure to a diversified portfolio of credits or to hedge against existing credit risks. When the fund provides sell protection, its maximum exposure is the notional amount of the credit default swap agreement.

CDSI are portfolios of credit instruments or exposures designed to be representative of some part of the credit market, such as the high-yield or investment-grade credit market. CDSI are generally traded using standardized terms, including a fixed spread and standard maturity dates, and reference all the names in the index. If there is a credit event, it is settled based on that name's weight in the index. The composition of the underlying issuers or obligations within a particular index may change periodically, usually every six months. A specified credit event may affect all or individual underlying reference obligations included in the index, and will be settled based upon the relative weighting of the affected obligation(s) within the index.

Upon entering into a centrally cleared CDSI contract, the fund is required to deposit with a derivatives clearing member ("DCM") in a segregated account in the name of the DCM an amount of cash, U.S. government securities or other liquid securities, which is known as initial margin. Generally, the initial margin required for a particular credit default swap is set and held as collateral by the clearinghouse on which the contract is cleared. The amount of initial margin required may be significantly modified from time to time by the clearinghouse during the term of the contract. Securities deposited as initial margin are designated on the investment portfolio.

On a daily basis, interest accruals related to the exchange of future payments are recorded as a receivable and payable in each fund's statement of assets and liabilities. Each fund also pays or receives a variation margin based on the increase or decrease in the value of the centrally cleared swaps, and records variation margin in the statement of assets and liabilities. Each fund records realized gains and losses on both the net accrued interest and any gain or loss recognized at the time the swap is closed or expires. Net realized gains or losses, as well as any net unrealized appreciation or depreciation, from credit default swaps are recorded in each fund's statement of operations. As of June 30, 2015, Bond Fund and High-Income Bond Fund had open credit default swaps.

Futures contracts – The managed risk funds have entered into futures contracts, which provide for the future sale by one party and purchase by another party of a specified amount of a specific financial instrument for a specified price, date, time and place designated at the time the contract is made. Futures contracts are used to strategically manage portfolio volatility and downside equity risk.

Upon entering into futures contracts, and to maintain the fund's open positions in futures contracts, the fund is required to deposit with a futures broker, or FCM, in a segregated account in the name of the FCM an amount of cash, U.S. government securities, suitable money market instruments, or other liquid securities, known as initial margin. The margin required for a particular futures contract is set by the exchange on which the contract is traded to serve as collateral, and may be significantly modified from time to time by the exchange during the term of the contract. When initial margin is deposited with brokers, a receivable is recorded in the fund's statement of assets and liabilities.

On a daily basis, each fund pays or receives variation margin based on the increase or decrease in the value of the futures contracts and records variation margin on futures contracts in the statement of assets and liabilities. In addition, each fund segregates liquid assets equivalent to the fund's outstanding obligations under the contract in excess of the initial margin and variation margin, if any. Futures contracts may involve a risk of loss in excess of the variation margin shown on each fund's statement of assets and liabilities. Each fund records realized gains or losses at the time the futures contract is closed or expires. Net realized gains or losses and net unrealized appreciation or depreciation from futures contracts are recorded in each fund's statement of operations. As of June 30, 2015, only Managed Risk Asset Allocation Fund did not hold any futures contracts.

The following tables present the financial statement impacts resulting from the funds' use of forward currency contracts, interest rate swaps, credit default swaps and/or futures contracts as of June 30, 2015 (dollars in thousands):

			Global Growth Fund	Global Small Capitalization Fund	International Fund
Assets	**Risk type**	**Location on statements of assets and liabilities**

*Includes cumulative appreciation (depreciation) on interest rate swaps, credit default swaps and/or futures contracts as reported in the applicable table(s) after each fund's investment portfolio. Only current day's variation margin is reported within the statements of assets and liabilities.

Collateral – Funds that invest in forward currency contracts, interest rate swaps, credit default swaps and/or futures contracts participate in a collateral program. For forward currency contracts, the program calls for the fund to either receive or pledge collateral based on the net gain or loss on unsettled forward currency contracts by counterparty. For interest rate swaps, credit default swaps and futures contracts, the program calls for the fund to pledge collateral for initial and variation margin by contract. The purpose of the collateral is to cover potential losses that could occur in the event that either party to the contract cannot meet its contractual obligations.

Rights of offset – Funds that hold forward currency contracts have enforceable master netting agreements with certain counterparties, where amounts payable by each party to the other in the same currency (with the same settlement date and with the same counterparty) are settled net of each party's payment obligation. If an early termination date occurs under these agreements following an event of default or termination event, all obligations of each party to its counterparty are settled net through a single payment in a single currency ("close-out netting"). For financial reporting purposes, the funds do not offset financial assets and financial liabilities that are subject to these master netting arrangements in the statements of assets and liabilities.

The following tables present each fund's forward currency contracts by counterparty that are subject to master netting agreements but that are not offset in the funds' statements of assets and liabilities. The net amount column shows the impact of offsetting on the funds' statement of assets and liabilities as of June 30, 2015 (dollars in thousands) if close-out netting was exercised:

Global Growth Fund

Counterparty	Gross amounts recognized in the statement of assets and liabilities	Gross amounts not offset in the statement of assets and liabilities and subject to a master netting agreement			Net amount
		Available to offset	Non-cash collateral*	Cash collateral

6. Taxation and distributions

Federal income taxation – Each fund complies with the requirements under Subchapter M of the Internal Revenue Code applicable to mutual funds and intends to distribute substantially all of its net taxable income and net capital gains each year. The funds are not subject to income taxes to the extent such distributions are made. Therefore, no federal income tax provision is required.

As of and during the period ended June 30, 2015, none of the funds had a liability for any unrecognized tax benefits. Each fund recognizes interest and penalties, if any, related to unrecognized tax benefits as income tax expense in the statements of operations. During the period, none of the funds incurred any significant interest or penalties.

The funds are not subject to examination by U.S. federal tax authorities for tax years before 2011. Global Balanced Fund and Mortgage Fund are not subject to examination by U.S. federal tax authorities for tax years before 2011, the year the funds commenced operations. Managed Risk Asset Allocation Fund is not subject to examination by U.S. federal tax authorities for tax years before 2012, the year the fund commenced operations. Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund and Managed Risk Growth-Income Fund are not subject to examination by U.S. federal tax authorities for tax years before 2013, the year the funds commenced operations. Capital Income Builder is not subject to examination by U.S. federal tax authorities for tax years before 2014, the year the fund commenced operations.

The funds are not subject to examination by state tax authorities for tax years before 2010. Global Balanced Fund and Mortgage Fund are not subject to examination by state tax authorities for tax years before 2011, the year the funds commenced operations. Managed Risk Asset Allocation Fund is not subject to examination by state tax authorities for tax years before 2012, the year the fund commenced operations. Managed Risk Growth Fund, Managed Risk International Fund, Managed Risk Blue Chip Income and Growth Fund and Managed Risk Growth-Income Fund are not subject to examination by state tax authorities for tax years before 2013, the year the funds

commenced operations. Capital Income Builder is not subject to examination by state tax authorities for tax years before 2014, the year the fund commenced operations.

The following funds are not subject to examination by tax authorities outside the U.S. for the years indicated: Global Growth Fund, Global Small Capitalization Fund, Growth Fund, International Fund, New World Fund and Global Growth and Income Fund for tax years before 2008; Growth-Income Fund for tax years before 2010; and International Growth and Income Fund and Global Balanced Fund for tax years before 2011. All other funds are not subject to examination by tax authorities outside the U.S.

Non-U.S. taxation – Dividend and interest income are recorded net of non-U.S. taxes paid. Gains realized by the funds on the sale of securities in certain countries are subject to non-U.S. taxes. The funds record a liability based on unrealized gains to provide for potential non-U.S. taxes payable upon the sale of these securities.

Distributions – Distributions paid to shareholders are based on net investment income and net realized gains determined on a tax basis, which may differ from net investment income and net realized gains for financial reporting purposes. These differences are due primarily to different treatment for items such as currency gains and losses; short-term capital gains and losses; capital losses related to sales of certain securities within 30 days of purchase; unrealized appreciation of certain investments in securities outside the U.S.; cost of investments sold; non-U.S. taxes on capital gains; paydowns on fixed-income securities; net capital losses; net operating losses; amortization of premiums and discounts; and income on certain investments. The fiscal year in which amounts are distributed may differ from the year in which the net investment income and net realized gains are recorded by the funds for financial reporting purposes.

As indicated in the tables in this section, some of the funds had capital loss carryforwards available at December 31, 2014. These will be used to offset any capital gains realized by the funds in the current year or in subsequent years through the expiration dates. Funds with capital loss carryforwards will not make distributions from capital gains while a capital loss carryforward remains.

Under the Regulated Investment Company Modernization Act of 2010 (the "Act"), net capital losses recognized after December 31, 2010, may be carried forward indefinitely, and their character is retained as short-term and/or long-term losses. Previously, net capital losses were carried forward for eight years and treated as short-term losses. As a transition rule, the Act requires that post-enactment net capital losses be used before pre-enactment net capital losses.

The components of distributable earnings on a tax basis are reported as of December 31, 2014, the funds' most recent year-end. Tax basis unrealized appreciation (depreciation) and cost of investment securities are reported as of June 30, 2015.

Additional tax basis disclosures are as follows (dollars in thousands):

7. Fees and transactions

CRMC, the series' investment adviser, is the parent company of American Funds Distributors,® Inc. ("AFD"), the distributor of the series' shares, and American Funds Service Company® ("AFS"), the series' transfer agent. CRMC, AFD and AFS are considered related parties to the series.

Investment advisory services – The series has an investment advisory and service agreement with CRMC that provides for monthly fees accrued daily. These fees are based on annual rates that generally decrease as average net asset levels increase. CRMC receives investment advisory fees from the underlying funds held by the managed risk funds. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables. Subadvisory fees for the managed risk funds are paid by CRMC to Milliman. The managed risk funds are not responsible for paying any subadvisory fees.

Investment advisory services waiver – The series' board of trustees approved an amended agreement for Blue Chip Income and Growth Fund effective February 1, 2015, decreasing the annual rates on daily net assets in excess of $6.5 billion to 0.360%. During the six months ended June 30, 2015, CRMC voluntarily reduced investment advisory services fees to the new breakpoint and rate in advance of the effective date of the amended agreement. CRMC is also waiving a portion of its investment advisory services fees for each of the managed risk funds. Investment advisory services fees are presented in each fund's statement of operations gross of the waivers from CRMC. For the six months ended June 30, 2015, total investment advisory services fees waived by CRMC were $1,092,000.

The range of rates and asset levels and the current annualized rates of average net assets for each fund, before and after any investment advisory services waivers, are as follows:

Fund	Rates		Net asset level (in billions)		For the period ended June 30, 2015, before waiver	For the period ended June 30, 2015, after waiver

Distribution services – The series has plans of distribution for all share classes except Class 1. Under the plans, the board of trustees approves certain categories of expenses that are used to finance activities primarily intended to sell fund shares. The plans provide for payments to pay service fees to firms that have entered into agreements with the series. These payments, based on an annualized percentage of average daily net assets, range from 0.18% to 0.50% as noted in the table below. In some cases, the board of trustees has limited the amounts that may be paid to less than the maximum allowed by the plans.

Share class	Currently approved limits	Plan limits
Class 2	0.25%	0.25%
Class 3	0.18	0.18
Class 4	0.25	0.25
Class P1	0.00	0.25
Class P2	0.25	0.50

Insurance administrative services – The series has an insurance administrative services plan for Class 4, P1 and P2 shares. Under the plan, these share classes pay 0.25% of each insurance company's respective average daily net assets in each share class to compensate the insurance companies for services provided to their separate accounts and contractholders for which the shares of the fund are beneficially owned as underlying investments of such contractholders' annuities. These services include, but are not limited to, maintenance, shareholder communications and transactional services. The insurance companies are not related parties to the series.

Transfer agent services – The series has a shareholder services agreement with AFS under which the funds compensate AFS for providing transfer agent services to all of the funds' share classes. These services include recordkeeping, shareholder communications and transaction processing. In addition, the managed risk funds reimburse AFS for amounts paid to third parties for performing transfer agent services on behalf of fund shareholders.

Administrative services – The series has an administrative services agreement that applies to all funds except the managed risk funds. Under the agreement, each share class pays an annual fee of 0.01% based on its respective average daily net assets to compensate CRMC for providing administrative services. These services include, but are not limited to, coordinating, monitoring, assisting and overseeing third parties that provide services to fund shareholders.

Accounting and administrative services – The managed risk funds have a subadministration agreement with BNY Mellon under which the fund compensates BNY Mellon for providing accounting and administrative services to each of the managed risk funds' share classes. These services include, but are not limited to, fund accounting (including calculation of net asset value), financial reporting and tax services. BNY Mellon is not a related party to the managed risk funds.

Reimbursement of fees and expenses – CRMC is currently reimbursing a portion of other expenses for each of the managed risk funds so that each fund's expenses do not exceed 0.28% of its respective average daily net assets. Other expenses exclude investment advisory services and distribution services fees. For the six months ended June 30, 2015, total expenses reimbursed by CRMC were $460,000.

Class-specific expenses under the agreements described above were as follows (dollars in thousands):

Trustees' deferred compensation – Trustees who are unaffiliated with CRMC may elect to defer the cash payment of part or all of their compensation. These deferred amounts, which remain as liabilities of the funds, are treated as if invested in one or more of the American Funds. These amounts represent general, unsecured liabilities of the funds and vary according to the total returns of the selected funds. Trustees' compensation, shown on the accompanying financial statements, includes current fees (either paid in cash or deferred) and a net increase in the value of the deferred amounts as follows (dollars in thousands):

[1]Based on average shares outstanding.
[2]Not annualized.
[3]Based on operations for the period shown and, accordingly, is not representative of a full year.
[4]Unaudited.
[5]Annualized.
[6]For the year ended December 31, 2014, this column reflects the impact of a corporate action event that resulted in a one-time increase to net investment income. If the corporate action event had not occurred, the net investment income per share and ratio of net income to average net assets would have been lower for all share classes.
[7]Class 4 shares were offered beginning December 14, 2012.
[8]Although the series has a plan of distribution and an insurance administrative services plan for some share classes, distribution services fees and/or insurance administrative services fees are not paid on amounts invested in a fund by the investment adviser and/or its affiliates. If fees for these services were charged on these assets, fund expenses would have been higher and net income and total return would have been lower.
[9]Amount less than $1 million.
[10]Amount less than $.01.
[11]For the period May 1, 2014, commencement of operations, through December 31, 2014.
[12]This class consisted solely of seed capital invested by CRMC; therefore, certain fees were not accrued.
[13]For the period May 2, 2011, commencement of operations, through December 31, 2011.
[14]This column reflects the impact, if any, of certain waivers by CRMC. CRMC reduced fees for investment advisory services for U.S. Government/AAA-Rated Securities Fund during 2010 and for the managed risk funds since each fund's commencement of operations.
[15]Ratio reflects weighted average net expense ratio of the underlying fund for the period presented. See Expense Example for further information regarding fees and expenses.
[16]For the period May 1, 2013, commencement of operations, through December 31, 2013.
[17]For the period September 28, 2012, commencement of operations, through December 31, 2012.
[18]Refer to Note 5 for further information on mortgage dollar rolls.
[19]Amount less than 1%.

Expense example

unaudited

The funds in American Funds Insurance Series serve as the underlying investment vehicle for various insurance products. As an owner of an insurance contract that invests in one of the funds in the series, you incur two types of costs: (1) transaction costs, such as initial sales charges on purchase payments and contingent deferred sales charges on redemptions (loads), and (2) ongoing costs, including management fees, distribution and service (12b-1) fees, and other expenses. Additional fees are charged by the insurance companies related to the various benefits they provide. This example is intended to help you understand your ongoing costs (in dollars) of investing in the underlying funds so you can compare these costs with the ongoing costs of investing in other mutual funds that serve a similar function in other annuity products. The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire six-month period (January 1, 2015, through June 30, 2015).

Actual expenses:

The first line of each share class in the tables on the following pages provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the first line under the heading entitled "Expenses paid during period" to estimate the expenses you paid on your account during this period.

Hypothetical example for comparison purposes:

The second line of each share class in the tables on the following pages provides information about hypothetical account values and hypothetical expenses based on the actual expense ratio for the share class and an assumed rate of return of 5.00% per year before expenses, which is not the actual return of the share class. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the fund and other funds. To do so, compare this 5.00% hypothetical example with the 5.00% hypothetical examples that appear in the shareholder reports of the other funds.

Notes:

Additional fees are charged by the insurance companies related to the various benefits they provide. You can estimate the impact of these fees by adding the amount of the fees to the total estimated expenses you paid on your account during the period as calculated above. In addition, your ending account value would be lower by the amount of these fees.

Note that the expenses shown in the tables on the following pages are meant to highlight your ongoing costs only and do not reflect any transactional costs. Therefore, the second line of each share class in the tables is useful in comparing ongoing costs only and will not help you determine the relative total costs of owning different funds. In addition, if these transactional costs were included, your costs would have been higher.

[1]The "expenses paid during period" are equal to the "annualized expense ratio," multiplied by the average account value over the period, multiplied by the number of days in the period, and divided by 365 (to reflect the one-half year period).

[2]The "expenses paid during period" and "annualized expense ratio" do not include the expenses of the underlying funds in which each fund invests.

[3]The "effective expenses paid during period" are equal to the "effective annualized expense ratio," multiplied by the average account value over the period, multiplied by the number of days in the period, and divided by 365 (to reflect the one-half year period).

[4]The "effective annualized expense ratio" reflects the net annualized expense ratio of the class plus the class's pro-rata share of the weighted average expense ratio of the underlying funds in which it invests.

Investors should carefully consider investment objectives, risks, charges and expenses. This and other important information is contained in the series prospectuses and summary prospectuses, which can be obtained from your financial professional and should be read carefully before investing. You may also call American Funds Service Company (AFS) at (800) 421-4225 or visit the American Funds website at americanfunds.com.

"American Funds Proxy Voting Procedures and Principles" – which describes how we vote proxies relating to portfolio securities – is available on the American Funds website or upon request by calling AFS. The series files its proxy voting record with the U.S. Securities and Exchange Commission (SEC) for the 12 months ended June 30 by August 31. The proxy voting record is available free of charge on the SEC website at sec.gov and on the American Funds website.

Complete June 30, 2015, portfolios of American Funds Insurance Series' investments are available free of charge by calling AFS or visiting the SEC website (where they are part of Form N-CSR).

American Funds Insurance Series files a complete list of its portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. This filing is available free of charge on the SEC website. You may also review or, for a fee, copy this filing at the SEC's Public Reference Room in Washington, D.C. Additional information regarding the operation of the Public Reference Room may be obtained by calling the SEC's Office of Investor Education and Advocacy at (800) SEC-0330. Additionally, the list of portfolio holdings is available by calling AFS.

This report is for the information of American Funds Insurance Series investors, but it also may be used as sales literature when preceded or accompanied by the current prospectuses or summary prospectuses for American Funds Insurance Series and the prospectus for the applicable insurance contract, which give details about charges, expenses, investment objectives and operating policies of the series. If used as sales material after September 30, 2015, this report must be accompanied by a statistical update for the most recently completed calendar quarter.

The American Funds Advantage

Since 1931, American Funds, part of Capital Group, has helped investors pursue long-term investment success. Our consistent approach – in combination with The Capital System℠ – has resulted in a superior long-term track record for American Funds Insurance Series®.

Aligned with investor success

We base our decisions on a long-term perspective, which we believe aligns our goals with the interests of our clients. American Funds Insurance Series (AFIS) portfolio managers average 26 years of investment experience, including 23 years at our company, reflecting a career commitment to our long-term approach.[1]

The Capital System℠

Our investment process, The Capital System, combines individual accountability with teamwork. Each fund is divided into portions that are managed independently by investment professionals with diverse backgrounds, ages and investment approaches. An extensive global research effort is the backbone of The Capital System.

Superior long-term track record

Our AFIS equity funds have beaten their comparable Lipper indexes in 90% of 10-year periods and 100% of 20-year periods. Our AFIS fixed-income funds have beaten comparable Lipper indexes in 58% of 10-year periods and 86% of 20-year periods.[2] We strive to keep management fees competitive. Over the past 20 years, most funds' fees have been below industry averages.[3]

[1] Portfolio manager experience as of May 2015.

[2] Based on Class 2 share results for rolling periods through December 31, 2014. Periods covered are the shorter of the fund's lifetime or since the inception date of the comparable Lipper index (except Global Small Capitalization Fund, for which the Lipper average was used). The comparable Lipper indexes are: Global Funds Index (Global Growth Fund), Growth Funds Index (Growth Fund), International Funds Index (International Fund), Emerging Markets Funds Index (New World Fund), Growth & Income Funds Index (Blue Chip Income and Growth Fund, Growth-Income Fund), Flexible Portfolio Funds Index (Asset Allocation Fund), Core Bond Funds Index (Bond Fund), High Yield Funds Index (High-Income Bond Fund) and General U.S. Government Funds Index (U.S. Government/AAA-Rated Securities Fund).

[3] Based on management fees for the 20-year period ended December 31, 2014, versus comparable Lipper categories, excluding funds of funds.

The Markets in Review

Dear Shareholder,

Uneven economic outlooks and divergence of monetary policies across regions have been the overarching themes driving financial markets over the past couple of years. In the latter half of 2015, as U.S. growth outpaced other developed markets, investors were focused largely on the timing of the Federal Reserve's (the "Fed") decision to end its near-zero interest rate policy. The Fed ultimately hiked rates in December, whereas the European Central Bank and the Bank of Japan took additional steps to stimulate growth, even introducing negative interest rates. The U.S. dollar had strengthened considerably ahead of these developments, causing profit challenges for U.S. companies that generate revenues overseas, and pressuring emerging market currencies and commodities prices.

Also during this time period, oil prices collapsed due to excess global supply. China, one of the world's largest consumers of oil, was another notable source of stress for financial markets as the country showed signs of slowing economic growth and took measures to devalue its currency. Declining confidence in the country's policymakers stoked investors' worries about the potential impact of China's weakness on the global economy. Global market volatility increased and risk assets (such as equities and high yield bonds) suffered in this environment.

The elevated market volatility spilled over into 2016, but as the first quarter wore on, fears of a global recession began to fade, allowing markets to calm and risk assets to rebound. Central bank stimulus in Europe and Japan, combined with a more tempered outlook for rate hikes in the United States, helped bolster financial markets. A softening in U.S. dollar strength brought relief to U.S. exporters and emerging market economies. Oil prices rebounded as the world's largest producers agreed to reduce supply.

Volatility spiked again in late June when the United Kingdom shocked investors with its vote to leave the European Union. Uncertainty around how the British exit might affect the global economy and political landscape long term drove investors to high quality assets, pushing already-low global yields to even lower levels.

At BlackRock, we believe investors need to think globally, extend their scope across a broad array of asset classes and be prepared to adjust accordingly as market conditions change over time. We encourage you to talk with your financial advisor and visit **blackrock.com** for further insight about investing in today's markets.

Sincerely,

Rob Kapito

Investment Objective

BlackRock Global Allocation V.I. Fund's (the "Fund") investment objective is to seek high total investment return.

Portfolio Management Commentary

How did the Fund perform?

- For the six-month period ended June 30, 2016, the Fund underperformed its reference benchmark, which is comprised of the S&P 500® Index (36%), FTSE World (ex-US) Index (24%), BofA Merrill Lynch Current 5-Year U.S. Treasury Index (24%) and Citigroup Non-U.S. Dollar World Government Bond Index (16%) (the "Reference Benchmark"). For the same period, the Fund also underperformed the broad-based all-equity benchmark, the FTSE World Index. The Fund invests in both equities and bonds; therefore, the Reference Benchmark provides a truer representation of the Fund's composition and a more comparable means for measurement. The following discussion of relative performance pertains to the Reference Benchmark. The commentary (and referenced allocation percentages) are based on the economic exposures of the Fund, which reflect adjustments for futures, swaps, options and convertible bonds, and may vary relative to the market value.

What factors influenced performance?

- Within equities, an overweight in Japan and an underweight in the United States detracted from performance. From a sector perspective, stock selection in industrials, consumer discretionary, information technology ("IT"), financials, and telecommunication services ("telecom") weighed on returns. An underweight in fixed income detracted from performance. Currency management, notably an overweight in the U.S. dollar, negatively impacted performance.
- The Fund uses derivatives, which may include options, futures, swaps and forward contracts both to seek to enhance returns of the Fund and to hedge (or protect) against adverse movements in currency exchange rates, interest rates and movements in the securities markets. During the period, the Fund's use of derivatives had a negative impact on the absolute performance of the Fund.
- Positive contributors within equities included an overweight in precious metal securities, in particular, gold miners. From a sector perspective, an overweight in energy was additive. Exposure to commodity-related securities (notably gold) and to cash and cash equivalents positively impacted performance as well.

Describe recent portfolio activity.

- During the period, the Fund's overall equity allocation increased slightly from 57% to 58% of net assets. Within equities, the Fund increased its exposure to the United States, and decreased exposure to Asia, notably Japan. On a sector basis, the Fund increased its weighting in financials, IT, and consumer staples, and decreased its weighting in health care, materials, energy, and telecom.
- The Fund's overall allocation to fixed income increased from 22% to 32% of net assets. Within fixed income, the Fund increased exposure to government bonds, notably in the US, Australia, and Europe. The Fund's exposure to commodity-related securities increased from 1% to 5% of net assets.
- Reflecting the above changes, the Fund's allocation to cash and cash equivalents was reduced from 20% to 5% of net assets. Over the period, cash and cash equivalents helped mitigate portfolio volatility and served as a source of funds for new investments.

Describe portfolio positioning at period end.

- Relative to the Reference Benchmark, the Fund ended the period underweight equities and fixed income and overweight commodity-related securities and cash and cash equivalents. Within equities, the Fund was overweight Japan and Europe, and underweight the United States. Within Europe, the Fund was overweight France and the Netherlands, and underweight Switzerland and Germany. From a sector perspective, the Fund was overweight IT and telecom, and underweight consumer staples, consumer discretionary, materials, utilities, and financials. Within fixed income, the Fund was underweight U.S. Treasuries, Japanese government bonds, and European sovereign debt, and overweight government bonds in Australia, Mexico, and Hungary. In addition, the Fund was overweight corporate and convertible bonds. With respect to currency exposure, the Fund was overweight the U.S. dollar, and was underweight the Japanese yen, euro, and British pound sterling.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

Overall Asset Exposure

Portfolio Composition	Percent of Fund's Net Assets[1] 6/30/16	Percent of Fund's Net Assets[1] 12/31/15	Reference Benchmark[2] Percentage

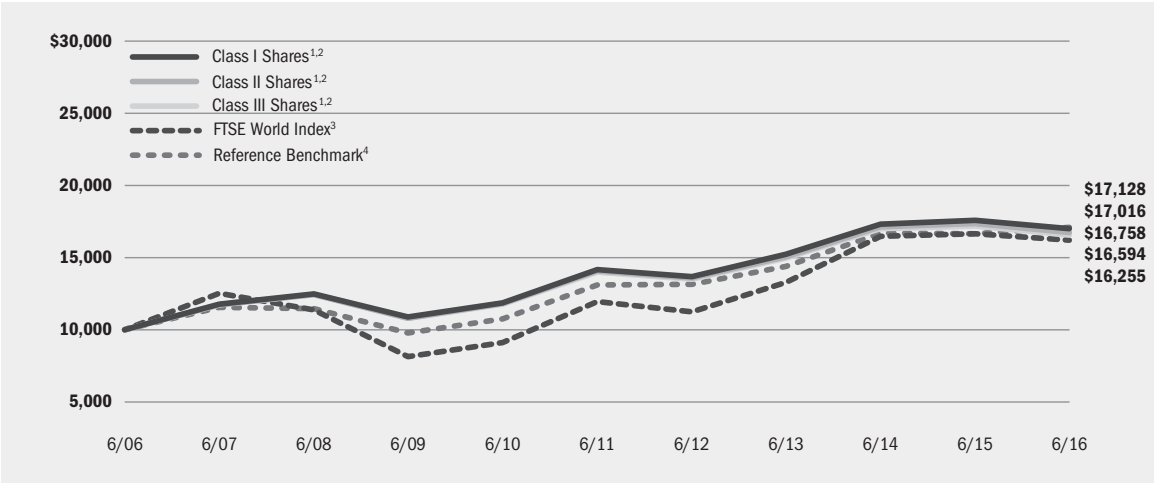
[1] Exposure based on market value and adjusted for the economic value of futures, swaps, options and convertible bonds.

[2] The Reference Benchmark is an unmanaged weighted index comprised as follows: 36% of the S&P 500 Index®; 24% FTSE World (ex U.S.) Index; 24% BofA Merrill Lynch Current 5-Year U.S. Treasury Index; and 16% Citigroup Non-U.S. Dollar World Government Bond Index. Descriptions of these indexes are found on page 3 of this report to shareholders in the "Performance Summary" section.

Total Return Based on a $10,000 Investment



[1] Assuming transaction costs, if any, and other operating expenses, including investment advisory fees. Does not include insurance-related fees and expenses.
[2] The Fund invests in a portfolio of U.S. and foreign equity securities, debt and money market securities, the combination of which will be varied from time to time with respect to types of securities and markets in response to changing markets and economic trends.
[3] This unmanaged capitalization-weighted index is comprised of 2,544 equities from 35 countries in 4 regions, including the United States.
[4] The Reference Benchmark is an unmanaged weighted index comprised as follows: 36% S&P 500® Index; 24% FTSE World (ex U.S.) Index; 24% BofA Merrill Lynch Current 5-Year U.S. Treasury Index; and 16% Citigroup Non-U.S. Dollar World Government Bond Index.

Performance Summary for the Period Ended June 30, 2016

	6-Month Total Returns[6]	Average Annual Total Returns		
		1 Year[6]	5 Years[6]	10 Years[6]
Class I[5]	0.20%	(3.43)%	3.69%	5.46%
Class II[5]	0.13	(3.60)	3.53	5.30
Class III[5]	0.08	(3.71)	3.43	5.19
FTSE World Index	1.55	(2.57)	6.34	4.98
Reference Benchmark	4.42	2.71	5.49	5.53
U.S. Stocks: S&P 500® Index[7]	3.84	3.99	12.10	7.43
Non-U.S. Stocks: FTSE World (ex U.S.) Index[8]	(1.03)	(9.03)	0.96	2.48
U.S. Bonds: BofA Merrill Lynch Current 5-Year U.S. Treasury Index[9]	4.36	4.74	2.84	4.98
Non-U.S. Bonds: Citigroup Non-U.S. Dollar World Government Bond Index[10]	13.50	13.85	0.31	3.97

[5] Average annual and cumulative total returns are based on changes in net asset value for the periods shown, and assume reinvestment of all distributions at net asset value on the ex-dividend date. Insurance-related fees and expenses are not reflected in these returns.
[6] For a portion of the period, the Fund's investment adviser waived a portion of its fees. Without such waiver, the Fund's performance would have been lower.
[7] This unmanaged index covers 500 leading companies and captures approximately 80% coverage of available market capitalization.
[8] This unmanaged capitalization-weighted index is comprised of 1,920 equities from 34 countries, excluding the United States.
[9] This unmanaged index is designed to track the total return of the current coupon five-year U.S. Treasury bond.
[10] This unmanaged market capitalization-weighted index tracks 22 government bond indexes, excluding the United States.
Past performance is not indicative of future results. Performance results do not reflect the deduction of taxes that a shareholder would pay on Fund distributions or the redemption of Fund shares.

Expense Example

	Actual				Hypothetical[13]				
			Including Dividend Expense and Stock Loan Fees	Excluding Dividend Expense and Stock Loan Fees		Including Dividend Expense and Stock Loan Fees		Excluding Dividend Expense and Stock Loan Fees	
	Beginning Account Value January 1, 2016	Ending Account Value June 30, 2016	Expenses Paid During the Period[11]	Expenses Paid During the Period[12]	Beginning Account Value January 1, 2016	Ending Account Value June 30, 2016	Expenses Paid During the Period[11]	Ending Account Value June 30, 2016	Expenses Paid During the Period[12]
Class I	$1,000.00	$1,002.00	$3.68	$3.63	$1,000.00	$1,021.18	$3.72	$1,021.23	$3.67
Class II	$1,000.00	$1,001.30	$4.43	$4.38	$1,000.00	$1,020.44	$4.47	$1,020.49	$4.42
Class III	$1,000.00	$1,000.80	$4.92	$4.88	$1,000.00	$1,019.94	$4.97	$1,019.99	$4.92

[11] For each class of the Fund, expenses are equal to the annualized expense ratio for the class (0.74% for Class I, 0.89% for Class II and 0.99% for Class III), multiplied by the average account value over the period, multiplied by 182/366 (to reflect the one-half year period shown).
[12] For each class of the Fund, expenses are equal to the annualized expense ratio for the class (0.73% for Class I, 0.88% for Class II and 0.98% for Class III), multiplied by the average account value over the period, multiplied by 182/366 (to reflect the one-half year period shown).
[13] Hypothetical 5% annual return before expenses is calculated by prorating the number of days in the most recent fiscal half year divided by 366.
See "Disclosure of Expenses" on the following page for further information on how expenses were calculated.

Disclosure of Expenses

Shareholders of the Fund may incur the following charges: (a) transactional expenses, such as sales charges; and (b) operating expenses, including investment advisory fees, service and distribution fees, including 12b-1 fees, acquired fund fees and expenses, and other fund expenses. The expense example shown on the previous page (which is based on a hypothetical investment of $1,000 invested on January 1, 2016 and held through June 30, 2016) is intended to assist shareholders both in calculating expenses based on an investment in the Fund and in comparing these expenses with similar costs of investing in other mutual funds.

The expense example provides information about actual account values and actual expenses. In order to estimate the expenses a shareholder paid during the period covered by this report, shareholders can divide their account value by $1,000 and then multiply the result by the number corresponding to their share class under the heading entitled "Expenses Paid During the Period."

The expense example also provides information about hypothetical account values and hypothetical expenses based on the Fund's actual expense ratio and an assumed rate of return of 5% per year before expenses. In order to assist shareholders in comparing the ongoing expenses of investing in the Fund and other funds, compare the 5% hypothetical example with the 5% hypothetical examples that appears in shareholder reports of other funds.

The expenses shown in the expense example are intended to highlight shareholders' ongoing costs only and do not reflect any transactional expenses, such as sales charges, if any. Therefore, the hypothetical example is useful in comparing ongoing expenses only, and will not help shareholders determine the relative total expenses of owning different funds. If these transactional expenses were included, shareholder expenses would have been higher.

Derivative Financial Instruments

The Fund may invest in various derivative financial instruments. These instruments are used to obtain exposure to a security, commodity, index, market, and/or other asset without owning or taking physical custody of securities, commodities and/or other referenced assets or to manage market, equity, credit, interest rate, foreign currency exchange rate, commodity and/or other risks. Derivative financial instruments may give rise to a form of economic leverage and involve risks, including the imperfect correlation between the value of a derivative financial instrument and the underlying asset, possible default of the counterparty to the transaction or illiquidity of the instrument. The Fund's successful use of a derivative financial instrument depends on the investment adviser's ability to predict pertinent market movements accurately, which cannot be assured. The use of these instruments may result in losses greater than if they had not been used, may limit the amount of appreciation the Fund can realize on an investment and/or may result in lower distributions paid to shareholders. The Fund's investments in these instruments, if any, are discussed in detail in the Notes to Consolidated Financial Statements.

Notes to Consolidated Schedule of Investments

(a) Security, or a portion of security, is on loan.
(b) Non-income producing security.
(c) Security exempt from registration pursuant to Rule 144A under the Securities Act of 1933, as amended. These securities may be resold in transactions exempt from registration to qualified institutional investors.
(d) Restricted security as to resale, excluding 144a securities. As of period end, the Fund held restricted securities with a current value of $157,057,876 and an original cost of $163,221,340 which was 1.5% of its net assets.
(e) All or a portion of security has been pledged and/or segregated as collateral in connection with outstanding exchange-traded options written.
(f) All or a portion of security has been pledged as collateral in connection with short sales.
(g) All or a portion of security has been pledged as collateral in connection with outstanding OTC derivatives.
(h) When-issued security.
(i) Issuer filed for bankruptcy and/or is in default of interest payments.
(j) Convertible security.
(k) Step-up bond that pays an initial coupon rate for the first period and then a higher coupon rate for the following periods. Rate as of period end.
(l) Variable rate security. Rate as of period end.
(m) All or a portion of security is held by a wholly owned subsidiary. See Note 1 of the Notes to Consolidated Financial Statements for details on the wholly owned subsidiary.

See Notes to Consolidated Financial Statements.

(n) During the six months ended June 30, 2016, investments in issuers considered to be affiliates of the Fund for purposes of Section 2(a)(3) of the Investment Company Act of 1940, as amended, were as follows:

Affiliate	Shares/Beneficial Interest Held at December 31, 2015	Shares/Beneficial Interest Purchased	Shares/Beneficial Interest Sold	Shares/Beneficial Interest Held at June 30, 2016	Value at June 30, 2016	Income	Realized Gain
BlackRock Liquidity Funds, TempFund, Institutional Class	8,973,878	–	(2,957,126)[1]	6,016,752	$ 6,016,752	$ 8,858	–
BlackRock Liquidity Series, LLC, Money Market Series	$290,256,248	–	$ (15,774,083)[2]	$274,482,165	274,482,165	1,743,660[3]	–
iShares Gold Trust	2,098,037	–	–	2,098,037	26,770,952	–	–
iShares iBoxx $ High Yield Corporate Bond ETF	–	662,768	(534,607)	128,161	10,853,955	223,840	$1,787,228
Total					$318,123,824	$1,976,358	$1,787,228

[1] Represents net shares sold.

[2] Represents net beneficial interest sold.

[3] Represents securities lending income earned from the reinvestment of cash collateral from loaned securities, net of fees and collateral investment expenses, and other payments to and from borrowers of securities.

(o) Perpetual security with no stated maturity date.

(p) Represents or includes a TBA transaction. As of period end, unsettled TBA transactions were as follows:

Counterparty	Value	Unrealized Appreciation
Merrill Lynch, Pierce, Fenner & Smith, Inc.	$64,114,666	$736,048

(q) All or a portion of security has been pledged in connection with outstanding futures contracts.

(r) Rates are discount rates or a range of discount rates at the time of purchase.

(s) Current yield as of period end.

(t) Security was purchased with the cash collateral from loaned securities. The Fund may withdraw up to 25% of its investment daily, although the manager of the BlackRock Liquidity Series, LLC, Money Market Series, in its sole discretion, may permit an investor to withdraw more than 25% on any one day.

As of period end, the value of portfolio securities subject to covered call options written was $449,242,794.

See Notes to Consolidated Financial Statements.

Derivative Financial Instruments Categorized by Risk Exposure

As of period end, the fair values of derivative financial instruments located in the Consolidated Statement of Assets and Liabilities were as follows:

Assets - Derivative Financial Instruments		Commodity Contracts	Credit Contracts	Equity Contracts	Foreign Currency Exchange Contracts	Interest Rate Contracts	Other Contracts	Total
Futures contracts	Net unrealized appreciation[1]	–	–	$ 334,406	–	–	–	$ 334,406
Forward foreign currency exchange contracts	Unrealized appreciation on forward foreign currency exchange contracts	–	–	–	$33,572,882	–	–	33,572,882
Options purchased	Investments at value – unaffiliated[2]	–	–	51,141,800	904,878	$ 2,753,047	–	54,799,725
Swaps - OTC	Unrealized appreciation on OTC swaps	–	–	1,824,378	–	–	–	1,824,378
Swaps - centrally cleared	Net unrealized appreciation[1]	–	$ 403,625	–	–	–	–	403,625
Total		–	$ 403,625	$53,300,584	$34,477,760	$ 2,753,047	–	$ 90,935,016

Liabilities - Derivative Financial Instruments								
Futures contracts	Net unrealized depreciation[1]	–	–	$ 846,378	–	–	–	$ 846,378
Forward foreign currency exchange contracts	Unrealized depreciation on forward foreign currency exchange contracts	–	–	–	$52,582,106	–	–	52,582,106
Options written	Options written at value	–	–	33,569,074	6,643,294	$ 1,954,776	–	42,167,144
Swaps - OTC	Unrealized depreciation on OTC swaps	–	–	2,688,517	–	16,113,629	–	18,802,146
Swaps - centrally cleared	Net unrealized depreciation[1]	–	$2,040,608	–	–	663,195	–	2,703,803
Total		–	$2,040,608	$37,103,969	$59,225,400	$18,731,600	–	$117,101,577

[1] Includes cumulative appreciation (depreciation) on futures contracts and centrally cleared swaps, if any, as reported in the Consolidated Schedule of Investments. Only current day's variation margin is reported within the Consolidated Statement of Assets and Liabilities.

[2] Includes options purchased at value as reported in the Consolidated Schedule of Investments.

For the six months ended June 30, 2016, the effect of derivative financial instruments in the Consolidated Statement of Operations was as follows:

Net Realized Gain (Loss) from:	Commodity Contracts	Credit Contracts	Equity Contracts	Foreign Currency Exchange Contracts	Interest Rate Contracts	Other Contracts	Total
Futures contracts	–	–	$ (8,576,328)	–	–	–	$ (8,576,328)
Forward foreign currency exchange contracts	–	–	–	$(76,803,292)	–	–	(76,803,292)
Options purchased[1]	–	–	(23,528,082)	(848,229)	$ (5,374,888)	–	(29,751,199)
Options written	–	–	(8,532,002)	751,881	(4,134,081)	–	(11,914,202)
Swaps	–	$4,225,798	2,062,655	–	2,287,092	–	8,575,545
Total	–	$4,225,798	$(38,573,757)	$(76,899,640)	$ (7,221,877)	–	$(118,469,476)

Net Change in Unrealized Appreciation (Depreciation) on:							
Futures contracts	–	–	$ 1,911,280	–	–	–	$ 1,911,280
Forward foreign currency exchange contracts	–	–	–	$(18,452,080)	–	–	(18,452,080)
Options purchased[2]	–	–	(3,061,043)	(4,470,711)	$ 2,929,174	–	(4,602,580)
Options written	–	–	(5,894,504)	(122,755)	930,005	–	(5,087,254)
Swaps	–	$ (892,623)	(4,245,361)	–	(17,240,467)	–	(22,378,451)
Total	–	$ (892,623)	$(11,289,628)	$(23,045,546)	$(13,381,288)	–	$ (48,609,085)

[1] Options purchased are included in net realized gain (loss) from investments.

[2] Options purchased are included in net change in unrealized appreciation (depreciation) on investments.

See Notes to Consolidated Financial Statements.

Average Quarterly Balances of Outstanding Derivative Financial Instruments

Futures contracts:	
Average notional value of contracts – long	$ 118,123,475[1]
Average notional value of contracts – short	$ 143,294,995
Forward foreign currency exchange contracts:	
Average amounts purchased – in USD	$1,411,585,128
Average amounts sold – in USD	$ 851,126,302
Options:	
Average value of option contracts purchased	$ 38,778,234
Average value of option contracts written	$ 35,650,568
Average notional value of swaption contracts purchased	$ 459,257,048
Average notional value of swaption contracts written	$ 532,812,493
Credit default swaps:	
Average notional value – buy protection	$ 29,468,000
Average notional value – sell protection	$ 250,950,517
Interest rate swaps:	
Average notional value – pays fixed rate	$ 331,569,791
Currency swaps:	
Average notional value – pays	$ 73,601,000
Average notional value – receives	$ 78,638,527
Total return swaps:	
Average notional value	$ 66,975,221

[1] Actual amounts for the period are shown due to limited outstanding derivative financial instruments as of each quarter end.

For more information about the Fund's investment risks regarding derivative financial instruments, refer to the Notes to Consolidated Financial Statements.

Derivative Financial Instruments - Offsetting as of Period End

The Fund's derivative assets and liabilities (by type) were as follows:

	Assets	Liabilities
Derivative Financial Instruments:		
Futures contracts	$ 176,627	$ 638,929
Forward foreign currency exchange contracts	33,572,882	52,582,106
Options	54,799,725[1]	42,167,144
Swaps - centrally cleared	739,645	–
Swaps - OTC[2]	1,824,378	18,802,146
Total derivative assets and liabilities in the Consolidated Statement of Assets and Liabilities	$91,113,257	$114,190,325
Derivatives not subject to a Master Netting Agreement or similar agreement ("MNA")	(5,376,052)	(4,186,140)
Total derivative assets and liabilities subject to an MNA	$85,737,205	$110,004,185

[1] Includes options purchased at value which is included in Investments at value - unaffiliated in the Consolidated Statement of Assets and Liabilities and reported in the Consolidated Schedule of Investments.

[2] Includes unrealized appreciation (depreciation) on OTC swaps in the Consolidated Statement of Assets and Liabilities.

The following tables present the Fund's derivative assets and liabilities by counterparty net of amounts available for offset under an MNA and net of the related collateral received and pledged by the Fund:

Counterparty	Derivative Assets Subject to an MNA by Counterparty	Derivatives Available for Offset[1]	Non-cash Collateral Received[2]	Cash Collateral Received[2]	Net Amount of Derivative Assets[3,6]
Bank of America N.A.	$ 224,591	$ (224,591)	–	–	–
Barclays Bank PLC	434,076	(434,076)	–	–	–

Total	$85,737,205	$(69,701,803)	–	$(10,135,067)	$5,900,335

See Notes to Consolidated Financial Statements.

Counterparty	Derivative Liabilities Subject to an MNA by Counterparty	Derivatives Available for Offset[1]	Non-cash Collateral Pledged[4]	Cash Collateral Pledged	Net Amount of Derivative Liabilities[5,6]
Bank of America N.A.	$ 16,113,629	$ (224,591)	$ (9,145,167)	–	$ 6,743,871
Barclays Bank PLC	4,092,573	(434,076)	(3,658,497)	–	–
BNP Paribas S.A.	2,827,633	(2,827,633)	–	–	–
Citibank N.A.	3,078,639	(3,078,639)	–	–	–
Credit Suisse International	8,823,757	(2,519,191)	–	–	6,304,566
Deutsche Bank AG	13,657,344	(12,109,289)	(621,246)	–	926,809
Goldman Sachs International	23,729,578	(23,729,578)	–	–	–
HSBC Bank USA N.A.	1,310,674	(1,310,674)	–	–	–
JPMorgan Chase Bank N.A.	12,032,720	(12,032,720)	–	–	–
Morgan Stanley & Co. International PLC	19,179,852	(7,779,849)	(4,334,160)	–	7,065,843
Morgan Stanley Capital Services LLC	1,607,606	(1,607,606)	–	–	–
Société Générale	646,842	(646,842)	–	–	–
UBS AG	2,903,338	(1,401,115)	(679,655)	–	822,568
Total	$110,004,185	$(69,701,803)	$(18,438,725)	–	$21,863,657

[1] The amount of derivatives available for offset is limited to the amount of derivative assets and/or liabilities that are subject to an MNA.

[2] Excess of collateral received from the individual counterparty is not shown for financial reporting purposes.

[3] Net amount represents the net amount receivable from the counterparty in the event of default.

[4] Excess of collateral pledged to the individual counterparty is not shown for financial reporting purposes.

[5] Net amount represents the net amount payable due to the counterparty in the event of default. Net amount may be offset further by the options written receivable/payable on the Consolidated Statement of Assets and Liabilities.

[6] Net amount may also include forward foreign currency exchange contracts and currency options that are not required to be collateralized.

Fair Value Hierarchy as of Period End

Various inputs are used in determining the fair value of investments and derivative financial instruments. For information about the Fund's policy regarding valuation of investments and derivative financial instruments, refer to the Notes to Consolidated Financial Statements.

The following tables summarize the Fund's investments and derivative financial instruments categorized in the disclosure hierarchy:

	Level 1	Level 2	Level 3	Total
Assets:				
Investments:				
Long-Term Investments:				
Common Stocks:				
Australia	–	$ 31,845,774	–	$ 31,845,774
Belgium	–	26,840,867	–	26,840,867
Brazil	$ 1,334,588	–	–	1,334,588

Total	$ (4,059,183)	$ (76,907,103)	–	$ (80,966,286)

[1] Derivative financial instruments are swaps, futures contracts, forward foreign currency exchange contracts and options written. Swaps, financial futures contracts and forward foreign currency exchange contracts are valued at the unrealized appreciation (depreciation) on the instrument and options written are shown at value.

The Fund may hold assets and/or liabilities in which the fair value approximates the carrying amount for financial statement purposes. As of period end, such assets and/or liabilities are categorized within the disclosure hierarchy as follows:

	Level 1	Level 2	Level 3	Total
Assets:				
Cash	$ 658,738	–	–	$ 658,738
Cash held for investments sold short	36,317,738	–	–	36,317,738
Cash pledged for centrally cleared swaps	15,286,960	–	–	15,286,960
Liabilities:				
Foreign bank overdraft	–	$ (683,278)	–	(683,278)
Cash received:				
Collateral – Options written	–	(18,520,000)	–	(18,520,000)
Collateral – TBA commitments	–	(503,000)	–	(503,000)
Collateral on securities loaned at value	–	(274,482,165)	–	(274,482,165)
Total	$ 52,263,436	$ (294,188,443)	–	$ (241,925,007)

See Notes to Consolidated Financial Statements.

During the six months ended June 30, 2016, there were no transfers between Level 1 and Level 2.

A reconciliation of Level 3 investments is presented when the Fund had a significant amount of Level 3 investments at the beginning and/or end of the period in relation to net assets. The following table is a reconciliation of Level 3 investments for which significant unobservable inputs were used in determining fair value:

	Common Stocks	Corporate Bonds	Floating Rate Loan Interests	Non-Agency Mortgage-Backed Securities	Preferred Securities	Rights	Options Purchased	Total
Assets:								
Opening balance, as of December 31, 2015	$ 6,823,323	$ 91,576,847	$15,440,951	$ 9,349,901	$129,809,258	$ 1	$ 1,273,536	$254,273,817
Transfers into Level 3	–	–	–	–	–	–	–	–
Transfers out of Level 3	–	(2,264,539)	–	–	–	–	–	(2,264,539)
Accrued discounts/ premiums	–	(449)	11,352	62,127	–	–	–	73,030
Net realized gain (loss)	–	–	8,614	–	–	–	(1,232,743)	(1,224,129)
Net change in unrealized appreciation (depreciation)[1,2]	(1,501,942)	(49,354,183)	399,066	(1,194,964)	(10,265,875)	(1)	(38,414)	(61,956,313)
Purchases	–	1,239,897	–	–	–	–	–	1,239,897
Sales	–	–	(1,383,422)	–	–	–	(2,379)	(1,385,801)
Closing balance, as of June 30, 2016	$ 5,321,381	$ 41,197,573	$14,476,561	$ 8,217,064	$119,543,383	–	–	$188,755,962
Net change in unrealized appreciation (depreciation) on investments still held at June 30, 2016[2]	$(1,501,942)	$(49,354,183)	$ 399,066	$(1,194,964)	$ (10,265,875)	–	–	$ (61,917,898)

[1] Included in the related net change in unrealized appreciation (depreciation) in the Consolidated Statement of Operations.

[2] Any difference between net change in unrealized appreciation (depreciation) and net change in unrealized appreciation (depreciation) on investments still held at June 30, 2016 is generally due to investments no longer held or categorized as Level 3 at period end.

The following table is a reconciliation of Level 3 derivative financial instruments for which significant unobservable inputs were used in determining fair value:

	Equity Contracts	
	Assets	Liabilities
Opening Balance, as of December 31, 2015	–	$ (875,797)
Transfers into Level 3	–	–
Transfers out of Level 3	–	–

Closing Balance, as of June 30, 2016	–	–
Net change in unrealized appreciation (depreciation) on derivative financial instruments still held at June 30, 2016	–	–

[1] Included in the related net change in unrealized appreciation (depreciation) in the Consolidated Statement of Operations.

The Fund's investments that are categorized as Level 3 were valued utilizing third party pricing information without adjustment. Such valuations are based on unobservable inputs. A significant change in third party information could result in a significantly lower or higher value of such Level 3 investments.

See Notes to Consolidated Financial Statements.

The following table summarizes the valuation techniques used and unobservable inputs utilized by the BlackRock Global Valuation Methodologies Committee ("Global Valuation Committee") to determine the value of certain of the Fund's Level 3 investments as of period end. The table does not include Level 3 investments with values based upon unadjusted third party pricing information in the amount of $22,783,820.

	Value	Valuation Techniques	Unobservable Inputs	Range of Unobservable Inputs Utilized	Weighted Average of Unobservable Inputs

[1] Decrease in unobservable input may result in a significant increase to value, while an increase in unobservable input may result in a significant decrease to value.

[2] Increase in unobservable input may result in a significant increase to value, while a decrease in unobservable input may result in a significant decrease to value.

[3] For the period ended June 30, 2016, the valuation technique for certain investments classified as corporate bonds changed to a Coverage Analysis Model. The investment was previously valued utilizing an Option Pricing Model. A Coverage Analysis Model was considered to be a more relevant measure of fair value for this investment.

See Notes to Consolidated Financial Statements.

Consolidated Statement of Assets and Liabilities

1. Organization:

BlackRock Variable Series Funds, Inc. (the "Company") is registered under the Investment Company Act of 1940, as amended (the "1940 Act"), as an open-end management investment company. The Company is organized as a Maryland corporation that is comprised of 20 separate funds. The funds offer shares to insurance companies for their separate accounts to fund benefits under certain variable annuity and variable life insurance contracts. The consolidated financial statements presented are for BlackRock Global Allocation V.I. Fund (the "Fund"). The Fund is classified as diversified. Class I, Class II and Class III Shares have equal voting, dividend, liquidation and other rights, except that only shares of the respective classes are entitled to vote on matters concerning only that class. In addition, Class II and Class III Shares bear certain expenses related to the distribution of such shares.

Basis of Consolidation: The accompanying consolidated financial statements of the Fund include the accounts of BlackRock Cayman Global Allocation V.I. Fund I, Ltd. (the "Subsidiary"), which is a wholly owned subsidiary of the Fund and primarily invests in commodity-related instruments. The Subsidiary enables the Fund to hold these commodity-related instruments and satisfy regulated investment company tax requirements. The Fund may invest up to 25% of its total assets in the Subsidiary. The net assets of the Subsidiary as of period end were $350,752,241 and 3.3% of the Fund's consolidated net assets. Intercompany accounts and transactions, if any, have been eliminated. The Subsidiary is subject to the same investment policies and restrictions that apply to the Fund, except that the Subsidiary may invest without limitation in commodity-related instruments.

The Fund, together with certain other registered investment companies advised by BlackRock Advisors, LLC (the "Manager") or its affiliates, is included in a complex of open-end funds referred to as the Equity-Bond Complex.

2. Significant Accounting Policies:

The consolidated financial statements are prepared in conformity with accounting principles generally accepted in the United States of America ("U.S. GAAP"), which may require management to make estimates and assumptions that affect the reported amounts of assets and liabilities in the consolidated financial statements, disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates. The Fund is considered an investment company under U.S. GAAP and follows the accounting and reporting guidance applicable to investment companies. Below is a summary of significant accounting policies:

Foreign Currency: The Fund's books and records are maintained in U.S. dollars. Purchases and sales of investments are recorded at the rates of exchange prevailing on the respective dates of such transactions. Generally, when the U.S. dollar rises in value against a foreign currency, the investments denominated in that currency will lose value; the opposite effect occurs if the U.S. dollar falls in relative value.

The Fund does not isolate the portion of the results of operations arising as a result of changes in the exchange rates from the changes in the market prices of investments held or sold for financial reporting purposes. Accordingly, the effects of changes in exchange rates on investments are not segregated in the Consolidated Statement of Operations from the effects of changes in market prices of those investments, but are included as a component of net realized and unrealized gain (loss) from investments. The Fund reports realized currency gains (losses) on foreign currency related transactions as components of net realized gain (loss) for financial reporting purposes, whereas such components are generally treated as ordinary income for federal income tax purposes.

Segregation and Collateralization: In cases where the Fund enters into certain investments (e.g., futures contracts, forward foreign currency exchange contracts, options written, swaps and short sales), that would be treated as "senior securities" for 1940 Act purposes, the Fund may segregate or designate on its books and records cash or liquid assets having a market value at least equal to the amount of its future obligations under such investments. Doing so allows the investment to be excluded from treatment as a "senior security." Furthermore, if required by an exchange or counterparty agreement, the Fund may be required to deliver/deposit cash and/or securities to/with an exchange, or broker-dealer or custodian as collateral for certain investments or obligations.

Investment Transactions and Investment Income: For financial reporting purposes, investment transactions are recorded on the dates the transactions are entered into (the trade dates). Realized gains and losses on investment transactions are determined on the identified cost basis. Dividend income is recorded on the ex-dividend date. Dividends from foreign securities where the ex-dividend date may have passed are subsequently recorded when the Fund is informed of the ex-dividend date. Under the applicable foreign tax laws, a withholding tax at various rates may be imposed on capital gains, dividends and interest. Upon notification from issuers, some of the dividend income received from a real estate investment trust may be redesignated as a reduction of cost of the related investment and/or realized gain. Interest income, including amortization and accretion of premiums and discounts on debt securities, is recognized on the accrual basis. Income, expenses and realized and unrealized gains and losses are allocated daily to each class based on its relative net assets.

Distributions: Distributions paid by the Fund are recorded on the ex-dividend date. The portion of distributions, if any, that exceeds the Fund's current and accumulated earnings and profits, as measured on a tax basis, constitute a non-taxable return of capital. The character and timing of distributions are determined in accordance with federal income tax regulations, which may differ from U.S. GAAP.

Net income and realized gains from investments held by the Subsidiary are treated as ordinary income for tax purposes. If a net loss is realized by the Subsidiary in any taxable year, the loss will generally not be available to offset the Fund's ordinary income and/or capital gains for that year.

Indemnifications: In the normal course of business, the Fund enters into contracts that contain a variety of representations that provide general indemnification. The Fund's maximum exposure under these arrangements is unknown because it involves future potential claims against the Fund, which cannot be predicted with any certainty.

Other: Expenses directly related to the Fund or its classes are charged to the Fund or the applicable class. Other operating expenses shared by several funds, including other funds managed by the Manager, are pro-rated among those funds on the basis of relative net assets or other appropriate methods. Expenses directly related to the Fund and other shared expenses prorated to the Fund are allocated daily to each class based on its relative net assets or other appropriate methods.

The Fund has an arrangement with its custodian whereby fees may be reduced by credits earned on uninvested cash balances, which, if applicable, are shown as fees paid indirectly in the Consolidated Statement of Operations. The custodian imposes fees on overdrawn cash balances, which can be offset by accumulated credits earned or may result in additional custody charges.

3. Investment Valuation and Fair Value Measurements:

Investment Valuation Policies: The Fund's investments are valued at fair value (also referred to as "market value" within the consolidated financial statements) as of the close of trading on the New York Stock Exchange ("NYSE") (generally 4:00 p.m., Eastern time). U.S. GAAP defines fair value as the price the Fund would receive to sell an asset or pay to transfer a liability in an orderly transaction between market participants at the measurement date. The Fund determines the fair values of its financial instruments using various independent dealers or pricing services under policies approved by the Board of Directors of the Company (the "Board"). The BlackRock Global Valuation Methodologies Committee (the "Global Valuation Committee") is the committee formed by management to develop global pricing policies and procedures and to oversee the pricing function for all financial instruments.

Fair Value Inputs and Methodologies: The following methods (or "techniques") and inputs are used to establish the fair value of the Fund's assets and liabilities:

- Equity investments traded on a recognized securities exchange are valued at the official closing price each day, if available. For equity investments traded on more than one exchange, the official close price on the exchange where the stock is primarily traded is used. Equity investments traded on a recognized exchange for which there were no sales on that day may be valued at the last available bid (long positions) or ask (short positions) price.
- Bond investments are valued on the basis of last available bid prices or current market quotations provided by dealers or pricing services. Floating rate loan interests are valued at the mean of the bid prices from one or more brokers or dealers as obtained from a pricing service. In determining the value of a particular investment, pricing services may use certain information with respect to transactions in such investments, quotations from dealers, pricing matrixes, market transactions in comparable investments, various relationships observed in the market between investments and calculated yield measures. Asset-backed and mortgage-backed securities are valued by independent pricing services using models that consider estimated cash flows of each tranche of the security, establish a benchmark yield and develop an estimated tranche-specific spread to the benchmark yield based on the unique attributes of the tranche.
- Generally, trading in foreign instruments is substantially completed each day at various times prior to the close of business on the NYSE. Occasionally, events affecting the values of such instruments may occur between the foreign market close and the close of business on the NYSE that may not be reflected in the computation of the Fund's net assets. Each business day, the Fund uses a pricing service to assist with the valuation of certain foreign exchange-traded equity securities and foreign exchange-traded OTC options (the "Systematic Fair Value Price"). Using current market factors, the Systematic Fair Value Price is designed to value such foreign securities and foreign options at fair value as of the close of business on the NYSE, which follows the close of the local markets.
- To-be-announced ("TBA") commitments are valued on the basis of last available bid prices or current market quotations provided by pricing services.
- Investments in open-end U.S. mutual funds are valued at net asset value each business day.
- The Fund values its investment in BlackRock Liquidity Series, LLC, Money Market Series (the "Money Market Series") at fair value, which is ordinarily based upon its pro rata ownership in the underlying fund's net assets. The Money Market Series seeks current income consistent with maintaining liquidity and preserving capital. Although the Money Market Series is not registered under the 1940 Act, its investments may follow the parameters

of investments by a money market fund that is subject to Rule 2a-7 under the 1940 Act. The Fund may withdraw up to 25% of its investment daily, although the manager of the Money Market Series, in its sole discretion, may permit an investor to withdraw more than 25% on any one day.

- Futures contracts traded on exchanges are valued at their last sale price.
- Securities and other assets and liabilities denominated in foreign currencies are translated into U.S. dollars using exchange rates determined as of the close of business on the NYSE. Forward foreign currency exchange contracts are valued at the mean between the bid and ask prices and are determined as of the close of business on the NYSE. Interpolated values are derived when the settlement date of the contract is an interim date for which quotations are not available.
- Exchange-traded options are valued at the mean between the last bid and ask prices at the close of the options market in which the options trade. An exchange-traded option for which there is no mean price is valued at the last bid (long positions) or ask (short positions) price. If no bid or ask price is available, the prior day's price will be used, unless it is determined that the prior day's price no longer reflects the fair value of the option. OTC options and options on swaps ("swaptions") are valued by an independent pricing service using a mathematical model, which incorporates a number of market data factors, such as the trades and prices of the underlying instruments.
- Swap agreements are valued utilizing quotes received daily by the Fund's pricing service or through brokers, which are derived using daily swap curves and models that incorporate a number of market data factors, such as discounted cash flows, trades and values of the underlying reference instruments.

If events (e.g., a company announcement, market volatility or a natural disaster) occur that are expected to materially affect the value of such instruments, or in the event that the application of these methods of valuation results in a price for an investment that is deemed not to be representative of the market value of such investment, or if a price is not available, the investment will be valued by the Global Valuation Committee, or its delegate, in accordance with a policy approved by the Board as reflecting fair value ("Fair Valued Investments"). When determining the price for Fair Valued Investments, the Global Valuation Committee, or its delegate, seeks to determine the price that the Fund might reasonably expect to receive or pay from the current sale or purchase of that asset or liability in an arm's-length transaction. Fair value determinations shall be based upon all available factors that the Global Valuation Committee, or its delegate, deems relevant consistent with the principles of fair value measurement which include the market approach, income approach and/or in the case of recent investments, the cost approach, as appropriate. The market approach generally consists of using comparable market transactions. The income approach generally is used to discount future cash flows to present value and is adjusted for liquidity as appropriate. These factors include but are not limited to: (i) attributes specific to the investment or asset; (ii) the principal market for the investment or asset; (iii) the customary participants in the principal market for the investment or asset; (iv) data assumptions by market participants for the investment or asset, if reasonably available; (v) quoted prices for similar investments or assets in active markets; and (vi) other factors, such as future cash flows, interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks, recovery rates, liquidation amounts and/or default rates. Due to the inherent uncertainty of valuations of such investments, the fair values may differ from the values that would have been used had an active market existed. The Global Valuation Committee, or its delegate, employs various methods for calibrating valuation approaches for investments where an active market does not exist, including regular due diligence of the Fund's pricing vendors, regular reviews of key inputs and assumptions, transactional back-testing or disposition analysis to compare unrealized gains and losses to realized gains and losses, reviews of missing or stale prices and large movements in market values and reviews of any market related activity. The pricing of all Fair Valued Investments is subsequently reported to the Board or a committee thereof on a quarterly basis.

Fair Value Hierarchy: Various inputs are used in determining the fair value of investments and derivative financial instruments. These inputs to valuation techniques are categorized into a fair value hierarchy consisting of three broad levels for financial statement purposes as follows:

- Level 1 – unadjusted price quotations in active markets/exchanges for identical assets or liabilities that the Fund has the ability to access
- Level 2 – other observable inputs (including, but not limited to, quoted prices for similar assets or liabilities in markets that are active, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the assets or liabilities (such as interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks and default rates) or other market–corroborated inputs)
- Level 3 – unobservable inputs based on the best information available in the circumstances, to the extent observable inputs are not available (including the Fund's own assumptions used in determining the fair value of investments and derivative financial instruments)

The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). Accordingly, the degree of judgment exercised in determining fair value is greatest for instruments categorized in Level 3. The inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, for disclosure purposes, the fair value hierarchy classification is determined based on the lowest level input that is significant to the fair value measurement in its entirety. The significant unobservable inputs used by the Global Valuation Committee in determining the price for Fair Valued Investments are typically categorized as Level 3. The fair value hierarchy for the Fund's investments and derivative financial instruments has been included in the Consolidated Schedule of Investments.

Changes in valuation techniques may result in transfers into or out of an assigned level within the hierarchy. In accordance with the Fund's policy, transfers between different levels of the fair value hierarchy are deemed to have occurred as of the beginning of the reporting period. The categorization of a value determined for investments and derivative financial instruments is based on the pricing transparency of the investments and derivative financial instruments and is not necessarily an indication of the risks associated with investing in those securities.

4. Securities and Other Investments:

Asset-Backed and Mortgage-Backed Securities: Asset-backed securities are generally issued as pass-through certificates or as debt instruments. Asset-backed securities issued as pass-through certificates represent undivided fractional ownership interests in an underlying pool of assets. Asset-backed securities issued as debt instruments, which are also known as collateralized obligations, are typically issued as the debt of a special purpose entity organized solely for the purpose of owning such assets and issuing such debt. Asset-backed securities are often backed by a pool of assets representing the obligations of a number of different parties. The yield characteristics of certain asset-backed securities may differ from traditional debt securities. One such major difference is that all or a principal part of the obligations may be prepaid at any time because the underlying assets (i.e., loans) may be prepaid at any time. As a result, a decrease in interest rates in the market may result in increases in the level of prepayments as borrowers, particularly mortgagors, refinance and repay their loans. An increased prepayment rate with respect to an asset-backed security will have the effect of shortening the maturity of the security. In addition, the Fund may subsequently have to reinvest the proceeds at lower interest rates. If the Fund has purchased such an asset-backed security at a premium, a faster than anticipated prepayment rate could result in a loss of principal to the extent of the premium paid.

For mortgage pass-through securities (the "Mortgage Assets") there are a number of important differences among the agencies and instrumentalities of the U.S. Government that issue mortgage-related securities and among the securities that they issue. For example, mortgage-related securities guaranteed by Ginnie Mae are guaranteed as to the timely payment of principal and interest by Ginnie Mae and such guarantee is backed by the full faith and credit of the United States. However, mortgage-related securities issued by Freddie Mac and Fannie Mae, including Freddie Mac and Fannie Mae guaranteed mortgage pass-through certificates, which are solely the obligations of Freddie Mac and Fannie Mae, are not backed by or entitled to the full faith and credit of the United States, but are supported by the right of the issuer to borrow from the U.S. Treasury.

Non-agency mortgage-backed securities are securities issued by non-governmental issuers and have no direct or indirect government guarantees of payment and are subject to various risks. Non-agency mortgage loans are obligations of the borrowers thereunder only and are not typically insured or guaranteed by any other person or entity. The ability of a borrower to repay a loan is dependent upon the income or assets of the borrower. A number of factors, including a general economic downturn, acts of God, terrorism, social unrest and civil disturbances, may impair a borrower's ability to repay its loans.

Inflation-Indexed Bonds: Inflation-indexed bonds (other than municipal inflation-indexed and certain corporate inflation-indexed bonds) are fixed income securities whose principal value is periodically adjusted according to the rate of inflation. If the index measuring inflation rises or falls, the principal value of inflation-indexed bonds (other than municipal inflation-indexed and certain corporate inflation-indexed bonds) will be adjusted upward or downward, and consequently the interest payable on these securities (calculated with respect to a larger or smaller principal amount) will be increased or reduced, respectively. Any upward or downward adjustment in the principal amount of an inflation-indexed bond will be included as interest income in the Consolidated Statement of Operations, even though investors do not receive their principal until maturity. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation-indexed bonds. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal. With regard to municipal inflation-indexed bonds and certain corporate inflation-indexed bonds, the inflation adjustment is typically reflected in the semi-annual coupon payment. As a result, the principal value of municipal inflation-indexed bonds and such corporate inflation-indexed bonds does not adjust according to the rate of inflation.

Multiple Class Pass-Through Securities: Multiple class pass-through securities, including collateralized mortgage obligations ("CMOs") and commercial mortgage-backed securities. may be issued by Ginnie Mae, U.S. Government agencies or instrumentalities or by trusts formed by private originators of, or investors in, mortgage loans. In general, CMOs are debt obligations of a legal entity that are collateralized by, a pool of residential or commercial mortgage loans or Mortgage Assets. The payments on these are used to make payments on the CMOs or multiple pass-through securities. Multiple class pass-through securities represent direct ownership interests in the Mortgage Assets. Classes of CMOs include interest only ("IOs"), principal only ("POs"), planned amortization classes and targeted amortization classes. IOs and POs are stripped mortgage-backed securities representing interests in a pool of mortgages, the cash flow from which has been separated into interest and principal components. IOs receive the interest portion of the cash flow while POs receive the principal portion. IOs and POs can be extremely volatile in response to changes in interest rates. As interest rates rise and fall, the value of IOs tends to move in the same direction as interest rates. POs perform best when prepayments on the underlying mortgages rise since this increases the rate at which the principal is returned and the yield to maturity on the PO. When payments on mortgages underlying a PO are slower than anticipated, the life of the PO is lengthened and the yield to maturity is reduced. If the underlying Mortgage Assets experience greater than anticipated prepayments of principal, the Fund's initial investment in the IOs may not fully recoup.

Zero-Coupon Bonds: Zero-coupon bonds, are normally issued at a significant discount from face value and do not provide for periodic interest payments. These bonds may experience greater volatility in market value than other debt obligations of similar maturity which provide for regular interest payments.

Capital Securities and Trust Preferred Securities: Capital securities, including trust preferred securities, are typically issued by corporations, generally in the form of interest-bearing notes with preferred securities characteristics. In the case of trust preferred securities, an affiliated business trust of a corporation issues these securities, generally in the form of beneficial interests in subordinated debentures or similarly structured securities. The securities can be structured with either a fixed or adjustable coupon that can have either a perpetual or stated maturity date. For trust preferred securities, the issuing bank or corporation pays interest to the trust, which is then distributed to holders of the these securities as a dividend. Dividends can be deferred without creating an event of default or acceleration, although maturity cannot take place unless all cumulative payment obligations have been met. The deferral of payments does not affect the purchase or sale of these securities in the open market. Payments on these securities are treated as interest rather than dividends for federal income tax purposes. These securities generally are rated below that of the issuing company's senior debt securities and are freely callable at the issuer's option.

Preferred Stock: Preferred stock has a preference over common stock in liquidation (and generally in receiving dividends as well) but is subordinated to the liabilities of the issuer in all respects. As a general rule, the market value of preferred stock with a fixed dividend rate and no conversion element varies inversely with interest rates and perceived credit risk, while the market price of convertible preferred stock generally also reflects some element of conversion value. Because preferred stock is junior to debt securities and other obligations of the issuer, deterioration in the credit quality of the issuer will cause greater changes in the value of a preferred stock than in a more senior debt security with similar stated yield characteristics. Unlike interest payments on debt securities, preferred stock dividends are payable only if declared by the issuer's board of directors. Preferred stock also may be subject to optional or mandatory redemption provisions.

Warrants: Warrants entitle the Fund to purchase a specified number of shares of common stock and are non-income producing. The purchase price and number of shares are subject to adjustment under certain conditions until the expiration date of the warrants, if any. If the price of the underlying stock does not rise above the strike price before the warrant expires, the warrant generally expires without any value and the Fund will lose any amount it paid for the warrant. Thus, investments in warrants may involve more risk than investments in common stock. Warrants may trade in the same markets as their underlying stock; however, the price of the warrant does not necessarily move with the price of the underlying stock.

Floating Rate Loan Interests: Floating rate loan interests are typically issued to companies (the "borrower") by banks, other financial institutions, or privately and publicly offered corporations (the "lender"). Floating rate loan interests are generally non-investment grade, often involve borrowers whose financial condition is troubled or uncertain and companies that are highly leveraged in bankruptcy proceedings. In addition, transactions in floating rate loan interests may settle on a delayed basis, which may result to proceeds from the sale to not be readily available for the Fund to make additional investments or meet its redemption obligations. Floating rate loan interests may include fully funded term loans or revolving lines of credit. Floating rate loan interests are typically senior in the corporate capital structure of the borrower. Floating rate loan interests generally pay interest at rates that are periodically determined by reference to a base lending rate plus a premium. Since the rates reset only periodically, changes in prevailing interest rates (and particularly sudden and significant changes) can be expected to cause some fluctuations in the net asset value of the Fund to the extent that it invests in floating rate debt securities. The base lending rates are generally the lending rate offered by one or more European banks, such as the London Interbank Offered Rate ("LIBOR"), the prime rate offered by one or more U.S. banks or the certificate of deposit rate. Floating rate loan interests may involve foreign borrowers, and investments may be denominated in foreign currencies. These investments are treated as investments in debt securities for purposes of the Fund's investment policies.

When the Fund purchases a floating rate loan interest, it may receive a facility fee and when it sells a floating rate loan interest, it may pay a facility fee. On an ongoing basis, the Fund may receive a commitment fee based on the undrawn portion of the underlying line of credit amount of a floating rate loan interest. Facility and commitment fees are typically amortized to income over the term of the loan or term of the commitment, respectively. Consent and amendment fees are recorded to income as earned. Prepayment penalty fees, which may be received by the Fund upon the prepayment of a floating rate loan interest by a borrower, are recorded as realized gains. The Fund may invest in multiple series or tranches of a loan. A different series or tranche may have varying terms and carry different associated risks.

Floating rate loan interests are usually freely callable at the borrower's option. The Fund may invest in such loans in the form of participations in loans ("Participations") or assignments ("Assignments") of all or a portion of loans from third parties. Participations typically will result in the Fund having a contractual relationship only with the lender, not with the borrower. The Fund has the right to receive payments of principal, interest and any fees to which it is entitled only from the lender selling the Participation and only upon receipt by the lender of the payments from the borrower. In connection with purchasing Participations, the Fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement, nor any rights of offset against the borrower. The Fund may not benefit directly from any collateral supporting the loan in which it has purchased the Participation. As a result, the Fund assumes the credit risk of both the borrower and the lender that is selling the Participation. The Fund's investment in

loan participation interests involves the risk of insolvency of the financial intermediaries who are parties to the transactions. In the event of the insolvency of the lender selling the Participation, the Fund may be treated as a general creditor of the lender and may not benefit from any offset between the lender and the borrower. Assignments typically result in the Fund having a direct contractual relationship with the borrower, and the Fund may enforce compliance by the borrower with the terms of the loan agreement.

Forward Commitments and When-Issued Delayed Delivery Securities: The Fund may purchase securities on a when-issued basis and may purchase or sell securities on a forward commitment basis. Settlement of such transactions normally occurs within a month or more after the purchase or sale commitment is made. The Fund may purchase securities under such conditions with the intention of actually acquiring them, but may enter into a separate agreement to sell the securities before the settlement date. Since the value of securities purchased may fluctuate prior to settlement, the Fund may be required to pay more at settlement than the security is worth. In addition, the Fund is not entitled to any of the interest earned prior to settlement. When purchasing a security on a delayed delivery basis, the Fund assumes the rights and risks of ownership of the security, including the risk of price and yield fluctuations. In the event of default by the counterparty, the Fund's maximum amount of loss is the unrealized appreciation of unsettled when-issued transactions.

TBA Commitments: TBA commitments are forward agreements for the purchase or sale of mortgage-backed securities for a fixed price, with payment and delivery on an agreed upon future settlement date. The specific securities to be delivered are not identified at the trade date. However, delivered securities must meet specified terms, including issuer, rate and mortgage terms. When entering into TBA commitments, the Fund may take possession of or deliver the underlying mortgage-backed securities but can extend the settlement or roll the transaction. TBA commitments involve a risk of loss if the value of the security to be purchased or sold declines or increases, respectively, prior to settlement date.

In order to better define contractual rights and to secure rights that will help the Fund mitigate its counterparty risk, TBA commitments may be entered into by the Fund under Master Securities Forward Transaction Agreements (each, an "MSFTA"). An MSFTA typically contains, among other things, collateral posting terms and netting provisions in the event of default and/or termination event. The collateral requirements are typically calculated by netting the mark-to-market amount for each transaction under such agreement and comparing that amount to the value of the collateral currently pledged by the Fund and the counterparty. Cash collateral that has been pledged to cover the obligations of the Fund and cash collateral received from the counterparty, if any, is reported separately on the Consolidated Statement of Assets and Liabilities as cash pledged as collateral for TBA commitments or cash received as collateral for TBA commitments, respectively. Non-cash collateral pledged by the Fund, if any, is noted in the Consolidated Schedule of Investments. Typically, the Fund is permitted to sell, repledge or use the collateral it receives; however, the counterparty is not permitted to do so. To the extent amounts due to the Fund is not fully collateralized, contractually or otherwise, the Fund bears the risk of loss from counterparty nonperformance.

Mortgage Dollar Roll Transactions: The Fund may sell TBA mortgage-backed securities and simultaneously contract to repurchase substantially similar (i.e., same type, coupon and maturity) securities on a specific future date at an agreed upon price. During the period between the sale and repurchase, the Fund is not entitled to receive interest and principal payments on the securities sold. Mortgage dollar roll transactions are treated as purchases and sales and realizes gains and losses on these transactions. Mortgage dollar rolls involve the risk that the market value of the securities that the Fund is required to purchase may decline below the agreed upon repurchase price of those securities.

Short Sales Transactions: In short sale transaction, the Fund sells a security it does not hold in anticipation of a decline in the market price of that security. When the Fund makes a short sale, it will borrow the security sold short from a broker/counterparty and deliver the security to the purchaser. To close out a short position, the Fund delivers the same security to the broker and records a liability to reflect the obligation to return the security to the broker. The amount of the liability is subsequently marked-to-market to reflect the market value of the short sale. The Fund maintains a segregated account of securities or deposits cash with the broker-dealer as collateral for the short sales. Cash deposited with the broker is recorded as an asset in the Consolidated Statement of Assets and Liabilities. Securities segregated as collateral are denoted in the Consolidated Schedule of Investments. The Fund may pay a financing fee for the difference between the market value of the short position and the cash collateral deposited with the broker which would be recorded as interest expense. The Fund is required to repay the counterparty any dividends received on the security sold short, which, if applicable, is shown as dividend expense in the Consolidated Statement of Operations. The Fund may pay a fee on the assets borrowed from the counterparty, which, if applicable, is shown as stock loan fees in the Consolidated Statement of Operations. The Fund is exposed to market risk based on the amount, if any, that the market value of the security increases beyond the market value at which the position was sold. Thus, a short sale of a security involves the risk that instead of declining, the price of the security sold short will rise. The short sale of securities involves the possibility of an unlimited loss since there is an unlimited potential for the market price of the security sold short to increase. A gain, limited to the price at which the Fund sold the security short. A realized gain or loss is recognized upon the termination of a short sale if the market price is either less than or greater than the proceeds originally received. There is no assurance that the Fund will be able to close out a short position at a particular time or at an acceptable price.

Securities Lending: The Fund may lend its securities to approved borrowers, such as brokers, dealers and other financial institutions. The borrower pledges and maintains with the Fund collateral consisting of cash, an irrevocable letter of credit issued by a bank, or securities issued or guaranteed by

the U.S. Government. The initial collateral received by the Fund is required to have a value of at least 102% of the current value of the loaned securities for securities traded on U.S. exchanges and a value of at least 105% for all other securities. The collateral is maintained thereafter at a value equal to at least 100% of the current market value of the securities on loan. The market value of the loaned securities is determined at the close of each business day of the Fund and any additional required collateral is delivered to the Fund, or excess collateral returned by the Fund, on the next business day. During the term of the loan, the Fund is entitled to all distributions made on or in respect of the loaned securities. Loans of securities are terminable at any time and the borrower, after notice, is required to return borrowed securities within the standard time period for settlement of securities transactions.

The market value of any securities on loan, all of which were classified as common or preferred stocks in the Fund's Consolidated Schedule of Investments, and the value of any related collateral are shown separately in the Consolidated Statement of Assets and Liabilities as a component of investments at value — unaffiliated, and collateral on securities loaned at value, respectively. As of period end, any securities on loan were collateralized by cash. The cash collateral invested by the securities lending agent, BlackRock Investment Management, LLC ("BIM"), if any, is disclosed in the Consolidated Schedule of Investments.

Securities lending transactions are entered into by the Fund under Master Securities Lending Agreements (each, an "MSLA"), which provide the right, in the event of default (including bankruptcy or insolvency), for the non-defaulting party to liquidate the collateral and calculate a net exposure to the defaulting party or request additional collateral. In the event that a borrower defaults, the Fund, as lender, would offset the market value of the collateral received against the market value of the securities loaned. When the value of the collateral is greater than that of the market value of the securities loaned, the lender is left with a net amount payable to the defaulting party. However, bankruptcy or insolvency laws of a particular jurisdiction may impose restrictions on or prohibitions against such a right of offset in the event of an MSLA counterparty's bankruptcy or insolvency. Under the MSLA, absent an event of default the borrower can resell or re-pledge the loaned securities, and the Fund can reinvest cash collateral received in connection with loaned securities. Upon an event of default, the parties' obligations to return the securities or collateral to the other party are extinguished, and the parties can resell or re-pledge the loaned securities or the collateral received in connection with the loaned securities in order to satisfy the defaulting party's net payment obligation for all transactions under the MSLA. The defaulting party remains liable for any deficiency.

As of period end, the following table is a summary of the Fund's securities lending agreements by counterparty which are subject to offset under an MSLA:

Counterparty	Securities Loaned at Value[1]	Cash Collateral Received[2]	Net Amount[3]
Barclays Capital, Inc.	$ 5,322,750	$ (5,322,750)	–
BNP Paribas S.A.	2,946,886	(2,946,886)	–
Citigroup Global Markets, Inc.	4,407,744	(4,407,744)	–
Credit Suisse Securities (USA) LLC	4,986,645	(4,986,645)	–
Goldman Sachs & Co.	14,390,231	(14,390,231)	–
JP Morgan Securities LLC	115,459,428	(115,459,428)	–
Merrill Lynch, Pierce, Fenner & Smith, Inc.	6,929,118	(6,929,118)	–
Morgan Stanley	77,726,684	(77,726,684)	–
Nomura Securities International Inc.	4,206,840	(4,206,684)	$156
State Street Bank & Trust Co.	19,921,530	(19,921,530)	–
UBS AG	12,099,776	(12,099,776)	–
Total	$268,397,632	$(268,397,476)	$156

[1] Securities loaned with a value of $805,991 have been sold and are pending settlement as of June 30, 2016.

[2] Collateral with a value of $274,482,165 has been received in connection with securities lending agreements. Collateral received in excess of the value of securities loaned from the individual counterparty is not shown for financial reporting purposes in the table above.

[3] The market value of the loaned securities is determined as of June 30, 2016. Additional collateral is delivered to the Fund on the next business day in accordance with the MSLA. The net amount would be subject to the borrower default indemnity in the event of default by the counterparty.

The risks of securities lending include the risk that the borrower may not provide additional collateral when required or may not return the securities when due. To mitigate these risks, the Fund benefits from a borrower default indemnity provided by BIM. BIM's indemnity allows for full replacement of the securities loaned if the collateral received does not cover the value on the securities loaned in the event of borrower default. The Fund could suffer a loss if the value of an investment purchased with cash collateral falls below the market value of loaned securities or if the value of an investment purchased with cash collateral falls below the value of the original cash collateral received.

5. Derivative Financial Instruments:

The Fund engages in various portfolio investment strategies using derivative contracts both to increase the returns of the Fund and/or to manage its exposure to certain risks such as credit risk, equity risk, interest rate risk, foreign currency exchange rate risk, commodity price risk or other risks (e.g.

inflation risk). Derivative financial instruments categorized by risk exposure are included in the Consolidated Schedule of Investments. These contracts may be transacted on an exchange or OTC.

Futures Contracts: The Fund invests in long and/or short positions in futures and options on futures contracts to gain exposure to, or manage exposure to, changes in interest rates (interest rate risk), changes in the value of equity securities (equity risk) or foreign currencies (foreign currency exchange rate risk.

Futures contracts are agreements between the Fund and a counterparty to buy or sell a specific quantity of an underlying instrument at a specified price and on a specified date. Depending on the terms of a contract, it is settled either through physical delivery of the underlying instrument on the settlement date or by payment of a cash amount on the settlement date. Upon entering into a futures contract, the Fund is required to deposit initial margin with the broker in the form of cash or securities in an amount that varies depending on a contract's size and risk profile. The initial margin deposit must then be maintained at an established level over the life of the contract.

Securities deposited as initial margin are designated in the Consolidated Schedule of Investments and cash deposited, if any, is shown as cash pledged for futures contracts in the Consolidated Statement of Assets and Liabilities. Pursuant to the contract, the Fund agrees to receive from or pay to the broker an amount of cash equal to the daily fluctuation in market value of the contract ("variation margin"). Variation margin is recorded as unrealized appreciation (depreciation) and, if any, shown as variation margin receivable (or payable) on futures contracts in the Consolidated Statement of Assets and Liabilities. When the contract is closed, a realized gain or loss is recorded in the Consolidated Statement of Operations equal to the difference between the value of the contract at the time it was opened and the value at the time it was closed. The use of futures contracts involves the risk of an imperfect correlation in the movements in the price of futures contracts and interest, foreign currency exchange rates or underlying assets.

Forward Foreign Currency Exchange Contracts: The Fund enters into forward foreign currency exchange contracts to gain or reduce exposure, to foreign currencies (foreign currency exchange rate risk).

A forward foreign currency exchange contract is an agreement between two parties to buy and sell a currency at a set exchange rate on a specified date. These contracts help to manage the overall exposure to the currencies in which some of the investments held by the Fund are denominated and in some cases, may be used to obtain exposure to a particular market.

The contract is marked to market daily and the change in market value is recorded as unrealized appreciation (depreciation) in the Consolidated Statement of Assets and Liabilities. When a contract is closed, a realized gain or loss is recorded in the Consolidated Statement of Operations equal to the difference between the value at the time it was opened and the value at the time it was closed. Non-deliverable forward foreign currency exchange contracts are settled with the counterparty in cash without the delivery of foreign currency. The use of forward foreign currency exchange contracts involves the risk that the value of a forward foreign currency exchange contract changes unfavorably due to movements in the value of the referenced foreign currencies.

Options: The Fund purchases and writes call and put options to increase or decrease its exposure to the risks of underlying instruments, including equity risk, interest rate risk and/or commodity price risk and/or, in the case of options written, to generate gains from options premiums.

A call option gives the purchaser (holder) of the option the right (but not the obligation) to buy, and obligates the seller (writer) to sell (when the option is exercised) the underlying instrument at the exercise or strike price at any time or at a specified time during the option period. A put option gives the holder the right to sell and obligates the writer to buy the underlying instrument at the exercise or strike price at any time or at a specified time during the option period.

Premiums paid on options purchased and premiums received on options written, as well as the daily fluctuation in market value, are included in investments at value – unaffiliated and options written at value, respectively, in the Consolidated Statement of Assets and Liabilities. When an instrument is purchased or sold through the exercise of an option, the premium is offset against the cost or proceeds of the underlying instrument. When an option expires, a realized gain or loss is recorded in the Consolidated Statement of Operations to the extent of the premiums received or paid. When an option is closed or sold, a gain or loss is recorded in the Consolidated Statement of Operations to the extent the cost of the closing transaction exceeds the premiums received or paid. When the Fund writes a call option, such option is typically "covered," meaning that it holds the underlying instrument subject to being called by the option counterparty. When the Fund writes a put option, such option is covered by cash in an amount sufficient to cover the obligation.

- Swaptions — The Fund purchases and writes options on swaps ("swaptions") primarily to preserve a return or spread on a particular investment or portion of the Fund's holdings, as a duration management technique or to protect against an increase in the price of securities it anticipates purchasing at a later date. The purchaser and writer of a swaption is buying or granting the right to enter into a previously agreed upon interest rate or credit default swap agreement (interest rate risk and/or credit risk) at any time before the expiration of the option.

- Foreign Currency options — The Fund purchases and writes foreign currency options, foreign currency futures and options on foreign currency futures to gain or reduce exposure to foreign currencies (foreign currency exchange rate risk). Foreign currency options give the purchaser the right to buy from or sell to the writer a foreign currency at any time before the expiration of the option.
- Barrier options — The Fund may purchase and write a variety of options with non-standard payout structures or other features ("barrier options") that are generally traded OTC.

  The Fund may invest in various types of barrier options, including down-and-out options, down-and-in options, double no-touch options, one-touch options and up-and-out options. Down-and-out options expire worthless to the purchaser if the price of the underlying instrument falls below a specific barrier price level prior to the expiration date. Down-and-in options expire worthless to the purchaser unless the price of the underlying instrument falls below a specific barrier price level prior to the expiration date. Double no-touch options provide the purchaser an agreed-upon payout if the price of the underlying instrument does not reach or surpass predetermined barrier price levels prior to the option's expiration date. One-touch options provide the purchaser an agreed-upon payout if the price of the underlying instrument reaches or surpasses predetermined barrier price levels prior to the expiration date. Up-and-out options expire worthless if the price of the underlying instrument increases beyond a predetermined barrier price level prior to the expiration date.
- Structured options — The Fund invests in structured options to increase or decrease its exposure to an underlying index or group of securities (equity risk).

  These options may consist of single or multiple OTC options which are priced as a single instrument. They may only be exercised at the expiration date, but may be transferred/sold prior to the expiration date. The value of a structured option may either increase or decrease with the underlying index or group of securities, depending on the combination of options used. Structured options are issued in units whereby each unit represents a structure based on the specific index with an initial reference strike price. One type of structure involves the combination of selling a put while buying a call on a specific index. This option would rise in value as the underlying index increases and fall in value as the underlying index decreases. Alternatively, another structure involves the sale of a call and the purchase of a put. This option structure would rise in value as the underlying index decreases and fall in value as the underlying index increases. Upon the exercise of the structured option, the Fund will receive a payment from, or be required to remit a payment to, the counterparty depending on the value of the underlying index at exercise.

In purchasing and writing options, the Fund bears the risk of an unfavorable change in the value of the underlying instrument or the risk that it may not be able to enter into a closing transaction due to an illiquid market. Exercise of a written option could result in the Fund purchasing or selling a security when it otherwise would not, or at a price different from the current market value.

Swaps: The Fund enters into swap contracts to manage exposure to issuers, markets and securities. Such contracts are agreements between the Fund and a counterparty to make periodic net payments on a specified notional amount or a net payment upon termination. Swap agreements are privately negotiated in the OTC market and may be entered into as a bilateral contract ("OTC swaps") or centrally cleared ("centrally cleared swaps").

For OTC swaps, any upfront premiums paid and any upfront fees received are shown as swap premiums paid and swap premiums received, respectively, in the Consolidated Statement of Assets and Liabilities and amortized over the term of the contract. The daily fluctuation in market value is recorded as unrealized appreciation (depreciation) on OTC Swaps in the Consolidated Statement of Assets and Liabilities. Payments received or paid are recorded in the Consolidated Statement of Operations as realized gains or losses, respectively. When an OTC swap is terminated, a realized gain or loss is recorded in the Consolidated Statement of Operations equal to the difference between the proceeds from (or cost of) the closing transaction and the Fund's basis in the contract, if any. Generally, the basis of the contract is the premium received or paid.

In a centrally cleared swap, immediately following execution of the swap contract, the swap contract is novated to a central counterparty (the "CCP") and the Fund's counterparty on the swap agreement becomes the CCP. The Fund is required to interface with the CCP through the broker. Upon entering into a centrally cleared swap, the Fund is required to deposit initial margin with the broker in the form of cash or securities in an amount that varies depending on the size and risk profile of the particular swap. Securities deposited as initial margin are designated in the Consolidated Schedule of Investments and cash deposited is shown as cash pledged for centrally cleared swaps in the Consolidated Statement of Assets and Liabilities. Pursuant to the contract, the Fund agrees to receive from or pay to the broker an amount of cash equal to the daily fluctuation in market value of the contract ("variation margin"). Variation margin is recorded as unrealized appreciation (depreciation) and shown as variation margin receivable (or payable) on centrally cleared swaps in the Consolidated Statement of Assets and Liabilities. Payments received from (paid to) the counterparty, including at termination, are recorded as realized gains (losses) in the Consolidated Statement of Operations.

- Credit default swaps — The Fund enters into credit default swaps to manage its exposure to the market or certain sectors of the market, to reduce their risk exposure to defaults of corporate and/or sovereign issuers or to create exposure to corporate and/or sovereign issuers to which it is not otherwise exposed (credit risk).

  The Fund may either buy or sell (write) credit default swaps on single-name issuers (corporate or sovereign), a combination or basket of single-name issuers or traded indexes. Credit default swaps are agreements in which the protection buyer pays fixed periodic payments to the seller in

consideration for a promise from the protection seller to make a specific payment should a negative credit event take place with respect to the referenced entity (e.g., bankruptcy, failure to pay, obligation acceleration, repudiation, moratorium or restructuring). As a buyer, if an underlying credit event occurs, the Fund will either (i) receive from the seller an amount equal to the notional amount of the swap and deliver the referenced security or underlying securities comprising the index, or (ii) receive a net settlement of cash equal to the notional amount of the swap less the recovery value of the security or underlying securities comprising the index. As a seller (writer), if an underlying credit event occurs, the Fund will either pay the buyer an amount equal to the notional amount of the swap and take delivery of the referenced security or underlying securities comprising the index or pay a net settlement of cash equal to the notional amount of the swap less the recovery value of the security or underlying securities comprising the index.

- Total return swaps — The Fund enters into total return swaps to obtain exposure to a security or market without owning such security or investing directly in such market or to exchange the risk/return of one market (e.g., fixed income) with another market (e.g., equity or commodity prices) (equity risk, commodity price risk and/or interest rate risk).

  Total return swaps are agreements in which there is an exchange of cash flows whereby one party commits to make payments based on the total return (distributions plus capital gains/losses) of an underlying instrument in exchange for fixed or floating rate interest payments. If the total return of the instrument or index underlying the transaction exceeds or falls short of the offsetting fixed or floating interest rate obligation, the Fund receives payment from or makes a payment to the counterparty.

- Interest rate swaps — The Fund enters into interest rate swaps to gain or reduce exposure to interest rates or to manage duration, the yield curve or interest rate (interest rate risk).

  Interest rate swaps are agreements in which one party pays a stream of interest payments, either fixed or floating, in exchange for another party's stream of interest payments, either fixed or floating, on the same notional amount for a specified period of time. In more complex interest rate swaps, the notional principal amount may decline (or amortize) over time.

- Currency swaps — The Fund enters into currency swaps to gain or reduce exposure to foreign currencies (foreign currency exchange rate risk).

  Currency swaps are interest rate swaps in which one party pays a stream of interest payments, either fixed or floating, in exchange for another party's stream of interest payments, either fixed or floating, based on the notional amounts of two different currencies. The notional amounts are typically determined based on the spot exchange rates at the inception of the trade. Currency swaps may also involve an exchange of notional amounts at the start, during and/or at expiration of the contract, either at the current spot rate or another specified rate.

- Forward swaps — The Fund enters into forward interest rate swaps and forward total return swaps. In a forward swap, the Fund and the counterparty agree to make periodic net payments beginning on a specified date or a net payment at termination.

Swap transactions involve, to varying degrees, elements of interest rate, credit and market risk in excess of the amounts recognized in the Consolidated Statement of Assets and Liabilities. Such risks involve the possibility that there will be no liquid market for these agreements, that the counterparty to the agreements may default on its obligation to perform or disagree as to the meaning of the contractual terms in the agreements, and that there may be unfavorable changes in interest rates and/or market values associated with these transactions.

Master Netting Arrangements: In order to define its contractual rights and to secure rights that will help it mitigate its counterparty risk, the Fund may enter into an International Swaps and Derivatives Association, Inc. Master Agreement ("ISDA Master Agreement") or similar agreement with its counterparties. An ISDA Master Agreement is a bilateral agreement between the Fund and a counterparty that governs certain OTC derivatives and typically contains, among other things, collateral posting terms and netting provisions in the event of a default and/or termination event. Under an ISDA Master Agreement, the Fund may, under certain circumstances, offset with the counterparty certain derivative financial instruments' payables and/or receivables with collateral held and/or posted and create one single net payment. The provisions of the ISDA Master Agreement typically permit a single net payment in the event of default including the bankruptcy or insolvency of the counterparty. Bankruptcy or insolvency laws of a particular jurisdiction may restrict or prohibit the right of offset in bankruptcy, insolvency or other events. In addition, certain ISDA Master Agreements allow counterparties to terminate derivative contracts prior to maturity in the event the Fund's net assets decline by a stated percentage or the Fund fails to meet the terms of its ISDA Master Agreements. The result would cause the Fund to accelerate payment of any net liability owed to the counterparty.

Collateral Requirements: For derivatives traded under an ISDA Master Agreement, the collateral requirements are typically calculated by netting the mark-to-market amount for each transaction under such agreement and comparing that amount to the value of any collateral currently pledged by the Fund and the counterparty.

Cash collateral that has been pledged to cover obligations of the Fund and cash collateral received from the counterparty, if any, is reported separately on the Consolidated Statement of Assets and Liabilities as cash pledged as collateral and cash received as collateral, respectively. Non-cash collateral pledged by the Fund, if any, is noted in the Consolidated Schedule of Investments. Generally, the amount of collateral due from or to a counterparty is

subject to a certain minimum transfer amount threshold before a transfer is required, which is determined at the close of business of the Fund. Any additional required collateral is delivered to/pledged by the Fund on the next business day. Typically, the counterparty is not permitted to sell, re-pledge or use cash and non-cash collateral it receives. The Fund generally agrees not to use non-cash collateral that it receives but may, absent default or certain other circumstances defined in the underlying ISDA Master Agreement, be permitted to use cash collateral received. In such cases, interest may be paid pursuant to the collateral arrangement with the counterparty. To the extent amounts due to the Fund from its counterparties are not fully collateralized, it bears the risk of loss from counterparty non-performance. Likewise, to the extent the Fund has delivered collateral to a counterparty and stands ready to perform under the terms of its agreement with such counterparty, it bears the risk of loss from a counterparty in the amount of the value of the collateral in the event the counterparty fails to return such collateral. Based on the terms of agreements, collateral may not be required for all derivative contracts.

For financial reporting purposes, the Fund does not offset derivative assets and derivative liabilities that are subject to netting arrangements, if any, in the Consolidated Statement of Assets and Liabilities.

6. Investment Advisory Agreement and Other Transactions with Affiliates:

The PNC Financial Services Group, Inc. is the largest stockholder and an affiliate of BlackRock, Inc. ("BlackRock") for 1940 Act purposes.

Investment Advisory

The Company, on behalf of the Fund, entered into an Investment Advisory Agreement with the Manager, the Fund's investment adviser, an indirect, wholly owned subsidiary of BlackRock, to provide investment advisory and administration services. The Manager is responsible for the management of the Fund's portfolio and provides the personnel, facilities, equipment and certain other services necessary to the operations of the Fund. For such services, the Fund pays the Manager a monthly fee, which is determined by calculating a percentage of the Fund's average daily net assets, based on the following annual rates:

Average Daily Net Assets	Investment Advisory Fee
First $6 Billion	0.65%
$6 Billion - $8 Billion	0.61%
$8 Billion - $10 Billion	0.59%
$10 Billion - $15 Billion	0.57%
Greater than $15 Billion	0.55%

The Manager provides investment management and other services to the Subsidiary. The Manager does not receive separate compensation from the Subsidiary for providing investment management or administrative services. However, the Fund pays the Manager based on the Fund's net assets, which includes the assets of the Subsidiary.

Distribution Fees

The Company, on behalf of the Fund, entered into a Distribution Agreement and a Distribution Plan with BlackRock Investments, LLC ("BRIL"), an affiliate of the Manager. Pursuant to the Distribution Plan and in accordance with Rule 12b-1 under the 1940 Act, the Fund pays BRIL ongoing service and distribution fees. The fees are accrued daily and paid monthly at annual rates based upon the average daily net assets of the relevant share class of the Fund as follows:

Class II	Class III
0.15%	0.25%

For the six months ended June 30, 2016, the following table shows the class specific distribution fees borne directly by each share class of the Fund:

Class II	Class III	Total
$181,129	$10,544,534	$10,725,663

Transfer Agent

The Manager, on behalf of the Fund, entered into agreements with insurance companies and other financial intermediaries ("Service Organizations"), some of which may be affiliates. Pursuant to these agreements, the Service Organizations provide the Fund with administrative, networking, recordkeeping, sub-transfer agency and shareholder services to sub-accounts they service. For these services, the Service Organizations receive an annual fee per shareholder account, which will vary depending on share class and/or net assets of Fund shareholders serviced by the Service Organizations, which is shown as transfer agent – class specific. For the six months ended June 30, 2016, the Fund did not pay any amounts to affiliates in return for these services.

In addition, the Fund pays the transfer agent, which is not an affiliate, a fee for issuance, transfer and redemption of shares and the opening and maintenance of shareholder accounts, which is included in transfer agent in the Consolidated Statement of Operations.

For the six months ended June 30, 2016, the following table shows the class specific transfer agent fees borne directly by each class of the Fund:

Class I	Class II	Class III	Total
$721,232	$238,855	$8,872,290	$9,832,377

Expense Limitations, Waivers and Reimbursements

The Manager, with respect to the Fund, contractually agreed to waive and/or reimburse fees or expenses in order to limit expenses, excluding interest expense, dividend expense, tax expense, acquired fund fees and expenses, and certain other fund expenses, which constitute extraordinary expenses not incurred in the ordinary course of the Fund's business. The expense limitations as a percentage of average daily net assets are as follows:

Class I	1.25%
Class II	1.40%
Class III	1.50%

The Manager has agreed not to reduce or discontinue this contractual expense limitation prior to May 1, 2017 unless approved by the Board, including a majority of the Independent Directors who are not "interested persons" of the Fund, as defined in the 1940 Act ("Independent Directors") or by a majority of the outstanding voting securities of the Fund.

The Manager, with respect to the Fund, voluntarily agreed to waive its investment advisory fees by the amount of investment advisory fees the Fund pays to the Manager indirectly through its investment in affiliated money market funds. This amount is shown as fees waived by the Manager in the Consolidated Statement of Operations. However, the Manager does not waive its investment advisory fees by the amount of investment advisory fees paid in connection with the Fund's investment in other affiliated investment companies, if any. For the six months ended June 30, 2016, the amount waived was $1,284.

The Manager has contractually agreed to reimburse transfer agent fees in order to limit such expenses as a percentage of average daily net assets as follows:

Class I	0.07%
Class II	0.07%
Class III	0.07%

The Manager has agreed not to reduce or discontinue this contractual expense limitation prior to May 1, 2017 unless approved by the Board, including a majority of the Independent Directors or by a majority of the outstanding voting securities of the Fund.

These amounts reimbursed are shown as transfer agent fees reimbursed – class specific in the Consolidated Statement of Operations. Class specific expense reimbursements are as follows:

	Class I	Class II	Class III	Total
Transfer Agent Fees Reimbursed	$23,745	$154,096	$5,911,732	$6,089,573

For the six months ended June 30, 2016, the Fund reimbursed the Manager $59,272 for certain accounting services, which is included in accounting services in the Consolidated Statement of Operations.

Securities Lending

The U.S. Securities and Exchange Commission has issued an exemptive order which permits BIM, an affiliate of the Manager, to serve as securities lending agent for the Fund, subject to applicable conditions. As securities lending agent, BIM bears all operational costs directly related to securities lending. The Fund is responsible for expenses in connection with the investment of cash collateral received for securities on loan (the "collateral investment expenses"). The cash collateral is invested in a private investment company managed by the Manager or its affiliates. However, BIM has agreed to cap the collateral investment expenses of the private investment company to an annual rate of 0.04%. The investment adviser to the private investment company will not charge any advisory fees with respect to shares purchased by the Fund.

Securities lending income is equal to the total of income earned from the reinvestment of cash collateral, net of fees and other payments to and from borrowers of securities, and less the collateral investment expenses. The Fund retains a portion of securities lending income and remits a remaining portion to BIM as compensation for its services as securities lending agent.

Pursuant to a securities lending agreement, the Fund retains 80% of securities lending income, and this amount retained can never be less than 70% of the total of securities lending income plus the collateral investment expenses.

In addition, commencing the business day following the date that the aggregate securities lending income earned across the Equity-Bond Complex in a calendar year exceeds a specified threshold, the Fund, pursuant to the securities lending agreement, will retain for the remainder of that calendar year securities lending income as follows: 85% of securities lending income, and this amount retained can never be less than 70% of the total of securities lending income plus the collateral investment expenses.

The share of securities lending income earned by the Fund is shown as securities lending — affiliated — net in the Consolidated Statement of Operations. For the six months ended June 30, 2016, the Fund paid BIM $426,366 for securities lending agent services.

Officers and Directors

Certain officers and/or directors of the Company are officers and/or directors of BlackRock or its affiliates. The Fund reimburses the Manager for a portion of the compensation paid to the Fund's Chief Compliance Officer, which is included in Officer and Directors in the Consolidated Statement of Operations.

Other Transactions

The Fund may purchase securities from, or sell securities to, an affiliated fund provided the affiliation is due solely to having a common investment adviser, common officers, or common directors. For the six months ended June 30, 2016, the purchase and sale transactions which resulted in net realized gains (losses) with an affiliated fund in compliance with Rule 17a-7 under the 1940 Act were as follows.

Purchases	Sales	Net Realized Gain
$9,877,590	$4,566,154	$557,197

7. Purchases and Sales:

For the six months ended June 30, 2016, purchases and sales of investments, including paydowns and excluding short-term securities, were as follows:

	Purchases	Sales
Non-U.S. Government Securities	$4,263,686,951	$3,623,825,858
U.S. Government Securities	$2,351,879,960	$1,884,222,567

For the six months ended June 30, 2016, purchases and sales related to mortgage dollar rolls were $148,044,015 and $147,522,701, respectively.

8. Income Tax Information:

It is the Fund's policy to comply with the requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies and to distribute substantially all of its taxable income to its shareholders. Therefore, no federal income tax provision is required.

The Fund files U.S. federal and various state and local tax returns. No income tax returns are currently under examination. The statute of limitations on the Fund's U.S. federal tax returns generally remains open for each of the four years ended December 31, 2015. The statutes of limitations on the Fund's state and local tax returns may remain open for an additional year depending upon the jurisdiction.

Management has analyzed tax laws and regulations and their application to the Fund as of June 30, 2016, inclusive of the open tax return years, and does not believe there are any uncertain tax positions that require recognition of a tax liability in the Fund's financial statements.

As of June 30, 2016, gross unrealized appreciation and depreciation based on cost for federal income tax purposes were as follows:

Tax cost	$11,432,839,176
Gross unrealized appreciation	$ 657,725,138
Gross unrealized depreciation	(759,051,864)
Net unrealized depreciation	$ (101,326,726)

9. Bank Borrowings:

The Company, on behalf of the Fund, along with certain other funds managed by the Manager and its affiliates ("Participating Funds"), is a party to a 364-day, $2.1 billion credit agreement with a group of lenders. Under this agreement, the Fund may borrow to fund shareholder redemptions. Excluding

commitments designated for certain individual funds, the Participating Funds, including the Fund, can borrow up to an aggregate commitment amount of $1.6 billion at any time outstanding, subject to asset coverage and other limitations as specified in the agreement. The credit agreement has the following terms: a fee of 0.12% per annum on unused commitment amounts and interest at a rate equal to the higher of (a) one-month LIBOR (but, in any event, not less than 0.00%) on the date the loan is made plus 0.80% per annum or (b) the Fed Funds rate (but, in any event, not less than 0.00%) in effect from time to time plus 0.80% per annum on amounts borrowed. The agreement expires in April 2017 unless extended or renewed. Prior to April 21, 2016, the credit agreement had a fee per annum of 0.06% on unused commitment amounts and interest at a rate equal to the higher of (a) one-month LIBOR (but, in any event, not less than 0.00%) on the date the loan is made plus 0.80% per annum or (b) the Fed Funds rate (but, in any event, not less than 0.00%) in effect from time to time plus 0.80% per annum on amounts borrowed. Participating Funds paid administration, legal and arrangement fees, which, if applicable, are included in miscellaneous expenses in the Consolidated Statement of Operations. These fees were allocated among such funds based upon portions of the aggregate commitment available to them and relative net assets of Participating Funds. During the six months ended June 30, 2016, the Fund did not borrow under the credit agreement.

10. Principal Risks:

In the normal course of business, the Fund invests in securities and enters into transactions where risks exist due to fluctuations in the market (market risk) or failure of the issuer to meet all its obligations, including the ability to pay principal and interest when due (issuer credit risk). The value of securities held by the Fund may decline in response to certain events, including those directly involving the issuers of securities owned by the Fund. Changes arising from the general economy; the overall market and local, regional or global political or/and social instability, as well as currency, interest rate and price fluctuations, may also affect the securities' value.

The Fund may be exposed to prepayment risk, which is the risk that borrowers may exercise their option to prepay principal earlier than scheduled during periods of declining interest rates, which would force the Fund to reinvest in lower yielding securities. The Fund may also be exposed to reinvestment risk, which is the risk that income from the Fund's portfolio will decline if the Fund invests the proceeds from matured, traded or called fixed income securities at market interest rates that are below the Fund portfolio's current earnings rate.

Counterparty Credit Risk: Similar to issuer credit risk, the Fund may be exposed to counterparty credit risk, or the risk that an entity may fail to or be unable to perform on its commitments related to unsettled or open transactions. The Fund manages counterparty credit risk by entering into transactions only with counterparties that the Manager believes have the financial resources to honor their obligations and by monitoring the financial stability of those counterparties. Financial assets, which potentially expose the Fund to market, issuer and counterparty credit risks, consist principally of financial instruments and receivables due from counterparties. The extent of the Fund's exposure to market, issuer and counterparty credit risks with respect to these financial assets is approximately their value recorded in the Consolidated Statement of Assets and Liabilities, less any collateral held by the Fund.

A derivative contract may suffer a mark-to-market loss if the value of the contract decreases due to an unfavorable change in the market rates or values of the underlying instrument. Losses can also occur if the counterparty does not perform under the contract.

The Fund's risk of loss from counterparty credit risk on OTC derivatives is generally limited to the aggregate unrealized gain less the value of any collateral held by the Fund.

For OTC options purchased, the Fund bears the risk of loss of the amount of the premiums paid plus the positive change in market values net of any collateral held by such Fund should the counterparty fail to perform under the contracts. Options written by the Fund do not typically give rise to counterparty credit risk, as options written generally obligate the Fund, and not the counterparty, to perform. The Fund may be exposed to counterparty credit risk with respect to options written to the extent the Fund deposits collateral with its counterparty to a written option.

With exchange-traded options purchased, futures and centrally cleared swaps, there is less counterparty credit risk to the Fund since the exchange or clearinghouse, as counterparty to such instruments, guarantees against a possible default. The clearinghouse stands between the buyer and the seller of the contract; therefore, credit risk is limited to failure of the clearinghouse. While offset rights may exist under applicable law, the Fund does not have a contractual right of offset against a clearing broker or clearinghouse in the event of a default (including the bankruptcy or insolvency). Additionally, credit risk exists in exchange-traded futures and centrally cleared swaps with respect to initial and variation margin that is held in a clearing broker's customer accounts. While clearing brokers are required to segregate customer margin from their own assets, in the event that a clearing broker becomes insolvent or goes into bankruptcy and at that time there is a shortfall in the aggregate amount of margin held by the clearing broker for all its clients, typically the shortfall would be allocated on a pro rata basis across all the clearing broker's customers, potentially resulting in losses to the Fund.

The Fund invests a significant portion of its assets in fixed-income securities and/or uses derivatives tied to the fixed-income markets. Changes in market interest rates or economic conditions, may affect the value and/or liquidity of such investments. Interest rate risk is the risk that prices of bonds

and other fixed-income securities will increase as interest rates fall and decrease as interest rates rise. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates.

11. Capital Share Transactions:

Transactions in capital shares for each class were as follows:

	Six Months Ended June 30, 2016		Year Ended December 31, 2015	
	Shares	Amount	Shares	Amount
Class I				
Shares sold	10,277,855	$152,287,171	29,942,559	$ 491,454,627
Shares issued in reinvestment of distributions	–	–	7,239,930	111,785,594
Shares redeemed	(6,104,793)	(90,886,023)	(10,045,140)	(164,284,586)
Net increase	4,173,062	$ 61,401,148	27,137,349	$ 438,955,635
Class II				
Shares sold	374,658	$ 5,539,660	1,738,682	$ 28,612,376
Shares issued in reinvestment of distributions	–	–	1,068,549	16,467,733
Shares redeemed	(1,653,195)	(24,374,446)	(1,772,664)	(28,738,978)
Net increase (decrease)	(1,278,537)	$(18,834,786)	1,034,567	$ 16,341,131

12. Subsequent Events:

Management has evaluated the impact of all subsequent events on the Fund through the date the financial statements were issued and has determined that there were no subsequent events requiring adjustment or additional disclosure in the consolidated financial statements.

Disclosure of Investment Advisory Agreements and Sub-Advisory Agreements

The Board of Directors (the "Board," the members of which are referred to as "Board Members") of BlackRock Variable Series Funds, Inc. (the "Corporation") met in person on April 12, 2016 (the "April Meeting") and May 10-11, 2016 (the "May Meeting") to consider the approval of the investment advisory agreements (collectively, the "Advisory Agreements") between the Corporation, on behalf of BlackRock Basic Value V.I. Fund (the "Basic Value V.I. Fund"), BlackRock Capital Appreciation V.I. Fund (the "Capital Appreciation V.I. Fund"), BlackRock Equity Dividend V.I. Fund (the "Equity Dividend V.I. Fund"), BlackRock Global Allocation V.I. Fund (the "Global Allocation V.I. Fund"), BlackRock Global Opportunities V.I. Fund (the "Global Opportunities V.I. Fund"), BlackRock Government Money Market V.I. Fund (the "Government Money Market V.I. Fund"), BlackRock High Yield V.I. Fund (the "High Yield V.I. Fund"), BlackRock International V.I. Fund (the "International V.I. Fund"), BlackRock iShares Alternative Strategies V.I. Fund (the "iShares Alternative Strategies V.I. Fund"), BlackRock iShares Dynamic Allocation V.I. Fund (the "iShares Dynamic Allocation V.I. Fund"), BlackRock iShares Dynamic Fixed Income V.I. Fund (the "iShares Dynamic Fixed Income V.I. Fund"), BlackRock iShares Equity Appreciation V.I. Fund (the "iShares Equity Appreciation V.I. Fund), BlackRock Large Cap Core V.I. Fund (the "Large Cap Core V.I. Fund"), BlackRock Large Cap Growth V.I. Fund (the "Large Cap Growth V.I. Fund"), BlackRock Large Cap Value V.I. Fund (the "Large Cap Value V.I. Fund"), BlackRock Managed Volatility V.I. Fund (the "Managed Volatility V.I. Fund"), BlackRock S&P 500 Index V.I. Fund (the "S&P 500 Index V.I. Fund"), BlackRock Total Return V.I. Fund (the "Total Return V.I. Fund"), BlackRock U.S. Government Bond V.I. Fund (the "U.S. Government Bond V.I. Fund") and BlackRock Value Opportunities V.I. Fund (the "Value Opportunities V.I. Fund") (each, a "Fund," and collectively, the "Funds"), each a series of the Corporation, and BlackRock Advisors, LLC (the "Manager"), each Fund's investment advisor. The Board also considered the approval of the sub-advisory agreements (collectively, the "Sub-Advisory Agreements") between the Manager and (a) BlackRock International Limited; (b) BlackRock Asset Management North Asia Limited; and (c) BlackRock (Singapore) Limited (collectively, the "Sub-Advisors"), respectively with respect to the Funds, as applicable. The Manager and the Sub-Advisors are referred to herein as "BlackRock." The Advisory Agreements and the Sub-Advisory Agreements are referred to herein as the "Agreements."

Activities and Composition of the Board

On the date of the May Meeting, the Board consisted of thirteen individuals, ten of whom were not "interested persons" of the Corporation as defined in the Investment Company Act of 1940, as amended (the "1940 Act") (the "Independent Board Members"). One of the Board Members is a non-management interested Board Member by virtue of his former positions with BlackRock, Inc. and its affiliates. The Board Members are responsible for the oversight of the operations of the Funds and perform the various duties imposed on the directors of investment companies by the 1940 Act. The Independent Board Members have retained independent legal counsel to assist them in connection with their duties. The Chair of the Board is an Independent Board Member. The Board has established five standing committees: an Audit Committee, a Governance and Nominating Committee, a Compliance Committee, a Performance Oversight Committee and an Executive Committee, each of which is chaired by an Independent Board Member and composed of Independent Board Members (except for the Performance Oversight Committee and the Executive Committee, each of which also has one interested Board Member).

The Agreements

Pursuant to the 1940 Act, the Board is required to consider the continuation of the Agreements on an annual basis. The Board has four quarterly meetings per year, each extending over two days, a fifth one-day meeting to consider specific information surrounding the consideration of renewing the Agreements and additional in-person and telephonic meetings as needed. In connection with this year-long deliberative process, the Board assessed, among other things, the nature, extent and quality of the services provided to each Fund by BlackRock, BlackRock's personnel and affiliates, including (as applicable): investment management; administrative and shareholder services; the oversight of fund service providers; marketing; risk oversight; compliance; and ability to meet applicable legal and regulatory requirements.

The Board, acting directly and through its committees, considers at each of its meetings, and from time to time as appropriate, factors that are relevant to its annual consideration of the renewal of the Agreements, including the services and support provided by BlackRock to each Fund and its shareholders. BlackRock also furnished additional information to the Board in response to specific questions from the Board. This additional information is discussed further below in the section titled "Board Considerations in Approving the Agreements." Among the matters the Board considered were: (a) investment performance for one-year, three-year, five-year, ten-year, and/or since inception periods, as applicable, against peer funds, applicable benchmark, and performance metrics, as applicable, as well as senior management's and portfolio managers' analysis of the reasons for any over-performance or underperformance relative to its peers, benchmarks, and other performance metrics, as applicable; (b) fees, including advisory, administration, if applicable, and other amounts paid to BlackRock and its affiliates by each Fund for services; (c) Fund operating expenses and how BlackRock allocates expenses to each Fund; (d) the resources devoted to, risk oversight of, and compliance reports relating to, implementation of each Fund's investment objective(s), policies and restrictions, and meeting regulatory requirements; (e) each Fund's compliance with its compliance policies and procedures; (f) the nature, cost and character of non-investment management services provided by BlackRock and its affiliates; (g) BlackRock's and other service providers' internal controls and risk and compliance oversight mechanisms; (h) BlackRock's implementation of the proxy voting policies approved by the Board; (i) the use of brokerage commissions and execution quality of portfolio transactions; (j) BlackRock's implementation of each Fund's valuation and liquidity procedures; (k) an analysis of management fees for products with similar investment mandates across the open-end fund, exchange-traded fund ("ETF"), closed-end fund and institutional account product channels, as applicable, and the similarities and

differences between these products and the services provided as compared to each Fund; (l) BlackRock's compensation methodology for its investment professionals and the incentives and accountability it creates, along with investment professionals' investments in the fund(s) they manage; and (m) periodic updates on BlackRock's business.

Board Considerations in Approving the Agreements

The Approval Process: Prior to the April Meeting, the Board requested and received materials specifically relating to the Agreements. The Board is continuously engaged in a process with its independent legal counsel and BlackRock to review the nature and scope of the information provided to better assist its deliberations. The materials provided in connection with the April Meeting included (a) information independently compiled and prepared by Broadridge Financial Solutions, Inc. ("Broadridge") on Fund fees and expenses as compared with a peer group of funds as determined by Broadridge ("Expense Peers") and the investment performance of each Fund (other than the Large Cap Growth V.I. Fund, the Global Opportunities V.I. Fund and the S&P 500 Index V.I. Fund) as compared with a peer group of funds as determined by Broadridge,[1] for the Large Cap Growth V.I. Fund and the Global Opportunities V.I. Fund, customized peer groups selected by BlackRock (each a "Customized Peer Group"), and for the S&P 500 Index V.I. Fund, the performance of the Fund as compared with its benchmark; (b) information on the profits realized by BlackRock and its affiliates pursuant to the Agreements and a discussion of fall-out benefits to BlackRock and its affiliates; (c) a general analysis provided by BlackRock concerning investment management fees charged to other clients, such as institutional clients, sub-advised mutual funds, ETFs and closed-end funds, under similar investment mandates, as well as the performance of such other clients, as applicable; (d) review of non-management fees; (e) the existence, impact and sharing of potential economies of scale; (f) a summary of aggregate amounts paid by each Fund to BlackRock; and (g) sales and redemption data regarding each Fund's shares.

At the April Meeting, the Board reviewed materials relating to its consideration of the Agreements. As a result of the discussions that occurred during the April Meeting, and as a culmination of the Board's year-long deliberative process, the Board presented BlackRock with questions and requests for additional information. BlackRock responded to these requests with additional written information in advance of the May Meeting.

At the May Meeting, the Board, including the Independent Board Members, approved the continuation of the Advisory Agreements between the Manager and the Corporation, on behalf of each Fund, and the Sub-Advisory Agreements between the Manager and the Sub-Advisors, with respect to each Fund, as applicable, each for a one-year term ending June 30, 2017. In approving the continuation of the Agreements, the Board considered: (a) the nature, extent and quality of the services provided by BlackRock; (b) the investment performance of each Fund; (c) the advisory fee and the cost of the services and profits to be realized by BlackRock and its affiliates from their relationship with each Fund; (d) each Fund's costs to investors compared to the costs of Expense Peers and performance compared to the relevant performance metrics as previously discussed; (e) the sharing of potential economies of scale; (f) fall-out benefits to BlackRock and its affiliates as a result of its relationship with each Fund; and (g) other factors deemed relevant by the Board Members.

The Board also considered other matters it deemed important to the approval process, such as other payments made to BlackRock or its affiliates, securities lending and cash management, services related to the valuation and pricing of Fund portfolio holdings, and materials submitted for the Board's review. The Board noted the willingness of BlackRock personnel to engage in open, candid discussions with the Board. The Board did not identify any particular information as determinative, and each Board Member may have attributed different weights to the various items considered.

A. Nature, Extent and Quality of the Services Provided by BlackRock

The Board, including the Independent Board Members, reviewed the nature, extent and quality of services provided by BlackRock, including the investment advisory services and the resulting performance of each Fund. Throughout the year, the Board compared Fund performance to the performance of a comparable group of mutual funds, a relevant benchmark, and performance metrics, as applicable. The Board met with BlackRock's senior management personnel responsible for investment activities, including the senior investment officers. The Board also reviewed the materials provided by each Fund's portfolio management team discussing each Fund's performance and each Fund's investment objective(s), strategies and outlook.

The Board considered, among other factors, with respect to BlackRock: the number, education and experience of investment personnel generally and each Fund's portfolio management team; BlackRock's research capabilities; investments by portfolio managers in the funds they manage; portfolio trading capabilities; use of technology; commitment to compliance; credit analysis capabilities; risk analysis and oversight capabilities; and the approach to training and retaining portfolio managers and other research, advisory and management personnel. The Board engaged in a review of BlackRock's compensation structure with respect to each Fund's portfolio management team and BlackRock's ability to attract and retain high-quality talent and create performance incentives.

In addition to investment advisory services, the Board considered the quality of the administrative and other non-investment advisory services provided to each Fund. BlackRock and its affiliates provide each Fund with certain administrative, shareholder and other services (in addition to any such services provided to each Fund by third parties) and officers and other personnel as are necessary for the operations of each Fund. In particular,

[1] Funds are ranked by Broadridge in quartiles, ranging from first to fourth, where first is the most desirable quartile position and fourth is the least desirable.

BlackRock and its affiliates provide each Fund with administrative services including, among others: (i) preparing disclosure documents, such as the prospectus, the summary prospectus (as applicable), the statement of additional information and periodic shareholder reports; (ii) oversight of daily accounting and pricing; (iii) preparing periodic filings with regulators; (iv) overseeing and coordinating the activities of other service providers; (v) organizing Board meetings and preparing the materials for such Board meetings; (vi) providing legal and compliance support; (vii) furnishing analytical and other support to assist the Board in its consideration of strategic issues such as the merger, consolidation or repurposing of certain open-end funds; and (viii) performing other administrative functions necessary for the operation of each Fund, such as tax reporting, fulfilling regulatory filing requirements and call center services. The Board reviewed the structure and duties of BlackRock's fund administration, shareholder services, and legal & compliance departments and considered BlackRock's policies and procedures for assuring compliance with applicable laws and regulations.

B. The Investment Performance of each Fund and BlackRock

The Board, including the Independent Board Members, also reviewed and considered the performance history of each Fund. In preparation for the April Meeting, the Board was provided with reports independently prepared by Broadridge, which included a comprehensive analysis of each Fund's performance. The Board also reviewed a narrative and statistical analysis of the Broadridge data that was prepared by BlackRock. In connection with its review, the Board received and reviewed information regarding the investment performance of each Fund (other than the Large Cap Growth V.I. Fund, Global Opportunities V.I. Fund and the S&P 500 Index V.I. Fund) as compared to other funds in its applicable Broadridge category, for the Large Cap Growth V.I. Fund and the Global Opportunities V.I. Fund, Customized Peer Groups, and for the S&P 500 Index V.I. Fund, the performance of the Fund as compared with its benchmark. The Board was provided with a description of the methodology used by Broadridge to select peer funds and periodically meets with Broadridge representatives to review its methodology. The Board was provided with information on the composition of the Broadridge performance universes and expense universes. The Board and its Performance Oversight Committee regularly review, and meet with Fund management to discuss, the performance of each Fund throughout the year.

In evaluating performance, the Board recognized that the performance data reflects a snapshot of a period as of a particular date and that selecting a different performance period could produce significantly different results. Further, the Board recognized that it is possible that long-term performance can be adversely affected by even one period of significant underperformance so that a single investment decision or theme has the ability to affect long-term performance disproportionately.

The Board noted that for the one-, three- and five-year periods reported, the Basic Value V.I. Fund ranked in the fourth, second and third quartiles, respectively, against its Broadridge Performance Universe. The Board and BlackRock reviewed and discussed the reasons for the Basic Value V.I. Fund's underperformance during the one- and five-year periods.

The Board and BlackRock discussed BlackRock's strategy for improving the Basic Value V.I. Fund's investment performance. Discussions covered topics such as: investment risks undertaken by the Basic Value V.I. Fund; performance attribution; the Fund's investment personnel; and the resources appropriate to support the Fund's investment processes. The Board and BlackRock also discussed BlackRock's active equity platform, and it was noted that BlackRock has recruited a Head of Global Active Equity, and has appointed a Chief Performance Officer to provide analysis of investment performance to senior management and the Board.

The Board noted that for the one-, three- and five-year periods reported, the Capital Appreciation V.I. Fund ranked in the second, third and fourth quartiles, respectively, against its Broadridge Performance Universe. The Board noted the Capital Appreciation V.I. Fund's improved performance during the one-year period. The Board and BlackRock reviewed and discussed the reasons for the Capital Appreciation V.I. Fund's underperformance during the three- and five-year periods.

The Board and BlackRock discussed BlackRock's strategy for improving the Capital Appreciation V.I. Fund's investment performance. Discussions covered topics such as: investment risks undertaken by the Capital Appreciation V.I. Fund; performance attribution; the Fund's investment personnel; and the resources appropriate to support the Fund's investment processes. The Board and BlackRock also discussed BlackRock's active equity platform, and it was noted that BlackRock has recruited a Head of Global Active Equity, and has appointed a Chief Performance Officer to provide analysis of investment performance to senior management and the Board.

The Board noted that for the one-, three- and five-year periods reported, the Equity Dividend V.I. Fund ranked in the first, third and second quartiles, respectively, against its Broadridge Performance Universe.

The Board noted that for the one-, three- and five-year periods reported, the Global Allocation V.I. Fund ranked in the first, second and third quartiles, respectively, against its Broadridge Performance Universe.

The Board noted that for the one-, three- and five-year periods reported, the Global Opportunities V.I. Fund ranked in the first, fourth, and fourth quartiles, respectively, against its Customized Peer Group. BlackRock believes that the Customized Peer Group is an appropriate performance metric for the Global Opportunities V.I. Fund. The Board noted the Global Opportunities V.I. Fund's improved performance during the one-year period. The Board and BlackRock reviewed and discussed the reasons for the Global Opportunities V.I. Fund's underperformance during the three- and five-year periods.

In response to the Board's ongoing concerns about underperformance, among other factors, the Board and BlackRock agreed to a continuation of a contractual expense cap, as detailed in Section C.

The Board and BlackRock discussed BlackRock's strategy for improving the Global Opportunities V.I. Fund's investment performance. Discussions covered topics such as: investment risks undertaken by the Global Opportunities V.I. Fund; performance attribution; the Fund's investment personnel; and the resources appropriate to support the Fund's investment processes. The Board and BlackRock also discussed BlackRock's active equity platform, and it was noted that BlackRock has recruited a Head of Global Active Equity, and has appointed a Chief Performance Officer to provide analysis of investment performance to senior management and the Board.

The Board noted that for the one-, three- and five-year periods reported, the Government Money Market V.I. Fund ranked in the first, first, and third quartiles, respectively, against its Broadridge Performance Universe. Additionally, the Board noted that the Government Money Market V.I. Fund performed within the one basis point threshold of its Broadridge Performance Universe peer median for the five-year period. The Board reviewed the Government Money Market V.I. Fund's performance within the context of the low yield environment that has existed over the past few years. The Board noted that effective September 1, 2015, the Government Money Market V.I. Fund had undergone a change in its investment strategy, and in that connection had changed its name from BlackRock Money Market V.I. Fund to BlackRock Government Money Market V.I. Fund.

The quartile standing of the Government Money Market V.I. Fund in its Broadridge Performance Universe takes into account the Fund's current yield only. The Board believes that a money market fund can only be understood holistically, accounting for current yield and risk. While the Board reviews the Government Money Market V.I. Fund's current yield performance, it also examines the liquidity, duration, and credit quality of the Fund's portfolio. In the Board's view, BlackRock's money market funds have performed well over the one-, three- and five-year periods given BlackRock's emphasis on preserving capital and seeking as high a level of current income as is consistent with liquidity while simultaneously managing risk.

The Board noted that for the one-, three- and five-year periods reported, the High Yield V.I. Fund ranked in the third, first and first quartiles, respectively, against its Broadridge Performance Universe. The Board and BlackRock reviewed and discussed the reasons for the High Yield V.I. Fund's underperformance during the one-year period.

The Board noted that for the one-, three- and five-year periods reported, the International V.I. Fund ranked in the third, third and fourth quartiles, respectively, against its Broadridge Performance Universe. The Board and BlackRock reviewed and discussed the reasons for the International V.I. Fund's underperformance during these periods.

The Board and BlackRock discussed BlackRock's strategy for improving the International V.I. Fund's investment performance. Discussions covered topics such as: investment risks undertaken by the International V.I. Fund; performance attribution; the Fund's investment personnel; and the resources appropriate to support the Fund's investment processes. The Board and BlackRock also discussed BlackRock's active equity platform, and it was noted that BlackRock has recruited a Head of Global Active Equity, and has appointed a Chief Performance Officer to provide analysis of investment performance to senior management and the Board.

The Board noted that for each of the one-year and since-inception periods reported, the iShares Alternative Strategies V.I. Fund ranked in the first quartile against its Broadridge Performance Universe.

The Board noted that for each of the one-year and since-inception periods reported, the iShares Dynamic Allocation V.I. Fund ranked in the third quartile against its Broadridge Performance Universe. The Board and BlackRock reviewed and discussed the reasons for the iShares Dynamic Allocation V.I. Fund's underperformance during these periods.

The Board and BlackRock discussed BlackRock's strategy for improving the iShares Dynamic Allocation V.I. Fund's investment performance. Discussions covered topics such as: investment risks undertaken by the iShares Dynamic Allocation V.I. Fund; performance attribution; the Fund's investment personnel; and the resources appropriate to support the Fund's investment processes.

The Board noted that for each of the one-year and since-inception periods reported, the iShares Dynamic Fixed Income V.I. Fund ranked in the second quartile against its Broadridge Performance Universe.

The Board noted that for each of the one-year and since-inception periods reported, the iShares Equity Appreciation V.I. Fund ranked in the fourth quartile against its Broadridge Performance Universe. The Board and BlackRock reviewed and discussed the reasons for the iShares Equity Appreciation V.I. Fund's underperformance during these periods.

The Board and BlackRock discussed BlackRock's strategy for improving the iShares Equity Appreciation V.I. Fund's investment performance. Discussions covered topics such as: investment risks undertaken by the iShares Equity Appreciation V.I. Fund; performance attribution; the Fund's investment personnel; and the resources appropriate to support the Fund's investment processes.

The Board noted that for the one-, three- and five-year periods reported, the Large Cap Core V.I. Fund ranked in the third, second and second quartiles, respectively, against its Broadridge Performance Universe. The Board and BlackRock reviewed and discussed the reasons for the Large Cap Core V.I. Fund's underperformance during the one-year period.

The Board noted that for the one-, three- and five-year periods reported, the Large Cap Growth V.I. Fund ranked in the fourth, third and second quartiles, respectively, against its Customized Peer Group. BlackRock believes that the Customized Peer Group is an appropriate performance metric for the Large Cap Growth V.I. Fund. The Board and BlackRock reviewed and discussed the reasons for the Large Cap Growth V.I. Fund's underperformance during one- and three-year periods.

The Board and BlackRock discussed BlackRock's strategy for improving the Large Cap Growth V.I. Fund's investment performance. Discussions covered topics such as: investment risks undertaken by the Large Cap Growth V.I. Fund; performance attribution; the Fund's investment personnel; and the resources appropriate to support the Fund's investment processes. The Board and BlackRock also discussed BlackRock's active equity platform, and it was noted that BlackRock has recruited a Head of Global Active Equity, and has appointed a Chief Performance Officer to provide analysis of investment performance to senior management and the Board.

The Board noted that for the one-, three- and five-year periods reported, the Large Cap Value V.I. Fund ranked in the first, first and second quartiles, respectively, against its Broadridge Performance Universe.

The Board noted that for each of the one-, three- and five-year periods reported, the Managed Volatility V.I. Fund ranked in the first quartile against its Broadridge Performance Universe.

The Board noted that for the past five one-year periods reported, the S&P 500 Index V.I. Fund's net performance was within the tolerance range of its benchmark index for four of the five periods. BlackRock believes that net performance relative to the benchmark is an appropriate performance metric for the Fund.

The Board noted that for each of the one-, three- and five-year periods reported, the Total Return V.I. Fund ranked in the second quartile against its Broadridge Performance Universe.

The Board noted that for the one-, three- and five-year periods reported, the U.S. Government Bond V.I. Fund ranked in the third, second and third quartiles, respectively, against its Broadridge Performance Universe. The Board and BlackRock reviewed and discussed the reasons for the U.S. Government Bond V.I. Fund's underperformance during one- and five-year periods.

The Board and BlackRock discussed BlackRock's strategy for improving the U.S. Government Bond V.I. Fund's investment performance. Discussions covered topics such as: investment risks undertaken by the U.S. Government Bond V.I. Fund; performance attribution; the Fund's investment personnel; and the resources appropriate to support the Fund's investment processes.

The Board noted that for the one-, three- and five-year periods reported, the Value Opportunities V.I. Fund ranked in the fourth, second, and third quartiles, respectively, against its Broadridge Performance Universe. The Board and BlackRock reviewed and discussed the reasons for the Value Opportunities V.I. Fund's underperformance during one- and five-year periods.

The Board and BlackRock discussed BlackRock's strategy for improving the Value Opportunities V.I. Fund's investment performance. Discussions covered topics such as: investment risks undertaken by the Value Opportunities V.I. Fund; performance attribution; the Fund's investment personnel; and the resources appropriate to support the Fund's investment processes. The Board and BlackRock also discussed BlackRock's active equity platform, and it was noted that BlackRock has recruited a Head of Global Active Equity, and has appointed a Chief Performance Officer to provide analysis of investment performance to senior management and the Board.

C. Consideration of the Advisory/Management Fees and the Cost of the Services and Profits to be Realized by BlackRock and its Affiliates from their Relationship with each Fund

The Board, including the Independent Board Members, reviewed each Fund's contractual management fee rate compared with the other funds in its Broadridge category. The contractual management fee rate represents a combination of the advisory fee and any administrative fees, before taking into account any reimbursements or fee waivers. The Board also compared each Fund's total expense ratio, as well as its actual management fee rate, to those of other funds in its Broadridge category. The total expense ratio represents a fund's total net operating expenses, including any 12b-1 or non 12b-1 service fees. The total expense ratio gives effect to any expense reimbursements or fee waivers that benefit a fund, and the actual management fee rate gives effect to any management fee reimbursements or waivers that benefit a fund. The Board considered the services provided and the fees charged by BlackRock and its affiliates to other types of clients with similar investment mandates, as applicable, including institutional accounts and sub-advised mutual funds (including mutual funds sponsored by third parties).

The Board received and reviewed statements relating to BlackRock's financial condition. The Board reviewed BlackRock's profitability methodology and was also provided with a profitability analysis that detailed the revenues earned and the expenses incurred by BlackRock for services provided to each Fund. The Board reviewed BlackRock's profitability with respect to each Fund and other funds the Board currently oversees for the year ended December 31, 2015 compared to available aggregate profitability data provided for the prior two years. The Board reviewed BlackRock's profitability with respect to certain other U.S. fund complexes managed by the Manager and/or its affiliates. The Board reviewed BlackRock's assumptions and methodology of allocating expenses in the profitability analysis, noting the inherent limitations in allocating costs among various advisory products. The Board recognized that profitability may be affected by numerous factors including, among other things, fee waivers and expense reimbursements by

the Manager, the types of funds managed, precision of expense allocations and business mix. As a result, calculating and comparing profitability at individual fund level is difficult.

The Board noted that, in general, individual fund or product line profitability of other advisors is not publicly available. The Board reviewed BlackRock's overall operating margin, in general, compared to that of certain other publicly-traded asset management firms. The Board considered the differences between BlackRock and these other firms, including the contribution of technology at BlackRock, BlackRock's expense management, and the relative product mix.

In addition, the Board considered the cost of the services provided to each Fund by BlackRock, and BlackRock's and its affiliates' profits relating to the management and distribution of each Fund and the other funds advised by BlackRock and its affiliates. As part of its analysis, the Board reviewed BlackRock's methodology in allocating its costs of managing each Fund, to each Fund. The Board may receive and review information from independent third parties as part of its annual evaluation. The Board considered whether BlackRock has the financial resources necessary to attract and retain high quality investment management personnel to perform its obligations under the Agreements and to continue to provide the high quality of services that is expected by the Board. The Board further considered factors including but not limited to BlackRock's commitment of time, assumption of risk, and liability profile in servicing each Fund in contrast to what is required of BlackRock with respect to other products with similar investment mandates across the open-end fund, ETF, closed-end fund, sub-advised mutual fund and institutional account product channels, as applicable.

The Board noted that the Basic Value V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio each ranked in the first quartile, relative to the Fund's Expense Peers. The Board also noted that the Basic Value V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Basic Value V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Basic Value V.I. Fund on a class-by-class basis.

The Board noted that the Capital Appreciation V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio ranked in the first and second quartiles, respectively, relative to the Fund's Expense Peers. The Board also noted that the Capital Appreciation V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Capital Appreciation V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Capital Appreciation V.I. Fund on a class-by-class basis.

The Board noted that the Equity Dividend V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio each ranked in the second quartile, relative to the Fund's Expense Peers. The Board also noted that the Equity Dividend V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Equity Dividend V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Equity Dividend V.I. Fund on a class-by-class basis.

The Board noted that the Global Allocation V.I. Fund's contractual management fee rate ranked in the second quartile, and that the actual management fee rate and total expense ratio each ranked in the second quartile, relative to the Fund's Expense Peers. The Board also noted that the Global Allocation V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Global Allocation V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Global Allocation V.I. Fund on a class-by-class basis.

The Board noted that the Global Opportunities V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio ranked in the first and second quartiles, respectively, relative to the Fund's Expense Peers. The Board also noted that the Global Opportunities V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Global Opportunities V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. The Board also noted that BlackRock agreed to a lower contractual expense cap on a class-by-class basis. The expense cap reduction was implemented on June 1, 2015. After discussions between the Board, including the Independent Board Members, and BlackRock, the Board and BlackRock agreed to a continuation of the contractual cap. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Global Opportunities V.I. Fund on a class-by-class basis.

The Board noted that the Government Money Market V.I. Fund's contractual management fee rate ranked in the third quartile, and that the actual management fee rate and total expense ratio each ranked in the fourth quartile, relative to the Fund's Expense Peers. The Board reviewed the Government Money Market V.I. Fund's expenses within the context of the low yield environment and consequent expense waivers and reimbursements. The Board

also noted that the Government Money Market V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Government Money Market V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. In addition, the Board noted that BlackRock proposed, and the Board agreed to, a lower contractual expense cap on a class by class basis, which was implemented on March 1, 2016. The Board also noted that, in connection with the lower contractual expense cap, effective March 1, 2016, BlackRock had discontinued the cap on certain operational and recordkeeping fees for the Government Money Market V.I. Fund on a class-by-class basis. Finally, the Board noted that, to enable the Government Money Market V.I. Fund to maintain minimum levels of daily net investment income, BlackRock has voluntarily agreed to waive a portion of its fees and/or reimburse the Fund's operating expenses as necessary. This waiver and/or reimbursement may be discontinued at any time without notice.

The Board noted that the High Yield V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio each ranked in the first quartile, relative to the Fund's Expense Peers. The Board also noted that the High Yield V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the aggregate assets of the Fund, combined with the assets of Total Return V.I. Fund, increase above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the High Yield V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the High Yield V.I. Fund on a class-by-class basis.

The Board noted that the International V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio each ranked in the second quartile, relative to the Fund's Expense Peers. The Board also noted that the International V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the International V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the International V.I. Fund on a class-by-class basis.

The Board noted that the varying fee structure for fund of funds can limit the value of management fee comparisons. The Board also noted that the iShares Alternative Strategies V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio each ranked in the first quartile, relative to the Fund's Expense Peers. The Board further noted that the iShares Alternative Strategies V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. Additionally, the Board noted that BlackRock has contractually agreed to a cap on the iShares Alternative Strategies V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. The Board noted that BlackRock proposed, and the Board agreed to, a lower contractual expense cap on a class-by-class basis. The contractual expense cap reduction was implemented on August 1, 2015.

The Board noted that the varying fee structure for fund of funds can limit the value of management fee comparisons. The Board also noted that the iShares Dynamic Allocation V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio each ranked in the first quartile, relative to the Fund's Expense Peers. The Board further noted that the iShares Dynamic Allocation V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. Additionally, the Board noted that BlackRock has contractually agreed to a cap on the iShares Dynamic Allocation V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. The Board noted that BlackRock proposed, and the Board agreed to, a lower contractual expense cap on a class-by-class basis. The contractual expense cap reduction was implemented on August 1, 2015.

The Board noted that the varying fee structure for fund of funds can limit the value of management fee comparisons. The Board also noted that the iShares Dynamic Fixed Income V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio each ranked in the first quartile, relative to the Fund's Expense Peers. The Board further noted that the iShares Dynamic Fixed Income V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. Additionally, the Board noted that BlackRock has contractually agreed to a cap on the iShares Dynamic Fixed Income V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. The Board noted that BlackRock proposed, and the Board agreed to, a lower contractual expense cap on a class-by-class basis. The contractual expense cap reduction was implemented on August 1, 2015.

The Board noted that the varying fee structure for fund of funds can limit the value of management fee comparisons. The Board also noted that the iShares Equity Appreciation V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio ranked in the first and second quartiles, respectively, relative to the Fund's Expense Peers. The Board further noted that the iShares Equity Appreciation V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. Additionally, the Board noted that BlackRock has contractually agreed to a cap on the iShares Equity Appreciation V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. The Board noted that

BlackRock proposed, and the Board agreed to, a lower contractual expense cap on a class-by-class basis. The contractual expense cap reduction was implemented on August 1, 2015.

The Board noted that the Large Cap Core V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio each ranked in the first quartile, relative to the Fund's Expense Peers. The Board also noted that the Large Cap Core V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Large Cap Core V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Large Cap Core V.I. Fund on a class-by-class basis.

The Board noted that the Large Cap Growth V.I. Fund's contractual management fee rate ranked in the second quartile, and that the actual management fee rate and total expense ratio each ranked in the second quartile, relative to the Fund's Expense Peers. The Board also noted that the Large Cap Growth V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Large Cap Growth V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Large Cap Growth V.I. Fund on a class-by-class basis.

The Board noted that the Large Cap Value V.I. Fund's contractual management fee rate ranked in the second quartile, and that the actual management fee rate and total expense ratio each ranked in the first quartile, relative to the Fund's Expense Peers. The Board also noted that the Large Cap Value V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Large Cap Value V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. After discussions between the Board, including the Independent Board Members, and BlackRock, the Board and BlackRock agreed to reduce the existing voluntary advisory fee waiver. This voluntary waiver reduction was implemented on June 17, 2016. Finally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Large Cap Value V.I. Fund on a class-by-class basis.

The Board noted that the Managed Volatility V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio ranked in the first and fourth quartiles, respectively, relative to the Fund's Expense Peers. The Board also noted that the Managed Volatility V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Managed Volatility V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Finally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Managed Volatility V.I. Fund on a class-by-class basis. In addition, the Board noted that BlackRock had agreed to a lower contractual expense cap on a class-by-class basis. The contractual expense cap reduction was implemented on June 1, 2014. After discussions between the Board, including the Independent Board Members, and BlackRock, the Board and BlackRock agreed to a continuation of the contractual cap.

The Board noted that the S&P 500 Index V.I. Fund's contractual management fee rate ranked in the second quartile, and that the actual management fee rate and total expense ratio each ranked in the first quartile, relative to the Fund's Expense Peers. The Board also noted that BlackRock has contractually agreed to a cap on the S&P 500 Index V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to waive a portion of the advisory fee payable by the S&P 500 Index V.I. Fund. Finally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the S&P 500 Index V.I. Fund on a class-by-class basis.

The Board noted that the Total Return V.I. Fund's contractual management fee rate ranked in the second quartile, and that the actual management fee rate and total expense ratio each ranked in the third quartile, relative to the Fund's Expense Peers. The Board also noted that the Total Return V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the aggregate assets of the Fund, combined with the assets of High Yield V.I. Fund, increase above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Total Return V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Total Return V.I. Fund on a class-by-class basis.

The Board noted that the U.S. Government Bond V.I. Fund's contractual management fee rate ranked in the second quartile, and that the actual management fee rate and total expense ratio ranked in the second and fourth quartiles, respectively, relative to the Fund's Expense Peers. The Board also noted that the U.S. Government Bond V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the U.S. Government Bond V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the U.S. Government Bond V.I. Fund on a class-by-class basis. After discussions between the Board, including the Independent Board Members, and BlackRock, the Board and BlackRock agreed to increase the existing voluntary advisory fee waiver. This waiver increase was implemented on June 15, 2016.

The Board noted that the Value Opportunities V.I. Fund's contractual management fee rate ranked in the first quartile, and that the actual management fee rate and total expense ratio ranked in the first and second quartiles, respectively, relative to the Fund's Expense Peers. The Board also noted that the Value Opportunities V.I. Fund has an advisory fee arrangement that includes breakpoints that adjust the fee rate downward as the size of the Fund increases above certain contractually specified levels. The Board further noted that BlackRock has contractually agreed to a cap on the Value Opportunities V.I. Fund's total expenses as a percentage of the Fund's average daily net assets on a class-by-class basis. Additionally, the Board noted that BlackRock has contractually agreed to a cap on certain operational and recordkeeping fees for the Value Opportunities V.I. Fund on a class-by-class basis.

D. Economies of Scale

The Board, including the Independent Board Members, considered the extent to which economies of scale might be realized as the assets of each Fund increase, as well as the existence of expense caps, as applicable. The Board also considered the extent to which each Fund benefits from such economies in a variety of ways, and whether there should be changes in the advisory fee rate or breakpoint structure in order to enable each Fund to more fully participate in these economies of scale. The Board considered each Fund's asset levels and whether the current fee schedule was appropriate. In its consideration, the Board Members took into account the existence of any expense caps and further considered the continuation and/or implementation, as applicable, of such caps.

E. Other Factors Deemed Relevant by the Board Members

The Board, including the Independent Board Members, also took into account other ancillary or "fall-out" benefits that BlackRock or its affiliates may derive from their respective relationships with each Fund, both tangible and intangible, such as BlackRock's ability to leverage its investment professionals who manage other portfolios and risk management personnel, an increase in BlackRock's profile in the investment advisory community, and the engagement of BlackRock's affiliates as service providers to each Fund, including for administrative, distribution, securities lending and cash management services. The Board also considered BlackRock's overall operations and its efforts to expand the scale of, and improve the quality of, its operations. The Board also noted that BlackRock may use and benefit from third party research obtained by soft dollars generated by certain registered fund transactions to assist in managing all or a number of its other client accounts. The Board further noted that, except with respect to the Government Money Market V.I. Fund, it had considered the investment by BlackRock's funds in affiliated ETFs without any offset against the management fees payable by the funds to BlackRock.

In connection with its consideration of the Agreements, the Board also received information regarding BlackRock's brokerage and soft dollar practices. The Board received reports from BlackRock which included information on brokerage commissions and trade execution practices throughout the year.

The Board noted the competitive nature of the open-end fund marketplace, and that shareholders are able to redeem their Fund shares if they believe that each Fund's fees and expenses are too high or if they are dissatisfied with the performance of each Fund.

Conclusion

The Board, including the Independent Board Members, approved the continuation of the Advisory Agreements between the Manager and the Corporation, on behalf of each Fund, for a one-year term ending June 30, 2017, and the Sub-Advisory Agreements between the Manager and the Sub-Advisors, with respect to each Fund, as applicable, for a one-year term ending June 30, 2017. Based upon its evaluation of all of the aforementioned factors in their totality, as well as other information, the Board, including the Independent Board Members, was satisfied that the terms of the Agreements were fair and reasonable and in the best interest of each Fund and its shareholders. In arriving at its decision to approve the Agreements, the Board did not identify any single factor or group of factors as all-important or controlling, but considered all factors together, and different Board Members may have attributed different weights to the various factors considered. The Independent Board Members were also assisted by the advice of independent legal counsel in making this determination. The contractual fee arrangements for each Fund reflect the results of several years of review by the Board Members and predecessor Board Members, and discussions between such Board Members (and predecessor Board Members) and BlackRock. As a result, the Board Members' conclusions may be based in part on their consideration of these arrangements in prior years.

Additional Information

General Information

Availability of Quarterly Schedule of Investments

The Funds file their complete schedule of portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. The Funds' Forms N-Q are available on the SEC's website at http://www.sec.gov and may also be reviewed and copied at the SEC's Public Reference Room in Washington, DC. Information on the operation of the Public Reference Room or how to access documents on the SEC's website without charge may be obtained by calling (800) SEC-0330. The Funds' Forms N-Q may also be obtained upon request and without charge by calling (800) 441-7762.

Availability of Proxy Voting Policies and Procedures

A description of the policies and procedures that the Funds use to determine how to vote proxies relating to portfolio securities is available upon request and without charge (1) by calling (800) 441-7762; (2) at **http://www.blackrock.com/prospectus/insurance;** and (3) on the SEC's website at http://www.sec.gov.

Availability of Proxy Voting Record

Information about how the Funds voted proxies relating to securities held in the Funds' portfolios during the most recent 12-month period ended June 30 is available upon request and without charge (1) at **http://www.blackrock.com/prospectus/insurance** or by calling (800) 441-7762 and (2) on the SEC's website at http://www.sec.gov.

BlackRock Privacy Principles

BlackRock is committed to maintaining the privacy of its current and former fund investors and individual clients (collectively, "Clients") and to safeguarding their non-public personal information. The following information is provided to help you understand what personal information BlackRock collects, how we protect that information and why in certain cases we share such information with select parties.

If you are located in a jurisdiction where specific laws, rules or regulations require BlackRock to provide you with additional or different privacy-related rights beyond what is set forth below, then BlackRock will comply with those specific laws, rules or regulations.

BlackRock obtains or verifies personal non-public information from and about you from different sources, including the following: (i) information we receive from you or, if applicable, your financial intermediary, on applications, forms or other documents; (ii) information about your transactions with us, our affiliates, or others; (iii) information we receive from a consumer reporting agency; and (iv) from visits to our websites.

BlackRock does not sell or disclose to non-affiliated third parties any non-public personal information about its Clients, except as permitted by law or as is necessary to respond to regulatory requests or to service Client accounts. These non-affiliated third parties are required to protect the confidentiality and security of this information and to use it only for its intended purpose.

We may share information with our affiliates to service your account or to provide you with information about other BlackRock products or services that may be of interest to you. In addition, BlackRock restricts access to non-public personal information about its Clients to those BlackRock employees with a legitimate business need for the information. BlackRock maintains physical, electronic and procedural safeguards that are designed to protect the non-public personal information of its Clients, including procedures relating to the proper storage and disposal of such information.

This report is only for distribution to shareholders of the Funds of BlackRock Variable Series Funds, Inc. Past performance results shown in this report should not be considered a representation of future performance. Investment return and principal value of non-money market fund shares will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Statements and other information herein are as dated and are subject to change.

PERFORMANCE OVERVIEW

(Unaudited)

Performance Summary

- Columbia Variable Portfolio — Emerging Markets Bond Fund (the Fund) Class 2 shares returned 10.74% for the six-month period that ended June 30, 2016.
- The Fund slightly underperformed its benchmark, the JPMorgan Emerging Markets Bond Index (EMBI) — Global, which returned 10.90% for the same period.

Average Annual Total Returns (%) (for period ended June 30, 2016)

	Inception	6 Months Cumulative	1 Year	Life
Class 1	04/30/12	10.80	7.61	3.45
Class 2	04/30/12	10.74	7.31	3.21
JPMorgan EMBI — Global		10.90	10.32	5.08

Performance data quoted represents past performance and current performance may be lower or higher. Past performance is no guarantee of future results. The investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than the original cost. For current month-end performance information, please contact your financial advisor or insurance representative.

Performance results reflect the effect of any fee waivers or reimbursements of fund expenses by Columbia Management Investment Advisers, LLC and/or any of its affiliates. Absent these fee waivers or expense reimbursement arrangements, performance results would have been lower.

Investment earnings, if any, are tax-deferred until distributed to shareholders, at which time taxes may become due. Total return performance includes changes in share price and assumes reinvestment of dividends and capital gains, if any. Performance results reflect the effect of all fund expenses, but do not include any fees and expenses imposed under your variable annuity contract and/or variable life insurance policy or qualified pension or retirement plan. If performance results included the effect of these additional charges, they would be lower.

The JPMorgan EMBI — Global is based on U.S. dollar-denominated debt instruments issued by emerging market sovereign and quasi-sovereign entities, such as Brady bonds, Eurobonds and loans, and reflects reinvestment of all distributions and changes in market prices.

Indices are not available for investment, are not professionally managed and do not reflect sales charges, fees, brokerage commissions, taxes or other expenses of investing. Securities in the Fund may not match those in an index.

PORTFOLIO OVERVIEW

(Unaudited)

Quality Breakdown (%) (at June 30, 2016)	
A rating	3.4
BBB rating	31.3
BB rating	29.1
B rating	30.7
CCC rating	5.5
Total	**100.0**

Percentages indicated are based upon total fixed income investments (excluding Money Market Funds).

Bond ratings apply to the underlying holdings of the Fund and not the Fund itself and are divided into categories ranging from highest to lowest credit quality, determined by using the middle rating of Moody's, S&P and Fitch, after dropping the highest and lowest available ratings. When ratings are available from only two rating agencies, the lower rating is used. When a rating is available from only one rating agency, that rating is used. When a bond is not rated by any rating agency, it is designated as "Not rated." Credit quality ratings assigned by a rating agency are subjective opinions, not statements of fact, and are subject to change, including daily. The ratings assigned by credit rating agencies are but one of the considerations that the Investment Manager and/or Fund's subadviser incorporates into its credit analysis process, along with such other country-specific factors as the direction and stance of fiscal policy, balance of payment trends and commodity prices, the level and structure of public debt as well as political stability and commitment to strong macroeconomic policies.

UNDERSTANDING YOUR FUND'S EXPENSES

(Unaudited)

As an investor, you incur ongoing costs, which generally include management fees, distribution and/or service fees, and other fund expenses. The following information is intended to help you understand your ongoing costs (in dollars) of investing in the Fund and to help you compare these costs with the ongoing costs of investing in other mutual funds.

The information below does not reflect fees and expenses imposed under your variable annuity contract and/or variable life insurance policy (collectively, Contracts) or qualified pension and retirement plan (Qualified Plan), if any. The total fees and expenses you bear may therefore be higher than those shown below.

Analyzing Your Fund's Expenses

To illustrate these ongoing costs, we have provided examples and calculated the expenses paid by investors in each share class of the Fund during the period. The actual and hypothetical information in the table is based on an initial investment of $1,000 at the beginning of the period indicated and held for the entire period. Expense information is calculated two ways and each method provides you with different information. The amount listed in the "Actual" column is calculated using the Fund's actual operating expenses and total return for the period. You may use the Actual information, together with the amount invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the results by the expenses paid during the period under the "Actual" column. The amount listed in the "Hypothetical" column assumes a 5% annual rate of return before expenses (which is not the Fund's actual return) and then applies the Fund's actual expense ratio for the period to the hypothetical return. You should not use the hypothetical account values and expenses to estimate either your actual account balance at the end of the period or the expenses you paid during the period. See "Compare With Other Funds" below for details on how to use the hypothetical data.

Compare With Other Funds

Since all mutual funds are required to include the same hypothetical calculations about expenses in shareholder reports, you can use this information to compare the ongoing cost of investing in the Fund with other funds. To do so, compare the hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of other funds. As you compare hypothetical examples of other funds, it is important to note that hypothetical examples are meant to highlight the ongoing costs of investing in a fund only and do not reflect any transaction costs, such as redemption or exchange fees, or expenses that apply to the subaccount or the Contract. Therefore, the hypothetical calculations are useful in comparing ongoing costs only, and will not help you determine the relative total costs of owning different funds. If the fees and expenses imposed under your Contract or Qualified Plan, if any, were included, your costs would be higher.

January 1, 2016 – June 30, 2016

	Account Value at the Beginning of the Period ($)		**Account Value at the End of the Period ($)**		**Expenses Paid During the Period ($)**		**Fund's Annualized Expense Ratio (%)**
	Actual	Hypothetical	Actual	Hypothetical	Actual	Hypothetical	Actual
Class 1	1,000.00	1,000.00	1,108.00	1,021.13	3.93	3.77	0.75
Class 2	1,000.00	1,000.00	1,107.40	1,019.89	5.24	5.02	1.00

Expenses paid during the period are equal to the annualized expense ratio for each class as indicated above, multiplied by the average account value over the period and then multiplied by the number of days in the Fund's most recent fiscal half year and divided by 366.

Expenses do not include fees and expenses incurred indirectly by the Fund from its investment in underlying funds, including affiliated and non-affiliated pooled investment vehicles, such as mutual funds and exchange-traded funds.

Notes to Portfolio of Investments

(a) Principal amounts are denominated in United States Dollars unless otherwise noted.

(b) Represents privately placed and other securities and instruments exempt from SEC registration (collectively, private placements), such as Section 4(a)(2) and Rule 144A eligible securities, which are often sold only to qualified institutional buyers. The Fund may invest in private placements determined to be liquid as well as those determined to be illiquid. Private placements may be determined to be liquid under guidelines established by the Fund's Board of Trustees. At June 30, 2016, the value of these securities amounted to $83,438,763 or 69.00% of net assets.

(c) Variable rate security.

(d) Principal and interest may not be guaranteed by the government.

(e) Security, or a portion thereof, has been purchased on a when-issued or delayed delivery basis.

(f) The rate shown is the seven-day current annualized yield at June 30, 2016.

(g) As defined in the Investment Company Act of 1940, an affiliated company is one in which the Fund owns 5% or more of the company's outstanding voting securities, or a company which is under common ownership or control with the Fund. Holdings and transactions in these affiliated companies during the period ended June 30, 2016 are as follows:

Issuer	Beginning Cost ($)	Purchase Cost ($)	Proceeds From Sales ($)	Ending Cost ($)	Dividends — Affiliated Issuers ($)	Value ($)
Columbia Short-Term Cash Fund	13,977,237	26,512,608	(34,446,871)	6,042,974	18,586	6,042,974

PORTFOLIO OF INVESTMENTS *(continued)*

June 30, 2016 (Unaudited)

Fair Value Measurements

The Fund categorizes its fair value measurements according to a three-level hierarchy that maximizes the use of observable inputs and minimizes the use of unobservable inputs by prioritizing that the most observable input be used when available. Observable inputs are those that market participants would use in pricing an investment based on market data obtained from sources independent of the reporting entity. Unobservable inputs are those that reflect the Fund's assumptions about the information market participants would use in pricing an investment. An investment's level within the fair value hierarchy is based on the lowest level of any input that is deemed significant to the asset's or liability's fair value measurement. The input levels are not necessarily an indication of the risk or liquidity associated with investments at that level. For example, certain U.S. government securities are generally high quality and liquid, however, they are reflected as Level 2 because the inputs used to determine fair value may not always be quoted prices in an active market.

Fair value inputs are summarized in the three broad levels listed below:

- Level 1 — Valuations based on quoted prices for investments in active markets that the Fund has the ability to access at the measurement date (including NAV for open-end mutual funds). Valuation adjustments are not applied to Level 1 investments.
- Level 2 — Valuations based on other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment speeds, credit risks, etc.).
- Level 3 — Valuations based on significant unobservable inputs (including the Fund's own assumptions and judgment in determining the fair value of investments).

Inputs that are used in determining fair value of an investment may include price information, credit data, volatility statistics, and other factors. These inputs can be either observable or unobservable. The availability of observable inputs can vary between investments, and is affected by various factors such as the type of investment, and the volume and level of activity for that investment or similar investments in the marketplace. The inputs will be considered by the Investment Manager, along with any other relevant factors in the calculation of an investment's fair value. The Fund uses prices and inputs that are current as of the measurement date, which may include periods of market dislocations. During these periods, the availability of prices and inputs may be reduced for many investments. This condition could cause an investment to be reclassified between the various levels within the hierarchy.

Certain investments that have been measured at fair value using the net asset value per share (or its equivalent) are not categorized in the fair value hierarchy. The fair value amounts presented in the table are intended to reconcile the fair value hierarchy to the amounts presented in the Portfolio of Investments. The Columbia Short-Term Cash Fund seeks to provide shareholders with maximum current income consistent with liquidity and stability of principal. Investments in Columbia Short-Term Cash Fund may be redeemed on a daily basis without restriction.

Investments falling into the Level 3 category are primarily supported by quoted prices from brokers and dealers participating in the market for those investments. However, these may be classified as Level 3 investments due to lack of market transparency and corroboration to support these quoted prices. Additionally, valuation models may be used as the pricing source for any remaining investments classified as Level 3. These models may rely on one or more significant unobservable inputs and/or significant assumptions by the Investment Manager. Inputs used in valuations may include, but are not limited to, financial statement analysis, capital account balances, discount rates and estimated cash flows, and comparable company data.

Under the direction of the Fund's Board of Trustees (the Board), the Investment Manager's Valuation Committee (the Committee) is responsible for overseeing the valuation procedures approved by the Board. The Committee consists of voting and non-voting members from various groups within the Investment Manager's organization, including operations and accounting, trading and investments, compliance, risk management and legal.

The Committee meets at least monthly to review and approve valuation matters, which may include a description of specific valuation determinations, data regarding pricing information received from approved pricing vendors and brokers and the results of Board-approved valuation control policies and procedures (the Policies). The Policies address, among other things, instances when market quotations are or are not readily available, including recommendations of third party pricing vendors and a determination of appropriate pricing methodologies; events that require specific valuation determinations and assessment of fair value techniques; securities with a potential for stale pricing, including those that are illiquid, restricted, or in default; and the effectiveness of third party pricing vendors, including periodic reviews of vendors. The Committee meets more frequently, as needed, to discuss additional valuation matters, which may include the need to review back-testing results, review time-sensitive information or approve related valuation actions. The Committee reports to the Board, with members of the Committee meeting with the Board at each of its regularly scheduled meetings to discuss valuation matters and actions during the period, similar to those described earlier.

For investments categorized as Level 3, the Committee monitors information similar to that described above, which may include: (i) data specific to the issuer or comparable issuers, (ii) general market or specific sector news and (iii) quoted prices and specific or similar security transactions. The Committee considers this data and any changes from prior periods in order to assess the reasonableness of observable and unobservable inputs, any assumptions or internal models used to value those securities and changes in fair value. This data is also used to corroborate, when available, information received from approved pricing vendors and brokers. Various factors impact the frequency of monitoring this information (which may occur as often as daily). However, the Committee may determine that changes to inputs, assumptions and models are not required as a result of the monitoring procedures performed.

The accompanying Notes to Financial Statements are an integral part of this statement.

PORTFOLIO OF INVESTMENTS *(continued)*

June 30, 2016 (Unaudited)

Fair Value Measurements *(continued)*

The following table is a summary of the inputs used to value the Fund's investments at June 30, 2016:

	Level 1 Quoted Prices in Active Markets for Identical Assets ($)	Level 2 Other Significant Observable Inputs ($)	Level 3 Significant Unobservable Inputs ($)	Total ($)
Investments				
Corporate Bonds & Notes	—	14,013,072	—	14,013,072
Foreign Government Obligations	—	98,429,918	1,651,821	100,081,739
Investments measured at net asset value				
Money Market Funds	—	—	—	6,042,974
Total Investments	—	112,442,990	1,651,821	120,137,785
Derivatives				
Assets				
Forward Foreign Currency Exchange Contracts	—	14,223	—	14,223
Futures Contracts	164,717	—	—	164,717
Liabilities				
Forward Foreign Currency Exchange Contracts	—	(10,104)	—	(10,104)
Total	164,717	112,447,109	1,651,821	120,306,621

See the Portfolio of Investments for all investment classifications not indicated in the table.

The Fund's assets assigned to the Level 2 input category are generally valued using the market approach, in which a security's value is determined through reference to prices and information from market transactions for similar or identical assets.

Derivative instruments are valued at unrealized appreciation (depreciation).

There were no transfers of financial assets between levels during the period.

The following table is a reconciliation of Level 3 assets for which significant observable and unobservable inputs were used to determine fair value:

	Foreign Government Obligations ($)
Balance as of December 31, 2015	1,640,671
Increase (decrease) in accrued discounts/premiums	(8,703)
Realized gain (loss)	—
Change in unrealized appreciation (depreciation)[(a)]	19,853
Sales	—
Purchases	—
Transfers into Level 3	—
Transfers out of Level 3	—
Balance as of June 30, 2016	1,651,821

(a) Change in unrealized appreciation relating to securities held at June 30, 2016 was $19,853.

The Fund's assets assigned to the Level 3 category are valued utilizing the valuation technique deemed the most appropriate in the circumstances. Certain foreign government obligations classified as Level 3 securities are valued using the market approach and utilize single market quotations from broker dealers which may have included, but were not limited to, observable transactions for identical or similar assets in the market and the distressed nature of the security. The appropriateness of fair values for these securities is monitored on an ongoing basis which may include results of back testing, manual price reviews and other control procedures. Significant increases (decreases) to any of these inputs would result in a significantly lower (higher) valuation measurement.

The accompanying Notes to Financial Statements are an integral part of this statement.

FINANCIAL HIGHLIGHTS

The following tables are intended to help you understand the Fund's financial performance. Certain information reflects financial results for a single share of a class held for the periods shown. Per share net investment income (loss) amounts are calculated based on average shares outstanding during the period. Total return assumes reinvestment of all dividends and distributions, if any. Total return does not reflect any fees and expenses imposed under your Contract and/or Qualified Plan, as applicable; such fees and expenses would reduce the total returns for all periods shown. Total return and portfolio turnover are not annualized for periods of less than one year. The portfolio turnover rate is calculated without regard to purchase and sales transactions of short-term instruments and certain derivatives, if any. If such transactions were included, the Fund's portfolio turnover rate may be higher.

Class 1	Six Months Ended June 30, 2016 (Unaudited)	Year Ended December 31, 2015	2014	2013	2012[a]

NOTES TO FINANCIAL STATEMENTS

June 30, 2016 (Unaudited)

Note 1. Organization

Columbia Variable Portfolio — Emerging Markets Bond Fund (the Fund), a series of Columbia Funds Variable Series Trust II (the Trust), is a non-diversified fund. The Trust is registered under the Investment Company Act of 1940, as amended (the 1940 Act), as an open-end management investment company organized as a Massachusetts business trust.

Fund Shares

The Trust may issue an unlimited number of shares (without par value). The Fund offers Class 1 and Class 2 shares to separate accounts funding variable annuity contracts and variable life insurance policies (collectively, Contracts) issued by affiliated and unaffiliated life insurance companies as well as qualified pension and retirement plans (Qualified Plans) and other qualified institutional investors (Qualified Investors) authorized by Columbia Management Investment Distributors, Inc. (the Distributor). You may not buy (nor will you own) shares of the Fund directly. You may invest by participating in a Qualified Plan or by buying a Contract and making allocations to the Fund. Although all share classes generally have identical voting, dividend and liquidation rights, each share class votes separately when required by the Trust's organizational documents or by law. Different share classes pay different distribution amounts to the extent the expenses of such share classes differ, and distributions in liquidation will be proportional to the net asset value of each share class. Each share class has its own cost structure and other features.

Note 2. Summary of Significant Accounting Policies

Basis of Preparation

The Fund is an investment company that applies the accounting and reporting guidance in the Financial Accounting Standards Board (FASB) Accounting Standards Codification Topic 946, *Financial Services — Investment Companies* (ASC 946). The financial statements are prepared in accordance with U.S. generally accepted accounting principles (GAAP), which requires management to make certain estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of income and expenses during the reporting period. Actual results could differ from those estimates.

The following is a summary of significant accounting policies followed by the Fund in the preparation of its financial statements.

Security Valuation

Debt securities generally are valued by pricing services approved by the Board of Trustees (the Board) based upon market transactions for normal, institutional-size trading units of similar securities. The services may use various pricing techniques that take into account, as applicable, factors such as yield, quality, coupon rate, maturity, type of issue, trading characteristics and other data, as well as broker quotes. Debt securities for which quotations are not readily available or not believed to be reflective of market value may also be valued based upon a bid quote from an approved independent broker-dealer. Debt securities maturing in 60 days or less are valued primarily at amortized cost value, unless this method results in a valuation that management believes does not approximate market value.

Investments in open-end investment companies, including money market funds, are valued at their latest net asset value.

Forward foreign currency exchange contracts are marked-to-market based upon foreign currency exchange rates provided by a pricing service.

Futures and options on futures contracts are valued based upon the settlement price at the close of regular trading on their principal exchanges or, in the absence of transactions, at the mean of the latest quoted bid and ask prices.

Investments for which market quotations are not readily available, or that have quotations which management believes are not reflective of market value or reliable, are valued at fair value as determined in good faith under procedures approved by and under the general supervision of the Board. If a security or class of securities (such as foreign securities) is valued at fair value, such value is likely to be different from the quoted or published price for the security.

The determination of fair value often requires significant judgment. To determine fair value, management may use assumptions including but not limited to future cash flows and estimated risk premiums. Multiple inputs from various sources may be used to determine fair value.

GAAP requires disclosure regarding the inputs and valuation techniques used to measure fair value and any changes in valuation inputs or techniques. In addition, investments shall be disclosed by major category. This

NOTES TO FINANCIAL STATEMENTS *(continued)*

June 30, 2016 (Unaudited)

information is disclosed following the Fund's Portfolio of Investments.

Foreign Currency Transactions and Translations

The values of all assets and liabilities denominated in foreign currencies are generally translated into U.S. dollars at exchange rates determined at the close of the New York Stock Exchange (NYSE) on any given day. Net realized and unrealized gains (losses) on foreign currency transactions and translations include gains (losses) arising from the fluctuation in exchange rates between trade and settlement dates on securities transactions, gains (losses) arising from the disposition of foreign currency and currency gains (losses) between the accrual and payment dates on dividends, interest income and foreign withholding taxes.

For financial statement purposes, the Fund does not distinguish that portion of gains (losses) on investments which is due to changes in foreign exchange rates from that which is due to changes in market prices of the investments. Such fluctuations are included with the net realized and unrealized gains (losses) on investments in the Statement of Operations.

Derivative Instruments

The Fund invests in certain derivative instruments, as detailed below, to meet its investment objectives. Derivatives are instruments whose values depend on, or are derived from, in whole or in part, the value of one or more securities, currencies, commodities, indices, or other assets or instruments. Derivatives may be used to increase investment flexibility (including to maintain cash reserves while maintaining desired exposure to certain assets), for risk management (hedging) purposes, to facilitate trading, to reduce transaction costs and to pursue higher investment returns. The Fund may also use derivative instruments to mitigate certain investment risks, such as foreign currency exchange rate risk, interest rate risk and credit risk. Derivatives may involve various risks, including the potential inability of the counterparty to fulfill its obligation under the terms of the contract, the potential for an illiquid secondary market (making it difficult for the Fund to sell, including at favorable prices) and the potential for market movements which may expose the Fund to gains or losses in excess of the amount shown in the Statement of Assets and Liabilities. The notional amounts of derivative instruments, if applicable, are not recorded in the financial statements.

A derivative instrument may suffer a marked-to-market loss if the value of the contract decreases due to an unfavorable change in the market rates or values of the underlying instrument. Losses can also occur if the counterparty does not perform under the contract. The Fund's risk of loss from counterparty credit risk on over-the-counter derivatives is generally limited to the aggregate unrealized gain netted against any collateral held by the Fund and the amount of any variation margin held by the counterparty. With exchange-traded or centrally cleared derivatives, there is reduced counterparty credit risk to the Fund since the exchange's clearinghouse, as counterparty to such instruments, guarantees against a possible default. The clearinghouse stands between the buyer and the seller of the contract; therefore, the counterparty credit risk is failure of the clearinghouse. However, credit risk still exists in exchange-traded or centrally cleared derivatives with respect to initial and variation margin that is held in a broker's customer account. While brokers are required to segregate customer margin from their own assets, in the event that a broker becomes insolvent or goes into bankruptcy and at that time there is a shortfall in the aggregate amount of margin held by the broker for all its clients, U.S. bankruptcy laws will typically allocate that shortfall on a pro-rata basis across all the broker's customers (including the Fund), potentially resulting in losses to the Fund.

In order to better define its contractual rights and to secure rights that will help the Fund mitigate its counterparty risk, the Fund may enter into an International Swaps and Derivatives Association, Inc. Master Agreement (ISDA Master Agreement) or similar agreement with its derivatives contract counterparties. An ISDA Master Agreement is an agreement between the Fund and a counterparty that governs over-the-counter derivatives and forward foreign currency exchange contracts and typically contains, among other things, collateral posting terms and netting provisions in the event of a default and/or termination event. Under an ISDA Master Agreement, the Fund may, under certain circumstances, offset with the counterparty certain derivative instrument's payables and/or receivables with collateral held and/or posted and create one single net payment. The provisions of the ISDA Master Agreement typically permit a single net payment in the event of default (close-out netting) including the bankruptcy or insolvency of the counterparty. Note, however, that bankruptcy or insolvency laws of a particular jurisdiction

NOTES TO FINANCIAL STATEMENTS *(continued)*

June 30, 2016 (Unaudited)

may impose restrictions on or prohibitions against the right of offset in bankruptcy, insolvency or other events.

Collateral (margin) requirements differ by type of derivative. Margin requirements are established by the exchange or clearinghouse for exchange-traded and centrally cleared derivatives. Brokers can ask for margin in excess of the minimum in certain circumstances. Collateral terms are contract specific for over-the-counter derivatives. For over-the-counter derivatives traded under an ISDA Master Agreement, the collateral requirements are typically calculated by netting the marked-to-market amount for each transaction under such agreement and comparing that amount to the value of any variation margin currently pledged by the Fund and/or the counterparty. Generally, the amount of collateral due from or to a party has to exceed a minimum transfer amount threshold (e.g., $500,000) before a transfer has to be made. To the extent amounts due to the Fund from its counterparties are not fully collateralized, contractually or otherwise, the Fund bears the risk of loss from counterparty nonperformance. The Fund attempts to mitigate counterparty risk by only entering into agreements with counterparties that it believes have the financial resources to honor their obligations and by monitoring the financial stability of those counterparties.

Certain ISDA Master Agreements allow counterparties to over-the-counter derivatives transactions to terminate derivatives contracts prior to maturity in the event the Fund's net asset value declines by a stated percentage over a specified time period or if the Fund fails to meet certain terms of the ISDA Master Agreement, which would cause the Fund to accelerate payment of any net liability owed to the counterparty. The Fund also has termination rights if the counterparty fails to meet certain terms of the ISDA Master Agreement. In addition to considering counterparty credit risk, the Fund would consider terminating the derivatives contracts based on whether termination would result in a net liability owed from the counterparty.

For financial reporting purposes, the Fund does not offset derivative assets and derivative liabilities that are subject to netting arrangements in the Statement of Assets and Liabilities.

Forward Foreign Currency Exchange Contracts

Forward foreign currency exchange contracts are over-the-counter agreements between two parties to buy and sell a currency at a set price on a future date. The Fund utilized forward foreign currency exchange contracts to hedge the currency exposure associated with some or all of the Fund's securities, to shift foreign currency exposure back to U.S. dollars and to shift investment exposure from one currency to another. These instruments may be used for other purposes in future periods.

The values of forward foreign currency exchange contracts fluctuate daily with changes in foreign currency exchange rates. Changes in the value of these contracts are recorded as unrealized appreciation or depreciation until the contract is exercised or has expired. The Fund will realize a gain or loss when the forward foreign currency exchange contract is closed or expires.

The use of forward foreign currency exchange contracts does not eliminate fluctuations in the prices of the Fund's portfolio securities. The risks of forward foreign currency exchange contracts include movement in the values of the foreign currencies relative to the U.S. dollar (or other foreign currencies) and the possibility that counterparties will not complete their contractual obligations, which may be in excess of the amount reflected, if any, in the Statement of Assets and Liabilities.

Futures Contracts

Futures contracts are exchange traded and represent commitments for the future purchase or sale of an asset at a specified price on a specified date. The Fund bought and sold futures contracts to manage the duration and yield curve exposure of the Fund versus the benchmark and to manage exposure to movements in interest rates. These instruments may be used for other purposes in future periods. Upon entering into futures contracts, the Fund bears risks that it may not achieve the anticipated benefits of the futures contracts and may realize a loss. Additional risks include counterparty credit risk, the possibility of an illiquid market, and that a change in the value of the contract or option may not correlate with changes in the value of the underlying asset.

Upon entering into a futures contract, the Fund pledges cash or securities with the broker in an amount sufficient to meet the initial margin requirement. The initial margin deposit must be maintained at an established level over the life of the contract. Cash deposited as initial margin is recorded in the Statement of Assets and Liabilities as margin deposits. Securities deposited as initial margin

NOTES TO FINANCIAL STATEMENTS *(continued)*

June 30, 2016 (Unaudited)

are designated in the Portfolio of Investments. Subsequent payments (variation margin) are made or received by the Fund each day. The variation margin payments are equal to the daily change in the contract value and are recorded as variation margin receivable or payable and are offset in unrealized gains or losses. The Fund recognizes a realized gain or loss when the contract is closed or expires. Futures contracts involve, to varying degrees, risk of loss in excess of the variation margin disclosed in the Statement of Assets and Liabilities.

Effects of Derivative Transactions in the Financial Statements

The following tables are intended to provide additional information about the effect of derivatives on the financial statements of the Fund, including: the fair value of derivatives by risk category and the location of those fair values in the Statement of Assets and Liabilities; and the impact of derivative transactions over the period in the Statement of Operations, including realized and unrealized gains (losses). The derivative instrument schedules following the Portfolio of Investments present additional information regarding derivative instruments outstanding at the end of the period, if any.

The following table is a summary of the fair value of derivative instruments (not considered to be hedging instruments for accounting disclosure purposes) at June 30, 2016:

Asset Derivatives		
Risk Exposure Category	**Statement of Assets and Liabilities Location**	**Fair Value ($)**
Foreign exchange risk	Unrealized appreciation on forward foreign currency exchange contracts	14,223
Interest rate risk	Net assets — unrealized appreciation on futures contracts	164,717*
Total		178,940
Liability Derivatives		
Risk Exposure Category	**Statement of Assets and Liabilities Location**	**Fair Value ($)**
Foreign exchange risk	Unrealized depreciation on forward foreign currency exchange contracts	10,104

*Includes cumulative appreciation (depreciation) as reported in the tables following the Portfolio of Investments. Only the current day's variation margin is reported in receivables or payables in the Statement of Assets and Liabilities.

The following table indicates the effect of derivative instruments (not considered to be hedging instruments for accounting disclosure purposes) in the Statement of Operations for the six months ended June 30, 2016:

Amount of Realized Gain (Loss) on Derivatives Recognized in Income			
Risk Exposure Category	**Forward Foreign Currency Exchange Contracts ($)**	**Futures Contracts ($)**	**Total ($)**
Foreign exchange risk	(761,134)	—	(761,134)
Interest rate risk	—	115,283	115,283
Total	(761,134)	115,283	(645,851)
Change in Unrealized Appreciation (Depreciation) on Derivatives Recognized in Income			
Risk Exposure Category	**Forward Foreign Currency Exchange Contracts ($)**	**Futures Contracts ($)**	**Total ($)**
Foreign exchange risk	115,617	—	115,617
Interest rate risk	—	171,504	171,504
Total	115,617	171,504	287,121

The following table provides a summary of the average outstanding volume by derivative instrument for the six months ended June 30, 2016:

Derivative Instrument	**Average Notional Amounts ($)***
Futures contracts — Long	5,457,266
Derivative Instrument	**Average Unrealized Appreciation ($)***	**Average Unrealized Depreciation ($)***
Forward foreign currency exchange contracts	7,112	(45,038)

*Based on the ending quarterly outstanding amounts for the six months ended June 30, 2016.

Treasury Inflation Protected Securities

The Fund may invest in treasury inflation protected securities (TIPS). The principal amount of TIPS is adjusted periodically and is increased for inflation or decreased for deflation based on a monthly published index. These adjustments are recorded as interest income in the Statement of Operations. Coupon payments are based on the adjusted principal at the time the interest is paid.

Offsetting of Assets and Liabilities

The following table presents the Fund's gross and net amount of assets and liabilities available for offset under

NOTES TO FINANCIAL STATEMENTS *(continued)*

June 30, 2016 (Unaudited)

netting arrangements as well as any related collateral received or pledged by the Fund as of June 30, 2016:

	Citi ($)	Credit Suisse ($)	Total ($)
Assets			
Forward foreign currency exchange contracts	—	14,223	14,223
Liabilities			
Forward foreign currency exchange contracts	10,104	—	10,104
Total Financial and Derivative Net Assets	**(10,104)**	**14,223**	**4,119**
Total collateral received (pledged)[a]	—	—	—
Net Amount[b]	**(10,104)**	**14,223**	**4,119**

(a) In some instances, the actual collateral received and/or pledged may be more than the amount shown due to overcollateralization.

(b) Represents the net amount due from/(to) counterparties in the event of default.

Security Transactions

Security transactions are accounted for on the trade date. Cost is determined and gains (losses) are based upon the specific identification method for both financial statement and federal income tax purposes.

Income Recognition

Interest income is recorded on an accrual basis. Market premiums and discounts, including original issue discounts, are amortized and accreted, respectively, over the expected life of the security on all debt securities, unless otherwise noted.

The Fund may place a debt security on non-accrual status and reduce related interest income when it becomes probable that the interest will not be collected and the amount of uncollectible interest can be reasonably estimated. A defaulted debt security is removed from non-accrual status when the issuer resumes interest payments or when collectibility of interest is reasonably assured.

Dividend income is recorded on the ex-dividend date.

Expenses

General expenses of the Trust are allocated to the Fund and other funds of the Trust based upon relative net assets or other expense allocation methodologies determined by the nature of the expense. Expenses directly attributable to the Fund are charged to the Fund. Expenses directly attributable to a specific class of shares are charged to that share class.

Determination of Class Net Asset Value

All income, expenses (other than class-specific expenses, which are charged to that share class, as shown in the Statement of Operations) and realized and unrealized gains (losses) are allocated to each class of the Fund on a daily basis, based on the relative net assets of each class, for purposes of determining the net asset value of each class.

Federal Income Tax Status

The Fund intends to qualify each year as a regulated investment company under Subchapter M of the Internal Revenue Code, as amended, and will distribute substantially all of its taxable income, if any, for its tax year, and as such will not be subject to federal income taxes. In addition, because the Fund's sole shareholders are Qualified Investors, the Fund expects not to be subject to federal excise tax. Therefore, no federal income or excise tax provision is recorded.

Foreign Taxes

The Fund may be subject to foreign taxes on income, gains on investments or currency repatriation, a portion of which may be recoverable. The Fund will accrue such taxes and recoveries, as applicable, based upon its current interpretation of tax rules and regulations that exist in the markets in which it invests.

Realized gains in certain countries may be subject to foreign taxes at the Fund level, based on statutory rates. The Fund accrues for such foreign taxes on realized and unrealized gains at the appropriate rate for each jurisdiction, as applicable. The amount, if any, is disclosed as a liability on the Statement of Assets and Liabilities.

Distributions to Subaccounts

Distributions to the subaccounts of Contracts, Qualified Plans and Qualified Investors are recorded at the close of business on the record date and are payable on the first business day following the record date. Dividends from net investment income, if any, are declared and distributed quarterly. Capital gains distributions, when available, will be made annually. However, an additional capital gain distribution may be made during the fiscal year in order to comply with the Internal Revenue Code, as applicable to registered investment companies. Income distributions and capital gain distributions are determined in accordance with federal income tax regulations, which may differ from GAAP. All dividends and distributions are reinvested in additional shares of the

NOTES TO FINANCIAL STATEMENTS *(continued)*

June 30, 2016 (Unaudited)

applicable share class of the Fund at the net asset value as of the ex-dividend date of the distribution.

Guarantees and Indemnifications

Under the Trust's organizational documents and, in some cases, by contract, its officers and trustees are indemnified against certain liabilities arising out of the performance of their duties to the Trust or its funds. In addition, certain of the Fund's contracts with its service providers contain general indemnification clauses. The Fund's maximum exposure under these arrangements is unknown since the amount of any future claims that may be made against the Fund cannot be determined, and the Fund has no historical basis for predicting the likelihood of any such claims.

Note 3. Fees and Other Transactions with Affiliates

Management Fees

Effective May 1, 2016, the Fund entered into a Management Agreement with Columbia Management Investment Advisers, LLC (the Investment Manager), a wholly-owned subsidiary of Ameriprise Financial, Inc. (Ameriprise Financial). Under the Management Agreement, the Investment Manager provides the Fund with investment research and advice, as well as administrative and accounting services. The management services fee is an annual fee that is equal to a percentage of the Fund's average daily net assets that declines from 0.600% to 0.393% as the Fund's net assets increase. The annualized effective management services fee rate for the six months ended June 30, 2016 was 0.600% of the Fund's average daily net assets.

Prior to May 1, 2016, the Fund paid the Investment Manager an annual fee for advisory services under an Investment Management Services Agreement and a separate annual fee for administrative and accounting services under an Administrative Services Agreement. For the period from January 1, 2016 through April 30, 2016, the investment advisory services fee paid to the Investment Manager was $184,866, and the administrative services fee paid to the Investment Manager was $24,417.

Participating Affiliates

The Investment Manager and its investment advisory affiliates (Participating Affiliates) around the world may coordinate in providing services to their clients. Such coordination may include functional leadership of the business (the "Global" business). From time to time the Investment Manager (or any affiliated investment subadviser to the Fund, as the case may be) may engage its Participating Affiliates to provide a variety of services such as investment research, investment monitoring, trading and discretionary investment management (including portfolio management) to certain accounts managed by the Investment Manager, including the Fund. These Participating Affiliates will provide services to the Investment Manager (or any affiliated investment subadviser to the Fund as the case may be) either pursuant to subadvisory agreements, personnel-sharing agreements or similar inter-company arrangements and the Fund will pay no additional fees and expenses as a result of any such arrangements.

These Participating Affiliates, like the Investment Manager, are direct or indirect subsidiaries of Ameriprise Financial and are registered with appropriate respective regulators in their home jurisdictions and, where required, the Securities and Exchange Commission and the Commodity Futures Trading Commission in the United States.

Pursuant to some of these arrangements, certain employees of these Participating Affiliates may serve as "associated persons" of the Investment Manager and, in this capacity, subject to the oversight and supervision of the Investment Manager and consistent with the investment objectives, policies and limitations set forth in the Fund's prospectus and Statement of Additional Information (SAI), may provide such services to the Fund on behalf of the Investment Manager.

Other Expenses

Other expenses are for, among other things, miscellaneous expenses of the Fund or the Board, including payments to Board Services Corp., a company providing limited administrative services to the Fund and the Board. That company's expenses include boardroom and office expense, employee compensation, employee health and retirement benefits, and certain other expenses. For the six months ended June 30, 2016, other expenses paid by the Fund to this company were $332.

Compensation of Board Members

Board members, who are not officers or employees of the Investment Manager or Ameriprise Financial, are compensated for their services to the Fund as disclosed in the Statement of Operations. Under a Deferred Compensation Plan (the Plan), these Board members may elect to defer payment of up to 100% of their compensation. Deferred amounts are treated as though

NOTES TO FINANCIAL STATEMENTS *(continued)*

June 30, 2016 (Unaudited)

equivalent dollar amounts had been invested in shares of certain funds managed by the Investment Manager. The Fund's liability for these amounts is adjusted for market value changes and remains in the Fund until distributed in accordance with the Plan. All amounts payable under the Plan constitute a general unsecured obligation of the Fund.

Transfer Agency Fees

The Fund has a Transfer and Dividend Disbursing Agent Agreement with Columbia Management Investment Services Corp. (the Transfer Agent), an affiliate of the Investment Manager and a wholly-owned subsidiary of Ameriprise Financial. The annual fee rate under this agreement is 0.06% of the Fund's average daily net assets attributable to each share class.

Distribution Fees

The Fund has an agreement with the Distributor, an affiliate of the Investment Manager and a wholly-owned subsidiary of Ameriprise Financial, for distribution services. Under a Plan and Agreement of Distribution, the Fund pays a fee at an annual rate of up to 0.25% of the Fund's average daily net assets attributable to Class 2 shares. The Fund pays no distribution and service fees for Class 1 shares.

Expenses Waived/Reimbursed by the Investment Manager and its Affiliates

The Investment Manager and certain of its affiliates have contractually agreed to waive fees and/or reimburse expenses (excluding certain fees and expenses described below) for the periods disclosed below, unless sooner terminated at the sole discretion of the Board, so that the Fund's net operating expenses, after giving effect to fees waived/expenses reimbursed and any balance credits and/or overdraft charges from the Fund's custodian, do not exceed the following annual rates as a percentage of the class' average daily net assets:

	May 1, 2016 through April 30, 2017	Prior to May 1, 2016
Class 1	0.89%	0.86%
Class 2	1.14	1.11

Under the agreement governing these fee waivers and/or expense reimbursement arrangements, the following fees and expenses are excluded from the waiver/reimbursement commitment, and therefore will be paid by the Fund, if applicable: taxes (including foreign transaction taxes), expenses associated with investments in affiliated and non-affiliated pooled investment vehicles (including mutual funds and exchange-traded funds), transaction costs and brokerage commissions, costs related to any securities lending program, dividend and interest expenses associated with securities sold short, inverse floater program fees and expenses, transaction charges and interest on borrowed money, interest, infrequent and/or unusual expenses and any other expenses the exclusion of which is specifically approved by the Board. This agreement may be modified or amended only with approval from the Investment Manager, certain of its affiliates and the Fund. Any fees waived and/or expenses reimbursed under the expense reimbursement arrangements described above are not recoverable by the Investment Manager or its affiliates in future periods.

Note 4. Federal Tax Information

The timing and character of income and capital gain distributions are determined in accordance with income tax regulations, which may differ from GAAP because of temporary or permanent book to tax differences.

At June 30, 2016, the cost of investments for federal income tax purposes was approximately $120,109,000 and the aggregate gross approximate unrealized appreciation and depreciation based on that cost was:

Unrealized appreciation	$4,611,000
Unrealized depreciation	(4,582,000)
Net unrealized appreciation	$29,000

The following capital loss carryforwards, determined as of December 31, 2015, may be available to reduce taxable income arising from future net realized gains on investments, if any, to the extent permitted by the Internal Revenue Code:

Year of Expiration	Amount ($)
No expiration — short-term	1,625,277
No expiration — long-term	9,942,286
Total	11,567,563

Management of the Fund has concluded that there are no significant uncertain tax positions in the Fund that would require recognition in the financial statements. However, management's conclusion may be subject to review and adjustment at a later date based on factors including, but not limited to, new tax laws, regulations, and administrative interpretations (including relevant court decisions). Generally, the Fund's federal tax returns for the prior three fiscal years remain subject to examination by the Internal Revenue Service.

NOTES TO FINANCIAL STATEMENTS *(continued)*

June 30, 2016 (Unaudited)

Note 5. Portfolio Information

The cost of purchases and proceeds from sales of securities, excluding short-term investments and derivatives, if any, aggregated to $28,611,148 and $11,671,153, respectively, for the six months ended June 30, 2016. The amount of purchase and sale activity impacts the portfolio turnover rate reported in the Financial Highlights.

Note 6. Affiliated Money Market Fund

The Fund invests in Columbia Short-Term Cash Fund, an affiliated money market fund established for the exclusive use by the Fund and other affiliated funds. The income earned by the Fund from such investments is included as Dividends — affiliated issuers in the Statement of Operations. As an investing fund, the Fund indirectly bears its proportionate share of the expenses of Columbia Short-Term Cash Fund.

Note 7. Line of Credit

The Fund has access to a revolving credit facility whereby the Fund may borrow for the temporary funding of shareholder redemptions or for other temporary or emergency purposes. Effective December 8, 2015, Citibank, N.A. and HSBC Bank USA, N.A. joined JPMorgan Chase Bank, N.A. (JPMorgan) as lead of a syndicate of banks under the credit facility, which is a collective agreement between the Fund and certain other funds managed by the Investment Manager, severally and not jointly, that permits collective borrowings up to $1 billion. Interest is charged to each participating fund based on its borrowings at a rate equal to the higher of (i) the overnight federal funds rate plus 1.00% or (ii) the one-month LIBOR rate plus 1.00%. Each borrowing under the credit facility matures no later than 60 days after the date of borrowing. The Fund also pays a commitment fee equal to its pro rata share of the amount of the credit facility at a rate of 0.15% per annum. The commitment fee is included in other expenses in the Statement of Operations. Prior to December 8, 2015, JPMorgan was the sole lead bank under the credit facility agreement that permitted borrowings up to $550 million under the same terms and interest rates as described above with the exception of the commitment fee which was charged at a rate of 0.075% per annum.

The Fund had no borrowings during the six months ended June 30, 2016.

Note 8. Significant Risks

Shareholder Concentration Risk

At June 30, 2016, affiliated shareholders of record owned 87.8% of the outstanding shares of the Fund in one or more accounts. Subscription and redemption activity by concentrated accounts may have a significant effect on the operations of the Fund. In the case of a large redemption, the Fund may be forced to sell investments at inopportune times, including its liquid or more liquid positions, resulting in Fund losses and the Fund holding a higher percentage of less liquid or illiquid securities. Large redemptions could result in decreased economies of scale and increased operating expenses for non-redeeming Fund shareholders.

Credit Risk

Credit risk is the risk that the value of debt securities in the Fund's portfolio may decline because the issuer may default and fail to pay interest or repay principal when due. Rating agencies assign credit ratings to debt securities to indicate their credit risk. Lower rated or unrated debt securities held by the Fund may present increased credit risk as compared to higher-rated debt securities.

Interest Rate Risk

Interest rate risk is the risk of losses attributable to changes in interest rates. In general, if prevailing interest rates rise, the values of debt securities tend to fall, and if interest rates fall, the values of debt securities tend to rise. Actions by governments and central banking authorities can result in increases in interest rates. Increasing interest rates may negatively affect the value of debt securities held by the Fund, resulting in a negative impact on the Fund's performance and net asset value per share. In general, the longer the maturity or duration of a debt security, the greater its sensitivity to changes in interest rates.

Liquidity Risk

Liquidity risk is the risk associated with a lack of marketability of investments which may make it difficult to sell the investment at a desirable time or price. Changing regulatory, market or other conditions or environments (for example, the interest rate or credit environments) may adversely affect the liquidity of the Fund's investments. The Fund may have to accept a lower selling price for the holding, sell other investments,

NOTES TO FINANCIAL STATEMENTS *(continued)*

June 30, 2016 (Unaudited)

or forego another, more appealing investment opportunity. Generally, the less liquid the market at the time the Fund sells a portfolio investment, the greater the risk of loss or decline of value to the Fund. A less liquid market can lead to an increase in Fund redemptions, which may negatively impact Fund performance and net asset value per share, including, for example, if the Fund is forced to sell securities in a down market.

Foreign Securities and Emerging Market Countries Risk

Investing in foreign securities may include certain risks and considerations not typically associated with investing in U.S. securities, such as fluctuating currency values and changing local and regional economic, political and social conditions, which may result in greater market volatility. In addition, certain foreign securities may not be as liquid as U.S. securities. Investing in emerging markets may accentuate these risks. These countries are also more likely to experience high levels of inflation, deflation or currency devaluation which could hurt their economies and securities markets. To the extent that the Fund concentrates its investment exposure to any one or a few specific countries, the Fund will be particularly susceptible to the various conditions, events or other factors impacting those countries and may, therefore, have a greater risk than that of a fund which is more geographically diversified.

High-Yield Securities Risk

Securities rated below investment grade (commonly called "high-yield" or "junk" bonds) and unrated securities of comparable quality expose the Fund to a greater risk of loss of principal and income than a fund that invests solely or primarily in investment grade securities. In addition, these investments have greater price fluctuations, are less liquid and are more likely to experience a default than higher-rated securities. High-yield securities are considered to be predominantly speculative with respect to the issuer's capacity to pay interest and repay principal.

Non-Diversification Risk

A non-diversified fund is permitted to invest a greater percentage of its total assets in fewer issuers than a diversified fund. The Fund may, therefore, have a greater risk of loss from a few issuers than a similar fund that invests more broadly.

Note 9. Subsequent Events

Management has evaluated the events and transactions that have occurred through the date the financial statements were issued and noted no items requiring adjustment of the financial statements or additional disclosure.

Note 10. Information Regarding Pending and Settled Legal Proceedings

In December 2005, without admitting or denying the allegations, American Express Financial Corporation (AEFC, which is now known as Ameriprise Financial, Inc. (Ameriprise Financial)) entered into settlement agreements with the Securities and Exchange Commission (SEC) and Minnesota Department of Commerce (MDOC) related to market timing activities. As a result, AEFC was censured and ordered to cease and desist from committing or causing any violations of certain provisions of the Investment Advisers Act of 1940, the Investment Company Act of 1940, and various Minnesota laws. AEFC agreed to pay disgorgement of $10 million and civil money penalties of $7 million. AEFC also agreed to retain an independent distribution consultant to assist in developing a plan for distribution of all disgorgement and civil penalties ordered by the SEC in accordance with various undertakings detailed at http://www.sec.gov/litigation/admin/ia-2451.pdf. Ameriprise Financial and its affiliates have cooperated with the SEC and the MDOC in these legal proceedings, and have made regular reports to the Funds' Boards of Trustees.

Ameriprise Financial and certain of its affiliates have historically been involved in a number of legal, arbitration and regulatory proceedings, including routine litigation, class actions, and governmental actions, concerning matters arising in connection with the conduct of their business activities. Ameriprise Financial believes that the Funds are not currently the subject of, and that neither Ameriprise Financial nor any of its affiliates are the subject of, any pending legal, arbitration or regulatory proceedings that are likely to have a material adverse effect on the Funds or the ability of Ameriprise Financial or its affiliates to perform under their contracts with the Funds. Ameriprise Financial is required to make quarterly (10-Q), annual (10-K) and, as necessary, 8-K filings with the SEC on legal and regulatory matters that relate to Ameriprise Financial and its affiliates. Copies of these filings may be obtained by accessing the SEC website at www.sec.gov.

NOTES TO FINANCIAL STATEMENTS *(continued)*

June 30, 2016 (Unaudited)

There can be no assurance that these matters, or the adverse publicity associated with them, will not result in increased fund redemptions, reduced sale of fund shares or other adverse consequences to the Funds. Further, although we believe proceedings are not likely to have a material adverse effect on the Funds or the ability of Ameriprise Financial or its affiliates to perform under their contracts with the Funds, these proceedings are subject to uncertainties and, as such, we are unable to estimate the possible loss or range of loss that may result. An adverse outcome in one or more of these proceedings could result in adverse judgments, settlements, fines, penalties or other relief that could have a material adverse effect on the consolidated financial condition or results of operations of Ameriprise Financial.

APPROVAL OF MANAGEMENT AGREEMENT

Columbia Management Investment Advisers, LLC (Columbia Threadneedle or the Investment Manager, and together with its domestic and global affiliates, Columbia Threadneedle Investments), a wholly-owned subsidiary of Ameriprise Financial, Inc. (Ameriprise Financial), serves as the investment manager to Columbia Variable Portfolio — Emerging Markets Bond Fund (the Fund). Under a management agreement (the Management Agreement), Columbia Threadneedle provides investment advice and other services to the Fund and other funds distributed by Columbia Management Investment Distributors, Inc. (collectively, the Funds).

On an annual basis, the Fund's Board of Trustees (the Board), including the independent Board members (the Independent Trustees), considers renewal of the Management Agreement. Columbia Threadneedle prepared detailed reports for the Board and its Contracts Committee in February, March and April 2016, including reports providing the results of analyses performed by an independent organization, Broadridge Financial Solutions, Inc. (Broadridge), and a comprehensive response to items of information requested by independent legal counsel to the Independent Trustees (Independent Legal Counsel) in a letter to the Investment Manager, to assist the Board in making this determination. Many of the materials presented in February, March and April were first supplied in draft form to designated independent Board representatives, *i.e.*, Independent Legal Counsel, the Chair of the Board and/or the Chair of the Contracts Committee, and the final materials were revised to contain information reflective of discussion and subsequent requests made by the Contracts Committee. In addition, throughout the year, the Board (or its committees) regularly meets with portfolio management teams and senior management personnel and reviews information prepared by Columbia Threadneedle addressing the services Columbia Threadneedle provides and Fund performance. The Board also accords appropriate weight to the work, deliberations and conclusions of the various committees, such as the Contracts Committee, the Investment Review Committee and the Compliance Committee in determining whether to continue the Management Agreement.

The Board, at its June 13-15, 2016 in-person Board meeting (the June Meeting), considered the renewal of the Management Agreement for an additional one-year term. At the June Meeting, Independent Legal Counsel reviewed with the Independent Trustees various factors relevant to the Board's consideration of management agreements and the Board's legal responsibilities related to such consideration. Following an analysis and discussion of the factors identified below, the Board, including all of the Independent Trustees, approved the renewal of the Management Agreement.

Nature, Extent and Quality of Services Provided by Columbia Threadneedle

The Independent Trustees analyzed various reports and presentations they had received detailing the services performed by Columbia Threadneedle, as well as its organization, expertise, resources and capabilities.

The Independent Trustees specifically considered many developments during the past year concerning the services provided by Columbia Threadneedle, including, in particular, the relatively recent change in the leadership of equity department oversight, improvements in technology research and the use of research analysts' model portfolios to highlight best ideas and improve implementation. The Independent Trustees further noted the restructured investment risk management department and its additional resources, including the new head of multi-asset investment risk. They also observed the relatively recent 5P leadership transition, and the additional staff and resources dedicated to the 5P team. The Board also noted the broad scope of services provided by Columbia Threadneedle to each Fund, including, among other services, investment, risk and compliance oversight. The Board also took into account the information it received concerning Columbia Threadneedle's ability to attract and retain key portfolio management personnel.

In connection with the Board's evaluation of the overall package of services provided by Columbia Threadneedle, the Board also considered the nature, quality and range of administrative services provided to the Fund by Columbia Threadneedle, as well as the achievements in 2015 in the performance of administrative services, and noted the various enhancements anticipated for 2016. In evaluating the quality of services provided under the Management Agreement, the Independent Trustees also took into account the organization and strength of the Fund's and its service providers' compliance programs. In addition, the Board reviewed the financial condition of Columbia Threadneedle and its affiliates and each entity's ability to carry out its responsibilities under the

APPROVAL OF MANAGEMENT AGREEMENT *(continued)*

Management Agreement and the Fund's other service agreements with affiliates of Ameriprise Financial, observing the financial strength of Ameriprise Financial, with its solid balance sheet.

The Board also discussed the acceptability of the terms of the Management Agreement (including the relatively broad scope of services required to be performed by Columbia Threadneedle), noting that no material changes are proposed from the form of agreement previously approved. They also noted the wide array of legal and compliance services provided to the Funds. It was also observed that the services being performed under the Management Agreement were of a reasonably high quality.

Based on the foregoing, and based on other information received (both oral and written, including the information on investment performance referenced below) and other considerations, the Board concluded that Columbia Threadneedle and its affiliates are in a position to continue to provide a high quality and level of services to the Fund.

Investment Performance

For purposes of evaluating the nature, extent and quality of services provided under the Management Agreement, the Board carefully reviewed the investment performance of the Fund. In this regard, the Board considered detailed reports providing the results of analyses performed by an independent organization showing, for various periods, the performance of the Fund, the performance of a benchmark index, the percentage ranking of the Fund among its comparison group and the net assets of the Fund. The Board observed that the Fund's investment performance met expectations.

Comparative Fees, Costs of Services Provided and the Profits Realized by Columbia Threadneedle and its Affiliates from their Relationships with the Fund

The Board reviewed comparative fees and the costs of services provided under the Management Agreement. The Board members considered detailed comparative information set forth in an annual report on fees and expenses, including, among other things, data (based on analyses conducted by an independent organization) showing a comparison of the Fund's expenses with median expenses paid by funds in its comparative peer universe, as well as data showing the Fund's contribution to Columbia Threadneedle's profitability. The Board reviewed the fees charged to comparable institutional or other accounts/vehicles managed by Columbia Threadneedle and discussed differences in how the products are managed and operated, noting no unreasonable differences in the levels of contractual fees.

The Board considered the reports of its independent fee consultant, JDL Consultants, LLC (JDL), which assisted in its analysis of the Funds' performance and expenses, the reasonableness of the Funds' fee rates, the reasonableness of Columbia Threadneedle's profitability and JDL's conclusion that the management fees being charged to the Fund are reasonable. The Board accorded particular weight to the notion that the level of fees should generally reflect a rational pricing model applied consistently across the various product lines in the Fund family, while assuring that the overall fees for each Fund (with certain defined exceptions) are generally in line with the "pricing philosophy" currently in effect (*i.e.*, that the total expense ratio of the Fund is generally no higher than the median expense ratio of funds in the comparison universe of the Fund). The Board took into account that the Fund's total expense ratio (after considering proposed expense caps/waivers) was below the peer universe's median expense ratio shown in the reports. Based on its review, the Board concluded that the Fund's management fee was fair and reasonable in light of the extent and quality of services that the Fund receives.

The Board also considered the expected profitability of Columbia Threadneedle and its affiliates in connection with Columbia Threadneedle providing management services to the Fund. In this regard, the Independent Trustees referred to their detailed analysis of the Profitability Report, discussing the profitability to Columbia Threadneedle and Ameriprise Financial from managing, operating and distributing the Funds. The Board took into account JDL's conclusion that 2015 Columbia Threadneedle profitability, relative to industry competitors, was reasonable. It also considered that in 2015 the Board had concluded that 2014 profitability was reasonable and that Columbia Threadneedle generated 2015 profitability that only slightly exceeded 2014 levels. It also took into account the indirect economic benefits flowing to Columbia Threadneedle or its affiliates in connection with managing or distributing the Funds, such as the enhanced ability to offer various other financial products to

APPROVAL OF MANAGEMENT AGREEMENT *(continued)*

Ameriprise Financial customers, soft dollar benefits and overall reputational advantages. The Board noted that the fees paid by the Fund should permit the Investment Manager to offer competitive compensation to its personnel, make necessary investments in its business and earn an appropriate profit. The Board concluded that profitability levels were reasonable.

Economies of Scale to be Realized

The Board also considered the economies of scale that might be realized by Columbia Threadneedle as the Fund grows and took note of the extent to which Fund shareholders might also benefit from such growth. In this regard, the Board took into account that management fees decline as Fund assets exceed various breakpoints, all of which have not been surpassed. The Board concluded that the breakpoints in the management fee rate schedule satisfactorily provides for the sharing of economies of scale, as they allow for adequate opportunity for shareholders to realize benefits (fee breaks) as Fund assets grow.

Based on the foregoing, the Board, including all of the Independent Trustees, concluded that the management fees were fair and reasonable in light of the extent and quality of services provided. In reaching this conclusion, no single factor was determinative. On June 15, 2016, the Board, including all of the Independent Trustees, approved the renewal of the Management Agreement.

IMPORTANT INFORMATION ABOUT THIS REPORT

The policy of the Board is to vote the proxies of the companies in which each fund holds investments consistent with the procedures as stated in the Statement of Additional Information (SAI). You may obtain a copy of the SAI without charge by calling 800.345.6611, contacting your financial intermediary or searching the website of the Securities and Exchange Commission (SEC) at sec.gov. Information regarding how each fund voted proxies relating to portfolio securities is filed with the SEC by August 31st for the most recent 12-month period ending June 30th of that year, and is available without charge by visiting investor.columbiathreadneedleus.com, or searching the website of the SEC at sec.gov.

Each fund files a complete schedule of portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. Each fund's Form N-Q is available on the SEC's website at sec.gov and may be reviewed and copied at the SEC's Public Reference Room in Washington, D.C. Information on the operation of the Public Reference Room may be obtained by calling 800.SEC.0330. Each fund's complete schedule of portfolio holdings, as filed on Form N-Q, can also be obtained without charge, upon request, by calling 800.345.6611.

Dear Shareholder,

At Dimensional we strive to offer Fund shareholders the best available investment solutions and second-to-none client service. More than just shares in a mutual fund, the assets invested with us represent institutions and individuals and are often savings earned with sacrifice. We appreciate and take with enormous responsibility the trust clients have put in us, always aiming for the highest standards when managing money, performing research, and finding ways to better provide client service.

On behalf of all of us at Dimensional, thank you for letting us help you pursue your investment goals. Your trust is taken with the seriousness it deserves.

Sincerely,

Eduardo A. Repetto
Co-Chief Executive Officer and Co-Chief Investment Officer

DISCLOSURE OF FUND EXPENSES
(Unaudited)

The following Expense Tables are shown so that you can understand the impact of fees on your investment. All mutual funds have operating expenses. As a shareholder of the fund, you incur ongoing costs, which include costs for portfolio management, administrative services, and shareholder reports, among others. Operating expenses, legal and audit services, which are deducted from a fund's gross income, directly reduce the investment return of the fund. A fund's expenses are expressed as a percentage of its average net assets. This figure is known as the expense ratio. The following examples are intended to help you understand the ongoing costs, in dollars, of investing in the fund and to compare these costs with those of other mutual funds. The examples are based on an investment of $1,000 made at the beginning of the period shown and held for the entire period.

The Expense Tables below illustrate your fund's costs in two ways.

Actual Fund Return

This section helps you to estimate the actual expenses after fee waivers that you paid over the period. The "Ending Account Value" shown is derived from the fund's actual return and "Expenses Paid During Period" reflect the dollar amount that would have been paid by an investor who started with $1,000 in the fund. You may use the information here, together with the amount you invested, to estimate the expenses that you paid over the period.

To do so, simply divide your account value by $1,000 (for example, a $7,500 account value divided by $1,000 = 7.5), then multiply the result by the number given for your fund under the heading "Expenses Paid During Period."

Hypothetical Example for Comparison Purposes

This section is intended to help you compare your fund's costs with those of other mutual funds. The hypothetical "Ending Account Value" and "Expenses Paid During Period" are derived from the fund's actual expense ratio and an assumed 5% annual return before expenses. In this case, because the return used is not the fund's actual return, the results do not apply to your investment. The example is useful in making comparisons because the SEC requires all mutual funds to calculate expenses based on a 5% annual return. You can assess your fund's costs by comparing this hypothetical example with the hypothetical examples that appear in shareholder reports of other funds.

Please note that the expenses shown in the tables are meant to highlight and help you compare ongoing costs only and do not reflect any transactional costs, if applicable. The "Annualized Expense Ratio" represents the actual expenses for the six-month period indicated.

EXPENSE TABLES

Hypothetical 5% Annual Return	$1,000.00	$1,022.87	0.40%	$2.01

* Expenses are equal to the fund's annualized expense ratio for the six-month period, multiplied by the average account value over the period, multiplied by the number of days in the most recent six-month period (182), then divided by the number of days in the year (366) to reflect the six-month period.

** DFA VA Global Moderate Allocation Portfolio is a Fund of Funds. The expenses shown reflect the direct expenses of the Fund of Funds and the Fund of Fund's portion of the expenses of its Master Funds (Affiliated Investment Companies).

DFA INVESTMENT DIMENSIONS GROUP INC.

DISCLOSURE OF PORTFOLIO HOLDINGS
(Unaudited)

The SEC requires that all funds file a complete Schedule of Investments with the SEC for their first and third fiscal quarters on Form N-Q. For DFA Investment Dimensions Group Inc., this would be for the fiscal quarters ending January 31 and July 31. The Form N-Q filing must be made within 60 days of the end of the quarter. DFA Investment Dimensions Group Inc. filed its most recent Form N-Q with the SEC on March 31, 2016. They are available upon request, without charge, by calling collect: (512) 306-7400 or by mailing a request to Dimensional Fund Advisors LP, 6300 Bee Cave Road, Building One, Austin, Texas 78746, or by visiting the SEC's website at http://www.sec.gov, or they may be reviewed and copied at the SEC's Public Reference Room in Washington, D.C. (call 1-800-732-0330 for information on the operation of the Public Reference Room).

SEC regulations permit a fund to include in its reports to shareholders a "Summary Schedule of Portfolio Holdings" in lieu of a full Schedule of Investments. The Summary Schedule of Portfolio Holdings reports the fund's 50 largest holdings in unaffiliated issuers and any investments that exceed one percent of the fund's net assets at the end of the reporting period. The regulations also require that the Summary Schedule of Portfolio Holdings identify each category of investments that are held.

A fund is required to file a complete Schedule of Investments with the SEC on Form N-CSR within ten days after mailing the annual and semi-annual reports to shareholders. It will be available upon request, without charge, by calling collect: (512) 306-7400 or by mailing a request to Dimensional Fund Advisors LP, 6300 Bee Cave Road, Building One, Austin, Texas 78746, or by visiting the SEC's website at http://www.sec.gov, or they may be reviewed and copied at the SEC's Public Reference Room in Washington, D.C. (call 1-800-732-0330 for information on the operation of the Public Reference Room).

PORTFOLIO HOLDINGS

The SEC requires that all funds present their categories of portfolio holdings in a table, chart or graph format in their annual and semi-annual shareholder reports, whether or not a Schedule of Investments is utilized. The following table, which presents portfolio holdings as a percent of total investments before short-term investments and collateral for loaned securities, is provided in compliance with such requirement. The categories shown below represent broad industry sectors. Each industry sector consists of one or more specific industry classifications.

A. Organization:

DFA Investment Dimensions Group Inc. (the "Fund") is an open-end management investment company registered under the Investment Company Act of 1940, whose shares are generally offered without a sales charge, to institutional investors, retirement plans and clients of registered investment advisors. The Fund consists of ninety-five operational portfolios, eight of which (the "Portfolios") are included in this report. The remaining eighty-seven are presented in separate reports. The Portfolios are only available through a select group of insurance products.

DFA VA Global Moderate Allocation Portfolio invests in eleven portfolios within the Fund (the "Master Funds").

Fund of Funds		Percentage Ownership at 04/30/16
DFA VA Global Moderate Allocation Portfolio	U.S. Core Equity 2 Portfolio	—*
	International Core Equity Portfolio	—*
	DFA Selectively Hedged Global Fixed Income Portfolio	1%
	VA Global Bond Portfolio	5%
	U.S. Core Equity 1 Portfolio	—*
	Emerging Markets Core Equity Portfolio	—*
	DFA Two-Year Global Fixed Income Portfolio	—*
	VA Short-Term Fixed Portfolio	2%
	VA U.S. Large Value Portfolio	1%
	VA International Value Portfolio	1%
	DFA Real Estate Securities Portfolio	—*

* Amounts designated as — are less than 1%.

B. Significant Accounting Policies:

The following significant accounting policies are in conformity with accounting principles generally accepted in the United States of America. Such policies are consistently followed by the Fund in preparation of its financial statements. The preparation of financial statements in accordance with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the fair value of investments, the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates and those differences could be material.

1. *Security Valuation:* The Portfolios utilize a fair value hierarchy which prioritizes the inputs to valuation techniques used to measure fair value into three broad levels described below:

- Level 1 – inputs are quoted prices in active markets for identical securities (including equity securities, open-end investment companies, futures contracts)
- Level 2 – other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment speeds, credit risk, etc.)
- Level 3 – significant unobservable inputs (including the Portfolios' own assumptions in determining the fair value of investments)

Securities held by VA U.S. Targeted Value Portfolio and VA U.S. Large Value Portfolio (the "Domestic Equity Portfolios") and by VA International Value Portfolio and VA International Small Portfolio (the "International Equity

Portfolios"), including over-the-counter securities, are valued at the last quoted sale price of the day. International equity securities are subject to a fair value factor, as described later in this note. Securities held by the Domestic Equity Portfolios and the International Equity Portfolios that are listed on Nasdaq are valued at the Nasdaq Official Closing Price ("NOCP"). If there is no last reported sale price or NOCP for the day, the Domestic Equity Portfolios and the International Equity Portfolios value the securities within the range of the most recent quoted bid and asked prices. Price information on listed securities is taken from the exchange where the security is primarily traded. Generally, securities issued by open-end investment companies are valued using their respective net asset values or public offering prices, as appropriate, for purchase orders placed at the close of the New York Stock Exchange (NYSE). These securities are generally categorized as Level 1 in the hierarchy.

Securities for which no market quotations are readily available (including restricted securities), or for which market quotations have become unreliable, are valued in good faith at fair value in accordance with procedures adopted by the Board of Directors of the Fund. Fair value pricing may also be used if events that have a significant effect on the value of an investment (as determined in the discretion of Dimensional Fund Advisors LP) occur before the net asset value of the Portfolio is calculated. When fair value pricing is used, the prices of securities used by the Domestic Equity Portfolios and the International Equity Portfolios may differ from the quoted or published prices for the same securities on their primary markets or exchanges. These securities are generally categorized as Level 2 in the hierarchy.

The International Equity Portfolios will also apply a fair value price in the circumstances described below. Generally, trading in foreign securities markets is completed each day at various times prior to the close of the NYSE. For example, trading in the Japanese securities markets is completed each day at the close of the Tokyo Stock Exchange (normally, 2:00 a.m. ET), which is fourteen hours before the close of the NYSE (normally, 4:00 p.m. ET) and the time that the net asset values of the International Equity Portfolios are computed. Due to the time differences between the closings of the relevant foreign securities exchanges and the time the International Equity Portfolios price their shares at the close of the NYSE, the International Equity Portfolios will fair value their foreign investments when it is determined that the market quotations for the foreign investments are either unreliable or not readily available. The fair value prices will attempt to reflect the impact of the U.S. financial markets' perceptions and trading activities on the International Equity Portfolios' foreign investments since the last closing prices of the foreign investments were calculated on their primary foreign securities markets or exchanges. For these purposes, the Board of Directors of the Fund has determined that movements in relevant indices or other appropriate market indicators, after the close of the Tokyo Stock Exchange or the London Stock Exchange, demonstrate that market quotations may be unreliable. Fair valuation of portfolio securities may occur on a daily basis. The fair value pricing by the International Equity Portfolios utilizes data furnished by an independent pricing service (and that data draws upon, among other information, the market values of foreign investments). When the International Equity Portfolios use fair value pricing, the values assigned to the foreign investments may not be the quoted or published prices of the investments on their primary markets or exchanges. These securities are generally categorized as Level 2 in the hierarchy.

Debt securities held by VA Short-Term Fixed Portfolio, VA Global Bond Portfolio and VIT Inflation-Protected Securities Portfolio (the "Fixed Income Portfolios"), are valued on the basis of evaluated prices provided by one or more pricing services or other reasonably reliable sources including broker/dealers that typically handle the purchase and sale of such securities. Securities that are traded over-the-counter and on a stock exchange generally will be valued according to the broadest and most representative market, and it is expected that for bonds and other fixed income securities, this ordinarily will be the over-the-counter market. Securities for which quotations are not readily available (including restricted securities), or for which market quotations have become unreliable, are valued in good faith at fair value in accordance with procedures adopted by the Board of Directors of the Fund. These securities are generally categorized as Level 2 in the hierarchy.

Futures contracts held by the Portfolios are valued using the settlement price established each day on the exchange on which they are traded. These valuations are generally categorized as Level 1 in the hierarchy. Over-the-counter derivative contracts, which include forward currency contracts, do not require material subjectivity as pricing inputs are observed from quoted markets and are categorized as Level 2 in the hierarchy.

Shares held by the DFA VA Global Moderate Allocation Portfolio of the Master Funds, which are treated as regulated investment companies, and the shares held by the Portfolios in other investment companies, are valued at their respective daily net asset values as reported by their administrator. These securities are generally categorized as Level 1 in the hierarchy.

A summary of the inputs used to value the Portfolios' investments by each major security type, industry and/or country is disclosed previously in this note. Valuation hierarchy tables have been included at the end of the Summary Schedule of Portfolio Holdings/Schedule of Investments. The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities.

For the six months ended April 30, 2016, there were no significant transfers between Level 1 and Level 2 and no significant Level 3 investments held by the Portfolios.

2. *Foreign Currency Translation:* Securities and other assets and liabilities of the International Equity Portfolios and VA Global Bond Portfolio whose values are initially expressed in foreign currencies are translated to U.S. dollars using the mean between the most recent bid and asked prices for the U.S. dollar as quoted by generally recognized reliable sources. Dividend and interest income and certain expenses are translated to U.S. dollars at the rate of exchange on their respective accrual dates. Receivables and payables denominated in foreign currencies are marked-to-market daily based on daily exchange rates and exchange gains or losses are realized upon ultimate receipt or disbursement. The VA Global Bond Portfolio also enters into forward currency contracts solely for the purpose of hedging against fluctuations in currency exchange rates. These contracts are marked-to-market daily based on daily forward exchange rates.

The International Equity Portfolios do not isolate the effect of fluctuations in foreign exchange rates from the effect of fluctuations in the market prices of securities whether realized or unrealized. However, the VA Global Bond Portfolio does isolate the effect of fluctuations in foreign currency rates when determining the realized gain or loss upon the sale or maturity of foreign currency denominated debt obligations pursuant to U.S. Federal income tax regulations; such amounts are categorized as foreign exchange gain or loss for income tax reporting purposes.

Realized gains or losses on foreign currency transactions represent net foreign exchange gains or losses from the disposition of foreign currencies, currency gains or losses realized between the trade and settlement dates on securities transactions, and the difference between amounts of interest, dividends and any foreign withholding taxes recorded on the books of the International Equity Portfolios and VA Global Bond Portfolio and the U.S. dollar equivalent amounts actually received or paid.

3. *Deferred Compensation Plan:* Each eligible Director of the Fund may elect participation in The Fee Deferral Plan for Independent Directors and Trustees (the "Plan"). Under the Plan, effective January 1, 2002, such Directors may defer payment of all or a portion of their total fees earned as a Director. These deferred amounts may be treated as though such amounts had been invested in shares of the following funds: U.S. Large Cap Value Portfolio; U.S. Core Equity 1 Portfolio; U.S. Core Equity 2 Portfolio; U.S. Vector Equity Portfolio; U.S. Micro Cap Portfolio; DFA International Value Portfolio; International Core Equity Portfolio; Emerging Markets Portfolio; Emerging Markets Core Equity Portfolio; and/or DFA Two-Year Global Fixed Income Portfolio. Contributions made under the Plan and the change in unrealized appreciation (depreciation) and income are included in Directors' Fees & Expenses.

Each Director has the option to receive their distribution of proceeds in one of the following methods: lump sum; annual installments over a period of agreed-upon years; or quarterly installments over a period of agreed-upon years. Each Director shall have the right in a notice of election (the "Notice") to defer the receipt of the Director's deferred compensation until a date specified by such Director in the Notice, which date may not be sooner than the earlier of: (i) the first business day of January following the year in which such Director ceases to be a member of the Board of Directors of the Fund; and (ii) five years following the effective date of the Director's first deferral election. If a Director who elects to defer fees fails to designate in the Notice a time or date as of which payment of the Director's deferred fee account shall commence, payment of such amount shall commence as of the first business day of January following the year in which the Director ceases to be a member of the Board (unless the Director files an amended Notice selecting a different distribution date). As of April 30, 2016, none of the Directors have requested or received a distribution of proceeds of a deferred fee account.

4. *Other:* Security transactions are accounted for as of the trade date. Costs used in determining realized gains and losses on the sale of investment securities and foreign currency are accounted for on the basis of identified cost. Dividend income and distributions to shareholders are recorded on the ex-dividend date. Distributions received on securities that represent a return of capital or capital gains are recorded as a reduction of cost of investments or as a realized gain, respectively. The Portfolios estimate the character of distributions received that may be considered return of capital distributions. Interest income is recorded on an accrual basis. Discount and premium on debt securities purchased are amortized over the lives of the respective securities, utilizing the effective interest method. Expenses directly attributable to a Portfolio are directly charged. Common expenses of the Fund or the Portfolios are allocated using methods approved by the Board, generally based on average net assets.

The International Equity Portfolios may be subject to taxes imposed by countries in which they invest, with respect to their investments in issuers existing or operating in such countries. Such taxes are generally based on income earned or repatriated and capital gains realized on the sale of such investments. The International Equity Portfolios accrue such taxes when the related income or capital gains are earned or throughout the holding period. Some countries require governmental approval for the repatriation of investment income, capital or the proceeds of sales earned by foreign investors. In addition, if there is a deterioration in a country's balance of payments or for other reasons, a country may impose temporary restrictions on foreign capital remittances abroad.

C. Investment Advisor:

The Advisor, Dimensional Fund Advisors LP, provides investment management services to the Portfolios. For the six months ended April 30, 2016, the Portfolios' investment management fees were accrued daily and paid monthly to the Advisor based on the following effective annual rates of average daily net assets:

VA U.S. Targeted Value Portfolio	0.35%
VA U.S. Large Value Portfolio	0.25%
VA International Value Portfolio	0.40%
VA International Small Portfolio	0.50%
VA Short-Term Fixed Portfolio	0.25%
VA Global Bond Portfolio	0.22%*
VIT Inflation-Protected Securities Portfolio	0.10%
DFA VA Global Moderate Allocation Portfolio	0.25%

* The VA Global Bond Portfolio's investment management fees are based on an effective annual rate of 0.25% of the first $100 million of average daily net assets and 0.20% of average daily net assets exceeding $100 million.

Pursuant to a Fee Waiver and/or Expense Assumption Agreement (the "Fee Waiver Agreement"), the Advisor has contractually agreed to waive certain fees and in certain instances, assume certain expenses of the VIT Inflation-Protected Securities Portfolio and DFA VA Global Moderate Allocation Portfolio, as described in the notes below. The Fee Waiver Agreements for the VIT Inflation-Protected Securities Portfolio and DFA VA Global Moderate Allocation Portfolio will remain in effect through February 28, 2017, and may only be terminated by the Fund's Board of Directors prior to that date. The Fee Waiver Agreements shall continue in effect from year to year thereafter unless terminated by the Fund or the Advisor. For the six months ended April 30, 2016, the Portfolios had the expense limits listed below based on a percentage of average net assets on an annualized basis. Previously waived fees subject to future recovery by the Advisor are reflected below (amounts in thousands). The Fund, on behalf of the Portfolios, is not obligated to reimburse the Advisor for fees previously waived or expenses previously assumed by the Advisor more than thirty-six months before the date of recovery.

Institutional Class Shares	Expense Limitation Amount	Recovery of Previously Waived Fees/ Expenses Assumed	Previously Waived Fees/ Expenses Assumed Subject to Future Recovery
VIT Inflation-Protected Securities Portfolio (1)	0.18%	—	$ 48
DFA VA Global Moderate Allocation Portfolio (2)	0.40%	—	348

(1) The Advisor has contractually agreed to waive all or a portion of its management fee and to assume the ordinary operating expenses of a class of the Portfolio (excluding the expenses that the Portfolio incurs indirectly through its investment in other investment companies) ("Portfolio Expenses") to the extent necessary to limit the Portfolio Expenses of a class of the Portfolio to the rate listed above as a percentage of the Portfolio's average net assets on an annualized basis (the "Expense Limitation Amount"). At any time that the Portfolio Expenses are less than the Expense Limitation Amount, the Advisor retains the right to recover any fees previously waived and/or expenses previously assumed to the extent that such recovery is within 36 months and will not cause the Portfolio's annualized Portfolio Expenses to exceed the Expense Limitation Amount.

(2) The Advisor has agreed to waive all or a portion of its management fee and to assume the expenses of the Institutional Class shares of the Portfolio (including the expenses that the Portfolio bears as a shareholder of other funds managed by the Advisor but excluding the expenses that the Portfolio incurs indirectly through its investment in unaffiliated investment companies) ("Portfolio Expenses") to the extent necessary to limit the Portfolio Expenses of the Institutional Class shares of the Portfolio, on an annualized basis, to the rate listed above as a percentage of the Portfolio's average net assets (the "Expense Limitation Amount"). At any time that the Portfolio Expenses of the Institutional Class shares of the Portfolio are less than the Expense Limitation Amount, the Advisor retains the right to recover any fees previously waived and/or expenses previously assumed to the extent that such recovery is within 36 months and will not cause the annualized Portfolio Expenses of such class of shares to exceed the Expense Limitation Amount.

Earned Income Credit:

In addition, the Portfolios have entered into arrangements with their custodian whereby net interest earned on uninvested cash balances was used to reduce a portion of the Portfolios' custody expenses. Custody expense in the accompanying financial statements is presented before reduction for credits. The impact of such credits is generally less than one basis point of each Portfolio's net assets. During the six months ended April 30, 2016, expenses reduced were as follows (amounts in thousands):

	Fees Paid Indirectly
VA International Value Portfolio	—*
VA International Small Portfolio	—*
VA Global Bond Portfolio	$ 1

* Amounts designated as — are less than $500.

Fees Paid to Officers and Directors/Trustees:

Certain Officers and Directors of the Advisor are also Officers and Directors of the Fund; however, such Officers and Directors (with the exception of the Chief Compliance Officer ("CCO")) receive no compensation from the Fund. For the six months ended April 30, 2016, the total related amounts paid by the Fund to the CCO were $144 (in thousands). The total related amounts paid by each of the Portfolios are included in Other Expenses on the Statements of Operations.

D. Deferred Compensation:

At April 30, 2016, the total liability for deferred compensation to Directors is included in Accrued Expenses and Other Liabilities on the Statements of Assets and Liabilities as follows (amounts in thousands):

VA U.S. Targeted Value Portfolio	$ 5
VA U.S. Large Value Portfolio	6
VA International Value Portfolio	4
VA International Small Portfolio	4
VA Short-Term Fixed Portfolio	5
VA Global Bond Portfolio	6
VIT Inflation-Protected Securities Portfolio	—
DFA VA Global Moderate Allocation Portfolio	1

E. Purchases and Sales of Securities:

For the six months ended April 30, 2016, the Portfolios made the following purchases and sales of investment securities, other than short-term securities (amounts in thousands):

	U.S. Government Securities		Other Investment Securities	
	Purchases	Sales	Purchases	Sales
VA U.S. Targeted Value Portfolio	—	—	$46,089	$31,717
VA U.S. Large Value Portfolio	—	—	28,582	19,502
VA International Value Portfolio	—	—	28,306	12,441
VA International Small Portfolio	—	—	15,232	4,745
VA Short-Term Fixed Portfolio	$15,225	$19,202	52,287	22,814
VA Global Bond Portfolio	5,203	5,250	74,582	49,627
VIT Inflation-Protected Securities Portfolio	14,251	2,025	—	—

For the six months ended April 30, 2016, DFA VA Global Moderate Allocation Portfolio made the following purchases and sales of Affiliated Investment Companies (amounts in thousands):

	DFA VA Global Moderate Allocation Portfolio					
Affiliated Investment Companies	Balance at 10/31/2015	Balance at 4/30/2016	Purchases	Sales	Dividend Income	Distributions of Realized Gains
U.S. Core Equity 2 Portfolio	$30,228	$ 31,554	$2,903	$ 664	$ 307	$594
International Core Equity Portfolio	14,054	14,949	1,140	143	120	—
DFA Selectively Hedged Global Fixed Income Portfolio	12,308	13,149	1,280	699	136	—
VA Global Bond Portfolio	12,325	13,118	1,601	819	194	52
U.S. Core Equity 1 Portfolio	10,839	11,221	619	—	109	129
DFA Two-Year Global Fixed Income Portfolio	4,900	5,194	461	173	15	—
VA Short-Term Fixed Portfolio	4,900	5,188	461	168	15	5
Emerging Markets Core Equity Portfolio	4,129	4,565	372	9	42	—
VA U.S. Large Value Portfolio	2,191	2,237	192	—	45	101
DFA Real Estate Securities Portfolio	1,449	1,663	175	—	32	—
VA International Value Portfolio	1,575	1,662	191	—	50	—
Total	$98,898	$104,500	$9,395	$2,675	$1,065	$881

F. Federal Income Taxes:

Each Portfolio has qualified and intends to continue to qualify as a regulated investment company under Subchapter M of the Internal Revenue Code for federal income tax purposes and to distribute substantially all of its taxable income and net capital gains to shareholders. Accordingly, no provision has been made for federal income taxes.

Distributions from net investment income and net realized capital gains are determined in accordance with U.S. federal income tax regulations, which may differ from those amounts determined under accounting principles generally accepted in the United States of America. These book/tax differences are either temporary or permanent in nature. To the extent these differences are permanent, they are charged or credited to paid-in capital, undistributed net investment income or accumulated net realized gains or losses, as appropriate, in the period that the differences arise. Accordingly, the following permanent differences as of October 31, 2015, primarily attributable to realized gains on securities considered to be “passive foreign investment companies”, and net

foreign currency gains/losses, were reclassified to the following accounts. These reclassifications had no effect on net assets or net asset value per share (amounts in thousands):

	Increase (Decrease) Paid-In Capital	Increase (Decrease) Undistributed Net Investment Income	Increase (Decrease) Accumulated Net Realized Gains (Losses)
VA U.S. Targeted Value Portfolio	$ 9,703	$ 3	$ (9,706)
VA U.S. Large Value Portfolio	13,443	—	(13,443)
VA International Value Portfolio	5,573	(21)	(5,552)
VA International Small Portfolio	8,504	75	(8,579)
VA Short-Term Fixed Portfolio	—	—	—
VA Global Bond Portfolio	—	(75)	75
DFA VA Global Moderate Allocation Portfolio	—	10	(10)

The tax character of dividends and distributions declared and paid during the years ended October 31, 2014 and October 31, 2015 were as follows (amounts in thousands):

	Net Investment Income and Short-Term Capital Gains	Long-Term Capital Gains	Total
VA U.S. Targeted Value Portfolio			
2014	$1,253	—	$ 1,253
2015	1,890	$ 9,989	11,879
VA U.S. Large Value Portfolio			
2014	2,914	16,668	19,582
2015	4,565	4,140	8,705
VA International Value Portfolio			
2014	3,420	—	3,420
2015	6,690	—	6,690
VA International Small Portfolio			
2014	3,450	2,793	6,243
2015	3,533	2,383	5,916
VA Short-Term Fixed Portfolio			
2014	467	42	509
2015	345	69	414
VA Global Bond Portfolio			
2014	1,112	2,067	3,179
2015	4,551	237	4,788
DFA VA Global Moderate Allocation Portfolio			
2014	648	—	648
2015	1,074	271	1,345

VIT Inflation-Protected Securities Portfolio commenced operations on May 29, 2015, and did not pay any distributions for the years ended October 31, 2014 and October 31, 2015.

At October 31, 2015, the components of distributable earnings (accumulated losses) were as follows (amounts in thousands):

	Undistributed Net Investment Income and Short-Term Capital Gains	Undistributed Long-Term Capital Gains	Capital Loss Carryforwards	Unrealized Appreciation (Depreciation)	Total Net Distributable Earnings (Accumulated Losses)
VA U.S. Targeted Value Portfolio	$4,311	$10,897	—	$ 12,570	$ 27,778
VA U.S. Large Value Portfolio	3,923	10,782	—	49,641	64,346
VA International Value Portfolio	4,476	—	$(3,316)	(18,223)	(17,063)
VA International Small Portfolio	2,768	3,999	—	(2,551)	4,216
VA Short-Term Fixed Portfolio	559	45	—	(8)	596
VA Global Bond Portfolio	3,191	786	—	1,303	5,280
VIT Inflation-Protected Securities Portfolio	55	—	(3)	(127)	(75)
DFA VA Global Moderate Allocation Portfolio	621	195	—	2,824	3,640

For federal income tax purposes, the Fund measures its capital loss carryforwards annually at October 31, its fiscal year end. Capital loss carryforwards may be carried forward and applied against future capital gains. Under the Regulated Investment Company Modernization Act of 2010, capital losses incurred by these Portfolios after October 31, 2011 will not be subject to expiration and will retain their character as either short-term or long-term capital losses. In addition, such losses must be utilized prior to the losses incurred in the years preceding enactment. As of October 31, 2015, the Portfolios had the following capital loss carryforwards available to offset future realized capital gains through the indicated expiration dates (amounts in thousands):

	Expires on October 31,		
	2017	Unlimited	Total
VA U.S. Targeted Value Portfolio	—	—	—
VA U.S. Large Value Portfolio	—	—	—
VA International Value Portfolio	$2,412	$904	$3,316
VA International Small Portfolio	—	—	—
VA Short-Term Fixed Portfolio	—	—	—
VA Global Bond Portfolio	—	—	—
VIT Inflation-Protected Securities Portfolio	—	3	3
DFA VA Global Moderate Allocation Portfolio	—	—	—

At April 30, 2016, the total cost and aggregate gross unrealized appreciation (depreciation) of securities for federal income tax purposes were different from amounts reported for financial reporting purposes, as follows (amounts in thousands):

	Federal Tax Cost	Unrealized Appreciation	Unrealized Depreciation	Net Unrealized Appreciation (Depreciation)
VA U.S. Targeted Value Portfolio	$228,706	$32,704	$(24,459)	$ 8,245
VA U.S. Large Value Portfolio	201,177	56,000	(7,620)	48,380
VA International Value Portfolio	192,095	9,090	(28,085)	(18,995)
VA International Small Portfolio	156,914	27,804	(27,240)	564
VA Short-Term Fixed Portfolio	193,471	218	(50)	168
VA Global Bond Portfolio	250,781	4,041	(2)	4,039
VIT Inflation-Protected Securities Portfolio	28,557	798	—	798
DFA VA Global Moderate Allocation Portfolio	102,688	3,148	(1,280)	1,868

The difference between book-basis and tax-basis unrealized appreciation (depreciation) is primarily attributable to the tax deferral of losses on wash sales and investments in passive foreign investment companies.

Accounting for Uncertainty in Income Taxes sets forth a minimum threshold for financial statement recognition of the benefit of a tax position taken or expected to be taken in a tax return. Management has analyzed the Portfolios' tax positions and has concluded that no additional provision for income tax is required in any Portfolio's financial statements. The Portfolios are not aware of any tax positions for which it is more likely than not that the total amounts of unrecognized tax benefits will significantly change in the next twelve months. The Portfolios' federal tax returns for the prior three fiscal years remain subject to examination by the Internal Revenue Service.

G. Financial Instruments:

In accordance with the Portfolios' investment objectives and policies, the Portfolios may invest in certain financial instruments that have off-balance sheet risk in excess of the amounts recognized in the financial statements and concentrations of credit and market risk. These instruments and their significant corresponding risks are described below:

1. *Foreign Market Risks:* Investments in foreign markets may involve certain considerations and risks not typically associated with investments in the United States of America, including the possibility of future political and economic developments and the level of foreign governmental supervision and regulation of foreign securities markets. These markets are generally smaller, less liquid and more volatile than the major securities markets in the United States of America. Consequently, acquisition and disposition of securities held by the Portfolios may be inhibited.

Derivative Financial Instruments:

Summarized below are the specific types of derivative instruments used by the Portfolios.

2. *Forward Currency Contracts:* The International Equity Portfolios may acquire and sell forward currency contracts in connection with the purchase or sale of foreign equity securities, typically to "lock in" the value of the transaction with respect to a different currency. In addition, the International Equity Portfolios may, from time to time, enter into forward currency contracts to transfer balances from one currency to another currency. The VA Global Bond Portfolio may enter into forward currency contracts only to hedge against adverse changes in the relationship of the U.S. dollar to foreign currencies (foreign exchange rate risk) or to transfer balances from one currency to another currency. The decision to hedge a Portfolio's currency exposure with respect to a foreign market will be based primarily on the Portfolio's existing exposure to a given foreign currency. Each contract is valued daily and the change in value is recorded by the Portfolio as an unrealized gain or loss, which is presented in the Statements of Operations as the change in unrealized appreciation or depreciation from translation of foreign currency denominated amounts. When the contract is closed or offset with the same counterparty, the Portfolio records a realized gain or loss equal to the change in the value of the contract when it was opened and the value at the time it was closed or offset. This is presented in the Statements of Operations as a net realized gain or loss on foreign currency transactions. At April 30, 2016, the VA Global Bond Portfolio had entered into the following contracts and the net unrealized foreign exchange gain (loss) is reflected in the accompanying financial statements (amounts in thousands):

VA Global Bond Portfolio*

Settlement Date	Currency Amount**	Currency	Counterparty	Contract Amount	Value at April 30, 2016	Unrealized Foreign Exchange Gain (Loss)
06/07/16	(1,041)	Singapore Dollar	Citibank, N.A.	$ (768)	$ (773)	$ (5)
05/11/16	(31,679)	Swedish Krona	Citibank, N.A.	(3,884)	(3,946)	(62)
07/01/16	47	UK Pound Sterling	Citibank, N.A.	67	68	1
07/01/16	3	UK Pound Sterling	Citibank, N.A.	4	4	—
07/01/16	(1,039)	UK Pound Sterling	UBS AG	(1,477)	(1,518)	(41)
07/01/16	(5,823)	UK Pound Sterling		(8,261)	(8,509)	(248)
				$(14,319)	$(14,674)	$(355)

* During the six months ended April 30, 2016, the VA Global Bond Portfolio's average contract amount of forward currency contracts was $8,720 (in thousands).

** Positive Currency Amount represents a purchase contract and a Currency Amount in parentheses represents a sale contract.

Risks may arise upon entering into these contracts from the potential inability of counterparties to meet the terms of their contracts and from unanticipated movements in the value of foreign currency relative to the U.S. dollar and are generally limited to unrealized appreciation, if any, on the contracts.

The following is a summary of the location of derivatives on the VA Global Bond Portfolio's Statement of Assets and Liabilities as of April 30, 2016:

	Location on the Statement of Assets and Liabilities	
Derivative Type	**Asset Derivatives**	**Liability Derivatives**
Foreign exchange contracts	Unrealized Gain on Forward Currency Contracts	Unrealized Loss on Forward Currency Contracts

The following is a summary of the VA Global Bond Portfolio's derivative instrument holdings categorized by primary risk exposure as of April 30, 2016 (amounts in thousands):

	Asset Derivatives Value	
	Total Value at April 30, 2016	**Foreign Exchange Contracts**
VA Global Bond Portfolio	$ 1	$ 1

	Liability Derivatives Value	
	Total Value at April 30, 2016	**Foreign Exchange Contracts**
VA Global Bond Portfolio	(356)	(356)

The following is a summary of the location on the VA Global Bond Portfolio's Statement of Operations of realized and change in unrealized gains and losses from the Portfolio's derivative instrument holdings through the six months ended April 30, 2016:

Derivative Type	**Location of Gain (Loss) on Derivatives**
Foreign exchange contracts	Net Realized Gain (Loss) on: Foreign Currency Transactions Change in Unrealized Appreciation (Depreciation) of: Translation of Foreign Currency Denominated Amounts

The following is a summary of the realized and change in unrealized gains and losses from the VA Global Bond Portfolio's derivative instrument holdings categorized by primary risk exposure through the six months ended April 30, 2016 (amounts in thousands):

	Realized Gain (Loss) on Derivatives	
	Total	**Foreign Exchange Contracts**
VA Global Bond Portfolio	$ (34)	$ (34)

	Change in Unrealized Appreciation (Depreciation) on Derivatives	
	Total	**Foreign Exchange Contracts**
VA Global Bond Portfolio	$(367)	$(367)

Offsetting of Derivative Assets and Derivative Liabilities

The following table presents the VA Global Bond Portfolio's gross and net amount of assets and liabilities available for offset under netting arrangements as well as any related collateral received or pledged by the Portfolio as of April 30, 2016 (amounts in thousands):

Description	Gross Amounts of Recognized Assets (a)	Gross Amounts Not Offset in the Statements of Assets and Liabilities		Net Amount (c)	Gross Amounts of Recognized Liabilities (a)	Gross Amounts Not Offset in the Statements of Assets and Liabilities		Net Amount (e)
		Financial Instruments (b)	Cash Collateral Received			Financial Instruments (d)	Cash Collateral Pledged	
	Assets				Liabilities			
VA Global Bond Portfolio								
Forward Currency Contracts	$1	$(1)	—	—	$356	$(1)	—	$355

(a) No amounts have been netted against the gross amounts recognized in the Statements of Assets and Liabilities.

(b) Represents the amount of assets that could be offset by liabilities with the same counterparty under master netting or similar agreements that management elects not to offset on the Statements of Assets and Liabilities.

(c) Represents the net amount due from counterparties in the event of default.

(d) Represents the amount of liabilities that could be offset by assets with the same counterparty under master netting or similar agreements that management elects not to offset on the Statements of Assets and Liabilities.

(e) Represents the net amount due to counterparties in the event of default.

Note J contains information regarding securities lending amounts that are subject to netting arrangements.

H. Line of Credit and Interfund Lending Program:

The Fund, together with other Dimensional-advised portfolios, has entered into a $500 million uncommitted, unsecured discretionary line of credit effective March 30, 2016, with its domestic custodian bank. A line of credit with similar terms was in effect through March 29, 2016. Each portfolio is permitted to borrow, subject to its investment limitations, up to a maximum of $500 million, as long as total borrowings under the line of credit do not exceed $500 million in the aggregate. Borrowings under the line of credit are charged interest at rates agreed upon by the parties at the time of borrowing. Each portfolio is individually, and not jointly, liable for its particular advances under the line of credit. There is no commitment fee on the unused portion of the line of credit. The agreement for the discretionary line of credit may be terminated by either party at any time. The agreement for the line of credit expires on March 29, 2017.

The Fund, together with other Dimensional-advised portfolios, has also entered into an additional $500 million unsecured line of credit with its international custodian bank effective January 8, 2016. A line of credit with similar terms was in effect through January 7, 2016. Each portfolio is permitted to borrow, subject to its investment limitations, up to a maximum of $500 million, as long as total borrowings under the line of credit do not exceed $500 million in the aggregate. Each portfolio is individually, and not jointly, liable for its particular advances under the line of credit. Borrowings under the line of credit are charged interest at rates agreed upon by the parties at the time of borrowing. There is no commitment fee on the unused portion of the line of credit. The line of credit agreement expires on January 7, 2017.

For the six months ended April 30, 2016, borrowings by the Portfolios under the lines of credit were as follows (amounts in thousands, except percentages and days):

	Weighted Average Interest Rate	Weighted Average Loan Balance	Number of Days Outstanding*	Interest Expense Incurred	Maximum Amount Borrowed During The Period
VA U.S. Targeted Value Portfolio	0.87%	$ 703	3	—	$1,083
VA U.S. Large Value Portfolio	1.02%	1,056	15	—	1,753
VA International Value Portfolio	1.12%	123	1	—	123
VA International Small Portfolio	1.07%	91	11	—	189
DFA VA Global Moderate Allocation Portfolio	1.04%	120	25	—	625

* Number of Days Outstanding represents the total of single or consecutive days during the six months ended April 30, 2016, that each Portfolio's available line of credit was utilized.

At April 30, 2016, VA International Small Portfolio had loans outstanding in the amount of $113 (in thousands).

Pursuant to an exemptive order issued by the SEC (the "Order"), the Portfolios may participate in an interfund lending program among certain portfolios managed by the Advisor (portfolios that operate as feeder funds do not participate in the program). The program allows the participating portfolios to borrow money from and loan money to each other for temporary or emergency purposes, subject to the conditions in the Order. A loan can only be made through the program if the interfund loan rate on that day is more favorable to both the borrowing and lending portfolios as compared to rates available through short-term bank loans or investments in overnight repurchase agreements and money market funds, respectively, as detailed in the Order. Further, a portfolio may participate in the program only if and to the extent that such participation is consistent with its investment objectives and limitations. Interfund loans have a maximum duration of seven days and may be called on one business day's notice. The Portfolios did not utilize the interfund lending program during the six months ended April 30, 2016.

I. Affiliated Trades:

Cross trades for the year ended October 31, 2015, if any, were executed by the Portfolios pursuant to procedures adopted by the Board of Directors of the Fund to ensure compliance with Rule 17a-7 under the Investment Company Act of 1940 (the "1940 Act"). Cross trading is the buying or selling of portfolio securities between series of investment companies, or between a series of an investment company and another entity, that are or could be considered affiliates by virtue of having a common investment adviser (or affiliated investment advisers), common directors/trustees and/or common officers. At its regularly scheduled meetings, the Board reviews such transactions for compliance with the requirements and restrictions set forth by Rule 17a-7 under the 1940 Act.

For the six months ended April 30, 2016, cross trades by the Portfolios under Rule 17a-7 were as follows (amounts in thousands):

Portfolio	Purchases	Sales	Realized Gains
VA U.S. Targeted Value Portfolio	$1,565	$5,085	$925
VA U.S. Large Value Portfolio	668	1,040	147

J. Securities Lending:

As of April 30, 2016, some of the Portfolios had securities on loan to brokers/dealers, for which each such Portfolio received cash collateral. In addition, the following Portfolios received non-cash collateral consisting of short-and/or long-term U.S. government securities as follows (amounts in thousands):

	Market Value
VA U.S. Targeted Value Portfolio	$7,382
VA U.S. Large Value Portfolio	4,212
VA International Small Portfolio	293

Each Portfolio with securities on loan invests the cash collateral, as described below, and records a liability for the return of the collateral, during the period the securities are on loan. Loans of securities are expected at all times to be secured by collateral in an amount (i) equal to at least 100% of the current market value of the loaned securities with respect to securities of the U.S. government or its agencies, (ii) generally equal to 102% of the current market value of the loaned securities with respect to U.S. securities, and (iii) generally equal to 105% of the current market value of the loaned securities with respect to foreign securities. However, daily market fluctuations could cause the Portfolios' collateral to be lower or higher than the expected thresholds. If this were to occur, the collateral would be adjusted the next business day to ensure adequate collateralization. In the event of default or bankruptcy by the other party to the agreement, realization and/or retention of the collateral may be subject to legal proceedings. If the borrower fails to return loaned securities, and cash collateral being maintained by the borrower is insufficient to cover the value of loaned securities and provided such collateral insufficiency is not the result of investment losses, the lending agent has agreed to pay the amount of the shortfall to the Portfolio or, at the option

of the lending agent, to replace the securities. In the event of the bankruptcy of the borrower, a Portfolio could experience delay in recovering the loaned securities or only recover cash or a security of equivalent value.

Subject to their stated investment policies, the Portfolios with securities on loan will generally invest the cash collateral received for the loaned securities in The DFA Short Term Investment Fund (the "Money Market Series"), an affiliated registered money market fund advised by the Advisor for which the Advisor receives a management fee of 0.05% of the average daily net assets of the Money Market Series. Such Portfolios also may invest the cash collateral received for the loaned securities in securities of the U.S. government or its agencies, repurchase agreements collateralized by securities of the U.S. government or its agencies, and affiliated and unaffiliated registered and unregistered money market funds. For purposes of this paragraph, agencies include both agency debentures and agency mortgage-backed securities. In addition, each Portfolio with securities on loan will be able to terminate the loan at any time and will receive reasonable interest on the loan, as well as amounts equal to any dividends, interest or other distributions on the loaned securities. However, dividend income received from loaned securities may not be eligible to be taxed at qualified dividend income rates.

The following table reflects a breakdown of transactions accounted for as secured borrowings, the gross obligation by the type of collateral pledged, and the remaining contractual maturity of those transactions as of April 30, 2016:

	Remaining Contractual Maturity of the Agreements As of April 30, 2016				
	Overnight and Continuous	<30 days	Between 30 & 90 days	>90 days	Total
VA U.S. Targeted Value Portfolio					
Bonds	$32,433,183	—	—	—	$32,433,183
VA U.S. Large Value Portfolio					
Bonds	$10,818,625	—	—	—	$10,818,625
VA International Value Portfolio					
Bonds	$10,306,766	—	—	—	$10,306,766
VA International Small Portfolio					
Bonds	$17,465,804	—	—	—	$17,465,804
VA Short-Term Fixed Portfolio					
Bonds	$ 6,944,308	—	—	—	$ 6,944,308
VA Global Bond Portfolio					
Bonds	$ 1,254,000	—	—	—	$ 1,254,000

Gross amount of recognized liabilities for securities lending transactions					**$79,222,686**

K. Indemnitees; Contractual Obligations:

Under the Fund's organizational documents, its officers and directors are indemnified against certain liabilities arising out of the performance of their duties to the Fund.

In the normal course of business, the Fund enters into contracts that contain a variety of representations and warranties that provide general indemnification. The Fund's maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Fund and/or its affiliates that have not yet occurred. However, based on experience, the Fund expects the risk of loss to be remote.

L. Other:

At April 30, 2016, the following number of shareholders held the following approximate percentages of the Portfolios' outstanding shares. One or more of the shareholders may be omnibus accounts, which typically hold shares for the benefit of several other underlying investors.

	Number of Shareholders	Approximate Percentage of Outstanding Shares
VA U.S. Targeted Value Portfolio	3	75%
VA U.S. Large Value Portfolio	3	73%
VA International Value Portfolio	4	78%
VA International Small Portfolio	5	78%
VA Short-Term Fixed Portfolio	5	85%
VA Global Bond Portfolio	5	87%
VIT Inflation-Protected Securities Portfolio	2	96%
DFA VA Global Moderate Allocation Portfolio	5	97%

The Portfolios are subject to claims and suits that arise from time to time in the ordinary course of business. Although management currently believes that resolving claims against us, individually or in aggregate, will not have a material adverse impact on our financial position, our results of operations, or our cash flows, these matters are subject to inherent uncertainties and management's view of these matters may change in the future

The VA U.S. Large Value Portfolio has been named as a defendant in a multi-district litigation pending in the United States District Court for the Southern District of New York (the "Court"), captioned *IN RE TRIBUNE COMPANY FRAUDULENT CONVEYANCE LITIGATION*, No. 11-MD-2296-RJS (the "Tribune MDL"). The Tribune MDL arises from the 2007 leveraged buyout of The Tribune Company ("Tribune") (the "LBO") and Tribune's subsequent bankruptcy and reorganization. In connection with the LBO, thousands of Tribune shareholders, including the VA U.S. Large Value Portfolio, sold Tribune shares back to Tribune for $34 per share. The Tribune MDL includes a series of lawsuits brought by individual creditors of Tribune (the "Individual Creditor Actions") and a lawsuit brought by a court-appointed trustee on behalf of the committee of unsecured creditors of Tribune (the "Committee Action," and with the Individual Creditor Actions, collectively referred to as the "Lawsuits"). The Lawsuits seek to unwind the LBO stock repurchases as fraudulent transfers and recover the stock repurchase proceeds paid to the Tribune shareholders who participated in the LBO. On September 23, 2013, the Court entered an order dismissing the Individual Creditor Actions in their entirety on the grounds that the individual creditor plaintiffs lack standing to pursue their claims. The parties appealed the Court's dismissal order to the Second Circuit, and, on March 29, 2016, the Second Circuit affirmed the dismissal, albeit on the grounds that the individual creditor plaintiffs' claims are preempted by the Bankruptcy Code's safe harbor for securities transactions. The individual creditor plaintiffs have petitioned the Second Circuit for rehearing of the appeal, and that petition is pending. The Committee Action remains pending, and a motion to dismiss on behalf of all shareholder defendants in the Committee Action was filed on May 23, 2014. The motion to dismiss is fully-briefed, and the parties await the scheduling of oral argument on the motion. The Committee Action is stayed pending the disposition of the motion to dismiss.

Litigation counsel to the VA U.S. Large Value Portfolio in the Lawsuits has advised management that it does not believe that it is possible, at this early stage in the proceedings, to predict with any reasonable certainty the probable outcome of the Lawsuits or quantify the ultimate exposure to the VA U.S. Large Value Portfolio arising from the Lawsuits. Until the VA U.S. Large Value Portfolio can do so, no reduction of the net asset value of the VA U.S. Large Value Portfolio will be made relating to the Lawsuits. However, even if the plaintiffs in the Lawsuits were to obtain the full recovery the plaintiffs seek, the amount would be less than 1% of the net asset value of the VA U.S. Large Value Portfolio at this time.

The VA U.S. Large Value Portfolio also cannot quantify the cost of the Lawsuits that could potentially be deducted from its net asset value. Therefore, at this time, those investors buying or redeeming shares of the VA U.S. Large Value Portfolio will pay or receive, as the case may be, a price based on the net asset value of the VA U.S. Large Value Portfolio, with no adjustment relating to the Lawsuits. The attorneys' fees and costs relating to the Lawsuits will be taken as expenses by the VA U.S. Large Value Portfolio as incurred and in a manner similar to any other expense incurred by the VA U.S. Large Value Portfolio.

M. Subsequent Event Evaluations:

Management has evaluated the impact of all subsequent events on the Portfolios and has determined that there are no subsequent events requiring recognition or disclosure in the financial statements.

VOTING PROXIES ON FUND PORTFOLIO SECURITIES

A description of the policies and procedures that the Fund uses in voting proxies relating to securities held in the portfolio is available (1) without charge, upon request, by calling collect: (512) 306-7400; (2) from the Advisor's website at http://us.dimensional.com; and (3) on the SEC's website at http://www.sec.gov. Information regarding how the Advisor votes these proxies is available from the EDGAR database on the SEC's website at http://www.sec.gov and from the Advisor's website at http://us.dimensional.com and reflects the twelve-month period beginning July 1st and ending June 30th.

BOARD APPROVAL OF INVESTMENT MANAGEMENT AGREEMENTS

At the Board meeting held on December 10-11, 2015 (the "Meeting"), the Board of Directors of DFA Investment Dimensions Group Inc. (the "Board") considered the continuation of the investment management agreements for each portfolio (collectively, the "Funds") and, if applicable, a Fund's sub-advisory agreements. For certain Funds, Dimensional Fund Advisors Ltd. or DFA Australia Limited serves as a sub-advisor. (The investment management agreements and the sub-advisory agreements are referred to as the "Management Agreements," and the Advisor and sub-advisors are referred to as the "Advisor.")

Prior to the Meeting, independent counsel to the Independent Board Members sent to the Advisor a request for information, which identified the information that the Independent Board Members wished to receive in order to consider the continuation of the Management Agreements. The Independent Board Members met with their independent counsel in advance of the Meeting to discuss the materials provided by the Advisor, the independent reports prepared by Morningstar Associates, LLC (the "Morningstar Reports"), and issues related to the continuation of the Management Agreements. Also in advance of the Meeting, management provided additional materials to address and respond to questions that the Independent Board Members posed after their review and analysis of materials provided by the Advisor and the Morningstar Reports.

At the Meeting, the Board considered a number of factors when considering the continuation of each Management Agreement for a Fund, including: (i) the nature, extent and quality of services provided by the Advisor to each Fund; (ii) the performance of each Fund and the Advisor; (iii) the fees and expenses borne by each Fund; (iv) the profitability realized by the Advisor from the relationship with each Fund; and (v) whether economies of scale are realized by the Advisor with respect to each Fund as it grows larger, and the extent to which this is reflected in the level of the management fee charged.

When considering the nature and quality of the services provided by the Advisor to a Fund, the Board reviewed: (a) the scope and depth of the Advisor's organization; (b) the experience and expertise of its investment professionals currently providing management services to the Fund; and (c) the Advisor's global investment advisory capabilities. The Board evaluated the Advisor's portfolio management process and discussed the unique features of the Advisor's investment approach. The Board also considered the nature and character of non-investment advisory services provided by the Advisor, including administrative services. After analyzing the caliber of services provided by the Advisor to each Fund, both quantitatively and qualitatively, including the impact of these services on investment performance, the Board concluded that the nature, extent and quality of services provided to each Fund were consistent with the operational requirements of the Fund and met the needs of the shareholders of the Fund.

In considering the performance of each Fund, the Board analyzed the Morningstar Reports, which compared the performance of each Fund with other funds in its respective peer group and investment category. The Board also reviewed the performance analysis prepared by the Advisor, which presented the performance of each Fund and its benchmark index, over multiple performance periods, along with the Advisor's explanation of the performance. The Board concluded that the Advisor's explanations provided a sound basis for understanding the comparative performance of the Funds. The Board determined, among other things, that after considering each Fund's investment strategies and the expectations of its shareholder base, the performance of each Fund was reasonable as compared with relevant performance standards and appropriate market indexes.

When considering the fees and expenses borne by each Fund, and considering the reasonableness of the management fees paid to the Advisor in light of the services provided to the Fund and any additional benefits received by the Advisor in connection with providing such services, the Board compared the fees charged by the Advisor to the Fund to the fees charged to the funds in its peer group for comparable services as provided in the Morningstar Reports. The Board concluded that the effective management fees and total expenses of each Fund over various periods were favorable in relation to those of its peer funds, and that the management fees were fair, both on an absolute basis and in comparison with the fees of other funds identified in the peer groups and the industry at large.

The Board considered the profitability of each Fund to the Advisor by reviewing the profitability analysis provided by the Advisor, including information about its fee revenues and income. The Board reviewed the overall

profitability of the Advisor, and the compensation that it received for providing services to each Fund. The Board considered the profitability to the Advisor of managing and servicing the Funds and the Advisor's unregistered clients, such as collective trusts, group trusts and separate accounts. Upon closely examining the Advisor's profitability, the Board concluded, among other things, that it was reasonable.

The Board also discussed whether economies of scale are realized by the Advisor with respect to each Fund as it grows larger, and the extent to which this is reflected in the level of management fees charged. For several reasons, the Board concluded that economies of scale and the reflection of such economies of scale in the level of management fees charged were inapplicable to each Fund at the present time, due to the current level of fees and expenses and the profitability of the Fund.

After full consideration of the factors discussed above, with no single factor identified as being of paramount importance, the Board, including the Independent Board Members, with the assistance of independent counsel, concluded that the continuation of the Management Agreement for each Fund was in the best interests of the Fund and its shareholders.

A LETTER FROM THE PRESIDENT

Dear Shareholder:

We are pleased to present this semiannual report for Dreyfus Variable Investment Fund, Quality Bond Portfolio, covering the six-month period from January 1, 2016 through June 30, 2016. For information about how the fund performed during the reporting period, as well as general market perspectives, we provide a Discussion of Fund Performance on the pages that follow.

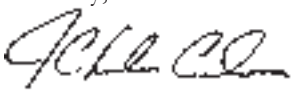
Financial markets experienced heightened turbulence over the first half of 2016 when global economic challenges fueled dramatic swings in market sentiment. At the start of the year, investors reacted cautiously to an economic slowdown in China, sluggish growth in Europe, plummeting commodity prices, and rising short-term interest rates in the United States. These worries sparked sharp declines in U.S. and global equity markets, while high-quality bonds gained value as investors flocked to traditional safe havens.

Investor sentiment subsequently rebounded when U.S. monetary policymakers refrained from additional rate hikes, major central banks eased their monetary policies further, and commodity prices improved. Stocks rallied strongly during the spring, recouping earlier losses, and bonds continued to benefit from robust investor demand. Still, by June, uncertainty continued to dominate the capital markets amid worries about Great Britain's exit from the European Union and disappointing job growth in the United States.

We remain encouraged by the resilience of the stock and bond markets, but we expect volatility to persist until global economic uncertainty abates. In addition, wide differences in underlying fundamental and technical influences across various asset classes, economic sectors, and regional markets suggest that selectivity may be an important determinant of investment success over the second half of 2016. As always, we encourage you to discuss the implications of our observations with your financial advisor.

Thank you for your continued confidence and support.

Sincerely,



J. Charles Cardona
President
The Dreyfus Corporation
July 15, 2016

DISCUSSION OF FUND PERFORMANCE

For the period of January 1, 2016 through June 30, 2016, as provided by David Bowser, CFA, and David Horsfall, CFA, Portfolio Managers

Fund and Market Performance Overview

For the six-month period ended June 30, 2016, Dreyfus Variable Investment Fund, Quality Bond Portfolio's Initial shares produced a total return of 4.48%, and its Service shares produced a total return of 4.29%.[1] The Barclays U.S. Aggregate Bond Index (the "Index"), the fund's benchmark, achieved a total return of 5.31% for the same period.[2]

High-quality bonds benefited over the first half of 2016 from falling long-term interest rates in the midst of global economic challenges. The fund lagged its benchmark, mainly due to its exposure to corporate bonds from commodities-related issuers.

The Fund's Investment Approach

The fund seeks to maximize total return consisting of capital appreciation and current income. To pursue this goal, the fund normally invests at least 80% of its net assets, plus any borrowings for investment purposes, in bonds. The fund's investments include corporate bonds, debentures, notes, mortgage-related securities, collateralized mortgage obligations and asset-backed securities, convertible debt obligations, preferred stocks, convertible preferred stocks, municipal obligations, and zero coupon bonds, that, when purchased, are rated A or better or what we believe are the unrated equivalent, as determined by Dreyfus Corporation and in securities issued or guaranteed by the U.S. government or its agencies or instrumentalities, including Treasury inflation-protected securities (TIPS). The fund also may invest up to 10% of its net assets in bonds issued by foreign issuers that are denominated in foreign currencies, and up to 20% of its net assets in bonds issued by foreign issuers whether denominated in U.S. dollars or in a foreign currency. The fund has no limit with respect to its portfolio maturity or duration.

Higher-Quality Bonds Outperformed Riskier Assets

Bonds proved volatile early in the reporting period amid concerns that the Federal Reserve Board (the "Fed") December 2015 rate hike might be the first in a series of increases during 2016 and beyond. Concerns about global economic conditions also sparked heightened market turbulence when a slowdown in China and plummeting commodity prices triggered a flight to traditional safe havens, hurting riskier corporate bonds. Conversely, intensifying demand for high-quality U.S. bonds sparked a rally among U.S. Treasury securities.

The market's trajectory changed dramatically in mid-February, when comments from the Fed suggested that U.S. policymakers would delay additional rate hikes due to global economic challenges. In addition, commodity prices began to rebound, and the People's Bank of China and the European Central Bank announced new stimulus measures. Investors regained a degree of confidence, and riskier corporate bonds began to recover from previous weakness, enabling them to recoup previous losses. Meanwhile, demand for high-quality U.S. government securities remained robust from global investors seeking more competitive yields than were available in overseas markets.

Near the end of the reporting period, concerns surrounding a vote in the United Kingdom to leave the European Union produced renewed volatility. The resulting demand for traditional safe havens drove prices of U.S. Treasury securities higher and their yields toward historical lows.

Corporate Bond Exposure Undermined Fund Results

Although the fund participated significantly in the bond market's rally, its performance compared to the Index was hampered by its exposure to corporate-backed bonds, including those that were hurt by declining commodity prices in the volatile energy and materials sectors. The fund later recouped some of the losses produced by corporate bonds early in the reporting period, but it was not enough to fully offset their weakness. To a lesser extent, the fund's relative results also were undermined by our decision to adopt a relatively short duration posture in advance of the Brexit vote in June. This tactical positioning was designed to protect the fund from potentially higher interest rates in case of a vote to stay in the European Union. Finally, an emphasis on the U.S. dollar proved counterproductive when major foreign currencies gained value in the spring.

The fund achieved better relative results from overweighted positions in taxable municipal bonds and asset-backed securities, and a focus on higher-quality securities proved especially beneficial during the market turbulence surrounding the Brexit vote.

At times during the reporting period, we employed futures to hedge against adverse interest-rate movements, and we used forward contracts to establish the fund's currency positions.

Continued Volatility Expected

As of the reporting period's end, we have maintained a generally cautious investment posture in anticipation of continued volatility in the financial markets. Economic instability in China and Europe seem likely to persist, as does the choppy U.S. economic recovery. In addition, yields of longer term sovereign bonds already have fallen toward historical lows, and yield differences have narrowed along the market's credit-quality spectrum. Therefore, we recently trimmed the fund's corporate bond exposure, and we have redeployed those assets to TIPS and other high-quality bonds with strong liquidity characteristics that can be used as a funding source when more attractively valued opportunities arise.

July 15, 2016

Bond funds are subject generally to interest-rate, credit, liquidity, and market risks, to varying degrees, all of which are more fully described in the fund's prospectus. Generally, all other factors being equal, bond prices are inversely related to interest-rate changes, and rate increases can cause price declines.

Investments in foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar, or, in the case of hedged positions, that the U.S. dollar will decline relative to the currency being hedged. Each of these risks could increase the fund's volatility.

High yield bonds are subject to increased credit risk and are considered speculative in terms of the issuer's perceived ability to continue making interest payments on a timely basis and to repay principal upon maturity.

The fund may use derivative instruments, such as options, futures, options on futures, forward contracts, swaps (including credit default swaps on corporate bonds and asset-backed securities), options on swaps, and other credit derivatives. A small investment in derivatives could have a potentially large impact on the fund's performance.

The fund is only available as a funding vehicle under variable life insurance policies or variable annuity contracts issued by insurance companies. Individuals may not purchase shares of the fund directly. A variable annuity is an insurance contract issued by an insurance company that enables investors to accumulate assets on a tax-deferred basis for retirement or other long-term goals. The investment objective and policies of Dreyfus Variable Investment Fund, Quality Bond Portfolio made available through insurance products may be similar to other funds managed or advised by Dreyfus. However, the investment results of the fund may be higher or lower than, and may not be comparable to, those of any other Dreyfus fund.

[1] *Total return includes reinvestment of dividends and any capital gains paid. Past performance is no guarantee of future results. Share price and investment return fluctuate such that upon redemption, fund shares may be worth more or less than their original cost. The fund's performance does not reflect the deduction of additional charges and expenses imposed in connection with investing in variable insurance contracts, which will reduce returns.*

[2] *SOURCE: Lipper Inc. — Reflects reinvestment of dividends and, where applicable, capital gain distributions. The Barclays U.S. Aggregate Bond Index is a widely accepted, unmanaged total return index of corporate, U.S. government and U.S. government agency debt instruments, mortgage-backed securities, and asset-backed securities with an average maturity of 1-10 years. The Index does not include fees and expenses to which the fund is subject. Investors cannot invest directly in any index.*

UNDERSTANDING YOUR FUND'S EXPENSES (Unaudited)

As a mutual fund investor, you pay ongoing expenses, such as management fees and other expenses. Using the information below, you can estimate how these expenses affect your investment and compare them with the expenses of other funds. You also may pay one-time transaction expenses, including sales charges (loads), redemption fees and expenses associated with variable annuity or insurance contracts, which are not shown in this section and would have resulted in higher total expenses. For more information, see your fund's prospectus or talk to your financial adviser.

Review your fund's expenses

The table below shows the expenses you would have paid on a $1,000 investment in Dreyfus Variable Investment Fund, Quality Bond Portfolio from January 1, 2016 to June 30, 2016. It also shows how much a $1,000 investment would be worth at the close of the period, assuming actual returns and expenses.

Expenses and Value of a $1,000 Investment

assuming actual returns for the six months ended June 30, 2016

	Initial Shares	Service Shares
Expenses paid per $1,000†	$ 4.78	$ 6.04
Ending value (after expenses)	$1,044.80	$1,042.90

COMPARING YOUR FUND'S EXPENSES WITH THOSE OF OTHER FUNDS (Unaudited)

Using the SEC's method to compare expenses

The Securities and Exchange Commission (SEC) has established guidelines to help investors assess fund expenses. Per these guidelines, the table below shows your fund's expenses based on a $1,000 investment, assuming a hypothetical 5% annualized return. You can use this information to compare the ongoing expenses (but not transaction expenses or total cost) of investing in the fund with those of other funds. All mutual fund shareholder reports will provide this information to help you make this comparison. Please note that you cannot use this information to estimate your actual ending account balance and expenses paid during the period.

Expenses and Value of a $1,000 Investment

assuming a hypothetical 5% annualized return for the six months ended June 30, 2016

	Initial Shares	Service Shares
Expenses paid per $1,000†	$ 4.72	$ 5.97
Ending value (after expenses)	$1,020.19	$1,018.95

† *Expenses are equal to the fund's annualized expense ratio of .94% for Initial shares and 1.19% for Service shares, multiplied by the average account value over the period, multiplied by 182/366 (to reflect the one-half year period).*

FINANCIAL HIGHLIGHTS

The following tables describe the performance for each share class for the fiscal periods indicated. All information (except portfolio turnover rate) reflects financial results for a single fund share. Total return shows how much your investment in the fund would have increased (or decreased) during each period, assuming you had reinvested all dividends and distributions. The fund's total returns do not reflect expenses associated with variable annuity or insurance contracts. These figures have been derived from the fund's financial statements.

NOTES TO FINANCIAL STATEMENTS (Unaudited)

NOTE 1—Significant Accounting Policies:

Quality Bond Portfolio (the "fund") is a separate diversified series of Dreyfus Variable Investment Fund (the "Company"), which is registered under the Investment Company Act of 1940, as amended (the "Act"), as an open-end management investment company and operates as a series company currently offering seven series, including the fund. The fund is only offered to separate accounts established by insurance companies to fund variable annuity contracts and variable life insurance policies. The fund's investment objective is to seek to maximize total return, consisting of capital appreciation and current income. The Dreyfus Corporation (the "Manager" or "Dreyfus"), a wholly-owned subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon"), serves as the fund's investment adviser.

MBSC Securities Corporation (the "Distributor"), a wholly-owned subsidiary of Dreyfus, is the distributor of the fund's shares, which are sold without a sales charge. The fund is authorized to issue an unlimited number of $.001 par value shares of Beneficial Interest in each of the following classes of shares: Initial and Service. Each class of shares has identical rights and privileges, except with respect to the Distribution Plan and the expenses borne by each class, the allocation of certain transfer agency costs, and certain voting rights. Income, expenses (other than expenses attributable to a specific class), and realized and unrealized gains or losses on investments are allocated to each class of shares based on its relative net assets.

The Company accounts separately for the assets, liabilities and operations of each series. Expenses directly attributable to each series are charged to that series' operations; expenses which are applicable to all series are allocated among them on a pro rata basis.

The Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") is the exclusive reference of authoritative U.S. generally accepted accounting principles ("GAAP") recognized by the FASB to be applied by nongovernmental entities. Rules and interpretive releases of the Securities and Exchange Commission ("SEC") under authority of federal laws are also sources of authoritative GAAP for SEC registrants. The fund's financial statements are prepared in accordance with GAAP, which may require the use of management estimates and assumptions. Actual results could differ from those estimates.

The Company enters into contracts that contain a variety of indemnifications. The fund's maximum exposure under these

arrangements is unknown. The fund does not anticipate recognizing any loss related to these arrangements.

(a) Portfolio valuation: The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (i.e., the exit price). GAAP establishes a fair value hierarchy that prioritizes the inputs of valuation techniques used to measure fair value. This hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements).

Additionally, GAAP provides guidance on determining whether the volume and activity in a market has decreased significantly and whether such a decrease in activity results in transactions that are not orderly. GAAP requires enhanced disclosures around valuation inputs and techniques used during annual and interim periods.

Various inputs are used in determining the value of the fund's investments relating to fair value measurements. These inputs are summarized in the three broad levels listed below:

Level 1—unadjusted quoted prices in active markets for identical investments.

Level 2—other significant observable inputs (including quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.).

Level 3—significant unobservable inputs (including the fund's own assumptions in determining the fair value of investments).

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities.

Changes in valuation techniques may result in transfers in or out of an assigned level within the disclosure hierarchy. Valuation techniques used to value the fund's investments are as follows:

Registered investment companies that are not traded on an exchange are valued at their net asset value and are generally categorized within Level 1 of the fair value hierarchy.

Investments in securities, excluding short-term investments (other than U.S. Treasury Bills), financial futures, options and forward foreign currency exchange contracts ("forward contracts") are valued each business day by an independent pricing service (the "Service") approved by the Company's Board of Trustees (the "Board") Investments for which quoted bid prices

are readily available and are representative of the bid side of the market in the judgment of the Service are valued at the mean between the quoted bid prices (as obtained by the Service from dealers in such securities) and asked prices (as calculated by the Service based upon its evaluation of the market for such securities). Other investments (which constitute a majority of the portfolio securities) are valued as determined by the Service, based on methods which include consideration of the following: yields or prices of securities of comparable quality, coupon, maturity and type; indications as to values from dealers; and general market conditions. These securities are generally categorized within Level 2 of the fair value hierarchy.

U.S. Treasury Bills are valued at the mean price between quoted bid prices and asked prices by the Service. These securities are generally categorized within Level 2 of the fair value hierarchy.

The Service's procedures are reviewed by Dreyfus under the general supervision of the Board.

When market quotations or official closing prices are not readily available, or are determined not to reflect accurately fair value, such as when the value of a security has been significantly affected by events after the close of the exchange or market on which the security is principally traded (for example, a foreign exchange or market), but before the fund calculates its net asset value, the fund may value these investments at fair value as determined in accordance with the procedures approved by the Board. Certain factors may be considered when fair valuing investments such as: fundamental analytical data, the nature and duration of restrictions on disposition, an evaluation of the forces that influence the market in which the securities are purchased and sold, and public trading in similar securities of the issuer or comparable issuers. These securities are either categorized within Level 2 or 3 of the fair value hierarchy depending on the relevant inputs used.

For restricted securities where observable inputs are limited, assumptions about market activity and risk are used and are generally categorized within Level 3 of the fair value hierarchy.

Investments denominated in foreign currencies are translated to U.S. dollars at the prevailing rates of exchange.

Financial futures and options, which are traded on an exchange, are valued at the last sales price on the securities exchange on which such securities are primarily traded or at the last sales price on the national securities market on each business day and are generally categorized within Level 1 of the fair value hierarchy. Options traded over-the-counter ("OTC") are valued at the mean between the bid and asked price and are generally

categorized within Level 2 of the fair value hierarchy. Investments in swap transactions are valued each business day by the Service. Swaps are valued by the Service by using a swap pricing model which incorporates among other factors, default probabilities, recovery rates, credit curves of the underlying issuer and swap spreads on interest rates and are generally categorized within Level 2 of the fair value hierarchy. Forward contracts are valued at the forward rate and are generally categorized within Level 2 of the fair value hierarchy.

The following is a summary of the inputs used as of June 30, 2016 in valuing the fund's investments:

	Level 1 - Unadjusted Quoted Prices	Level 2 - Other Significant Observable Inputs	Level 3 - Significant Unobservable Inputs	Total
Assets ($)				
Investments in Securities:

Options Written	-	(6,600)	-	**(6,600)**

† *See Statement of Investments for additional detailed categorizations.*

†† *Amount shown represents unrealized appreciation (depreciation) at period end.*

At June 30, 2016, there were no transfers between levels of the fair value hierarchy.

(b) Foreign currency transactions: The fund does not isolate that portion of the results of operations resulting from changes in foreign exchange rates on investments from the fluctuations arising from changes in the market prices of securities held. Such fluctuations are included with the net realized and unrealized gain or loss on investments.

Net realized foreign exchange gains or losses arise from sales of foreign currencies, currency gains or losses realized on securities transactions between trade and settlement date, and the difference between the amounts of dividends, interest and foreign withholding taxes recorded on the fund's books and the U.S. dollar equivalent of the amounts actually received or paid. Net unrealized foreign exchange gains and losses arise from changes in the value of assets and liabilities other than investments resulting from changes in exchange rates. Foreign currency gains and losses on foreign currency transactions are also included with net realized and unrealized gain or loss on investments.

(c) Securities transactions and investment income: Securities transactions are recorded on a trade date basis. Realized gains and losses from securities transactions are recorded on the identified cost basis. Dividend income is recognized on the ex-dividend date and interest income, including, where applicable, accretion of discount and amortization of premium on investments, is recognized on the accrual basis.

Pursuant to a securities lending agreement with The Bank of New York Mellon, a subsidiary of BNY Mellon and an affiliate of Dreyfus, the fund may lend securities to qualified institutions. It is the fund's policy that, at origination, all loans are secured by collateral of at least 102% of the value of U.S. securities loaned and 105% of the value of foreign securities loaned. Collateral equivalent to at least 100% of the market value of securities on loan is maintained at all times. Collateral is either in the form of cash, which can be invested in certain money market mutual funds managed by Dreyfus, or U.S. Government and Agency securities. The fund is entitled to receive all dividends, interest and distributions on securities loaned, in addition to income earned as a result of the lending transaction. Should a borrower fail to return the securities in a timely manner, The Bank of New York Mellon is required to replace the securities for the benefit of the fund or credit the fund with the market value of the unreturned securities and is subrogated to the fund's rights against the borrower and the collateral. Additionally, the contractual maturity of security lending transactions are on an overnight and continuous basis. During the period ended June 30, 2016, The Bank of New York Mellon

earned $1,975 from lending portfolio securities, pursuant to the securities lending agreement.

(d) Affiliated issuers: Investments in other investment companies advised by Dreyfus are defined as "affiliated" under the Act. Investments in affiliated investment companies during the period ended June 30, 2016 were as follows:

Affiliated Investment Company	Value 12/31/2015 ($)	Purchases ($)	Sales ($)	Value 6/30/2016 ($)	Net Assets (%)
Dreyfus Institutional Cash Advantage Fund, Institutional Shares	266,500	4,273,753	4,209,303	330,950	.6
Dreyfus Institutional Preferred Plus Money Market Fund	580,061	13,210,252	13,734,263	56,050	.1
Total	**846,561**	**17,484,005**	**17,943,566**	**387,000**	**.7**

(e) Dividends to shareholders: Dividends are recorded on the ex-dividend date. Dividends from investment income-net are normally declared and paid on a monthly basis. Dividends from net realized capital gains, if any, are normally declared and paid annually, but the fund may make distributions on a more frequent basis to comply with the distribution requirements of the Internal Revenue Code of 1986, as amended (the "Code"). To the extent that net realized capital gains can be offset by capital loss carryovers, it is the policy of the fund not to distribute such gains. Income and capital gain distributions are determined in accordance with income tax regulations, which may differ from GAAP.

On June 30, 2016, the Board declared a cash dividend of $.015 and $.013 per share for the Initial shares and Service shares, respectively, from undistributed investment income-net payable on July 1, 2016 (ex-dividend date) to shareholders of record as of the close of business on June 30, 2016.

(f) Federal income taxes: It is the policy of the fund to continue to qualify as a regulated investment company, if such qualification is in the best interests of its shareholders, by complying with the applicable provisions of the Code, and to make distributions of taxable income sufficient to relieve it from substantially all federal income and excise taxes.

As of and during the period ended June 30, 2016, the fund did not have any liabilities for any uncertain tax positions. The fund recognizes interest and penalties, if any, related to uncertain tax positions as income tax

expense in the Statement of Operations. During the period ended June 30, 2016, the fund did not incur any interest or penalties.

Each tax year in the three-year period ended December 31, 2015 remains subject to examination by the Internal Revenue Service and state taxing authorities.

Under the Regulated Investment Company Modernization Act of 2010 (the "2010 Act"), the fund is permitted to carry forward capital losses incurred in taxable years beginning after December 22, 2010 ("post-enactment losses") for an unlimited period. Furthermore, post-enactment capital loss carryovers retain their character as either short-term or long-term capital losses rather than short-term as they were under previous statute. The 2010 Act requires post-enactment losses to be utilized before the utilization of losses incurred in taxable years prior to the effective date of the 2010 Act ("pre-enactment losses"). As a result of this ordering rule, pre-enactment losses may be more likely to expire unused.

The fund has an unused capital loss carryover of $718,077 available for federal income tax purposes to be applied against future net realized capital gains, if any, realized subsequent to December 31, 2015. If not applied, the carryover expires in fiscal year 2017.

The tax character of distributions paid to shareholders during the fiscal year ended December 31, 2015 was as follows: ordinary income $1,252,125. The tax character of current year distributions will be determined at the end of the current fiscal year.

NOTE 2—Bank Lines of Credit:

The fund participates with other Dreyfus-managed funds in a $555 million unsecured credit facility led by Citibank, N.A. and a $300 million unsecured credit facility provided by The Bank of New York Mellon (each, a "Facility"), each to be utilized primarily for temporary or emergency purposes, including the financing of redemptions. Prior to January 11, 2016, the unsecured credit facility with Citibank, N.A. was $480 million. In connection therewith, the fund has agreed to pay its pro rata portion of commitment fees for each Facility. Interest is charged to the fund based on rates determined pursuant to the terms of the respective Facility at the time of borrowing. During the period ended June 30, 2016, the fund did not borrow under the Facilities.

NOTE 3—Investment Advisory Fee and Other Transactions with Affiliates:

(a) Pursuant to an investment advisory agreement with Dreyfus, the investment advisory fee is computed at the annual rate of .65% of the value of the fund's average daily net assets and is payable monthly.

(b) Under the Distribution Plan adopted pursuant to Rule 12b-1 under the Act, Service shares pay the Distributor for distributing its shares, for servicing and/or maintaining Service shares' shareholder accounts and for advertising and marketing for Service shares. The Distribution Plan provides for payments to be made at an annual rate of .25% of the value of the Service shares' average daily net assets. The Distributor may make payments to Participating Insurance Companies and to brokers and dealers acting as principal underwriter for their variable insurance products. The fees payable under the Distribution Plan are payable without regard to actual expenses incurred. During the period ended June 30, 2016, Service shares were charged $17,429 pursuant to the Distribution Plan.

The fund has arrangements with the transfer agent and the custodian whereby the fund may receive earnings credits when positive cash balances are maintained, which are used to offset transfer agency and custody fees. For financial reporting purposes, the fund includes net earnings credits as an expense offset in the Statement of Operations.

The fund compensates Dreyfus Transfer, Inc., a wholly-owned subsidiary of Dreyfus, under a transfer agency agreement for providing transfer agency and cash management services for the fund. The majority of transfer agency fees are comprised of amounts paid on a per account basis, while cash management fees are related to fund subscriptions and redemptions. During the period ended June 30, 2016, the fund was charged $261 for transfer agency services and $22 for cash management services. These fees are included in Shareholder servicing costs in the Statement of Operations. Cash management fees were partially offset by earnings credits of $10.

The fund compensates The Bank of New York Mellon under a custody agreement for providing custodial services for the fund. These fees are determined based on net assets, geographic region and transaction activity. During the period ended June 30, 2016, the fund was charged $10,445 pursuant to the custody agreement.

During the period ended June 30, 2016, the fund was charged $4,812 for services performed by the Chief Compliance Officer and his staff.

The components of "Due to The Dreyfus Corporation and affiliates" in the Statement of Assets and Liabilities consist of: investment advisory fees $30,314, Distribution Plan fees $2,824, custodian fees $5,352, Chief Compliance Officer fees $4,812 and transfer agency fees $62.

(c) Each Board member also serves as a Board member of other funds within the Dreyfus complex. Annual retainer fees and attendance fees are allocated to each fund based on net assets.

NOTE 4—Securities Transactions:

The aggregate amount of purchases and sales (including paydowns) of investment securities, excluding short-term securities, forward contracts, financial futures, options transactions and swap transactions, during the period ended June 30, 2016, amounted to $74,039,153 and $79,978,394, respectively, of which $15,981,675 in purchases and $16,004,354 in sales were from mortgage dollar roll transactions.

Mortgage Dollar Rolls: A mortgage dollar roll transaction involves a sale by the fund of mortgage related securities that it holds with an agreement by the fund to repurchase similar securities at an agreed upon price and date. The securities purchased will bear the same interest rate as those sold, but generally will be collateralized by pools of mortgages with different prepayment histories than those securities sold. The fund accounts for mortgage dollar rolls as purchases and sales transactions.

Derivatives: A derivative is a financial instrument whose performance is derived from the performance of another asset. The fund enters into International Swaps and Derivatives Association, Inc. Master Agreements or similar agreements (collectively, "Master Agreements") with its OTC derivative contract counterparties in order to, among other things, reduce its credit risk to counterparties. Master Agreements include provisions for general obligations, representations, collateral and events of default or termination. Under a Master Agreement, the fund may offset with the counterparty certain derivative financial instrument's payables and/or receivables with collateral held and/or posted and create one single net payment in the event of default or termination.

Each type of derivative instrument that was held by the fund during the period ended June 30, 2016 is discussed below.

Financial Futures: In the normal course of pursuing its investment objective, the fund is exposed to market risk, including interest rate risk, as a result of changes in value of underlying financial instruments. The fund invests in financial futures in order to manage its exposure to or protect against changes in the market. A financial futures contract represents a

commitment for the future purchase or a sale of an asset at a specified date. Upon entering into such contracts, these investments require initial margin deposits with a counterparty, which consist of cash or cash equivalents. The amount of these deposits is determined by the exchange or Board of Trade on which the contract is traded and is subject to change. Accordingly, variation margin payments are received or made to reflect daily unrealized gains or losses which are recorded in the Statement of Operations. When the contracts are closed, the fund recognizes a realized gain or loss which is reflected in the Statement of Operations. There is minimal counterparty credit risk to the fund with financial futures since they are exchange traded, and the exchange guarantees the financial futures against default. At June 30, 2016, there were no financial futures outstanding.

Options Transactions: The fund purchases and writes (sells) put and call options to hedge against changes in foreign currencies or as a substitute for an investment. The fund is subject to market risk and currency risk in the course of pursuing its investment objectives through its investments in options contracts. A call option gives the purchaser of the option the right (but not the obligation) to buy, and obligates the writer to sell, the underlying financial instrument at the exercise price at any time during the option period, or at a specified date. Conversely, a put option gives the purchaser of the option the right (but not the obligation) to sell, and obligates the writer to buy the underlying financial instrument at the exercise price at any time during the option period, or at a specified date.

As a writer of call options, the fund receives a premium at the outset and then bears the market risk of unfavorable changes in the price of the financial instrument underlying the option. Generally, the fund realizes a gain, to the extent of the premium, if the price of the underlying financial instrument decreases between the date the option is written and the date on which the option is terminated. Generally, the fund incurs a loss if the price of the financial instrument increases between those dates.

As a writer of put options, the fund receives a premium at the outset and then bears the market risk of unfavorable changes in the price of the financial instrument underlying the option. Generally, the fund realizes a gain, to the extent of the premium, if the price of the underlying financial instrument increases between the date the option is written and the date on which the option is terminated. Generally, the fund incurs a loss if the price of the financial instrument decreases between those dates.

As a writer of an option, the fund has no control over whether the underlying financial instrument may be sold (call) or purchased (put) and as a result bears the market risk of an unfavorable change in the price of the

financial instrument underlying the written option. There is a risk of loss from a change in value of such options which may exceed the related premiums received. This risk is mitigated by Master Agreements between the fund and the counterparty and the posting of collateral, if any, by the counterparty to the fund to cover the fund's exposure to the counterparty. The Statement of Operations reflects any unrealized gains or losses which occurred during the period as well as any realized gains or losses which occurred upon the expiration or closing of the option transaction.

The following summarizes the fund's call/put options written during the period ended June 30, 2016:

		Options Terminated	
Option Written:	Premiums Received ($)	Cost ($)	Net Realized Gain (Loss) ($)
Contracts outstanding December 31, 2015	19,588		
Contracts written	19,314		
Contracts terminated:			
Contracts expired	27,473	-	27,473
Contracts outstanding June 30, 2016	**11,429**		

Forward Foreign Currency Exchange Contracts: The fund enters into forward contracts in order to hedge its exposure to changes in foreign currency exchange rates on its foreign portfolio holdings, to settle foreign currency transactions or as a part of its investment strategy. When executing forward contracts, the fund is obligated to buy or sell a foreign currency at a specified rate on a certain date in the future. With respect to sales of forward contracts, the fund incurs a loss if the value of the contract increases between the date the forward contract is opened and the date the forward contract is closed. The fund realizes a gain if the value of the contract decreases between those dates. With respect to purchases of forward contracts, the fund incurs a loss if the value of the contract decreases between the date the forward contract is opened and the date the forward contract is closed. The fund realizes a gain if the value of the contract increases between those dates. Any realized or unrealized gains or losses which occurred during the period are reflected in the Statement of Operations. The fund is exposed to foreign currency risk as a result of changes in value of underlying financial instruments. The fund is also exposed to credit risk associated with counterparty nonperformance on these forward contracts, which is generally limited to the unrealized gain on each open contract. This risk may be mitigated by Master Agreements, if any, between the fund and the counterparty and the posting of collateral, if any, by the counterparty to the fund to cover the fund's exposure to the

counterparty. The following summarizes open forward contracts at June 30, 2016:

Forward Foreign Currency Exchange Contracts	Foreign Currency Amounts	Cost/ Proceeds ($)	Value ($)	Unrealized Appreciation (Depreciation)($)
Purchases:

Gross Unrealized Appreciation				**31,555**
Gross Unrealized Depreciation				**(43,510)**

Swap Transactions: The fund enters into swap agreements to exchange the interest rate on, or return generated by, one nominal instrument for the return generated by another nominal instrument. Swap agreements are privately negotiated in the OTC market or centrally cleared. The fund enters into these agreements to hedge certain market or interest rate risks, to manage the interest rate sensitivity (sometimes called duration) of fixed income securities, to provide a substitute for purchasing or selling particular securities or to increase potential returns.

For OTC swaps, the fund accrues for interim payments on a daily basis, with the net amount recorded within unrealized appreciation (depreciation) on swap agreements in the Statement of Assets and Liabilities. Once the interim payments are settled in cash, the net amount is recorded as a realized gain (loss) on swaps, in addition to realized gain (loss) recorded upon the termination of swap transactions in the Statement of Operations. Upfront payments made and/or received by the fund, are recorded as an asset and/or liability in the Statement of Assets and Liabilities and are recorded as a realized gain or loss ratably over the agreement's term/event with the exception of forward starting interest rate swaps which are recorded as realized gains or losses on the termination date.

Fluctuations in the value of swap agreements are recorded for financial statement purposes as unrealized appreciation or depreciation on swap transactions.

Interest Rate Swaps: Interest rate swaps involve the exchange of commitments to pay and receive interest based on a notional principal amount. The fund may elect to pay a fixed rate and receive a floating rate, or receive a fixed rate and pay a floating rate on a notional principal amount. The net interest received or paid on interest rate swap agreements is included within realized gain (loss) on swap transactions in the Statement of Operations. Interest rate swap agreements are subject to general market risk, liquidity risk, counterparty risk and interest rate risk.

For OTC swaps, the fund's maximum risk of loss from counterparty risk is the discounted value of the cash flows to be received from the counterparty over the agreement's remaining life, to the extent that the amount is positive. This risk may be mitigated by Master Agreements, if any, between the fund and the counterparty and the posting of collateral, if any, by the counterparty to the fund to cover the fund's exposure to the counterparty. The following summarizes open interest rate swaps entered into by the fund at June 30, 2016:

OTC Interest Rate Swaps

Notional Amount ($)	Currency/ Floating Rate	Counterparty	(Pay) Receive Fixed Rate (%)	Expiration	Unrealized Appreciation ($)
5,340,000	USD - 1 YEAR US CPI URBAN CONSUMERS NSA	Deutsche Bank	0.34	10/1/2016	38,834
10,600,000	USD - 1 YEAR US CPI URBAN CONSUMERS NSA	Deutsche Bank	0.41	10/2/2016	70,350
Gross Unrealized Appreciation					**109,184**

CPI—Consumer Price Index
NSA—Not Seasonally Adjusted
USD—United States Dollar

Credit Default Swaps: Credit default swaps involve commitments to pay a fixed interest rate in exchange for payment if a credit event affecting a third party (the referenced obligation or index) occurs. Credit events may include a failure to pay interest or principal, bankruptcy, or restructuring. The fund enters into these agreements to manage its exposure to the market or certain sectors of the market, to reduce its risk exposure to defaults of corporate and sovereign issuers, or to create exposure to

corporate or sovereign issuers to which it is not otherwise exposed. For those credit default swaps in which the fund is paying a fixed rate, the fund is buying credit protection on the instrument. In the event of a credit event, the fund would receive the full notional amount for the reference obligation. For those credit default swaps in which the fund is receiving a fixed rate, the fund is selling credit protection on the underlying instrument. The maximum payouts for these agreements are limited to the notional amount of each swap. Credit default swaps may involve greater risks than if the fund had invested in the reference obligation directly and are subject to general market risk, liquidity risk, counterparty risk and credit risk. This risk may be mitigated by Master Agreements, if any, between the fund and the counterparty and the posting of collateral, if any, by the counterparty to the fund to cover the fund's exposure to the counterparty. At June 30, 2016, there were no credit default swap agreements outstanding.

The following tables show the fund's exposure to different types of market risk as it relates to the Statement of Assets and Liabilities and the Statement of Operations, respectively.

Fair value of derivative instruments as of June 30, 2016 is shown below:

	Derivative Assets ($)		Derivative Liabilities ($)
Interest rate risk	109,184[1]	Interest rate risk	-
Foreign exchange risk	34,266[2,3]	Foreign exchange risk	(50,110)[3,4]
Gross fair value of derivative contracts	**143,450**		**(50,110)**

Statement of Assets and Liabilities location:

[1] *Unrealized appreciation (depreciation) on swap agreements.*
[2] *Options purchased are included in Investments in securities—Unaffiliated issuers, at value.*
[3] *Unrealized appreciation (depreciation) on forward foreign currency exchange contracts.*
[4] *Outstanding options written, at value.*

The effect of derivative instruments in the Statement of Operations during the period ended June 30, 2016 is shown below:

	Amount of realized gain (loss) on derivatives recognized in income ($)				
Underlying risk	Financial Futures[1]	Options Transactions[2]	Forward Contracts[3]	Swaps Transactions[4]	Total
Interest rate	(16,048)	-	-	-	**(16,048)**
Foreign Exchange	-	23,191	(49,289)	-	**(26,098)**
Credit	-	-	-	1,264	**1,264**
Total	**(16,048)**	**23,191**	**(49,289)**	**1,264**	**(40,882)**

Change in unrealized appreciation (depreciation) on derivatives recognized in income ($)					
Underlying risk	Financial Futures[5]	Options Transactions[6]	Forward Contracts[7]	Swaps Transactions[8]	Total
Interest rate	(7,181)	-	-	68,363	**61,182**
Foreign Exchange	-	481	(27,603)	-	**(27,122)**
Total	**(7,181)**	**481**	**(27,603)**	**68,363**	**34,060**
Statement of Operations location:					

[1] *Net realized gain (loss) on financial futures.*

[2] *Net realized gain (loss) on options transactions.*

[3] *Net realized gain (loss) on forward foreign currency exchange contracts.*

[4] *Net realized gain (loss) on swaps transactions.*

[5] *Net unrealized appreciation (depreciation) on financial futures.*

[6] *Net unrealized appreciation (depreciation) on options transactions.*

[7] *Net unrealized appreciation (depreciation) on forward foreign currency exchange contracts.*

[8] *Net unrealized appreciation (depreciation) on swap transactions.*

The provisions of ASC Topic 210 "Disclosures about Offsetting Assets and Liabilities" require disclosure on the offsetting of financial assets and liabilities. These disclosures are required for certain investments, including derivative financial instruments subject to Master Agreements which are eligible for offsetting in the Statement of Assets and Liabilities and require the fund to disclose both gross and net information with respect to such investments. For financial reporting purposes, the fund does not offset derivative assets and derivative liabilities that are subject to Master Agreements in the Statement of Assets and Liabilities.

At June 30, 2016, derivative assets and liabilities (by type) on a gross basis are as follows:

Derivative Financial Instruments:	Assets ($)	Liabilities ($)
Options	2,711	(6,600)
Forward contracts	31,555	(43,510)
Swaps	109,184	-
Total gross amount of derivative assets and liabilities in the Statement of Assets and Liabilities	143,450	(50,110)
Derivatives not subject to Master Agreements	-	-
Total gross amount of assets and liabilities subject to Master Agreements	143,450	(50,110)

The following tables present derivative assets and liabilities net of amounts available for offsetting under Master Agreements and net of related collateral received or pledged, if any, as of June 30, 2016:

Counterparty	Gross Amount of Assets ($)[1]	Financial Instruments and Derivatives Available for Offset ($)	Collateral Received ($)	Net Amount of Assets ($)
Bank of America	2,577	(2,250)	-	327
Barclays Bank	953	-	-	953
Citigroup	16,123	(5,482)	-	10,641
Deutsche Bank	109,184	-	-	109,184
Goldman Sachs International	1,596	(391)	-	1,205
HSBC	2,575	(2,575)	-	-
JP Morgan Chase Bank	6,442	(6,442)	-	-
UBS	4,000	-	-	4,000
Total	**143,450**	**(17,140)**	**-**	**126,310**

Counterparty	Gross Amount of Liabilities ($)[1]	Financial Instruments and Derivatives Available for Offset ($)	Collateral Pledged ($)	Net Amount of Liabilities ($)
Bank of America	(2,250)	2,250	-	-
Citigroup	(5,482)	5,482	-	-
Goldman Sachs International	(391)	391	-	-
HSBC	(7,005)	2,575	-	(4,430)
JP Morgan Chase Bank	(34,982)	6,442	-	(28,540)
Total	**(50,110)**	**17,140**	**-**	**(32,970)**

[1] *Absent a default event or early termination, OTC derivative assets and liabilities are presented at gross amounts and are not offset in the Statement of Assets and Liabilities.*

The following summarizes the average market value of derivatives outstanding during the period ended June 30, 2016:

	Average Market Value ($)
Interest rate financial futures	3,436,699
Foreign currency options contracts	7,067
Forward contracts	4,885,513

The following summarizes the average notional value of swap agreements outstanding during the period ended June 30, 2016:

	Average Notional Value ($)
Interest rate swap agreements	15,940,000
Credit default swap agreements	167,143

At June 30, 2016, accumulated net unrealized appreciation on investments was $1,632,371, consisting of $1,779,514 gross unrealized appreciation and $147,143 gross unrealized depreciation.

At June 30, 2016, the cost of investments for federal income tax purposes was substantially the same as the cost for financial reporting purposes (see the Statement of Investments).

INFORMATION ABOUT THE RENEWAL OF THE FUND'S INVESTMENT ADVISORY AGREEMENTS (Unaudited)

At a meeting of the fund's Board of Trustees held on February 17-18, 2016, the Board considered the renewal of the fund's Investment Advisory Agreement pursuant to which Dreyfus provides the fund with investment advisory and administrative services (the "Agreement"). The Board members, none of whom are "interested persons" (as defined in the Investment Company Act of 1940, as amended) of the fund, were assisted in their review by independent legal counsel and met with counsel in executive session separate from Dreyfus representatives. In considering the renewal of the Agreement, the Board considered all factors that it believed to be relevant, including those discussed below. The Board did not identify any one factor as dispositive, and each Board member may have attributed different weights to the factors considered.

Analysis of Nature, Extent, and Quality of Services Provided to the Fund. The Board considered information provided to them at the meeting and in previous presentations from Dreyfus representatives regarding the nature, extent, and quality of the services provided to funds in the Dreyfus fund complex. Dreyfus provided the number of open accounts in the fund, the fund's asset size and the allocation of fund assets among distribution channels. Dreyfus also had previously provided information regarding the diverse intermediary relationships and distribution channels of funds in the Dreyfus fund complex (such as retail direct or intermediary, in which intermediaries typically are paid by the fund and/or Dreyfus) and Dreyfus' corresponding need for broad, deep, and diverse resources to be able to provide ongoing shareholder services to each intermediary or distribution channel, as applicable to the fund.

The Board also considered research support available to, and portfolio management capabilities of, the fund's portfolio management personnel and that Dreyfus also provides oversight of day-to-day fund operations, including fund accounting and administration and assistance in meeting legal and regulatory requirements. The Board also considered Dreyfus' extensive administrative, accounting and compliance infrastructures.

Comparative Analysis of the Fund's Performance and Management Fee and Expense Ratio. The Board reviewed reports prepared by Lipper, Inc. ("Lipper"), an independent provider of investment company data, which included information comparing (1) the fund's performance with the performance of a group of comparable funds (the "Performance Group") and with a broader group of funds (the "Performance Universe"), all for various periods ended December 31, 2015, and (2) the fund's actual and contractual management fees and total expenses with those of a group of comparable funds (the "Expense Group") and with a broader group of funds (the "Expense Universe"), the information for which was derived in part from fund financial statements available to Lipper as of the date of its analysis.

Dreyfus previously had furnished the Board with a description of the methodology Lipper used to select the Performance Group and Performance Universe and the Expense Group and Expense Universe.

Dreyfus representatives stated that the usefulness of performance comparisons may be affected by a number of factors, including different investment limitations that may be applicable to the fund and comparison funds. They also noted that performance generally should be considered over longer periods of time, although it is possible that long-term performance can be adversely affected by even one period of significant underperformance so that a single investment decision or theme has the ability to affect disproportionately long-term performance. The Board discussed the results of the comparisons and noted that the fund's total return performance was below the Performance Group and Performance Universe medians for all periods (lowest in the Performance Group for five out of six periods), except for the ten-year period when it was at the Performance Universe median. The Board also noted that the fund's yield performance was below the Performance Group medians for eight of the ten one-year periods ended December 31st, and was below the Performance Universe medians for seven of the ten one-year periods ended December 31st. Dreyfus also provided a comparison of the fund's calendar year total returns to the returns of the fund's benchmark index.

The Board also reviewed the range of actual and contractual management fees and total expenses of the Expense Group and Expense Universe funds and discussed the results of the comparisons. The Board noted that the fund's contractual management fee was above the Expense Group median and that the fund's actual management fee and total expenses were above the Expense Group and Expense Universe medians.

Dreyfus representatives reviewed with the Board the management or investment advisory fees (1) paid by funds advised or administered by Dreyfus that are in the same Lipper category as the fund and (2) paid to Dreyfus or the Dreyfus-affiliated primary employer of the fund's primary portfolio manager(s) for advising any separate accounts and/or other types of client portfolios that are considered to have similar investment strategies and policies as the fund (the "Similar Clients"), and explained the nature of the Similar Clients. They discussed differences in fees paid and the relationship of the fees paid in light of any differences in the services provided and other relevant factors. The Board considered the relevance of the fee information provided for the Similar Clients to evaluate the appropriateness and reasonableness of the fund's management fee.

Analysis of Profitability and Economies of Scale. Dreyfus representatives reviewed the expenses allocated and profit received by Dreyfus and its affiliates and the resulting profitability percentage for managing the fund (which has been zero for several years) and the aggregate profitability percentage to Dreyfus and its affiliates for managing the funds in the Dreyfus

fund complex, and the method used to determine the expenses and profit. The Board also had been provided with information prepared by an independent consulting firm regarding Dreyfus' approach to allocating costs to, and determining the profitability of, individual funds and the entire Dreyfus fund complex. The consulting firm also had analyzed where any economies of scale might emerge in connection with the management of a fund.

The Board considered, on the advice of its counsel, the profitability analysis (1) as part of its evaluation of whether the fees under the Agreement bear a reasonable relationship to the mix of services provided by Dreyfus, including the nature, extent and quality of such services, and (2) in light of the relevant circumstances for the fund and the extent to which economies of scale would be realized if the fund grows and whether fee levels reflect these economies of scale for the benefit of fund shareholders. Dreyfus representatives noted that a discussion of economies of scale is predicated on a fund having achieved a substantial size with increasing assets and that, if a fund's assets had been stable or decreasing, the possibility that Dreyfus may have realized any economies of scale would be less. Dreyfus representatives also noted that, as a result of shared and allocated costs among funds in the Dreyfus fund complex, the extent of economies of scale could depend substantially on the level of assets in the complex as a whole, so that increases and decreases in complex-wide assets can affect potential economies of scale in a manner that is disproportionate to, or even in the opposite direction from, changes in the fund's asset level. The Board also considered potential benefits to Dreyfus from acting as investment adviser and noted that there were no soft dollar arrangements in effect for trading the fund's investments.

At the conclusion of these discussions, the Board agreed that it had been furnished with sufficient information to make an informed business decision with respect to the renewal of the Agreement. Based on the discussions and considerations as described above, the Board concluded and determined as follows.

- The Board concluded that the nature, extent and quality of the services provided by Dreyfus are adequate and appropriate.
- The Board expressed concern about the fund's performance and agreed to closely monitor performance.
- The Board concluded that the fee paid to Dreyfus was not so disproportionately large that it could not have been the result of an arm's-length bargaining.
- The Board determined that the economies of scale which may accrue to Dreyfus and its affiliates in connection with the management of the fund had been adequately considered by Dreyfus in connection with the fee rate charged to the fund pursuant to the Agreement and

that, to the extent in the future it were determined that material economies of scale had not been shared with the fund, the Board would seek to have those economies of scale shared with the fund.

In evaluating the Agreement, the Board considered these conclusions and determinations and also relied on its previous knowledge, gained through meetings and other interactions with Dreyfus and its affiliates, of the fund and the services provided to the fund by Dreyfus. The Board also relied on information received on a routine and regular basis throughout the year relating to the operations of the fund and the investment management and other services provided under the Agreement, including information on the investment performance of the fund in comparison to similar mutual funds and benchmark performance indices; general market outlook as applicable to the fund; and compliance reports. In addition, the Board's consideration of the contractual fee arrangements for this fund had the benefit of a number of years of reviews of prior or similar agreements during which lengthy discussions took place between the Board and Dreyfus representatives. Certain aspects of the arrangements may receive greater scrutiny in some years than in others, and the Board's conclusions may be based, in part, on their consideration of the same or similar arrangements in prior years. The Board determined to renew the Agreement.

Important Notes to Performance Information

Performance data is historical and cannot predict or guarantee future results. Principal value and investment return will fluctuate with market conditions, and you may have a gain or loss when you withdraw your money. Inception dates of the funds may have preceded the effective dates of the subaccounts, contracts or their availability in all states.

When reviewing the index comparisons, please keep in mind that indexes have a number of inherent performance differentials over the funds. First, unlike the funds, which must hold a minimum amount of cash to maintain liquidity, indexes do not have a cash component. Second, the funds are actively managed and, thus, are subject to management fees to cover salaries of securities analysts or portfolio managers in addition to other expenses. Indexes are unmanaged and do not include any commissions or other expenses typically associated with investing in securities. Third, indexes often contain a different mix of securities than the fund to which they are compared. Additionally, please remember that indexes are simply a measure of performance and cannot be invested in directly.

Franklin High Income VIP Fund

This semiannual report for Franklin High Income VIP Fund covers the period ended June 30, 2016.

Class 1 Performance Summary as of June 30, 2016

The Fund's Class 1 shares delivered a +8.28% total return for the six-month period ended June 30, 2016.

*Performance reflects the Fund's Class 1 operating expenses, but does **not** include any contract fees, expenses or sales charges. If they had been included, performance would be lower. These charges and deductions, particularly for variable life policies, can have a significant effect on contract values and insurance benefits. See the contract prospectus for a complete description of these expenses, including sales charges.*

Performance data represent past performance, which does not guarantee future results. Investment return and principal value will fluctuate, and you may have a gain or loss when you sell your shares. Current performance may differ from figures shown.

Fund Goals and Main Investments

The Fund seeks a high level of current income with capital appreciation as a secondary goal. Under normal market conditions, the Fund invests predominantly in high yield, lower rated debt securities and preferred stocks.

Fund Risks

All investments involve risks, including possible loss of principal. The risks associated with higher yielding, lower rated securities include higher risk of default and loss of principal. Changes in the financial strength of a bond issuer or in a bond's credit rating may affect its value. In addition, interest rate movements will affect the Fund's share price and yield. Bond prices generally move in the opposite direction of interest rates. Thus, as prices of bonds in the Fund adjust to a rise in interest rates, the Fund's share price may decline. Investment in foreign securities also involves special risks, including currency fluctuations, and political and economic uncertainty. The Fund is actively managed but there is no guarantee that the manager's investment decisions will produce the desired results. The Fund's prospectus also includes a description of the main investment risks.

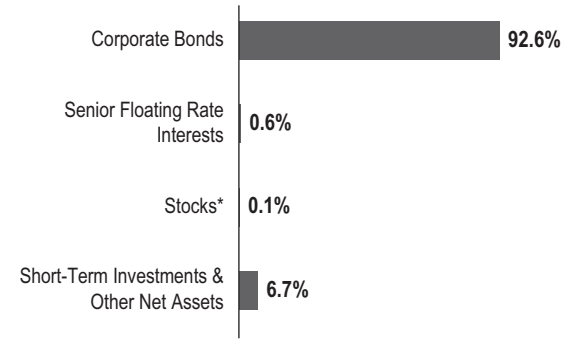
Performance Overview

You can find the Fund's six-month total return in the Performance Summary. In comparison, the Fund's benchmark, the Credit Suisse (CS) High Yield Index, posted a +9.19% total return for the period under review.[1] The Fund's peers, as measured by the Lipper VIP High Yield Funds Classification Average, delivered a +6.52% total return.[2]

Economic and Market Overview

The U.S. economy grew moderately, as measured by gross domestic product in 2016's first and second quarters, driven by consumer spending and exports. A decline in private inventory investment and nonresidential fixed investment contributed to the moderation. Although the unemployment rate rose from 4.7% in May to 4.9% in June, the increase was due to additional people entering the labor force, and for the entire period under review, unemployment declined slightly.[3] Home sales and prices rose amid relatively low mortgage rates. Monthly retail sales grew during most of the review period, and rose to the highest level in April in more than a year, due to a broad-based increase across most retail categories. Inflation, as measured by the Consumer Price Index, remained subdued overall even though it spiked to the highest level in three years in April mainly due to a rebound in energy prices.

Asset Allocation
Based on Total Net Assets as of 6/30/16



*Includes common and convertible preferred shares.

After raising its target range for the federal funds rate to 0.25%–0.50% at its December meeting, the Federal Reserve (Fed) maintained the rate through-period end. Although the Fed hinted at an interest rate hike in June, subsequent reports showed job additions slowed substantially in May. Consequently, at its June meeting, the Fed kept the federal funds rates unchanged, and indicated that in determining the timing and size of future adjustments to the target range, it will assess realized and expected economic conditions relative to its objectives of maximum employment and 2.00% inflation. The Fed expects economic conditions to evolve in a manner that could warrant only gradual increases in the federal funds rate.

The 10-year Treasury yield, which moves inversely to price, declined during the period. It declined from a period high of 2.27% on December 31, 2015, and remained relatively low through period-end, reflecting investors' concerns about global economic uncertainty. Negative interest rates in Japan and Europe, and central banks' purchases of government bonds, also put downward pressure on U.S. yields. It touched a period low of 1.46% on June 27, 2016, and ended the period at 1.49%, after the Fed kept short-term interest rates unchanged and fears of Britain's exit from the European Union (also known as the "Brexit") boosted safe-haven buying by investors.

Investment Strategy

We are research-driven, fundamental investors who rely on a team of analysts to provide in-depth industry expertise and use qualitative and quantitative analyses to evaluate companies. As bottom-up investors, we focus primarily on individual securities. We also consider sectors when choosing investments. In selecting securities for the Fund's investment portfolio, we do not rely principally on ratings assigned by rating agencies but perform our own independent analysis to evaluate an issuer's creditworthiness. We consider a variety of factors, including an issuer's experience and managerial strength, its sensitivity to economic conditions and its current financial condition.

Manager's Discussion

During the period, mixed U.S. economic data at the start of 2016, continued weak commodity prices and investor concerns about China's growth rate weighed on financial markets. The prospect of the Fed increasing its target short-term interest rate and the Brexit caused further volatility. However, by period-end, dovish comments by the Fed reassured investors, and oil prices posted a notable recovery as a rebalancing of supply and demand led to investor hopes that a sustainable price recovery was underway. Other commodities also rebounded based on general increased optimism for global growth, allowing securities in the metals and mining industry to realize price gains.

The heavy combined weighting of the energy sector and metals and mining industry significantly affected the high yield corporate bond market's performance during the period. The gain in commodity prices and change in investor sentiment drove the high yield market to stage a strong rally in the second half of the period. The Brexit caused temporary volatility, but markets quickly recovered based on analysts' prevailing view that any negative impact would be largely confined to the U.K. Overall, spreads to comparable Treasuries narrowed almost 100 basis points by period-end.

Fundamentally, with the overall decline in commodity prices throughout 2015, earnings and credit quality trends for the energy sector and metals and mining industry were challenged going into 2016. As expected, default rates in commodity-related sectors rose as companies attempted to reduce debt on their balance sheets and strengthen liquidity in the face of lower cash flow and earnings prospects.

We feel the fundamental outlook for the remainder of the high yield corporate market continued to be supportive. Although earnings growth and margin improvements may have already peaked and leverage ratios have ticked higher over the past few years, given the significant refinancing activity and earnings growth over the past several years, non-commodity high yield issuers have experienced below-average default rates. Spreads tightened during the period for many non-commodity related issuers, but given the prospect for more stable credit fundamentals, we still believed valuations to be relatively attractive across many of these industries.
