In terms of the Fund's performance, during the period the Fund underperformed the CS High Yield Index but outperformed the return of peer funds, as measured by the Lipper High Yield Funds Classification Average. The underperformance against the CS High Yield Index was primarily due to the Fund's larger positioning in the energy sector as well as certain holdings in the media and health care sectors.[4]

During the period, we drew on our fundamental research process to make individual investment decisions and to overweight and underweight certain industries relative to our benchmark in an effort to potentially outperform. Overall, our industry exposure had a negative impact on relative returns during the period. For example, our overweighted position and security selection in the cable industry detracted from performance.[5] Significant new issuance, merger and acquisition activity, a highly competitive landscape and potential spectrum sales caused volatility in the industry. Our overweighted position in large cap issuer Intelsat Jackson Holdings, a dominant player in the satellite market, also hurt Fund performance as the company's highly leveraged balance sheet was pressured in the face of uncertain demand.

4. The health care sector comprises health care equipment and services and pharmaceuticals, biotechnology and life sciences in the SOI.
5. Cable is part of media in the SOI.

The normally defensive health care sector was another detractor, with poor performance driven mainly by developments in the pharmaceuticals industry. The Fund was overweighted in the sector as a whole, which dragged on relative performance. Our position in Valeant Pharmaceuticals International, a large cap issuer in the high yield market, experienced notable price declines driven mainly by questionable accounting and strategic practices. Finally, a combination of industry positioning and security selection in the energy sector also hampered returns. Although the energy sector posted a meaningful recovery as a whole, some more leveraged issuers preemptively moved to restructure their balance sheets when oil prices approached their lows. This trend pressured the recovery in their bond prices on a relative basis and our holdings in these types of situations hurt relative performance.

Some of the Fund's industry weightings favorably impacted relative performance. The general rally in commodity prices spurred a recovery in the metals and mining industry, benefiting our overweighted position.[6] The aerospace and defense industry and the information technology sector also produced positive results.[7] The Fund's weightings in these sectors roughly matched the benchmark index, and these positionings did not significantly affect performance. However, our ratings mix in information technology was a relative contributor and our security selection in aerospace and defense outperformed the index.

Thank you for your participation in Franklin High Income VIP Fund. We look forward to serving your future investment needs.

The foregoing information reflects our analysis, opinions and portfolio holdings as of June 30, 2016, the end of the reporting period. The way we implement our main investment strategies and the resulting portfolio holdings may change depending on factors such as market and economic conditions. These opinions may not be relied upon as investment advice or an offer for a particular security. The information is not a complete analysis of every aspect of any market, country, industry, security or the Fund. Statements of fact are from sources considered reliable, but the investment manager makes no representation or warranty as to their completeness or accuracy. Although historical performance is no guarantee of future results, these insights may help you understand our investment management philosophy.

6. Metals and mining is part of materials in the SOI.

7. The aerospace and defense sector is part of capital goods in the SOI. The information technology sector comprises software and services and technology, hardware and equipment in the SOI.

Class 1 Fund Expenses

As an investor in a variable insurance contract (Contract) that indirectly provides for investment in an underlying mutual fund, you can incur transaction and/or ongoing expenses at both the Fund level and the Contract level.

- Transaction expenses can include sales charges (loads) on purchases, surrender fees, transfer fees and premium taxes.
- Ongoing expenses can include management fees, distribution and service (12b-1) fees, contract fees, annual maintenance fees, mortality and expense risk fees and other fees and expenses. All mutual funds and Contracts have some types of ongoing expenses.

The expenses shown in the table are meant to highlight ongoing expenses at the Fund level only and do not include ongoing expenses at the Contract level, or transaction expenses at either the Fund or Contract levels. While the Fund does not have transaction expenses, if the transaction and ongoing expenses at the Contract level were included, the expenses shown below would be higher. You should consult your Contract prospectus or disclosure document for more information.

The table shows Fund-level ongoing expenses and can help you understand these expenses and compare them with those of other mutual funds offered through the Contract. The table assumes a $1,000 investment held for the six months indicated. Please refer to the Fund prospectus for additional information on operating expenses.

Actual Fund Expenses

The first line (Actual) of the table provides actual account values and expenses. The "Ending Account Value" is derived from the Fund's actual return, which includes the effect of ongoing Fund expenses, but does not include the effect of ongoing Contract expenses.

You can estimate the Fund-level expenses you incurred during the period by following these steps. *Of course, your account value and expenses will differ from those in this illustration*:

1. Divide your account value by $1,000.
   If an account had an $8,600 value, then $8,600 ÷ $1,000 = 8.6.
2. Multiply the result by the number under the heading "Fund-Level Expenses Incurred During Period."
   If Fund-Level Expenses Incurred During Period were $7.50, then 8.6 × $7.50 = $64.50.

In this illustration, the estimated expenses incurred this period at the Fund level are $64.50.

Hypothetical Example for Comparison with Other Mutual Funds

Information in the second line (Hypothetical) of the table can help you compare ongoing expenses of the Fund with those of other mutual funds offered through the Contract. This information may not be used to estimate the actual ending account balance or expenses you incurred during the period. The hypothetical "Ending Account Value" is based on the Fund's actual expense ratio and an assumed 5% annual rate of return before expenses, which does not represent the Fund's actual return. The figure under the heading "Fund-Level Expenses Incurred During Period" shows the hypothetical expenses your account would have incurred under this scenario. You can compare this figure with the 5% hypothetical examples that appear in shareholder reports of other funds offered through a Contract.

Class 1	Beginning Account Value 1/1/16	Ending Account Value 6/30/16	Fund-Level Expenses Incurred During Period* 1/1/16–6/30/16
Actual	$1,000	$1,082.80	$3.16
Hypothetical (5% return before expenses)	$1,000	$1,021.83	$3.07

*Expenses are calculated using the most recent six-month annualized expense ratio for the Fund's Class 1 shares (0.61%), which does not include any ongoing expenses of the Contract for which the Fund is an investment option, multiplied by the average account value over the period, multiplied by 182/366 to reflect the one-half year period.

Financial Highlights

Franklin High Income VIP Fund

	Six Months Ended June 30, 2016 (unaudited)	Year Ended December 31, 2015	2014	2013	2012	2011

[†] Rounds to less than 0.1% of net assets.

* The principal amount is stated in U.S. dollars unless otherwise indicated.

[a] Non-income producing.

[b] Security has been deemed illiquid because it may not be able to be sold within seven days. At June 30, 2016, the aggregate value of these securities was $376,767, representing 0.1% of net assets.

[c] Perpetual security with no stated maturity date.

[d] Security was purchased pursuant to Rule 144A under the Securities Act of 1933 and may be sold in transactions exempt from registration only to qualified institutional buyers or in a public offering registered under the Securities Act of 1933. These securities have been deemed liquid under guidelines approved by the Trust's Board of Trustees. At June 30, 2016, the aggregate value of these securities was $118,323,476, representing 45.2% of net assets.

[e] See Note 7 regarding defaulted securities.

[f] At June 30, 2016, pursuant to the Fund's policies and the requirements of applicable securities law, the Fund is restricted from trading these securities at period end.

[g] Principal amount is stated in 1,000 Units.

[h] See Note 1(d) regarding senior floating rate interests.

[i] The coupon rate shown represents the rate at period end.

[j] See Note 1(c) regarding joint repurchase agreement.

Notes to Financial Statements (unaudited)

Franklin High Income VIP Fund

1. Organization and Significant Accounting Policies

Franklin Templeton Variable Insurance Products Trust (Trust) is registered under the Investment Company Act of 1940 (1940 Act) as an open-end management investment company, consisting of nineteen separate funds and applies the specialized accounting and reporting guidance in U.S. Generally Accepted Accounting Principles (U.S. GAAP). Franklin High Income VIP Fund (Fund) is included in this report. The financial statements of the remaining funds in the Trust are presented separately. Shares of the Fund are generally sold only to insurance company separate accounts to fund the benefits of variable life insurance policies or variable annuity contracts. At June 30, 2016, 85.09% of the Fund's shares were held through one insurance company. Investment activities of these insurance company separate accounts could have a material impact on the Fund. The Fund offers three classes of shares: Class 1, Class 2, and Class 4. Each class of shares differs by its distribution fees, voting rights on matters affecting a single class and its exchange privilege.

The following summarizes the Fund's significant accounting policies.

a. Financial Instrument Valuation

The Fund's investments in financial instruments are carried at fair value daily. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants on the measurement date. The Fund calculates the net asset value (NAV) per share as of 4 p.m. Eastern time each day the New York Stock Exchange (NYSE) is open for trading. Under compliance policies and procedures approved by the Trust's Board of Trustees (the Board), the Fund's administrator has responsibility for oversight of valuation, including leading the cross-functional Valuation Committee (VC). The VC provides administration and oversight of the Fund's valuation policies and procedures, which are approved annually by the Board. Among other things, these procedures allow the Fund to utilize independent pricing services, quotations from securities and financial instrument dealers, and other market sources to determine fair value.

Equity securities listed on an exchange or on the NASDAQ National Market System are valued at the last quoted sale price or the official closing price of the day, respectively. Foreign equity securities are valued as of the close of trading on the foreign stock exchange on which the security is primarily traded or as of 4 p.m. Eastern time whichever is earlier. The value is then converted into its U.S. dollar equivalent at the foreign exchange rate in effect at 4 p.m. Eastern time on the day that the value of the security is determined. Over-the-counter (OTC) securities are valued within the range of the most recent quoted bid and ask prices. Securities that trade in multiple markets or on multiple exchanges are valued according to the broadest and most representative market. Certain equity securities are valued based upon fundamental characteristics or relationships to similar securities.

Debt securities generally trade in the OTC market rather than on a securities exchange. The Fund's pricing services use multiple valuation techniques to determine fair value. In instances where sufficient market activity exists, the pricing services may utilize a market-based approach through which quotes from market makers are used to determine fair value. In instances where sufficient market activity may not exist or is limited, the pricing services also utilize proprietary valuation models which may consider market characteristics such as benchmark yield curves, credit spreads, estimated default rates, anticipated market interest rate volatility, coupon rates, anticipated timing of principal repayments, underlying collateral, and other unique security features in order to estimate the relevant cash flows, which are then discounted to calculate the fair value. Securities denominated in a foreign currency are converted into their U.S. dollar equivalent at the foreign exchange rate in effect at 4 p.m. Eastern time on the date that the values of the foreign debt securities are determined.

Repurchase agreements are valued at cost, which approximates fair value.

The Fund has procedures to determine the fair value of financial instruments for which market prices are not reliable or readily available. Under these procedures, the VC convenes on a regular basis to review such financial instruments and considers a number of factors, including significant unobservable valuation inputs, when arriving at fair value. The VC primarily employs a market-based approach which may use related or comparable assets or liabilities, recent transactions, market multiples, book values, and other relevant information for the investment to determine the fair value of the investment. An income-based valuation approach may also be used in which the anticipated future cash flows of the investment are discounted to calculate fair value. Discounts may also be applied due to the nature or duration of any restrictions on the disposition of the

Franklin High Income VIP Fund (continued)

investments. Due to the inherent uncertainty of valuations of such investments, the fair values may differ significantly from the values that would have been used had an active market existed. The VC employs various methods for calibrating these valuation approaches including a regular review of key inputs and assumptions, transactional back-testing or disposition analysis, and reviews of any related market activity.

Trading in securities on foreign securities stock exchanges and OTC markets may be completed before 4 p.m. Eastern time. In addition, trading in certain foreign markets may not take place on every NYSE business day. Occasionally, events occur between the time at which trading in a foreign security is completed and the close of the NYSE that might call into question the reliability of the value of a portfolio security held by the Fund. As a result, differences may arise between the value of the Fund's portfolio securities as determined at the foreign market close and the latest indications of value at the close of the NYSE. In order to minimize the potential for these differences, the VC monitors price movements following the close of trading in foreign stock markets through a series of country specific market proxies (such as baskets of American Depositary Receipts, futures contracts and exchange traded funds). These price movements are measured against established trigger thresholds for each specific market proxy to assist in determining if an event has occurred that may call into question the reliability of the values of the foreign securities held by the Fund. If such an event occurs, the securities may be valued using fair value procedures, which may include the use of independent pricing services.

When the last day of the reporting period is a non-business day, certain foreign markets may be open on those days that the NYSE is closed, which could result in differences between the value of the Fund's portfolio securities on the last business day and the last calendar day of the reporting period. Any significant security valuation changes due to an open foreign market are adjusted and reflected by the Fund for financial reporting purposes.

b. Foreign Currency Translation

Portfolio securities and other assets and liabilities denominated in foreign currencies are translated into U.S. dollars based on the exchange rate of such currencies against U.S. dollars on the date of valuation. The Fund may enter into foreign currency exchange contracts to facilitate transactions denominated in a foreign currency. Purchases and sales of securities, income and expense items denominated in foreign currencies are translated into U.S. dollars at the exchange rate in effect on the transaction date. Portfolio securities and assets and liabilities denominated in foreign currencies contain risks that those currencies will decline in value relative to the U.S. dollar. Occasionally, events may impact the availability or reliability of foreign exchange rates used to convert the U.S. dollar equivalent value. If such an event occurs, the foreign exchange rate will be valued at fair value using procedures established and approved by the Board.

The Fund does not separately report the effect of changes in foreign exchange rates from changes in market prices on securities held. Such changes are included in net realized and unrealized gain or loss from investments in the Statement of Operations.

Realized foreign exchange gains or losses arise from sales of foreign currencies, currency gains or losses realized between the trade and settlement dates on securities transactions and the difference between the recorded amounts of dividends, interest, and foreign withholding taxes and the U.S. dollar equivalent of the amounts actually received or paid. Net unrealized foreign exchange gains and losses arise from changes in foreign exchange rates on foreign denominated assets and liabilities other than investments in securities held at the end of the reporting period.

c. Joint Repurchase Agreement

The Fund enters into a joint repurchase agreement whereby its uninvested cash balance is deposited into a joint cash account with other funds managed by the investment manager or an affiliate of the investment manager and is used to invest in one or more repurchase agreements. The value and face amount of the joint repurchase agreement are allocated to the funds based on their pro-rata interest. A repurchase agreement is accounted for as a loan by the Fund to the seller, collateralized by securities which are delivered to the Fund's custodian. The fair value, including accrued interest, of the initial collateralization is required to be at least 102% of the dollar amount invested by the funds, with the value of the underlying securities marked to market daily to maintain coverage of at least 100%. Repurchase agreements are subject to the terms of Master Repurchase Agreements (MRAs) with approved counterparties (sellers). The MRAs contain various provisions, including but not limited to events of default and maintenance of collateral for repurchase agreements. In the event of default by either the seller or the Fund, certain MRAs may permit the non-defaulting party to net

Franklin High Income VIP Fund (continued)

1. Organization and Significant Accounting Policies (continued)

c. Joint Repurchase Agreement *(continued)*

and close-out all transactions, if any, traded under such agreements. The Fund may sell securities it holds as collateral and apply the proceeds towards the repurchase price and any other amounts owed by the seller to the Fund in the event of default by the seller. This could involve costs or delays in addition to a loss on the securities if their value falls below the repurchase price owed by the seller. The joint repurchase agreement held by the Fund at period end, as indicated in the Statement of Investments, had been entered into on June 30, 2016.

d. Senior Floating Rate Interests

The Fund invests in senior secured corporate loans that pay interest at rates which are periodically reset by reference to a base lending rate plus a spread. These base lending rates are generally the prime rate offered by a designated U.S. bank or the London InterBank Offered Rate (LIBOR). Senior secured corporate loans often require prepayment of principal from excess cash flows or at the discretion of the borrower. As a result, actual maturity may be substantially less than the stated maturity. Senior secured corporate loans in which the Fund invests are generally readily marketable, but may be subject to certain restrictions on resale.

e. Income and Deferred Taxes

It is the Fund's policy to qualify as a regulated investment company under the Internal Revenue Code. The Fund intends to distribute to shareholders substantially all of its taxable income and net realized gains to relieve it from federal income and if applicable, excise taxes. As a result, no provision for U.S. federal income taxes is required.

The Fund may be subject to foreign taxation related to income received, capital gains on the sale of securities and certain foreign currency transactions in the foreign jurisdictions in which it invests. Foreign taxes, if any, are recorded based on the tax regulations and rates that exist in the foreign markets in which the Fund invests. When a capital gain tax is determined to apply, the Fund records an estimated deferred tax liability in an amount that would be payable if the securities were disposed of on the valuation date.

The Fund may recognize an income tax liability related to its uncertain tax positions under U.S. GAAP when the uncertain tax position has a less than 50% probability that it will be sustained upon examination by the tax authorities based on its technical merits. As of June 30, 2016, the Fund has determined that no tax liability is required in its financial statements related to uncertain tax positions for any open tax years (or expected to be taken in future tax years). Open tax years are those that remain subject to examination and are based on each tax jurisdiction's statute of limitation.

f. Security Transactions, Investment Income, Expenses and Distributions

Security transactions are accounted for on trade date. Realized gains and losses on security transactions are determined on a specific identification basis. Interest income and estimated expenses are accrued daily. Amortization of premium and accretion of discount on debt securities are included in interest income. Facility fees are recognized as income over the expected term of the loan. Distributions to shareholders are recorded on the ex-dividend date and are determined according to income tax regulations (tax basis). Distributable earnings determined on a tax basis may differ from earnings recorded in accordance with U.S. GAAP. These differences may be permanent or temporary. Permanent differences are reclassified among capital accounts to reflect their tax character. These reclassifications have no impact on net assets or the results of operations. Temporary differences are not reclassified, as they may reverse in subsequent periods.

Common expenses incurred by the Trust are allocated among the Funds based on the ratio of net assets of each Fund to the combined net assets of the Trust. Fund specific expenses are charged directly to the fund that incurred the expense.

Realized and unrealized gains and losses and net investment income, not including class specific expenses, are allocated daily to each class of shares based upon the relative proportion of net assets of each class. Differences in per share distributions, by class, are generally due to differences in class specific expenses.

g. Accounting Estimates

The preparation of financial statements in accordance with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the amounts of income and expenses during the reporting period. Actual results could differ from those estimates.

Franklin High Income VIP Fund (continued)

h. Guarantees and Indemnifications

Under the Trust's organizational documents, its officers and trustees are indemnified by the Trust against certain liabilities arising out of the performance of their duties to the Trust. Additionally, in the normal course of business, the Trust, on behalf of the Fund, enters into contracts with service providers that contain general indemnification clauses. The Trust's maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Trust that have not yet occurred. Currently, the Trust expects the risk of loss to be remote.

2. Shares of Beneficial Interest

At June 30, 2016, there were an unlimited number of shares authorized (without par value). Transactions in the Fund's shares were as follows:

	Six Months Ended June 30, 2016		Year Ended December 31, 2015	
	Shares	Amount	Shares	Amount
Class 1 Shares:				
Shares sold	48,240	$ 275,100	75,416	$ 488,620
Shares issued in reinvestment of distributions	336,354	1,890,311	345,109	2,177,640
Shares redeemed	(395,202)	(2,245,853)	(874,142)	(5,563,119)
Net increase (decrease)	(10,608)	$ (80,442)	(453,617)	$ (2,896,859)
Class 2 Shares:				
Shares sold	3,993,563	$ 21,674,166	8,301,712	$ 51,141,411
Shares issued in reinvestment of distributions	2,684,938	14,579,216	2,818,239	17,219,440
Shares redeemed	(5,704,303)	(30,897,959)	(14,249,319)	(86,970,715)
Net increase (decrease)	974,198	$ 5,355,423	(3,129,368)	$(18,609,864)
Class 4 Shares:				
Shares sold	175,339	$ 949,644	185,105	$ 1,139,732
Shares issued in reinvestment of distributions	275,125	1,529,698	256,800	1,604,998
Shares redeemed	(290,428)	(1,644,715)	(474,184)	(2,956,892)
Net increase (decrease)	160,036	$ 834,627	(32,279)	$ (212,162)

3. Transactions With Affiliates

Franklin Resources, Inc. is the holding company for various subsidiaries that together are referred to as Franklin Templeton Investments. Certain officers and trustees of the Fund are also officers and/or directors of the following subsidiaries:

Subsidiary	Affiliation
Franklin Advisers, Inc. (Advisers)	Investment manager
Franklin Templeton Services, LLC (FT Services)	Administrative manager
Franklin Templeton Distributors, Inc. (Distributors)	Principal underwriter
Franklin Templeton Investor Services, LLC (Investor Services)	Transfer agent

Franklin High Income VIP Fund (continued)

3. Transactions With Affiliates (continued)

a. Management Fees

The Fund pays an investment management fee to Advisers based on the average daily net assets of the Fund as follows:

Annualized Fee Rate	Net Assets
0.625%	Up to and including $100 million
0.500%	Over $100 million, up to and including $250 million
0.450%	Over $250 million, up to and including $7.5 billion
0.440%	Over $7.5 billion, up to and including $10 billion
0.430%	Over $10 billion, up to and including $12.5 billion
0.420%	Over $12.5 billion, up to and including $15 billion
0.400%	In excess of $15 billion

For the period ended June 30, 2016, the annualized effective investment management fee rate was 0.549% of the Fund's average daily net assets.

b. Administrative Fees

Under an agreement with Advisers, FT Services provides administrative services to the Fund. The fee is paid by Advisers based on the Fund's average daily net assets, and is not an additional expense of the Fund.

c. Distribution Fees

The Board has adopted distribution plans for Class 2 and Class 4 shares pursuant to Rule 12b-1 under the 1940 Act. Under the Fund's compensation distribution plans, the Fund pays Distributors for costs incurred in connection with the servicing, sale and distribution of the Fund's shares up to 0.35% per year of its average daily net assets of each class. The Board has agreed to limit the current rate to 0.25% per year for Class 2. The plan year, for purposes of monitoring compliance with the maximum annual plan rates, is February 1 through January 31.

d. Transfer Agent Fees

Investor Services, under terms of an agreement, performs shareholder servicing for the Fund and is not paid by the Fund for the services.

4. Expense Offset Arrangement

The Fund has entered into an arrangement with its custodian whereby credits realized as a result of uninvested cash balances are used to reduce a portion of the Fund's custodian expenses. During the period ended June 30, 2016, the custodian fees were reduced as noted in the Statement of Operations.

5. Income Taxes

For tax purposes, capital losses may be carried over to offset future capital gains. Capital loss carryforwards with no expiration, if any, must be fully utilized before those losses with expiration dates.

Franklin High Income VIP Fund (continued)

At June 30, 2016, capital loss carryforwards were as follows:

Capital loss carryforwards subject to expiration:	
2016	$ 5,148,804
2017	10,621,353
Capital loss carryforwards not subject to expiration:	
Short term	79,444
Long term	9,179,067
Total capital loss carryforwards	$25,028,668

At June 30, 2016, the cost of investments and net unrealized appreciation (depreciation) for income tax purposes were as follows:

Cost of investments	$282,994,655
Unrealized appreciation	$ 4,038,847
Unrealized depreciation	(36,579,934)
Net unrealized appreciation (depreciation)	$ (32,541,087)

Differences between income and/or capital gains as determined on a book basis and a tax basis are primarily due to differing treatments of defaulted securities, bond discounts and premiums, and wash sales.

6. Investment Transactions

Purchases and sales of investments (excluding short term securities) for the period ended June 30, 2016, aggregated $29,309,337 and $33,186,100, respectively.

7. Credit Risk and Defaulted Securities

At June 30, 2016, the Fund had 95.5% of its portfolio invested in high yield securities, senior secured floating rate notes, or other securities rated below investment grade. These securities may be more sensitive to economic conditions causing greater price volatility and are potentially subject to a greater risk of loss due to default than higher rated securities.

The Fund held defaulted securities and/or other securities for which the income has been deemed uncollectible. At June 30, 2016, the aggregate value of these securities was $5,117,247, representing 2.0% of the Fund's net assets. The Fund discontinues accruing income on securities for which income has been deemed uncollectible and provides an estimate for losses on interest receivable. The securities have been identified in the accompanying Statement of Investments.

8. Credit Facility

The Fund, together with other U.S. registered and foreign investment funds (collectively, Borrowers), managed by Franklin Templeton Investments, are borrowers in a joint syndicated senior unsecured credit facility totaling $2 billion (Global Credit Facility) which matures on February 10, 2017. This Global Credit Facility provides a source of funds to the Borrowers for temporary and emergency purposes, including the ability to meet future unanticipated or unusually large redemption requests.

Under the terms of the Global Credit Facility, the Fund shall, in addition to interest charged on any borrowings made by the Fund and other costs incurred by the Fund, pay its share of fees and expenses incurred in connection with the implementation and maintenance of the Global Credit Facility, based upon its relative share of the aggregate net assets of all of the Borrowers, including an annual commitment fee of 0.07% based upon the unused portion of the Global Credit Facility. Effective February 12, 2016, the annual commitment fee is 0.15%. These fees are reflected in other expenses in the Statement of Operations. During the period ended June 30, 2016, the Fund did not use the Global Credit Facility.

Franklin High Income VIP Fund (continued)

9. Fair Value Measurements

The Fund follows a fair value hierarchy that distinguishes between market data obtained from independent sources (observable inputs) and the Fund's own market assumptions (unobservable inputs). These inputs are used in determining the value of the Fund's financial instruments and are summarized in the following fair value hierarchy:

- Level 1 – quoted prices in active markets for identical financial instruments
- Level 2 – other significant observable inputs (including quoted prices for similar financial instruments, interest rates, prepayment speed, credit risk, etc.)
- Level 3 – significant unobservable inputs (including the Fund's own assumptions in determining the fair value of financial instruments)

The input levels are not necessarily an indication of the risk or liquidity associated with financial instruments at that level.

For movements between the levels within the fair value hierarchy, the Fund has adopted a policy of recognizing the transfers as of the date of the underlying event which caused the movement.

A summary of inputs used as of June 30, 2016, in valuing the Fund's assets carried at fair value, is as follows:

	Level 1	Level 2	Level 3	Total
Assets:				
Investments in Securities				
Equity Investments[a,b]	$ —	$ —	$251,576	$ 251,576
Corporate Bonds	—	242,384,499	151,049	242,535,548
Senior Floating Rate Interests	—	1,527,466	—	1,527,466
Escrows and Litigation Trusts	—	—	—[c]	—
Short Term Investments	—	6,138,978	—	6,138,978
Total Investments in Securities	$ —	$250,050,943	$402,625	$250,453,568

[a]Includes common and convertible preferred stocks.
[b]For detailed categories, see the accompanying Statement of Investments.
[c]Includes securities determined to have no value at June 30, 2016.

A reconciliation of assets in which Level 3 inputs are used in determining fair value is presented when there are significant Level 3 financial instruments at the end of the period.

10. Subsequent Events

The Fund has evaluated subsequent events through the issuance of the financial statements and determined that no events have occurred that require disclosure.

Index Descriptions

The indexes are unmanaged and include reinvestment of any income or distributions. They do not reflect any fees, expenses or sales charges.

For Russell Indexes: Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of Russell Investment Group.

See www.franklintempletondatasources.com for additional data provider information.

Barclays U.S. Aggregate Bond Index is a market capitalization-weighted index representing the U.S. investment-grade, fixed-rate, taxable bond market with index components for government and corporate, mortgage pass-through and asset-backed securities. All issues included are SEC registered, taxable, dollar denominated and nonconvertible, must have at least one year to final maturity and must be rated investment grade (Baa3/BBB-/BBB- or higher) using the middle rating of Moody's, Standard & Poor's and Fitch, respectively.

Barclays U.S. Government Index: Intermediate Component is the intermediate component of the Barclays U.S. Government Index, which includes public obligations of the U.S. Treasury with at least one year to final maturity and publicly issued debt of U.S. government agencies, quasi-federal corporations, and corporate or foreign debt guaranteed by the U.S. government.

Bloomberg Commodity Index comprises exchange-traded futures on physical commodities, which are weighted to account for economic significance and market liquidity.

Citigroup World Government Bond Index is a market capitalization-weighted index consisting of investment-grade world government bond markets.

Consumer Price Index (CPI) is a commonly used measure of the inflation rate.

Credit Suisse (CS) High Yield Index is designed to mirror the investable universe of the U.S. dollar-denominated high yield debt market.

FTSE® EPRA®/NAREIT® Developed Index is a free float-adjusted index designed to measure the performance of publicly traded real estate securities in the North American, European and Asian real estate markets.

J.P. Morgan (JPM) Global Government Bond Index (GGBI) tracks total returns for liquid, fixed-rate, domestic government bonds with maturities greater than one year issued by developed countries globally.

Lipper Multi-Sector Income Funds Classification Average is calculated by averaging the total returns of all funds within the Lipper Multi-Sector Income Funds classification in the Lipper Open-End underlying funds universe. Lipper Multi-Sector Income Funds are defined as funds that seek current income by allocating assets among different fixed income securities sectors (not primarily in one sector except for defensive purposes), including U.S. and foreign governments, with a significant portion rated below investment grade. For the six-month period ended 6/30/16, there were 313 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

Lipper VIP Equity Income Funds Classification Average is an equally weighted average calculation of performance figures for all funds within the Lipper Equity Income Funds classification in the Lipper VIP underlying funds universe. Lipper Equity Income Funds seek relatively high current income and growth of income through investing 60% or more of their portfolios in equities. For the six-month period ended 6/30/16, there were 72 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

Lipper VIP General U.S. Government Funds Classification Average is an equally weighted average calculation of performance figures for all funds within the Lipper General U.S. Government Funds classification in the Lipper VIP underlying funds universe. Lipper General U.S. Government Funds invest primarily in U.S. government and agency issues. For the six-month period ended 6/30/16, there were 55 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

Lipper VIP High Yield Funds Classification Average is an equally weighted average calculation of performance figures for all funds within the Lipper High Yield Funds Classification in the Lipper VIP underlying funds universe. Lipper High Yield Funds aim at high (relative) current yield from fixed income securities, have no quality or maturity restrictions, and tend to invest in lower grade debt issues. For the six-month period

ended 6/30/16, there were 109 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

MSCI All Country World Index (ACWI) is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global developed and emerging markets.

MSCI All Country World Index (ACWI) ex USA Index captures large- and mid-capitalization representation across 22 of 23 developed markets countries (excluding the U.S.) and 23 emerging markets countries. The index covers approximately 85% of the global equity opportunity set outside the U.S.

MSCI Emerging Markets (EM) Index is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global emerging markets.

MSCI Europe, Australasia, Far East (EAFE) Index is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global developed markets excluding the U.S. and Canada.

MSCI World Index is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global developed markets.

Russell 1000® Growth Index is market capitalization weighted and measures performance of those Russell 1000® Index companies with higher price-to-book ratios and higher forecasted growth values.

Russell 1000® Index is market capitalization weighted and measures performance of the largest companies in the Russell 3000® Index, which represents the majority of the U.S. market's total capitalization.

Russell 2500™ Index is market capitalization weighted and measures performance of the smallest companies in the Russell 3000® Index, which represent a modest amount of the Russell 3000® Index's total market capitalization.

Russell 2500™ Value Index is market capitalization weighted and measures performance of those Russell 2500™ Index companies with lower price-to-book ratios and lower forecasted growth values.

Russell 3000® Growth Index is market capitalization weighted and measures performance of those Russell 3000® Index companies with higher price-to-book ratios and higher forecasted growth values.

Russell Midcap® Growth Index is market capitalization weighted and measures performance of those Russell Midcap® Index companies with higher price-to-book ratios and higher forecasted growth values.

Russell Midcap® Index is market capitalization weighted and measures performance of the smallest companies in the Russell 1000® Index, which represent a modest amount of the Russell 1000® Index's total market capitalization.

Standard & Poor's® 500 Index (S&P 500®) is a market capitalization-weighted index of 500 stocks designed to measure total U.S. equity market performance.

Standard & Poor's®/International Finance Corporation Investable (S&P/IFCI) Composite Index is a free float-adjusted, market capitalization-weighted index designed to measure equity performance in global emerging markets.

Shareholder Information

Board Review of Investment Management Agreement

At a meeting held April 12, 2016, the Board of Trustees (Board), including a majority of trustees that are not "interested persons" as such term is defined in section 2(a)(19) of the Investment Company Act of 1940 (hereinafter referred to as "non-interested Trustees" or "independent Trustees"), approved renewal of the investment management agreement and investment sub-advisory agreement, as applicable, for each of the separate funds within the Trust (Fund(s)). In reaching this decision, the Board took into account information furnished throughout the year at regular Board meetings, as well as information prepared specifically in connection with the annual renewal review process. Information furnished and discussed throughout the year included investment performance reports and related financial information for each Fund, along with periodic reports on expenses, shareholder services, legal and compliance matters, risk control, pricing, brokerage commissions and execution, and other services provided by each Investment Manager and investment sub-adviser (Manager(s)) and their affiliates, as well as marketing support payments made to financial intermediaries. Information furnished specifically in connection with the renewal process included reports for each Fund prepared by Broadridge Financial Solutions, Inc. (Broadridge), an independent organization, as well as additional material, including a Fund profitability analysis prepared by management. The Broadridge reports, which utilize data from Lipper, Inc. (Lipper), compared each Fund's investment performance and expenses with those of other mutual funds deemed comparable to the Fund as selected by Lipper. The Fund profitability analysis discussed the profitability to Franklin Templeton Investments (FTI) from its overall U.S. fund operations, as well as on an individual fund-by-fund basis. Additional material accompanying such profitability analysis included information on a fund-by-fund basis listing portfolio managers and other accounts they manage, as well as information on management fees charged by the Managers and their affiliates to U.S. mutual funds and other accounts, including management's explanation of differences where relevant. Such material also included a memorandum prepared by management describing project initiatives and capital investments relating to the services provided to the Funds by the FTI organization, as well as a memorandum relating to economies of scale and an analysis concerning transfer agent fees charged by an affiliate of the Managers. The Board also received a report on all marketing support payments made by FTI to financial intermediaries during the past year, as well as a memorandum relating to third-party servicing arrangements in response to a Guidance Update from the U.S. Securities and Exchange Commission (SEC) relating to mutual fund distribution and sub-accounting fees.

In considering such materials, the independent Trustees received assistance and advice from and met separately with independent counsel. While the investment management agreements and investment sub-advisory agreements, as applicable, for all Funds were considered at the same Board meeting, the Board dealt with each Fund separately. In approving continuance of the investment management agreement and investment sub-advisory agreement, as applicable, for each Fund, the Board, including a majority of independent Trustees, determined that the existing management fee structure was fair and reasonable and that continuance of each investment management agreement and investment sub-advisory agreement, as applicable, was in the best interests of such Fund and its shareholders. While attention was given to all information furnished, the following discusses some primary factors relevant to the Board's decision.

NATURE, EXTENT AND QUALITY OF SERVICE. The Board was satisfied with the nature and quality of the overall services provided by the Managers and their affiliates to the Funds and their shareholders, except as noted later with respect to investment performance and expenses. The Board's opinion was based, in part, upon periodic reports furnished it showing that the investment policies and restrictions for each Fund were consistently complied with as well as other reports periodically furnished the Board covering matters such as the compliance of portfolio managers and other management personnel with the code of ethics adopted throughout the Franklin Templeton fund complex, the adherence to fair value pricing procedures established by the Board, and the accuracy of net asset value calculations. Favorable consideration was given to management's continual efforts and expenditures in establishing effective business continuity plans and developing strategies to address cybersecurity threats. Additionally, the Board noted the Managers' continued attention to pricing and valuation issues, particularly with respect to complex securities. Among other factors taken into account by the Board was the Managers' best execution trading policies, including a favorable report by an independent portfolio trading analytical firm that also covered FOREX transactions. Consideration was also given to the experience of each Fund's portfolio management team, the

number of accounts managed and general method of compensation. In this latter respect, the Board noted that a primary factor in management's determination of a portfolio manager's bonus compensation was the relative investment performance of the funds he or she managed and that a portion of such bonus was required to be invested in a pre-designated list of funds within such person's fund management area so as to be aligned with the interests of shareholders. The Board also took into account the quality of transfer agent and shareholder services provided Fund shareholders by an affiliate of the Manager and steps taken by FTI to enhance analytical support to the investment management groups and provide additional oversight of liquidity risk and complex securities. The Board also took into account, among other things, management's efforts in establishing a global credit facility for the benefit of the Funds and other accounts managed by FTI to provide a source of cash for temporary and emergency purposes or to meet unusual redemption requests as well as the strong financial position of the Managers' parent company and its commitment to the mutual fund business as evidenced by its continued introduction of new funds and reassessment of the fund offerings in response to the market environment.

INVESTMENT PERFORMANCE. The Board placed significant emphasis on the investment performance of each of the Funds in view of its importance to shareholders. While consideration was given to performance reports and discussions with portfolio managers at Board meetings throughout the year, particular attention in assessing performance was given to the Broadridge reports furnished for the agreement renewals of all Funds. The Broadridge reports prepared for each of the individual Funds showed the investment performance of Class 1 shares for those having such class of shares and Class 2 shares for those Funds that did not have Class 1 shares, in comparison to a performance universe selected by Lipper. Comparative performance for each Fund was shown for the one-year period ended January 31, 2016, and previous periods ended that date of up to 10 years unless otherwise noted. Performance was shown on a total return basis for each Fund. In certain cases, income return was indicated as well. The following summarizes the performance results for each of the Funds and the Board's view of such performance.

Franklin Founding Funds Allocation VIP Fund – The performance universe for this Fund consisted of the Fund and all mixed-asset target allocation growth funds underlying variable insurance products as selected by Lipper. The Fund has been in operation less than 10 years. The Broadridge report showed its income return to be in the highest quintile of such Lipper universe for the one-year period, and on an annualized basis to also be in the highest quintile of such universe for each of the previous three- and five-year periods. The Broadridge report showed the Fund's total return for the one-year period to be in the lowest performing quintile of such performance universe, and on an annualized basis to also be in the lowest performing quintile of such universe for the previous three- and five-year periods. In assessing the relevance of such comparative performance, the Board noted the Fund is not actively managed and that its performance reflects those of the three underlying funds in which it invests in equal portions, which are not perfectly aligned to the investment style of comparative funds. The Board found the Fund's performance as shown in the Broadridge report to be acceptable in light of the unique investment strategy of the Fund.

Franklin Global Real Estate VIP Fund – The performance universe for this Fund consisted of the Fund and all global real estate funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return to be in the highest performing quintile of such universe for the one-year period, and on an annualized basis to also be in the highest performing quintile of such universe for the previous three- and five-year periods, but in the lowest performing quintile of such universe for the previous 10-year period. Noting the marked improvement in performance in recent years, the Board was satisfied with the Fund's comparative performance as shown in the Broadridge report.

Franklin Growth and Income VIP Fund – The performance universe for this Fund consisted of the Fund and all equity income funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return during the one-year period to be in the highest quintile of its Lipper performance universe, and on an annualized basis in each of the previous three-, five- and 10-year periods to also be in the highest quintile of such universe. The Broadridge report showed the Fund's total return for the one-year period to be in the highest performing quintile of its performance universe, and on an annualized basis to be in the second-highest performing quintile of such universe for each of the previous three-, five-, and 10-year periods. The Board found the Fund's comparative performance as shown in the Broadridge report to be satisfactory.

Franklin High Income VIP Fund – The performance universe for this Fund consisted of the Fund and all high yield funds underlying variable insurance products as selected by Lipper.

The Broadridge report showed the Fund's income return for the one-year period to be in the second-highest quintile of such performance universe, and on an annualized basis to be in the highest and second-highest quintile of such universe for the previous three- and five-year periods, respectively, and to be in the middle quintile of such universe for the previous 10-year period. The Broadridge report showed the Fund's total return to be in the lowest performing quintile of its performance universe for the one-year period, and on an annualized basis to be in the lowest performing quintile of such universe for the previous three-year period, and in the second-lowest performing quintile of such universe for the previous five- and 10-year periods. The Board found the Fund's comparative performance as shown in the Broadridge report to be acceptable given the Fund's income objective.

Franklin Income VIP Fund – The performance universe for this Fund consisted of the Fund and all mixed-asset target allocation moderate funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return to be in the highest quintile of such performance universe for the one-year period and to also be in the highest quintile of such universe for each of the previous three-, five- and 10-year periods on an annualized basis. The Broadridge report showed the Fund's total return to be in the lowest performing quintile of its performance universe for the one-year period, and on an annualized basis to be in the lowest performing quintile of such universe for the previous three- and five-year periods, and the middle performing quintile of such universe for the previous 10-year period. The Board found the Fund's comparative performance as shown in the Broadridge report to be acceptable, noting the Fund's income objective.

Franklin Large Cap Growth VIP Fund – The performance universe for this Fund consisted of the Fund and all multi-cap growth funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return to be in the second-highest performing quintile of such universe for the one-year period, and on an annualized basis to be in the middle performing quintile of such universe for the previous three-, five- and 10-year periods. The Board found the Fund's comparative performance as shown in the Broadridge report to be acceptable.

Franklin Mutual Global Discovery VIP Fund – The performance universe for this Fund consisted of the Fund and all global multi-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return to be in the highest performing quintile of such universe for the one-year period, and on an annualized basis to also be in the highest performing quintile of such universe for the previous three-, five- and 10-year periods. The Board found the Fund's overall comparative performance as set forth in the Broadridge report to be satisfactory.

Franklin Mutual Shares VIP Fund – The performance universe for this Fund consisted of the Fund and all large-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of the performance universe, and on an annualized basis to be in the lowest performing quintile of such universe for the previous three- and five-year periods, and to be in the second-lowest performing quintile for the previous 10-year period. The Board found the Fund's overall performance as set forth in the Broadridge report to be unacceptable, but acknowledged management's explanation that the Fund is managed conservatively and the Fund's cash holdings detract from relative performance in sharply rising markets. The Board indicated it would continue to monitor the Fund.

Franklin Rising Dividends VIP Fund – The performance universe for this Fund consisted of the Fund and all multi-cap core funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's comparative total return to be in the highest performing quintile of the performance universe for the one-year period, and on an annualized basis to be in the middle performing quintile of such universe for the previous three-year period, the second-highest performing quintile of such universe for the previous five-year period, and the highest performing quintile of such universe for the previous 10-year period. The Board found the Fund's comparative performance as set forth in the Broadridge report to be satisfactory.

Franklin Small Cap Value VIP Fund – The performance universe for this Fund consisted of the Fund and all small-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the highest performing quintile of such performance universe, and on an annualized basis to be in the second-lowest performing quintile of such universe for the previous three-year period, and in the second-highest performing quintile of such universe for each of the previous five- and 10-year periods. The Board found the Fund's comparative performance as set forth in the Broadridge report to be satisfactory, noting the Fund's improved performance over the past year.

Franklin Small-Mid Cap Growth VIP Fund – The performance universe for this Fund consisted of the Fund and all mid-cap growth funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of such universe, and on an annualized basis to be in the middle performing quintile of such universe for the previous three-year period, and the second-lowest performing quintile of such universe for each of the previous five- and 10-year periods. The Board discussed with management its ongoing attention to the Fund. The Board found the Fund's performance to be acceptable and noted that the three-year annualized total return performance was eight basis points above the median.

Franklin Strategic Income VIP Fund – The performance universe for this Fund consisted of the Fund and all general bond funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return to be in the highest quintile of such Lipper universe for the one-year period, and on an annualized basis to also be in the highest quintile of such universe during each of the previous three-, five- and 10-year periods. The Broadridge report showed the Fund's total return to be in the lowest performing quintile of such universe during the one-year period, and on an annualized basis to be in the second-lowest performing quintile of such universe for the previous three- and five-year periods, and the second-highest performing quintile of such universe for the previous 10-year period. The Board found the Fund's performance as shown in the Broadridge report to be acceptable, noting its income orientation.

Franklin U.S. Government Securities VIP Fund – The performance universe for this Fund consisted of the Fund and all general U.S. government funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return for the one-year period to be in the highest quintile of such universe, and on an annualized basis to also be in the highest quintile of such universe for each of the previous three-, five- and 10-year periods. The Broadridge report showed the Fund's total return to be in the highest performing quintile of such universe for the one-year period, and on an annualized basis to be in the middle performing quintile of such universe for the previous three- and 10-year periods, and in the second-lowest performing quintile of such universe for the previous five-year period. The Board found the Fund's comparative performance as shown in the Broadridge report to be satisfactory, noting the Fund's income objective and the nature of the Fund's investments, which were primarily in U.S. mortgage backed securities.

Templeton Developing Markets VIP Fund – The performance universe for this Fund consisted of the Fund and all emerging markets funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's comparative total return for the one-year period to be in the lowest performing quintile of such performance universe, and on an annualized basis to also be in the lowest performing quintile of such universe for the previous three-year period and in the second-lowest performing quintile of such universe for each of the previous five- and 10-year periods. The Board found the performance of the Fund as set forth in the Broadridge report to be unacceptable and discussed with management measures it was implementing to address the performance, including a more rigorous selling discipline. The Board concluded that continued monitoring is warranted in light of the Fund's underperformance, but did not believe a portfolio management change was needed at this time given management's attention to the Fund.

Templeton Foreign VIP Fund – The performance universe for this Fund consisted of the Fund and all international large-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's comparative total return for the one-year period to be in the lowest performing quintile of such performance universe and on an annualized basis to be in the lowest performing quintile of such universe for the previous three-year period, in the second-lowest performing quintile of such universe for the previous five-year period, and in the second-highest performing quintile of such universe for the previous 10-year period. The Board found the Fund's comparative investment performance as set forth in the Broadridge report to be acceptable, noting that performance was in the highest or second-highest quintile in seven of the previous eight years.

Templeton Global Bond VIP Fund – The performance universe for this Fund consisted of the Fund and all global income funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return for the one-year period to be in the highest quintile of such Lipper universe, and on an annualized basis to also be in the highest quintile of such universe for the previous three-, five- and 10-year periods. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of its performance universe, and on an annualized basis to be in the highest performing quintile of such universe for each of the previous three-, five- and 10-year annualized periods. The Board was satisfied with the Fund's comparative performance as set forth in the Broadridge report.

Templeton Growth VIP Fund – The performance universe for this Fund consisted of the Fund and all global large-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of such performance universe, and on an annualized basis to also be in the second-lowest performing quintile of such universe for each of the previous three- and five-year periods. (Although the Fund has been in operation for 10 years, Lipper comparative data is not available for this longer period.) The Board found the Fund's comparative performance as set forth in the Broadridge report to be acceptable, noting that the Fund's performance had been in the highest or second-highest quintile in three of the previous five one-year periods. They also observed that the Fund's annualized performance was within 1% of the median for the five- year period and at the median for the 10-year period.

COMPARATIVE EXPENSES. Consideration was given to information contained in the Broadridge reports furnished for each Fund, which compared its management fee and total expense ratio with those of a group of other funds selected by Lipper as its appropriate Lipper expense group. Lipper expense data is based upon information taken from each fund's most recent annual report, which reflects historical asset levels that may be quite different from those currently existing, particularly in a period of market volatility. While recognizing such inherent limitation and the fact that expense ratios generally increase as assets decline and decrease as assets grow, the Board believed the independent analysis conducted by Lipper to be an appropriate measure of comparative expenses. In reviewing comparative costs, Lipper provides information on the Funds' contractual investment management fee rate in comparison with the contractual investment management fee rate that would have been charged by other funds within its Lipper expense group assuming they were similar in size to the Fund, as well as the actual total expense ratio of the Fund in comparison with those of its Lipper expense group. The Lipper contractual investment management fee analysis includes administrative charges at the fund level as being part of a management fee, and actual total expenses, for comparative consistency, are shown by Lipper for the same class of shares for all funds within a particular Lipper expense group.

The results of such comparisons showed that both the contractual investment management fee rates and actual total expense ratios of the following Funds were in the least expensive quintiles of their respective Lipper expense groups: Franklin Small Cap Value VIP Fund, Franklin Growth and Income VIP Fund, Franklin High Income VIP Fund, Franklin Income VIP Fund and Templeton Global Bond VIP Fund. The Board was satisfied with the comparative contractual investment management fees and expenses of these Funds as shown in their Broadridge reports.

The contractual investment management fee rates and actual total expense ratios of each of Franklin Global Real Estate VIP Fund, Franklin Large Cap Growth VIP Fund, Franklin Mutual Global Discovery VIP Fund and Templeton Developing Markets VIP Fund were above the medians of their Lipper expense groups. In the case of contractual management fees, Franklin Mutual Global Discovery VIP Fund exceeds the median by 23.6 basis points, while the other Funds exceed the median by less than 16 basis points. The Board found the comparative contractual investment management fees and expenses of these Funds as shown in their Broadridge reports to be acceptable.

The contractual investment management fee rates of the following Funds were above the median of their Lipper expense groups, while the actual total expense ratios were at the median: Franklin Small-Mid Cap Growth VIP Fund and Templeton Growth VIP Fund. The Board found the comparative expenses of these Funds as shown in the Broadridge reports to be acceptable.

The contractual investment management fee rates of the following Funds were at or above the median of their Lipper expense groups, while the actual total expense ratios were at or below the median: Franklin Founding Funds Allocation VIP Fund and Franklin Mutual Shares VIP Fund. The Board found the comparative expenses of these Funds as shown in their Broadridge reports to be acceptable, noting that a fee waiver was in place for Franklin Founding Funds Allocation VIP Fund.

The contractual investment management fee rate and actual total expense ratio for Franklin Rising Dividends VIP Fund were both below the median of its Lipper expense group. The Board found the comparative expenses of Franklin Rising Dividends VIP Fund as shown in the Broadridge reports to be acceptable.

The contractual investment management fee rates and actual total expense ratios for the following Funds were in the first or second quintiles of their expense groups, meaning they were among the least expensive of their peers: Franklin Strategic Income VIP Fund, Franklin U.S. Government Securities VIP Fund and Templeton Foreign VIP Fund. The Board was satisfied with the comparative expenses of these Funds as shown in their Broadridge reports.

MANAGEMENT PROFITABILITY. The Board also considered the level of profits realized by the Managers and their affiliates in connection with the operation of each Fund. In this respect, the Board reviewed the Fund profitability analysis that addresses the overall profitability of Franklin Templeton's U.S. fund business, as well as its profits in providing management and other services to each of the individual funds during the 12-month period ended September 30, 2015, being the most recent fiscal year-end for Franklin Resources, Inc., the Managers' parent. In reviewing the analysis, the Board recognized that allocation methodologies are inherently subjective and various allocation methodologies may be reasonable while producing different results. In this respect, the Board noted that while management continually makes refinements to its methodologies in response to organizational and product related changes, the overall approach as defined by the primary drivers and activity measurements has remained consistent with that used in the Funds' profitability report presentations from prior years. Additionally, the Funds' independent registered public accounting firm had been engaged by the Manager to periodically review the reasonableness of the allocation methodologies to be used solely by the Funds' Board in reference to the profitability analysis. In reviewing and discussing such analysis, management discussed with the Board its belief that costs incurred in establishing the infrastructure necessary for the type of mutual fund operations conducted by the Managers and their affiliates may not be fully reflected in the expenses allocated to each Fund in determining its profitability, as well as the fact that the level of profits, to a certain extent, reflected operational cost savings and efficiencies initiated by management. The Board also took into account management's expenditures in improving services provided the Funds, as well as the need to implement systems to meet additional regulatory and compliance requirements resulting from statutes such as the Sarbanes-Oxley and Dodd-Frank Acts and recent SEC and other regulatory requirements. In addition, the Board considered a third-party study comparing the profitability of the Managers' parent on an overall basis to other publicly held managers broken down to show profitability from management operations exclusive of distribution expenses, as well as profitability including distribution expenses. The Board also considered the extent to which the Managers and their affiliates might derive ancillary benefits from Fund operations, including potential benefits resulting from personnel and systems enhancements necessitated by fund growth, increased leverage with the service providers and counterparties, allocation of fund brokerage and the use of commission dollars to pay for research. Based upon its consideration of all these factors, the Board determined that the level of profits realized by the Managers and their affiliates from providing services to each Fund was not excessive in view of the nature, quality and extent of services provided.

ECONOMIES OF SCALE. The Board also considered whether economies of scale are realized by the Manager as the Funds grow larger and the extent to which this is reflected in the level of management fees charged. While recognizing that any precise determination is inherently subjective, the Board noted that based upon the Fund profitability analysis, it appears that as some funds get larger, at some point economies of scale do result in a Manager realizing a larger profit margin on management services provided such a fund. The Board also noted that economies of scale are shared with a fund and its shareholders through management fee breakpoints so that as a fund grows in size, its effective management fee rate declines. In the case of Franklin Founding Funds Allocation VIP Fund, the management fees of the underlying funds in which it invests have management fee breakpoints that extend beyond their existing asset sizes, and in the case of each of the other Funds, other than Franklin Rising Dividends VIP Fund, their management fees contain breakpoints that extend beyond their existing asset sizes. To the extent economies of scale may be realized by the Managers and their affiliates, the Board believed the schedule of investment management fees provides a sharing of benefits for each Fund and its shareholders. The investment management structure of the Franklin Rising Dividends VIP Fund provides for a fee of 0.750% on the first $500 million of net assets; 0.625% on the next $500 million of net assets; and 0.500% on assets in excess of $1 billion. This Fund had assets of approximately $1.5 billion at December 31, 2015, and in reviewing its fee structure, management stated its belief that this fee structure reaches a relatively low rate quickly, reflecting anticipated economies of scale. In support of such position, management pointed out the favorable management fee and total expense comparisons of this Fund within its Lipper expense group as previously discussed under "Comparative Expenses." In light of such position and taking into account the fact that the reduced rate on assets in excess of the last breakpoint lowers the Fund's overall investment management fee rate, the Board believed that the schedule of investment management fees provides a sharing of benefits for the Fund and its shareholders, but intends to monitor future growth and the appropriateness of adding additional breakpoints.

Proxy Voting Policies and Procedures

The Trust's investment manager has established Proxy Voting Policies and Procedures (Policies) that the Trust uses to

determine how to vote proxies relating to portfolio securities. Shareholders may view the Trust's complete Policies online at franklintempleton.com. Alternatively, shareholders may request copies of the Policies free of charge by calling the Proxy Group collect at (954) 527-7678 or by sending a written request to: Franklin Templeton Companies, LLC, 300 S.E. 2nd Street, Fort Lauderdale, FL 33301, Attention: Proxy Group. Copies of the Trust's proxy voting records are also made available online at franklintempleton.com and posted on the U.S. Securities and Exchange Commission's website at sec.gov and reflect the most recent 12-month period ended June 30.

Quarterly Statement of Investments

The Trust files a complete statement of investments with the U.S. Securities and Exchange Commission for the first and third quarters for each fiscal year on Form N-Q. Shareholders may view the filed Form N-Q by visiting the Commission's website at sec.gov. The filed form may also be viewed and copied at the Commission's Public Reference Room in Washington, DC. Information regarding the operations of the Public Reference Room may be obtained by calling (800) SEC-0330.

Important Notes to Performance Information

Performance data is historical and cannot predict or guarantee future results. Principal value and investment return will fluctuate with market conditions, and you may have a gain or loss when you withdraw your money. Inception dates of the funds may have preceded the effective dates of the subaccounts, contracts or their availability in all states.

When reviewing the index comparisons, please keep in mind that indexes have a number of inherent performance differentials over the funds. First, unlike the funds, which must hold a minimum amount of cash to maintain liquidity, indexes do not have a cash component. Second, the funds are actively managed and, thus, are subject to management fees to cover salaries of securities analysts or portfolio managers in addition to other expenses. Indexes are unmanaged and do not include any commissions or other expenses typically associated with investing in securities. Third, indexes often contain a different mix of securities than the fund to which they are compared. Additionally, please remember that indexes are simply a measure of performance and cannot be invested in directly.

Templeton Foreign VIP Fund

This semiannual report for Templeton Foreign VIP Fund covers the period ended June 30, 2016.

Class 1 Performance Summary as of June 30, 2016

The Fund's Class 1 shares had a -2.34% total return* for the six-month period ended June 30, 2016.

*The Fund has a fee waiver associated with any investment in a Franklin Templeton money fund and/or Franklin Templeton fund, as applicable, contractually guaranteed through at least the Fund's current fiscal year-end. Fund investment results reflect the fee waiver, to the extent applicable; without this reduction, the results would have been lower.

*Performance reflects the Fund's Class 1 operating expenses, but does **not** include any contract fees, expenses or sales charges. If they had been included, performance would be lower. These charges and deductions, particularly for variable life policies, can have a significant effect on contract values and insurance benefits. See the contract prospectus for a complete description of these expenses, including sales charges.*

Performance data represent past performance, which does not guarantee future results. Investment return and principal value will fluctuate, and you may have a gain or loss when you sell your shares. Current performance may differ from figures shown.

Fund Goal and Main Investments

The Fund seeks long-term capital growth. Under normal market conditions, the Fund invests at least 80% of its net assets in investments of issuers located outside the U.S., including those in emerging markets.

Fund Risks

All investments involve risks, including possible loss of principal. Special risks are associated with foreign investing, including currency fluctuations, economic instability and political developments; investments in emerging markets involve heightened risks related to the same factors. In addition, smaller company stocks have historically experienced more price volatility than larger company stocks, especially over the short term. To the extent the Fund focuses on particular countries, regions, industries, sectors or types of investment from time to time, it may be subject to greater risks of adverse developments in such areas of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments. The Fund is actively managed but there is no guarantee that the manager's investment decisions will produce the desired results. The Fund's prospectus also includes a description of the main investment risks.

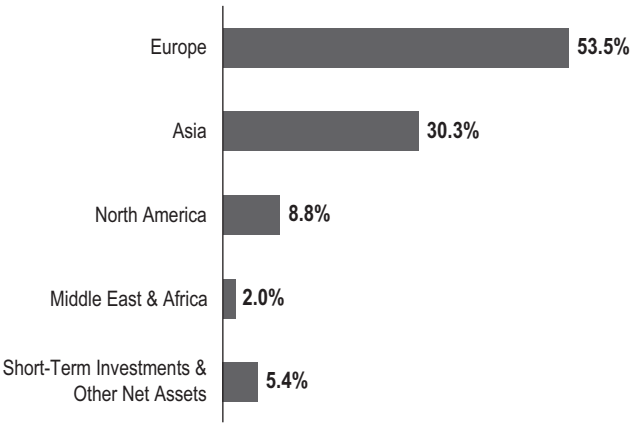
Performance Overview

You can find the Fund's six-month total return in the Performance Summary. In comparison, the Fund's new benchmark, the MSCI All Country World (ACW) ex USA Index, had a -0.67% total return for the same period, while its old benchmark, the MSCI EAFE Index, had a -4.04% total return.[1] We believe the new index better represents the Fund's investable universe and is more in line with the Fund's mandates. Please note, index performance information is provided for reference and we do not attempt to track the index but rather undertake investments on the basis of fundamental research.

Economic and Market Overview

The global economy expanded during the six months under review. An improvement in commodity prices including a rally in crude oil prices, accommodative monetary policy from various global central banks, finalization of the new debt deal for Greece and encouraging Chinese trade data toward period-end boosted market sentiment. However, global equity market volatility increased after the U.S. Federal Reserve's (Fed's) June decision to keep its federal funds target range unchanged, while providing a cautious stance on further interest rate hikes. In addition, global economic concerns and the U.K.'s historic referendum to leave the European Union (EU), also known as the "Brexit", contributed to volatile global stock markets.

Geographic Breakdown
Based on Total Net Assets as of 6/30/16



Oil prices fell at the beginning of the review period, largely due to strong global supply, but recovered in the period's second half amid oilfield outages and continued demand growth. Meanwhile, commodity prices increased for most of the review period as oversupply for a host of commodities shrank and the market appeared to be on the path of rebalancing after hitting a glut-induced bottom earlier in the year. Gold prices continued to rise following the Brexit referendum as some investors turned to safe haven investing. The U.S. dollar generally depreciated against most currencies during the period, which increased returns of many foreign assets in U.S. dollar terms. In this environment, global developed market stocks overall, as measured by the MSCI World Index, rose slightly during the period.[2]

The U.S. economy grew moderately, as measured by gross domestic product (GDP) in 2016's first and second quarters, driven by consumer spending and exports. A decline in private inventory investment and nonresidential fixed investment contributed to the moderation. The Fed maintained its target interest rate during the review period after raising it for the first time in nine years at its December meeting. The Fed kept its target rate unchanged in its June meeting mainly due to a substantial slowdown in job additions toward period-end. The Fed expects economic conditions to evolve in a manner that could warrant only gradual increases in the federal funds rate.

1. Source: Morningstar. One cannot invest directly in an index, and an index is not representative of the Fund's portfolio. Please see Index Descriptions following the Fund Summaries.

2. Please see Index Descriptions following the Fund Summaries.

In Europe, slower U.K. economic growth continued in 2016's first quarter as output slowed in construction, production and agriculture. Immediate effects of the Brexit materialized as U.K. stocks significantly declined and the pound sterling hit a three-decade low amid intensified selling. Credit rating agencies Standard & Poor's and Fitch also downgraded the U.K.'s credit rating. In the eurozone, despite investors' concerns about banking sector weakness, low corporate earnings and post-Brexit political repercussions, some regions benefited due to rising consumer spending resulting from a cheaper euro, low inflation and signs of sustained economic growth. The eurozone's annual inflation rate remained in negative territory for most of the review period; however, it rose marginally above zero in June.

Japan's economy posted mixed results, contracting in 2015's fourth quarter stemming from declining private and household consumption. However, the economy expanded during 2016's first quarter as private consumption increased and business investment decreased less than initially believed. The Bank of Japan (BOJ) took several actions during the review period. In January, to boost lending and support inflation, the BOJ introduced a negative interest rate on excess reserves held at the central bank by financial institutions. In April, the BOJ further reduced its GDP and inflation forecasts for fiscal year 2016, and decided against additional quantitative easing measures. However, after the U.K.'s vote in June to leave the EU, the BOJ hinted at carrying out flexible open market operations to stabilize its financial markets.

In emerging markets, economic growth generally moderated during the review period. Brazil's economy witnessed its longest recession since the 1930s amid political and economic turmoil, while Russia's economy continued to contract. The Bank of Russia reduced its key interest rate in an attempt to revive its economy. China's economic growth slowed marginally in 2016's first quarter compared to the previous quarter, but remained largely in line with the government's target. The People's Bank of China cut its cash reserve requirement ratio for the country's banks and effectively devalued the renminbi against the U.S. dollar to the lowest level in more than five years. Overall, emerging market stocks, as measured by the MSCI Emerging Markets Index, rose for the six-month period.[2]

Investment Strategy

Our investment philosophy is bottom up, value oriented and long term. In choosing investments, we generally focus on the market price of a company's securities relative to our evaluation of the company's potential long-term earnings, asset value and cash flow. Among factors we consider are a company's historical value measures, including price/earnings ratio, profit margins and liquidation value. We do in-depth research to construct a bargain list from which we buy.

Manager's Discussion

For the six-month period ended June 30, 2016, the Fund underperformed its benchmark, the MSCI ACW ex USA Index. However, the Fund had several notable contributors to its relative resulted including stock selection in the materials sector, particularly in metals and mining.[3] In metals and mining, precious metals streaming company Silver Wheaton (Canada) and gold, copper and nickel extractor Barrick Gold (Canada) helped the Fund's performance. Shares of Silver Wheaton increased during the period on news of strong earnings in the first quarter of 2016 following record sales and production volumes for the 2015 calendar year. In 2016, operating cash flows and revenues continued to improve relative to prior periods and at period end the company's stock price nearly doubled. Additionally, in May 2016, new management was elected during Silver Wheaton's 2016 Annual and Special Meeting of Shareholders.

An overweighted position in energy and stock selection in the information technology (IT) sectors also aided relative performance.[4] Within both sectors, some of the Fund's largest relative contributors included oil and gas drilling company Precision Drilling (Canada) and multinational electronics company Samsung Electronics (Korea). Other individual contributors included Glencore (Switzerland), Posco Daewoo (South Korea) and Subsea 7 (U.K.). Despite recent difficulties surrounding the volatility of oil prices and demand, Precision's share price increased during the period under review. The company, however, continued to report lesser earnings in both the first and second quarters of 2016, compared to the respective 2015 quarters, which was primarily attributed to contract cancellations and lack of demand for oil drillings in North America. Nonetheless, in 2016 investors began to recognize the long-term value of the organization and potential rebound, which has continued to drive the share price since the beginning of the period. Shares

3. The materials sector comprises chemicals, construction materials, and metals and mining in the SOI.

4. The energy sector comprises energy equipment and services and oil, gas and consumable fuels in the SOI. The information technology sector comprises electronic equipment, instruments and components; Internet software and services; semiconductors and semiconductor equipment; and technology hardware, storage and peripherals in the SOI.

of Samsung Electronics increased after consecutive reported earnings in 2015's fourth quarter and 2016's first quarter. Strong sales of Samsung's new flagship mobile phone models—the Galaxy S7 and the Galaxy S7 Edge—boosted its first quarter's operating performance.

In contrast, stock selection in the financials sector and specifically an overweighting in banks weighed on relative results.[5] Within the financials sector, the Fund's position in Credit Suisse (Switzerland), AXA (France) and Aegon (Netherlands) hindered results. Shares of Credit Suisse, a financial services provider, declined during the period surrounding investor uncertainty stemming partially from the events surrounding the Brexit. The company nonetheless has been combatting these effects by implementing significant cost-savings initiatives. Further, in May 2016, the company announced a change in management, which the company expects to strengthen the international wealth management division's investment capabilities.

An overweighted position in the health care sector and an underweighted position in the consumer staples sector along with stock selection in both sectors impacted relative results.[6] Within health care, positions in pharmaceutical manufacturer Teva Pharmaceutical Industries (Israel), QIAGEN (Netherlands) and MorphoSys (Germany) hurt relative results. Teva's shares declined largely due to a delay in its acquisition of Allergan's generics portfolio amid longer-than-anticipated deliberations with the U.S. Federal Trade Commission and the FDA. Among individual holdings, general goods retailer Marks and Spencer (U.K.), automobile manufacturer Nissan Motor (Japan) and financial services provider Aviva (U.K.) detracted from the Fund's relative returns. Shares of Marks and Spencer declined during the period on continued news of disappointing sales in its clothing retail division. The company restructured its strategic vision in early 2016, focusing on customer retention, sales growth and continued support of its growth food sales division, but these efforts yielded little turnaround by the end of the period.

From a geographic perspective, stock selection in North America and Asia, specifically in Canada, South Korea and Japan, contributed to the Fund's relative performance. Although the Fund's overall position in Europe detracted, some investments, such as those in Spain and Ireland contributed. Conversely, stock selection in the eurozone (including the U.K.), an overweighted allocation in Israel and an underweighted allocation in Brazil hindered returns.

Thank you for your participation in Templeton Foreign VIP Fund. We look forward to serving your future investment needs.

The foregoing information reflects our analysis, opinions and portfolio holdings as of June 30, 2016, the end of the reporting period. The way we implement our main investment strategies and the resulting portfolio holdings may change depending on factors such as market and economic conditions. These opinions may not be relied upon as investment advice or an offer for a particular security. The information is not a complete analysis of every aspect of any market, country, industry, security or the Fund. Statements of fact are from sources considered reliable, but the investment manager makes no representation or warranty as to their completeness or accuracy. Although historical performance is no guarantee of future results, these insights may help you understand our investment management philosophy.

5. The financials sector comprises banks, capital markets, diversified financial services and insurance in the SOI.

6. The health care sector comprises health care equipment and supplies, health care providers and services, life sciences tools and services and pharmaceuticals in the SOI. The consumer staples sector comprises beverages and food and staples retailing in the SOI.

Class 1 Fund Expenses

As an investor in a variable insurance contract (Contract) that indirectly provides for investment in an underlying mutual fund, you can incur transaction and/or ongoing expenses at both the Fund level and the Contract level.

- Transaction expenses can include sales charges (loads) on purchases, surrender fees, transfer fees and premium taxes.
- Ongoing expenses can include management fees, distribution and service (12b-1) fees, contract fees, annual maintenance fees, mortality and expense risk fees and other fees and expenses. All mutual funds and Contracts have some types of ongoing expenses.

The expenses shown in the table are meant to highlight ongoing expenses at the Fund level only and do not include ongoing expenses at the Contract level, or transaction expenses at either the Fund or Contract levels. While the Fund does not have transaction expenses, if the transaction and ongoing expenses at the Contract level were included, the expenses shown below would be higher. You should consult your Contract prospectus or disclosure document for more information.

The table shows Fund-level ongoing expenses and can help you understand these expenses and compare them with those of other mutual funds offered through the Contract. The table assumes a $1,000 investment held for the six months indicated. Please refer to the Fund prospectus for additional information on operating expenses.

Actual Fund Expenses

The first line (Actual) of the table provides actual account values and expenses. The "Ending Account Value" is derived from the Fund's actual return, which includes the effect of ongoing Fund expenses, but does not include the effect of ongoing Contract expenses.

You can estimate the Fund-level expenses you incurred during the period by following these steps. *Of course, your account value and expenses will differ from those in this illustration*:

1. Divide your account value by $1,000.
   If an account had an $8,600 value, then $8,600 ÷ $1,000 = 8.6.
2. Multiply the result by the number under the heading "Fund-Level Expenses Incurred During Period."
   If Fund-Level Expenses Incurred During Period were $7.50, then 8.6 × $7.50 = $64.50.

In this illustration, the estimated expenses incurred this period at the Fund level are $64.50.

Hypothetical Example for Comparison with Other Mutual Funds

Information in the second line (Hypothetical) of the table can help you compare ongoing expenses of the Fund with those of other mutual funds offered through the Contract. This information may not be used to estimate the actual ending account balance or expenses you incurred during the period. The hypothetical "Ending Account Value" is based on the Fund's actual expense ratio and an assumed 5% annual rate of return before expenses, which does not represent the Fund's actual return. The figure under the heading "Fund-Level Expenses Incurred During Period" shows the hypothetical expenses your account would have incurred under this scenario. You can compare this figure with the 5% hypothetical examples that appear in shareholder reports of other funds offered through a Contract.

Class 1	Beginning Account Value 1/1/16	Ending Account Value 6/30/16	Fund-Level Expenses Incurred During Period* 1/1/16–6/30/16
Actual	$1,000	$ 976.60	$3.83
Hypothetical (5% return before expenses)	$1,000	$1,020.98	$3.92

*Expenses are calculated using the most recent six-month annualized expense ratio, net of expense waivers, for the Fund's Class 1 shares (0.78%), which does not include any ongoing expenses of the Contract for which the Fund is an investment option, multiplied by the average account value over the period, multiplied by 182/366 to reflect the one-half year period.

SUPPLEMENT DATED JUNE 27, 2016
TO THE PROSPECTUSES DATED MAY 1, 2016
OF
TEMPLETON FOREIGN VIP FUND
TEMPLETON GROWTH VIP FUND
(Series of Franklin Templeton Variable Insurance Products Trust)

Effective June 30, 2016, the prospectus is amended as follows:

I. The benchmark for the Templeton Foreign VIP Fund has changed from the MSCI EAFE Index to the MSCI ACWI EX USA Index. The "Fund Summary – Performance – Average Annual Total Returns" table on page TF-S4 is revised to add the following:

	1 Year	5 Years	10 Years
MSCI All Country World ex-US Index (index reflects no deduction for fees, expenses or taxes)[1]	-5.25%	1.51%	3.38%

1. Performance figures as of December 31, 2015. The MSCI All Country World ex-US Index is replacing the MSCI EAFE Index as the Fund's benchmark. The investment manager believes the composition of the MSCI All Country World ex-US Index more accurately reflects the Fund's holdings.

II. The benchmark for the Templeton Growth VIP Fund has changed from the MSCI World Index to the MSCI ACWI Index. The "Fund Summary – Performance – Average Annual Total Returns" table on page TG-S3 is revised to add the following:

	1 Year	5 Years	10 Years
MSCI All Country World Index (index reflects no deduction for fees, expenses or taxes)[1]	-1.84%	6.66%	5.31%

1. Performance figures as of December 31, 2015. The MSCI All Country World Index is replacing the MSCI World Index as the Fund's benchmark. The investment manager believes the composition of the MSCI All Country World Index more accurately reflects the Fund's holdings.

Please keep this supplement with your prospectus for future reference.

Notes to Financial Statements (unaudited)

Templeton Foreign VIP Fund

1. Organization and Significant Accounting Policies

Franklin Templeton Variable Insurance Products Trust (Trust) is registered under the Investment Company Act of 1940 (1940 Act) as an open-end management investment company, consisting of nineteen separate funds and applies the specialized accounting and reporting guidance in U.S. Generally Accepted Accounting Principles (U.S. GAAP). Templeton Foreign VIP Fund (Fund) is included in this report. The financial statements of the remaining funds in the Trust are presented separately. Shares of the Fund are generally sold only to insurance company separate accounts to fund the benefits of variable life insurance policies or variable annuity contracts. The Fund offers three classes of shares: Class 1, Class 2, and Class 4. Each class of shares differs by its distribution fees, voting rights on matters affecting a single class and its exchange privilege.

The following summarizes the Fund's significant accounting policies.

a. Financial Instrument Valuation

The Fund's investments in financial instruments are carried at fair value daily. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants on the measurement date. The Fund calculates the net asset value (NAV) per share as of 4 p.m. Eastern time each day the New York Stock Exchange (NYSE) is open for trading. Under compliance policies and procedures approved by the Trust's Board of Trustees (the Board), the Fund's administrator has responsibility for oversight of valuation, including leading the cross-functional Valuation Committee (VC). The VC provides administration and oversight of the Fund's valuation policies and procedures, which are approved annually by the Board. Among other things, these procedures allow the Fund to utilize independent pricing services, quotations from securities and financial instrument dealers, and other market sources to determine fair value.

Equity securities listed on an exchange or on the NASDAQ National Market System are valued at the last quoted sale price or the official closing price of the day, respectively. Foreign equity securities are valued as of the close of trading on the foreign stock exchange on which the security is primarily traded or as of 4 p.m. Eastern time whichever is earlier. The value is then converted into its U.S. dollar equivalent at the foreign exchange rate in effect at 4 p.m. Eastern time on the day that the value of the security is determined. Over-the-counter (OTC) securities are valued within the range of the most recent quoted bid and ask prices. Securities that trade in multiple markets or on multiple exchanges are valued according to the broadest and most representative market. Certain equity securities are valued based upon fundamental characteristics or relationships to similar securities.

Investments in open-end mutual funds are valued at the closing NAV.

The Fund has procedures to determine the fair value of financial instruments for which market prices are not reliable or readily available. Under these procedures, the VC convenes on a regular basis to review such financial instruments and considers a number of factors, including significant unobservable valuation inputs, when arriving at fair value. The VC primarily employs a market-based approach which may use related or comparable assets or liabilities, recent transactions, market multiples, book values, and other relevant information for the investment to determine the fair value of the investment. An income-based valuation approach may also be used in which the anticipated future cash flows of the investment are discounted to calculate fair value. Discounts may also be applied due to the nature or duration of any restrictions on the disposition of the investments. Due to the inherent uncertainty of valuations of such investments, the fair values may differ significantly from the values that would have been used had an active market existed. The VC employs various methods for calibrating these valuation approaches including a regular review of key inputs and assumptions, transactional back-testing or disposition analysis, and reviews of any related market activity.

Trading in securities on foreign securities stock exchanges and OTC markets may be completed before 4 p.m. Eastern time. In addition, trading in certain foreign markets may not take place on every NYSE business day. Occasionally, events occur between the time at which trading in a foreign security is completed and the close of the NYSE that might call into question the reliability of the value of a portfolio security held by the Fund. As a result, differences may arise between the value of the Fund's portfolio securities as determined at the foreign market close and the latest indications of value at the close of the NYSE. In order to minimize the potential for these differences, the VC monitors price movements following the close of trading in foreign stock markets through a series of country specific market proxies (such as baskets of American Depositary Receipts, futures contracts and exchange traded funds).

Templeton Foreign VIP Fund (continued)

1. Organization and Significant Accounting Policies (continued)

a. Financial Instrument Valuation *(continued)*

These price movements are measured against established trigger thresholds for each specific market proxy to assist in determining if an event has occurred that may call into question the reliability of the values of the foreign securities held by the Fund. If such an event occurs, the securities may be valued using fair value procedures, which may include the use of independent pricing services.

When the last day of the reporting period is a non-business day, certain foreign markets may be open on those days that the NYSE is closed, which could result in differences between the value of the Fund's portfolio securities on the last business day and the last calendar day of the reporting period. Any significant security valuation changes due to an open foreign market are adjusted and reflected by the Fund for financial reporting purposes.

b. Foreign Currency Translation

Portfolio securities and other assets and liabilities denominated in foreign currencies are translated into U.S. dollars based on the exchange rate of such currencies against U.S. dollars on the date of valuation. The Fund may enter into foreign currency exchange contracts to facilitate transactions denominated in a foreign currency. Purchases and sales of securities, income and expense items denominated in foreign currencies are translated into U.S. dollars at the exchange rate in effect on the transaction date. Portfolio securities and assets and liabilities denominated in foreign currencies contain risks that those currencies will decline in value relative to the U.S. dollar. Occasionally, events may impact the availability or reliability of foreign exchange rates used to convert the U.S. dollar equivalent value. If such an event occurs, the foreign exchange rate will be valued at fair value using procedures established and approved by the Board.

The Fund does not separately report the effect of changes in foreign exchange rates from changes in market prices on securities held. Such changes are included in net realized and unrealized gain or loss from investments in the Statement of Operations.

Realized foreign exchange gains or losses arise from sales of foreign currencies, currency gains or losses realized between the trade and settlement dates on securities transactions and the difference between the recorded amounts of dividends, interest, and foreign withholding taxes and the U.S. dollar equivalent of the amounts actually received or paid. Net unrealized foreign exchange gains and losses arise from changes in foreign exchange rates on foreign denominated assets and liabilities other than investments in securities held at the end of the reporting period.

c. Securities Lending

The Fund participates in an agency based securities lending program to earn additional income. The Fund receives cash collateral against the loaned securities in an amount equal to at least 102% of the fair value of the loaned securities. Collateral is maintained over the life of the loan in an amount not less than 100% of the fair value of loaned securities, as determined at the close of Fund business each day; any additional collateral required due to changes in security values is delivered to the Fund on the next business day. The collateral is deposited into a joint cash account with other funds and is used to invest in a money market fund managed by Franklin Advisers, Inc., an affiliate of the Fund. The Fund may receive income from the investment of cash collateral, in addition to lending fees and rebates paid by the borrower. Income from securities loaned, net of fees paid to the securities lending agent and/or third-party vendor, is reported separately in the Statement of Operations. The Fund bears the market risk with respect to the collateral investment, securities loaned, and the risk that the agent may default on its obligations to the Fund. If the borrower defaults on its obligation to return the securities loaned, the Fund has the right to repurchase the securities in the open market using the collateral received. The securities lending agent has agreed to indemnify the Fund in the event of default by a third party borrower.

d. Income and Deferred Taxes

It is the Fund's policy to qualify as a regulated investment company under the Internal Revenue Code. The Fund intends to distribute to shareholders substantially all of its taxable income and net realized gains to relieve it from federal income and if applicable, excise taxes. As a result, no provision for U.S. federal income taxes is required.

The Fund may be subject to foreign taxation related to income received, capital gains on the sale of securities and certain foreign currency transactions in the foreign jurisdictions in which it invests. Foreign taxes, if any, are recorded based on the tax regulations and rates that exist in the foreign markets in which the Fund invests. When a capital gain tax is determined to apply, the Fund records an estimated deferred tax liability in

Templeton Foreign VIP Fund (continued)

an amount that would be payable if the securities were disposed of on the valuation date. As a result of several court cases, in certain countries across the European Union, the Fund filed additional tax reclaims for previously withheld taxes on dividends earned in those countries (EU reclaims). These additional filings are subject to various administrative proceedings by the local jurisdictions' tax authorities within the European Union, as well as a number of related judicial proceedings. Income recognized, if any, for EU reclaims is reflected as other income in the Statement of Operations and any related receivable, if any, is reflected as European Union tax reclaims in the Statement of Assets and Liabilities. When uncertainty exists as to the ultimate resolution of these proceedings, the likelihood of receipt of these EU reclaims, and the potential timing of payment, no amounts are reflected in the financial statements.

The Fund may recognize an income tax liability related to its uncertain tax positions under U.S. GAAP when the uncertain tax position has a less than 50% probability that it will be sustained upon examination by the tax authorities based on its technical merits. As of June 30, 2016, the Fund has determined that no tax liability is required in its financial statements related to uncertain tax positions for any open tax years (or expected to be taken in future tax years). Open tax years are those that remain subject to examination and are based on each tax jurisdiction's statute of limitation.

e. Security Transactions, Investment Income, Expenses and Distributions

Security transactions are accounted for on trade date. Realized gains and losses on security transactions are determined on a specific identification basis. Interest income and estimated expenses are accrued daily. Dividend income is recorded on the ex-dividend date except for certain dividends from foreign securities where the dividend rate is not available. In such cases, the dividend is recorded as soon as the information is received by the Fund. Distributions to shareholders are recorded on the ex-dividend date and are determined according to income tax regulations (tax basis). Distributable earnings determined on a tax basis may differ from earnings recorded in accordance with U.S. GAAP. These differences may be permanent or temporary. Permanent differences are reclassified among capital accounts to reflect their tax character. These reclassifications have no impact on net assets or the results of operations. Temporary differences are not reclassified, as they may reverse in subsequent periods.

Common expenses incurred by the Trust are allocated among the Funds based on the ratio of net assets of each Fund to the combined net assets of the Trust. Fund specific expenses are charged directly to the fund that incurred the expense.

Realized and unrealized gains and losses and net investment income, not including class specific expenses, are allocated daily to each class of shares based upon the relative proportion of net assets of each class. Differences in per share distributions, by class, are generally due to differences in class specific expenses.

f. Accounting Estimates

The preparation of financial statements in accordance with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the amounts of income and expenses during the reporting period. Actual results could differ from those estimates.

g. Redemption Fees

Redemptions and exchanges of interests in an insurance company subaccount that invested in Class 3 shares of the Fund were subject to a 1.0% short term trading fee if the interest in the subaccount had been held for less than 60 days. Such fees were retained by the Fund and accounted for as an addition to paid-in capital, allocated to each class of shares based upon the relative proportion of net assets of each class. There were no redemption fees for the period.

h. Guarantees and Indemnifications

Under the Trust's organizational documents, its officers and trustees are indemnified by the Trust against certain liabilities arising out of the performance of their duties to the Trust. Additionally, in the normal course of business, the Trust, on behalf of the Fund, enters into contracts with service providers that contain general indemnification clauses. The Trust's maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Trust that have not yet occurred. Currently, the Trust expects the risk of loss to be remote.

Templeton Foreign VIP Fund (continued)

2. Shares of Beneficial Interest

At June 30, 2016, there were an unlimited number of shares authorized (without par value). Transactions in the Fund's shares were as follows:

	Six Months Ended June 30, 2016		Year Ended December 31, 2015	
	Shares	Amount	Shares	Amount
Class 1 Shares:				
Shares sold	187,606	$ 2,408,488	454,466	$ 6,842,816
Shares issued in reinvestment of distributions	633,861	7,973,968	1,057,790	16,173,612
Shares redeemed	(924,389)	(12,026,022)	(1,792,103)	(27,033,382)
Net increase (decrease)	(102,922)	$ (1,643,566)	(279,847)	$ (4,016,954)
Class 2 Shares:				
Shares sold	8,819,370	$ 113,983,326	14,594,828	$ 213,082,680
Shares issued in reinvestment of distributions	4,365,589	53,871,367	6,974,654	104,689,555
Shares redeemed	(8,362,774)	(105,990,309)	(20,492,400)	(305,835,763)
Net increase (decrease)	4,822,185	$ 61,864,384	1,077,082	$ 11,936,472
Class 4 Shares:				
Shares sold	2,906,866	$ 36,677,027	5,690,434	$ 80,692,209
Shares issued on reinvestment of distributions	1,344,436	16,724,782	2,072,852	31,341,523
Shares redeemed	(2,473,404)	(31,614,986)	(5,429,602)	(81,185,489)
Net increase (decrease)	1,777,898	$ 21,786,823	2,333,684	$ 30,848,243

3. Transactions With Affiliates

Franklin Resources, Inc. is the holding company for various subsidiaries that together are referred to as Franklin Templeton Investments. Certain officers and trustees of the Fund are also officers and/or directors of the following subsidiaries:

Subsidiary	Affiliation
Templeton Investment Counsel, LLC (TIC)	Investment manager
Franklin Templeton Services, LLC (FT Services)	Administrative manager
Franklin Templeton Distributors, Inc. (Distributors)	Principal underwriter
Franklin Templeton Investor Services, LLC (Investor Services)	Transfer agent

a. Management Fees

The Fund pays an investment management fee to TIC based on the average daily net assets of the Fund as follows:

Annualized Fee Rate	Net Assets
0.900%	Up to and including $200 million
0.810%	Over $200 million, up to and including $700 million
0.775%	Over $700 million, up to and including $1.2 billion
0.750%	Over $1.2 billion, up to and including $1.3 billion
0.675%	Over $1.3 billion, up to and including $10 billion
0.655%	Over $10 billion, up to and including $15 billion
0.635%	Over $15 billion, up to and including $20 billion
0.615%	In excess of $20 billion

Templeton Foreign VIP Fund (continued)

For the period ended June 30, 2016, the annualized effective investment management fee rate was 0.758% of the Fund's average daily net assets.

b. Administrative Fees

Under an agreement with TIC, FT Services provides administrative services to the Fund. The fee is paid by TIC based on the Fund's average daily net assets, and is not an additional expense of the Fund.

c. Distribution Fees

The Board has adopted distribution plans for Class 2 and Class 4 shares pursuant to Rule 12b-1 under the 1940 Act. Under the Fund's compensation distribution plans, the Fund pays Distributors for costs incurred in connection with the servicing, sale and distribution of the Fund's shares up to 0.25% and 0.35% per year of its average daily net assets of Class 2 and Class 4, respectively. The plan year, for purposes of monitoring compliance with the maximum annual plan rates, is February 1 through January 31.

d. Transfer Agent Fees

Investor Services, under terms of an agreement, performs shareholder servicing for the Fund and is not paid by the Fund for the services.

e. Investments in Affiliated Management Investment Companies

The Fund invests in one or more affiliated management investment companies for purposes other than exercising a controlling influence over the management or policies. Management fees paid by the Fund are waived on assets invested in the affiliated management investment companies, as noted in the Statement of Operations, in an amount not to exceed the management and administrative fees paid directly or indirectly by each affiliate. Prior to January 1, 2014, the waiver was accounted for as a reduction to management fees.

	Number of Shares Held at Beginning of Period	Gross Additions	Gross Reductions	Number of Shares Held at End of Period	Value at End of Period	Investment Income	Realized Gain (Loss)	% of Affiliated Fund Shares Outstanding Held at End of Period
Non-Controlled Affiliates								
Institutional Fiduciary Trust Money Market Portfolio	71,421,269	685,470,192	(652,794,543)	104,096,918	$104,096,918	$ —	$ —	0.5%

4. Expense Offset Arrangement

The Fund has entered into an arrangement with its custodian whereby credits realized as a result of uninvested cash balances are used to reduce a portion of the Fund's custodian expenses. During the period ended June 30, 2016, there were no credits earned.

5. Income Taxes

At June 30, 2016, the cost of investments and net unrealized appreciation (depreciation) for income tax purposes were as follows:

Cost of investments	$2,184,560,139
Unrealized appreciation	$ 267,302,947
Unrealized depreciation	(369,611,214)
Net unrealized appreciation (depreciation)	$ (102,308,267)

Differences between income and/or capital gains as determined on a book basis and a tax basis are primarily due to differing treatment of foreign capital gains tax.

Templeton Foreign VIP Fund (continued)

6. Investment Transactions

Purchases and sales of investments (excluding short term securities) for the period ended June 30, 2016, aggregated $199,100,919 and $194,372,981, respectively.

At June 30, 2016, in connection with securities lending transactions, the Fund loaned equity investments and received $7,952,392 of cash collateral. The gross amount of recognized liability for such transactions is included in payable upon return of securities loaned in the Statement of Assets and Liabilities. The agreements can be terminated at any time.

7. Concentration of Risk

Investing in foreign securities may include certain risks and considerations not typically associated with investing in U.S. securities, such as fluctuating currency values and changing local and regional economic, political and social conditions, which may result in greater market volatility. In addition, certain foreign securities may not be as liquid as U.S. securities.

8. Credit Facility

The Fund, together with other U.S. registered and foreign investment funds (collectively, Borrowers), managed by Franklin Templeton Investments, are borrowers in a joint syndicated senior unsecured credit facility totaling $2 billion (Global Credit Facility) which matures on February 10, 2017. This Global Credit Facility provides a source of funds to the Borrowers for temporary and emergency purposes, including the ability to meet future unanticipated or unusually large redemption requests.

Under the terms of the Global Credit Facility, the Fund shall, in addition to interest charged on any borrowings made by the Fund and other costs incurred by the Fund, pay its share of fees and expenses incurred in connection with the implementation and maintenance of the Global Credit Facility, based upon its relative share of the aggregate net assets of all of the Borrowers, including an annual commitment fee of 0.07% based upon the unused portion of the Global Credit Facility. Effective February 12, 2016, the annual commitment fee is 0.15%. These fees are reflected in other expenses in the Statement of Operations. During the period ended June 30, 2016, the Fund did not use the Global Credit Facility.

9. Fair Value Measurements

The Fund follows a fair value hierarchy that distinguishes between market data obtained from independent sources (observable inputs) and the Fund's own market assumptions (unobservable inputs). These inputs are used in determining the value of the Fund's financial instruments and are summarized in the following fair value hierarchy:

- Level 1 – quoted prices in active markets for identical financial instruments
- Level 2 – other significant observable inputs (including quoted prices for similar financial instruments, interest rates, prepayment speed, credit risk, etc.)
- Level 3 – significant unobservable inputs (including the Fund's own assumptions in determining the fair value of financial instruments)

The input levels are not necessarily an indication of the risk or liquidity associated with financial instruments at that level.

For movements between the levels within the fair value hierarchy, the Fund has adopted a policy of recognizing the transfers as of the date of the underlying event which caused the movement.

A summary of inputs used as of June 30, 2016, in valuing the Fund's assets carried at fair value were valued using Level 1 inputs. For detailed categories, see the accompanying Statement of Investments.

Templeton Foreign VIP Fund (continued)

10. Subsequent Events

The Fund has evaluated subsequent events through the issuance of the financial statements and determined that no events have occurred that require disclosure.

Tax Information (unaudited)

Templeton Foreign VIP Fund

At December 31, 2015, more than 50% of the Fund's total assets were invested in securities of foreign issuers. In most instances, foreign taxes were withheld from income paid to the Fund on these investments. As shown in the table below, the Fund hereby reports to shareholders the foreign source income and foreign taxes paid, pursuant to Section 853 of the Internal Revenue Code. This written statement will allow shareholders of record on June 14, 2016, to treat their proportionate share of foreign taxes paid by the Fund as having been paid directly by them. The shareholder shall consider these amounts as foreign taxes paid in the tax year in which they receive the Fund distribution.

The following table provides a detailed analysis of foreign tax paid, and foreign source income as reported by the Fund, to Class 1, Class 2, and Class 4 shareholders of record.

Class	Foreign Tax Paid Per Share	Foreign Source Income Per Share
Class 1	$0.0241	$0.3139
Class 2	$0.0241	$0.2779
Class 4	$0.0241	$0.2651

Foreign Tax Paid Per Share (Column 1) is the amount per share available to you, as a tax credit (assuming you held your shares in the Fund for a minimum of 16 days during the 31-day period beginning 15 days before the ex-dividend date of the Fund's distribution to which the foreign taxes relate), or, as a tax deduction.

Foreign Source Income Per Share (Column 2) is the amount per share of income dividends attributable to foreign securities held by the Fund, plus any foreign taxes withheld on these dividends.

Index Descriptions

The indexes are unmanaged and include reinvestment of any income or distributions. They do not reflect any fees, expenses or sales charges.

For Russell Indexes: Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of Russell Investment Group.

See www.franklintempletondatasources.com for additional data provider information.

Barclays U.S. Aggregate Bond Index is a market capitalization-weighted index representing the U.S. investment-grade, fixed-rate, taxable bond market with index components for government and corporate, mortgage pass-through and asset-backed securities. All issues included are SEC registered, taxable, dollar denominated and nonconvertible, must have at least one year to final maturity and must be rated investment grade (Baa3/BBB-/BBB- or higher) using the middle rating of Moody's, Standard & Poor's and Fitch, respectively.

Barclays U.S. Government Index: Intermediate Component is the intermediate component of the Barclays U.S. Government Index, which includes public obligations of the U.S. Treasury with at least one year to final maturity and publicly issued debt of U.S. government agencies, quasi-federal corporations, and corporate or foreign debt guaranteed by the U.S. government.

Bloomberg Commodity Index comprises exchange-traded futures on physical commodities, which are weighted to account for economic significance and market liquidity.

Citigroup World Government Bond Index is a market capitalization-weighted index consisting of investment-grade world government bond markets.

Consumer Price Index (CPI) is a commonly used measure of the inflation rate.

Credit Suisse (CS) High Yield Index is designed to mirror the investable universe of the U.S. dollar-denominated high yield debt market.

FTSE® EPRA®/NAREIT® Developed Index is a free float-adjusted index designed to measure the performance of publicly traded real estate securities in the North American, European and Asian real estate markets.

J.P. Morgan (JPM) Global Government Bond Index (GGBI) tracks total returns for liquid, fixed-rate, domestic government bonds with maturities greater than one year issued by developed countries globally.

Lipper Multi-Sector Income Funds Classification Average is calculated by averaging the total returns of all funds within the Lipper Multi-Sector Income Funds classification in the Lipper Open-End underlying funds universe. Lipper Multi-Sector Income Funds are defined as funds that seek current income by allocating assets among different fixed income securities sectors (not primarily in one sector except for defensive purposes), including U.S. and foreign governments, with a significant portion rated below investment grade. For the six-month period ended 6/30/16, there were 313 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

Lipper VIP Equity Income Funds Classification Average is an equally weighted average calculation of performance figures for all funds within the Lipper Equity Income Funds classification in the Lipper VIP underlying funds universe. Lipper Equity Income Funds seek relatively high current income and growth of income through investing 60% or more of their portfolios in equities. For the six-month period ended 6/30/16, there were 72 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

Lipper VIP General U.S. Government Funds Classification Average is an equally weighted average calculation of performance figures for all funds within the Lipper General U.S. Government Funds classification in the Lipper VIP underlying funds universe. Lipper General U.S. Government Funds invest primarily in U.S. government and agency issues. For the six-month period ended 6/30/16, there were 55 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

Lipper VIP High Yield Funds Classification Average is an equally weighted average calculation of performance figures for all funds within the Lipper High Yield Funds Classification in the Lipper VIP underlying funds universe. Lipper High Yield Funds aim at high (relative) current yield from fixed income securities, have no quality or maturity restrictions, and tend to invest in lower grade debt issues. For the six-month period

ended 6/30/16, there were 109 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

MSCI All Country World Index (ACWI) is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global developed and emerging markets.

MSCI All Country World Index (ACWI) ex USA Index captures large- and mid-capitalization representation across 22 of 23 developed markets countries (excluding the U.S.) and 23 emerging markets countries. The index covers approximately 85% of the global equity opportunity set outside the U.S.

MSCI Emerging Markets (EM) Index is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global emerging markets.

MSCI Europe, Australasia, Far East (EAFE) Index is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global developed markets excluding the U.S. and Canada.

MSCI World Index is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global developed markets.

Russell 1000® Growth Index is market capitalization weighted and measures performance of those Russell 1000® Index companies with higher price-to-book ratios and higher forecasted growth values.

Russell 1000® Index is market capitalization weighted and measures performance of the largest companies in the Russell 3000® Index, which represents the majority of the U.S. market's total capitalization.

Russell 2500™ Index is market capitalization weighted and measures performance of the smallest companies in the Russell 3000® Index, which represent a modest amount of the Russell 3000® Index's total market capitalization.

Russell 2500™ Value Index is market capitalization weighted and measures performance of those Russell 2500™ Index companies with lower price-to-book ratios and lower forecasted growth values.

Russell 3000® Growth Index is market capitalization weighted and measures performance of those Russell 3000® Index companies with higher price-to-book ratios and higher forecasted growth values.

Russell Midcap® Growth Index is market capitalization weighted and measures performance of those Russell Midcap® Index companies with higher price-to-book ratios and higher forecasted growth values.

Russell Midcap® Index is market capitalization weighted and measures performance of the smallest companies in the Russell 1000® Index, which represent a modest amount of the Russell 1000® Index's total market capitalization.

Standard & Poor's® 500 Index (S&P 500®) is a market capitalization-weighted index of 500 stocks designed to measure total U.S. equity market performance.

Standard & Poor's®/International Finance Corporation Investable (S&P/IFCI) Composite Index is a free float-adjusted, market capitalization-weighted index designed to measure equity performance in global emerging markets.

Shareholder Information

Board Review of Investment Management Agreement

At a meeting held April 12, 2016, the Board of Trustees (Board), including a majority of trustees that are not "interested persons" as such term is defined in section 2(a)(19) of the Investment Company Act of 1940 (hereinafter referred to as "non-interested Trustees" or "independent Trustees"), approved renewal of the investment management agreement and investment sub-advisory agreement, as applicable, for each of the separate funds within the Trust (Fund(s)). In reaching this decision, the Board took into account information furnished throughout the year at regular Board meetings, as well as information prepared specifically in connection with the annual renewal review process. Information furnished and discussed throughout the year included investment performance reports and related financial information for each Fund, along with periodic reports on expenses, shareholder services, legal and compliance matters, risk control, pricing, brokerage commissions and execution, and other services provided by each Investment Manager and investment sub-adviser (Manager(s)) and their affiliates, as well as marketing support payments made to financial intermediaries. Information furnished specifically in connection with the renewal process included reports for each Fund prepared by Broadridge Financial Solutions, Inc. (Broadridge), an independent organization, as well as additional material, including a Fund profitability analysis prepared by management. The Broadridge reports, which utilize data from Lipper, Inc. (Lipper), compared each Fund's investment performance and expenses with those of other mutual funds deemed comparable to the Fund as selected by Lipper. The Fund profitability analysis discussed the profitability to Franklin Templeton Investments (FTI) from its overall U.S. fund operations, as well as on an individual fund-by-fund basis. Additional material accompanying such profitability analysis included information on a fund-by-fund basis listing portfolio managers and other accounts they manage, as well as information on management fees charged by the Managers and their affiliates to U.S. mutual funds and other accounts, including management's explanation of differences where relevant. Such material also included a memorandum prepared by management describing project initiatives and capital investments relating to the services provided to the Funds by the FTI organization, as well as a memorandum relating to economies of scale and an analysis concerning transfer agent fees charged by an affiliate of the Managers. The Board also received a report on all marketing support payments made by FTI to financial intermediaries during the past year, as well as a memorandum relating to third-party servicing arrangements in response to a Guidance Update from the U.S. Securities and Exchange Commission (SEC) relating to mutual fund distribution and sub-accounting fees.

In considering such materials, the independent Trustees received assistance and advice from and met separately with independent counsel. While the investment management agreements and investment sub-advisory agreements, as applicable, for all Funds were considered at the same Board meeting, the Board dealt with each Fund separately. In approving continuance of the investment management agreement and investment sub-advisory agreement, as applicable, for each Fund, the Board, including a majority of independent Trustees, determined that the existing management fee structure was fair and reasonable and that continuance of each investment management agreement and investment sub-advisory agreement, as applicable, was in the best interests of such Fund and its shareholders. While attention was given to all information furnished, the following discusses some primary factors relevant to the Board's decision.

NATURE, EXTENT AND QUALITY OF SERVICE. The Board was satisfied with the nature and quality of the overall services provided by the Managers and their affiliates to the Funds and their shareholders, except as noted later with respect to investment performance and expenses. The Board's opinion was based, in part, upon periodic reports furnished it showing that the investment policies and restrictions for each Fund were consistently complied with as well as other reports periodically furnished the Board covering matters such as the compliance of portfolio managers and other management personnel with the code of ethics adopted throughout the Franklin Templeton fund complex, the adherence to fair value pricing procedures established by the Board, and the accuracy of net asset value calculations. Favorable consideration was given to management's continual efforts and expenditures in establishing effective business continuity plans and developing strategies to address cybersecurity threats. Additionally, the Board noted the Managers' continued attention to pricing and valuation issues, particularly with respect to complex securities. Among other factors taken into account by the Board was the Managers' best execution trading policies, including a favorable report by an independent portfolio trading analytical firm that also covered FOREX transactions. Consideration was also given to the experience of each Fund's portfolio management team, the

number of accounts managed and general method of compensation. In this latter respect, the Board noted that a primary factor in management's determination of a portfolio manager's bonus compensation was the relative investment performance of the funds he or she managed and that a portion of such bonus was required to be invested in a pre-designated list of funds within such person's fund management area so as to be aligned with the interests of shareholders. The Board also took into account the quality of transfer agent and shareholder services provided Fund shareholders by an affiliate of the Manager and steps taken by FTI to enhance analytical support to the investment management groups and provide additional oversight of liquidity risk and complex securities. The Board also took into account, among other things, management's efforts in establishing a global credit facility for the benefit of the Funds and other accounts managed by FTI to provide a source of cash for temporary and emergency purposes or to meet unusual redemption requests as well as the strong financial position of the Managers' parent company and its commitment to the mutual fund business as evidenced by its continued introduction of new funds and reassessment of the fund offerings in response to the market environment.

INVESTMENT PERFORMANCE. The Board placed significant emphasis on the investment performance of each of the Funds in view of its importance to shareholders. While consideration was given to performance reports and discussions with portfolio managers at Board meetings throughout the year, particular attention in assessing performance was given to the Broadridge reports furnished for the agreement renewals of all Funds. The Broadridge reports prepared for each of the individual Funds showed the investment performance of Class 1 shares for those having such class of shares and Class 2 shares for those Funds that did not have Class 1 shares, in comparison to a performance universe selected by Lipper. Comparative performance for each Fund was shown for the one-year period ended January 31, 2016, and previous periods ended that date of up to 10 years unless otherwise noted. Performance was shown on a total return basis for each Fund. In certain cases, income return was indicated as well. The following summarizes the performance results for each of the Funds and the Board's view of such performance.

Franklin Founding Funds Allocation VIP Fund – The performance universe for this Fund consisted of the Fund and all mixed-asset target allocation growth funds underlying variable insurance products as selected by Lipper. The Fund has been in operation less than 10 years. The Broadridge report showed its income return to be in the highest quintile of such Lipper universe for the one-year period, and on an annualized basis to also be in the highest quintile of such universe for each of the previous three- and five-year periods. The Broadridge report showed the Fund's total return for the one-year period to be in the lowest performing quintile of such performance universe, and on an annualized basis to also be in the lowest performing quintile of such universe for the previous three- and five-year periods. In assessing the relevance of such comparative performance, the Board noted the Fund is not actively managed and that its performance reflects those of the three underlying funds in which it invests in equal portions, which are not perfectly aligned to the investment style of comparative funds. The Board found the Fund's performance as shown in the Broadridge report to be acceptable in light of the unique investment strategy of the Fund.

Franklin Global Real Estate VIP Fund – The performance universe for this Fund consisted of the Fund and all global real estate funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return to be in the highest performing quintile of such universe for the one-year period, and on an annualized basis to also be in the highest performing quintile of such universe for the previous three- and five-year periods, but in the lowest performing quintile of such universe for the previous 10-year period. Noting the marked improvement in performance in recent years, the Board was satisfied with the Fund's comparative performance as shown in the Broadridge report.

Franklin Growth and Income VIP Fund – The performance universe for this Fund consisted of the Fund and all equity income funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return during the one-year period to be in the highest quintile of its Lipper performance universe, and on an annualized basis in each of the previous three-, five- and 10-year periods to also be in the highest quintile of such universe. The Broadridge report showed the Fund's total return for the one-year period to be in the highest performing quintile of its performance universe, and on an annualized basis to be in the second-highest performing quintile of such universe for each of the previous three-, five-, and 10-year periods. The Board found the Fund's comparative performance as shown in the Broadridge report to be satisfactory.

Franklin High Income VIP Fund – The performance universe for this Fund consisted of the Fund and all high yield funds underlying variable insurance products as selected by Lipper.

The Broadridge report showed the Fund's income return for the one-year period to be in the second-highest quintile of such performance universe, and on an annualized basis to be in the highest and second-highest quintile of such universe for the previous three- and five-year periods, respectively, and to be in the middle quintile of such universe for the previous 10-year period. The Broadridge report showed the Fund's total return to be in the lowest performing quintile of its performance universe for the one-year period, and on an annualized basis to be in the lowest performing quintile of such universe for the previous three-year period, and in the second-lowest performing quintile of such universe for the previous five- and 10-year periods. The Board found the Fund's comparative performance as shown in the Broadridge report to be acceptable given the Fund's income objective.

Franklin Income VIP Fund – The performance universe for this Fund consisted of the Fund and all mixed-asset target allocation moderate funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return to be in the highest quintile of such performance universe for the one-year period and to also be in the highest quintile of such universe for each of the previous three-, five- and 10-year periods on an annualized basis. The Broadridge report showed the Fund's total return to be in the lowest performing quintile of its performance universe for the one-year period, and on an annualized basis to be in the lowest performing quintile of such universe for the previous three- and five-year periods, and the middle performing quintile of such universe for the previous 10-year period. The Board found the Fund's comparative performance as shown in the Broadridge report to be acceptable, noting the Fund's income objective.

Franklin Large Cap Growth VIP Fund – The performance universe for this Fund consisted of the Fund and all multi-cap growth funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return to be in the second-highest performing quintile of such universe for the one-year period, and on an annualized basis to be in the middle performing quintile of such universe for the previous three-, five- and 10-year periods. The Board found the Fund's comparative performance as shown in the Broadridge report to be acceptable.

Franklin Mutual Global Discovery VIP Fund – The performance universe for this Fund consisted of the Fund and all global multi-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return to be in the highest performing quintile of such universe for the one-year period, and on an annualized basis to also be in the highest performing quintile of such universe for the previous three-, five- and 10-year periods. The Board found the Fund's overall comparative performance as set forth in the Broadridge report to be satisfactory.

Franklin Mutual Shares VIP Fund – The performance universe for this Fund consisted of the Fund and all large-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of the performance universe, and on an annualized basis to be in the lowest performing quintile of such universe for the previous three- and five-year periods, and to be in the second-lowest performing quintile for the previous 10-year period. The Board found the Fund's overall performance as set forth in the Broadridge report to be unacceptable, but acknowledged management's explanation that the Fund is managed conservatively and the Fund's cash holdings detract from relative performance in sharply rising markets. The Board indicated it would continue to monitor the Fund.

Franklin Rising Dividends VIP Fund – The performance universe for this Fund consisted of the Fund and all multi-cap core funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's comparative total return to be in the highest performing quintile of the performance universe for the one-year period, and on an annualized basis to be in the middle performing quintile of such universe for the previous three-year period, the second-highest performing quintile of such universe for the previous five-year period, and the highest performing quintile of such universe for the previous 10-year period. The Board found the Fund's comparative performance as set forth in the Broadridge report to be satisfactory.

Franklin Small Cap Value VIP Fund – The performance universe for this Fund consisted of the Fund and all small-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the highest performing quintile of such performance universe, and on an annualized basis to be in the second-lowest performing quintile of such universe for the previous three-year period, and in the second-highest performing quintile of such universe for each of the previous five- and 10-year periods. The Board found the Fund's comparative performance as set forth in the Broadridge report to be satisfactory, noting the Fund's improved performance over the past year.

Franklin Small-Mid Cap Growth VIP Fund – The performance universe for this Fund consisted of the Fund and all mid-cap growth funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of such universe, and on an annualized basis to be in the middle performing quintile of such universe for the previous three-year period, and the second-lowest performing quintile of such universe for each of the previous five- and 10-year periods. The Board discussed with management its ongoing attention to the Fund. The Board found the Fund's performance to be acceptable and noted that the three-year annualized total return performance was eight basis points above the median.

Franklin Strategic Income VIP Fund – The performance universe for this Fund consisted of the Fund and all general bond funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return to be in the highest quintile of such Lipper universe for the one-year period, and on an annualized basis to also be in the highest quintile of such universe during each of the previous three-, five- and 10-year periods. The Broadridge report showed the Fund's total return to be in the lowest performing quintile of such universe during the one-year period, and on an annualized basis to be in the second-lowest performing quintile of such universe for the previous three- and five-year periods, and the second-highest performing quintile of such universe for the previous 10-year period. The Board found the Fund's performance as shown in the Broadridge report to be acceptable, noting its income orientation.

Franklin U.S. Government Securities VIP Fund – The performance universe for this Fund consisted of the Fund and all general U.S. government funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return for the one-year period to be in the highest quintile of such universe, and on an annualized basis to also be in the highest quintile of such universe for each of the previous three-, five- and 10-year periods. The Broadridge report showed the Fund's total return to be in the highest performing quintile of such universe for the one-year period, and on an annualized basis to be in the middle performing quintile of such universe for the previous three- and 10-year periods, and in the second-lowest performing quintile of such universe for the previous five-year period. The Board found the Fund's comparative performance as shown in the Broadridge report to be satisfactory, noting the Fund's income objective and the nature of the Fund's investments, which were primarily in U.S. mortgage backed securities.

Templeton Developing Markets VIP Fund – The performance universe for this Fund consisted of the Fund and all emerging markets funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's comparative total return for the one-year period to be in the lowest performing quintile of such performance universe, and on an annualized basis to also be in the lowest performing quintile of such universe for the previous three-year period and in the second-lowest performing quintile of such universe for each of the previous five- and 10-year periods. The Board found the performance of the Fund as set forth in the Broadridge report to be unacceptable and discussed with management measures it was implementing to address the performance, including a more rigorous selling discipline. The Board concluded that continued monitoring is warranted in light of the Fund's underperformance, but did not believe a portfolio management change was needed at this time given management's attention to the Fund.

Templeton Foreign VIP Fund – The performance universe for this Fund consisted of the Fund and all international large-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's comparative total return for the one-year period to be in the lowest performing quintile of such performance universe and on an annualized basis to be in the lowest performing quintile of such universe for the previous three-year period, in the second-lowest performing quintile of such universe for the previous five-year period, and in the second-highest performing quintile of such universe for the previous 10-year period. The Board found the Fund's comparative investment performance as set forth in the Broadridge report to be acceptable, noting that performance was in the highest or second-highest quintile in seven of the previous eight years.

Templeton Global Bond VIP Fund – The performance universe for this Fund consisted of the Fund and all global income funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return for the one-year period to be in the highest quintile of such Lipper universe, and on an annualized basis to also be in the highest quintile of such universe for the previous three-, five- and 10-year periods. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of its performance universe, and on an annualized basis to be in the highest performing quintile of such universe for each of the previous three-, five- and 10-year annualized periods. The Board was satisfied with the Fund's comparative performance as set forth in the Broadridge report.

Templeton Growth VIP Fund – The performance universe for this Fund consisted of the Fund and all global large-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of such performance universe, and on an annualized basis to also be in the second-lowest performing quintile of such universe for each of the previous three- and five-year periods. (Although the Fund has been in operation for 10 years, Lipper comparative data is not available for this longer period.) The Board found the Fund's comparative performance as set forth in the Broadridge report to be acceptable, noting that the Fund's performance had been in the highest or second-highest quintile in three of the previous five one-year periods. They also observed that the Fund's annualized performance was within 1% of the median for the five- year period and at the median for the 10-year period.

COMPARATIVE EXPENSES. Consideration was given to information contained in the Broadridge reports furnished for each Fund, which compared its management fee and total expense ratio with those of a group of other funds selected by Lipper as its appropriate Lipper expense group. Lipper expense data is based upon information taken from each fund's most recent annual report, which reflects historical asset levels that may be quite different from those currently existing, particularly in a period of market volatility. While recognizing such inherent limitation and the fact that expense ratios generally increase as assets decline and decrease as assets grow, the Board believed the independent analysis conducted by Lipper to be an appropriate measure of comparative expenses. In reviewing comparative costs, Lipper provides information on the Funds' contractual investment management fee rate in comparison with the contractual investment management fee rate that would have been charged by other funds within its Lipper expense group assuming they were similar in size to the Fund, as well as the actual total expense ratio of the Fund in comparison with those of its Lipper expense group. The Lipper contractual investment management fee analysis includes administrative charges at the fund level as being part of a management fee, and actual total expenses, for comparative consistency, are shown by Lipper for the same class of shares for all funds within a particular Lipper expense group.

The results of such comparisons showed that both the contractual investment management fee rates and actual total expense ratios of the following Funds were in the least expensive quintiles of their respective Lipper expense groups: Franklin Small Cap Value VIP Fund, Franklin Growth and Income VIP Fund, Franklin High Income VIP Fund, Franklin Income VIP Fund and Templeton Global Bond VIP Fund. The Board was satisfied with the comparative contractual investment management fees and expenses of these Funds as shown in their Broadridge reports.

The contractual investment management fee rates and actual total expense ratios of each of Franklin Global Real Estate VIP Fund, Franklin Large Cap Growth VIP Fund, Franklin Mutual Global Discovery VIP Fund and Templeton Developing Markets VIP Fund were above the medians of their Lipper expense groups. In the case of contractual management fees, Franklin Mutual Global Discovery VIP Fund exceeds the median by 23.6 basis points, while the other Funds exceed the median by less than 16 basis points. The Board found the comparative contractual investment management fees and expenses of these Funds as shown in their Broadridge reports to be acceptable.

The contractual investment management fee rates of the following Funds were above the median of their Lipper expense groups, while the actual total expense ratios were at the median: Franklin Small-Mid Cap Growth VIP Fund and Templeton Growth VIP Fund. The Board found the comparative expenses of these Funds as shown in the Broadridge reports to be acceptable.

The contractual investment management fee rates of the following Funds were at or above the median of their Lipper expense groups, while the actual total expense ratios were at or below the median: Franklin Founding Funds Allocation VIP Fund and Franklin Mutual Shares VIP Fund. The Board found the comparative expenses of these Funds as shown in their Broadridge reports to be acceptable, noting that a fee waiver was in place for Franklin Founding Funds Allocation VIP Fund.

The contractual investment management fee rate and actual total expense ratio for Franklin Rising Dividends VIP Fund were both below the median of its Lipper expense group. The Board found the comparative expenses of Franklin Rising Dividends VIP Fund as shown in the Broadridge reports to be acceptable.

The contractual investment management fee rates and actual total expense ratios for the following Funds were in the first or second quintiles of their expense groups, meaning they were among the least expensive of their peers: Franklin Strategic Income VIP Fund, Franklin U.S. Government Securities VIP Fund and Templeton Foreign VIP Fund. The Board was satisfied with the comparative expenses of these Funds as shown in their Broadridge reports.

MANAGEMENT PROFITABILITY. The Board also considered the level of profits realized by the Managers and their affiliates in connection with the operation of each Fund. In this respect, the Board reviewed the Fund profitability analysis that addresses the overall profitability of Franklin Templeton's U.S. fund business, as well as its profits in providing management and other services to each of the individual funds during the 12-month period ended September 30, 2015, being the most recent fiscal year-end for Franklin Resources, Inc., the Managers' parent. In reviewing the analysis, the Board recognized that allocation methodologies are inherently subjective and various allocation methodologies may be reasonable while producing different results. In this respect, the Board noted that while management continually makes refinements to its methodologies in response to organizational and product related changes, the overall approach as defined by the primary drivers and activity measurements has remained consistent with that used in the Funds' profitability report presentations from prior years. Additionally, the Funds' independent registered public accounting firm had been engaged by the Manager to periodically review the reasonableness of the allocation methodologies to be used solely by the Funds' Board in reference to the profitability analysis. In reviewing and discussing such analysis, management discussed with the Board its belief that costs incurred in establishing the infrastructure necessary for the type of mutual fund operations conducted by the Managers and their affiliates may not be fully reflected in the expenses allocated to each Fund in determining its profitability, as well as the fact that the level of profits, to a certain extent, reflected operational cost savings and efficiencies initiated by management. The Board also took into account management's expenditures in improving services provided the Funds, as well as the need to implement systems to meet additional regulatory and compliance requirements resulting from statutes such as the Sarbanes-Oxley and Dodd-Frank Acts and recent SEC and other regulatory requirements. In addition, the Board considered a third-party study comparing the profitability of the Managers' parent on an overall basis to other publicly held managers broken down to show profitability from management operations exclusive of distribution expenses, as well as profitability including distribution expenses. The Board also considered the extent to which the Managers and their affiliates might derive ancillary benefits from Fund operations, including potential benefits resulting from personnel and systems enhancements necessitated by fund growth, increased leverage with the service providers and counterparties, allocation of fund brokerage and the use of commission dollars to pay for research. Based upon its consideration of all these factors, the Board determined that the level of profits realized by the Managers and their affiliates from providing services to each Fund was not excessive in view of the nature, quality and extent of services provided.

ECONOMIES OF SCALE. The Board also considered whether economies of scale are realized by the Manager as the Funds grow larger and the extent to which this is reflected in the level of management fees charged. While recognizing that any precise determination is inherently subjective, the Board noted that based upon the Fund profitability analysis, it appears that as some funds get larger, at some point economies of scale do result in a Manager realizing a larger profit margin on management services provided such a fund. The Board also noted that economies of scale are shared with a fund and its shareholders through management fee breakpoints so that as a fund grows in size, its effective management fee rate declines. In the case of Franklin Founding Funds Allocation VIP Fund, the management fees of the underlying funds in which it invests have management fee breakpoints that extend beyond their existing asset sizes, and in the case of each of the other Funds, other than Franklin Rising Dividends VIP Fund, their management fees contain breakpoints that extend beyond their existing asset sizes. To the extent economies of scale may be realized by the Managers and their affiliates, the Board believed the schedule of investment management fees provides a sharing of benefits for each Fund and its shareholders. The investment management structure of the Franklin Rising Dividends VIP Fund provides for a fee of 0.750% on the first $500 million of net assets; 0.625% on the next $500 million of net assets; and 0.500% on assets in excess of $1 billion. This Fund had assets of approximately $1.5 billion at December 31, 2015, and in reviewing its fee structure, management stated its belief that this fee structure reaches a relatively low rate quickly, reflecting anticipated economies of scale. In support of such position, management pointed out the favorable management fee and total expense comparisons of this Fund within its Lipper expense group as previously discussed under "Comparative Expenses." In light of such position and taking into account the fact that the reduced rate on assets in excess of the last breakpoint lowers the Fund's overall investment management fee rate, the Board believed that the schedule of investment management fees provides a sharing of benefits for the Fund and its shareholders, but intends to monitor future growth and the appropriateness of adding additional breakpoints.

Proxy Voting Policies and Procedures

The Trust's investment manager has established Proxy Voting Policies and Procedures (Policies) that the Trust uses to

determine how to vote proxies relating to portfolio securities. Shareholders may view the Trust's complete Policies online at franklintempleton.com. Alternatively, shareholders may request copies of the Policies free of charge by calling the Proxy Group collect at (954) 527-7678 or by sending a written request to: Franklin Templeton Companies, LLC, 300 S.E. 2nd Street, Fort Lauderdale, FL 33301, Attention: Proxy Group. Copies of the Trust's proxy voting records are also made available online at franklintempleton.com and posted on the U.S. Securities and Exchange Commission's website at sec.gov and reflect the most recent 12-month period ended June 30.

Quarterly Statement of Investments

The Trust files a complete statement of investments with the U.S. Securities and Exchange Commission for the first and third quarters for each fiscal year on Form N-Q. Shareholders may view the filed Form N-Q by visiting the Commission's website at sec.gov. The filed form may also be viewed and copied at the Commission's Public Reference Room in Washington, DC. Information regarding the operations of the Public Reference Room may be obtained by calling (800) SEC-0330.

Important Notes to Performance Information

Performance data is historical and cannot predict or guarantee future results. Principal value and investment return will fluctuate with market conditions, and you may have a gain or loss when you withdraw your money. Inception dates of the funds may have preceded the effective dates of the subaccounts, contracts or their availability in all states.

When reviewing the index comparisons, please keep in mind that indexes have a number of inherent performance differentials over the funds. First, unlike the funds, which must hold a minimum amount of cash to maintain liquidity, indexes do not have a cash component. Second, the funds are actively managed and, thus, are subject to management fees to cover salaries of securities analysts or portfolio managers in addition to other expenses. Indexes are unmanaged and do not include any commissions or other expenses typically associated with investing in securities. Third, indexes often contain a different mix of securities than the fund to which they are compared. Additionally, please remember that indexes are simply a measure of performance and cannot be invested in directly.

Templeton Global Bond VIP Fund

This semiannual report for Templeton Global Bond VIP Fund covers the period ended June 30, 2016.

Class 1 Performance Summary as of June 30, 2016

The Fund's Class 1 shares had a -1.69% total return* for the six-month period ended June 30, 2016.

*The Fund has a fee waiver associated with any investment in a Franklin Templeton money fund and/or Franklin Templeton fund, as applicable, contractually guaranteed through at least the Fund's current fiscal year-end. Fund investment results reflect the fee waiver, to the extent applicable; without this reduction, the results would have been lower.

*Performance reflects the Fund's Class 1 operating expenses, but does **not** include any contract fees, expenses or sales charges. If they had been included, performance would be lower. These charges and deductions, particularly for variable life policies, can have a significant effect on contract values and insurance benefits. See the contract prospectus for a complete description of these expenses, including sales charges.*

Performance data represent past performance, which does not guarantee future results. Investment return and principal value will fluctuate, and you may have a gain or loss when you sell your shares. Current performance may differ from figures shown.

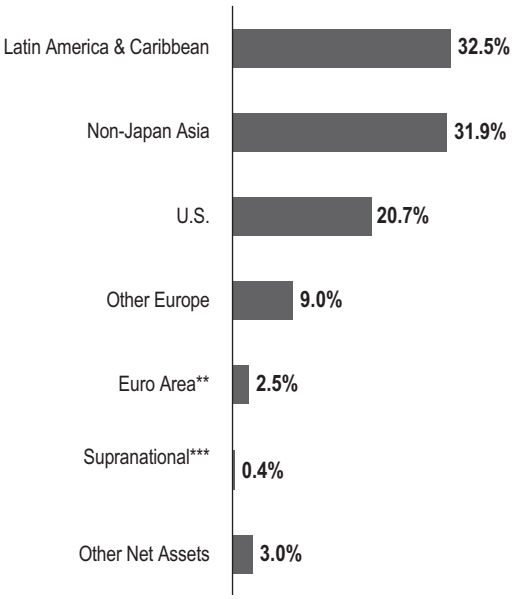
Fund Goal and Main Investments

The Fund seeks high current income, consistent with preservation of capital, with capital appreciation as a secondary consideration. Under normal market conditions, the Fund invests at least 80% of its net assets in bonds, which include debt securities of any maturity, such as bonds, notes, bills and debentures.

Fund Risks

All investments involve risks, including possible loss of principal. Currency rates may fluctuate significantly over short periods of time, and can reduce returns. Derivatives, including currency management strategies, involve costs and can create economic leverage in the portfolio that may result in significant volatility and cause the Fund to participate in losses (as well as enable gains) on an amount that exceeds the Fund's initial investment. The Fund may not achieve the anticipated benefits and may realize losses when a counterparty fails to perform as promised. Foreign securities involve special risks, including currency fluctuations and economic and political uncertainties. Investments in emerging markets involve heightened risks related to the same factors, in addition to those associated with these markets' smaller size and lesser liquidity. Sovereign debt securities are subject to various risks in addition to those relating to debt securities and foreign securities generally, including, but not limited to, the risk that a government entity may be unwilling or unable to pay interest and repay principal on its sovereign debt, or otherwise meet its obligations when due. Investments in lower rated bonds include higher risk of default and loss of principal. Changes in interest rates will affect the value of the Fund's portfolio and its share price and yield. Bond prices generally move in the opposite direction of interest rates. As prices of bonds in the Fund adjust to a rise in interest rates, the Fund's share price may decline. The markets for particular securities or types of securities are or may become relatively illiquid. Reduced liquidity will have an adverse impact on the security's value and on the Fund's ability to sell such securities when necessary to meet the Fund's liquidity needs or in response to a specific market event. The Fund is also non-diversified, which involves the risk of greater price fluctuation than a more diversified portfolio. Changes in the financial strength of a bond issuer or in a bond's credit rating may affect its value. The Fund is actively managed but there is no guarantee that the manager's investment decisions will produce the desired results. The Fund's prospectus also includes a description of the main investment risks.

Geographic Breakdown*
Based on Total Net Assets as of 6/30/16



*Figures are stated as a percentage of total and may not equal 100% or may be negative due to rounding, use of any derivatives, unsettled trades or other factors.
**The Fund's euro area investments were in Slovenia and Portugal.
***The Fund's supranational investment was denominated in the Mexican peso.

Performance Overview

You can find the Fund's six-month total return in the Performance Summary. For comparison, the Fund's benchmarks, the J.P. Morgan (JPM) Global Government Bond Index (GGBI) posted a +10.58% total return and the Citigroup World Government Bond Index, posted a +10.74% total return for the same period.[1]

Economic and Market Overview

Global markets experienced periods of heightened volatility during the six-month period, as declines in oil prices and concerns about economic conditions in China and growth across the globe appeared at times to have negative effects on investor sentiment. Despite the near-term volatility, our medium-term investment convictions remained intact and we held the view that global market fundamentals would eventually re-emerge. During the second half of the period, a number of emerging markets recovered from the extraordinarily low valuation levels of January and February to achieve what we viewed as compelling positive appreciation for the full six-month period.

1. Source: Morningstar. One cannot invest directly in an index, and an index is not representative of the Fund's portfolio. Please see Index Descriptions following the Fund Summaries.

During the first two months of the year, markets appeared to regard emerging economies as being in near-crisis condition, reacting as if conditions were worse than the 2008 global financial crisis or the Asian financial crisis of 1997 and 1998. However, several emerging market economies were in far better shape, in our assessment, with larger foreign reserves and more diversified, growing economies. We were focused on the opportunities in specific emerging market currencies and believed that fears of a systemic crisis across the asset class were exaggerated. Over the final weeks of February, risk appetites returned and several local-currency markets rallied, creating a positive trend for global markets that largely carried into March and April, and through much of the remaining months of the period.

The U.S. Federal Reserve (Fed) passed on raising rates at its January, March, April and June meetings, while indicating that rate hikes would likely be more gradual than previously envisioned. The 10-year U.S. Treasury yield declined from 2.27% at the beginning of the period to 1.78% by the end of March. The result of the Fed's dovishness was an implicit easing of policy, as markets essentially eliminated previously priced-in rate hikes for 2016. Consequently, the U.S. dollar weakened as the Japanese yen and euro notably strengthened. We believed the periods of yen and euro strength would prove temporary as we expected fundamentals to ultimately re-emerge in the currency valuations. Given U.S. labor market strength and underlying inflation pressures, we anticipated that the Fed would ultimately have to make a firmer commitment to rate hikes that would fortify the divergences in monetary policies between the easings of the European Central Bank and the Bank of Japan and the tightening of the Fed.

In May, market expectations for U.S. interest rate hikes increased sharply after hawkish-sounding comments were released in the Fed meeting minutes on May 18. However, those sentiments proved temporary, as the 10-year Treasury yield declined to 1.60% on June 15, the same day that the Fed announced rates would remain unchanged at 0.25%. Yields temporarily surged higher in the weeks after the Fed's meeting due to growing expectations for a rate hike in the second half of 2016. However, the U.K.'s June 23 referendum vote to leave the European Union quickly altered global market sentiments—risk aversion escalated sharply, driving yields significantly lower as investors sought perceived safe havens amid the growing uncertainties surrounding the Brexit. Nonetheless, a number of emerging market currencies rallied in the final weeks of the period, culminating in positive appreciations in a select number of markets such as Brazil, Indonesia and Malaysia.

Investment Strategy

We invest selectively in bonds around the world based upon our assessment of changing market, political and economic conditions. While seeking opportunities, we monitor various factors including changes in interest rates, currency exchange rates and credit risks. We seek to manage the Fund's exposure to various currencies and may utilize currency forward contracts.

What is a currency forward contract?
A currency forward contract is an agreement between the Fund and a counterparty to buy or sell a foreign currency in exchange for another currency at a specific exchange rate on a future date.

Manager's Discussion

Overall, we continued to position our strategies for rising rates by maintaining low portfolio duration and aiming at a negative correlation with U.S. Treasury returns. We also continued to actively seek select duration exposures that we believe can offer positive real yields without taking undue interest-rate risk, favoring countries that we believe have solid underlying fundamentals and prudent fiscal, monetary and financial policies. When investing globally, investment opportunities may take time to materialize, which may require weathering short-term volatility as the longer term investing theses develop. During the period, we shifted out of markets that we were previously contrarian on to reallocate to positions that we believe have fundamentally attractive valuations for the medium term ahead. We also maintained our exposures to several of our strongest investment convictions and added to those types of positions as prices became cheaper during periods of heightened volatility. Despite the persistence of volatility during the period, we remained encouraged by the vast set of what we considered fundamentally attractive valuations across the global bond and currency markets. We were positioned for depreciation of the euro and the Japanese yen, rising U.S. Treasury yields, and currency appreciation in select emerging markets. During the period, we used currency forward contracts to actively manage exposure to currencies. We also used interest rate swaps to tactically manage duration exposures.

What is duration?
Duration is a measure of a bond's price sensitivity to interest rate changes. In general, a portfolio of securities with a lower duration can be expected to be less sensitive to interest rate changes than a portfolio with a higher duration.

What is an interest rate swap?
An interest rate swap is an agreement between two parties to exchange interest rate obligations, generally one based on an interest rate fixed to maturity and the other based on an interest rate that changes in accordance with changes in a designated benchmark (for example, LIBOR, prime, commercial paper or other benchmarks).

During the period, the Fund's negative absolute performance was primarily attributable to currency positions. Interest rate strategies contributed to absolute return while sovereign credit exposures had a largely neutral effect. Among currencies, the Fund's net-negative positions in the Japanese yen and the euro detracted from absolute performance. However, currency positions in Asia ex-Japan and Latin America contributed. The Fund maintained a defensive approach regarding interest rates in developed and emerging markets. Select duration exposures in Latin America and Asia ex-Japan contributed to absolute performance, while negative duration exposure to U.S. Treasuries detracted.

Relative to the JPM GGBI benchmark, the Fund's underperformance was primarily attributable to interest rate strategies followed by currency positions. Sovereign credit exposures had a largely neutral effect on relative return. The Fund maintained a defensive approach regarding interest rates in developed and emerging markets. Select underweighted duration exposures in Europe detracted from relative performance, as did underweighted duration exposures in Japan and the U.S. However, select duration exposures in Latin America and Asia ex-Japan contributed to relative return. Among currencies, the Fund's underweighted positions in the Japanese yen and the euro detracted from relative performance. However, overweighted currency positions in Asia ex-Japan and Latin America contributed to relative return, as did underweighted exposure to the British pound.

Thank you for your participation in Templeton Global Bond VIP Fund. We look forward to serving your future investment needs.

The foregoing information reflects our analysis, opinions and portfolio holdings as of June 30, 2016, the end of the reporting period. The way we implement our main investment strategies and the resulting portfolio holdings may change depending on factors such as market and economic conditions. These opinions may not be relied upon as investment advice or an offer for a particular security. The information is not a complete analysis of every aspect of any market, country, industry, security or the Fund. Statements of fact are from sources considered reliable, but the investment manager makes no representation or warranty as to their completeness or accuracy. Although historical performance is no guarantee of future results, these insights may help you understand our investment management philosophy.

Class 1 Fund Expenses

As an investor in a variable insurance contract (Contract) that indirectly provides for investment in an underlying mutual fund, you can incur transaction and/or ongoing expenses at both the Fund level and the Contract level.

- Transaction expenses can include sales charges (loads) on purchases, surrender fees, transfer fees and premium taxes.
- Ongoing expenses can include management fees, distribution and service (12b-1) fees, contract fees, annual maintenance fees, mortality and expense risk fees and other fees and expenses. All mutual funds and Contracts have some types of ongoing expenses.

The expenses shown in the table are meant to highlight ongoing expenses at the Fund level only and do not include ongoing expenses at the Contract level, or transaction expenses at either the Fund or Contract levels. While the Fund does not have transaction expenses, if the transaction and ongoing expenses at the Contract level were included, the expenses shown below would be higher. You should consult your Contract prospectus or disclosure document for more information.

The table shows Fund-level ongoing expenses and can help you understand these expenses and compare them with those of other mutual funds offered through the Contract. The table assumes a $1,000 investment held for the six months indicated. Please refer to the Fund prospectus for additional information on operating expenses.

Actual Fund Expenses

The first line (Actual) of the table provides actual account values and expenses. The "Ending Account Value" is derived from the Fund's actual return, which includes the effect of ongoing Fund expenses, but does not include the effect of ongoing Contract expenses.

You can estimate the Fund-level expenses you incurred during the period by following these steps. *Of course, your account value and expenses will differ from those in this illustration*:

1. Divide your account value by $1,000.
   If an account had an $8,600 value, then $8,600 ÷ $1,000 = 8.6.
2. Multiply the result by the number under the heading "Fund-Level Expenses Incurred During Period."
   If Fund-Level Expenses Incurred During Period were $7.50, then 8.6 × $7.50 = $64.50.

In this illustration, the estimated expenses incurred this period at the Fund level are $64.50.

Hypothetical Example for Comparison with Other Mutual Funds

Information in the second line (Hypothetical) of the table can help you compare ongoing expenses of the Fund with those of other mutual funds offered through the Contract. This information may not be used to estimate the actual ending account balance or expenses you incurred during the period. The hypothetical "Ending Account Value" is based on the Fund's actual expense ratio and an assumed 5% annual rate of return before expenses, which does not represent the Fund's actual return. The figure under the heading "Fund-Level Expenses Incurred During Period" shows the hypothetical expenses your account would have incurred under this scenario. You can compare this figure with the 5% hypothetical examples that appear in shareholder reports of other funds offered through a Contract.

Class 1	Beginning Account Value 1/1/16	Ending Account Value 6/30/16	Fund-Level Expenses Incurred During Period* 1/1/16–6/30/16
Actual	$1,000	$ 983.10	$2.37
Hypothetical (5% return before expenses)	$1,000	$1,022.48	$2.41

*Expenses are calculated using the most recent six-month annualized expense ratio, net of expense waivers, for the Fund's Class 1 shares (0.48%), which does not include any ongoing expenses of the Contract for which the Fund is an investment option, multiplied by the average account value over the period, multiplied by 182/366 to reflect the one-half year period.

Financial Highlights

Templeton Global Bond VIP Fund

	Six Months Ended June 30, 2016 (unaudited)	Year Ended December 31, 2015	2014	2013	2012	2011

Net Assets 100.0%	$ 3,220,232,098

[†]Rounds to less than 0.1% of net assets.

*The principal amount is stated in U.S. dollars unless otherwise indicated.

[a]Principal amount is stated in 1,000 Brazilian Real Units.

[b]Redemption price at maturity is adjusted for inflation. See Note 1(h).

[c]Security was purchased pursuant to Rule 144A under the Securities Act of 1933 and may be sold in transactions exempt from registration only to qualified institutional buyers or in a public offering registered under the Securities Act of 1933. These securities have been deemed liquid under guidelines approved by the Trust's Board of Trustees. At June 30, 2016, the aggregate value of these securities was $219,356,593, representing 6.8% of net assets.

[d]Principal amount is stated in 100 Mexican Peso Units.

[e]Principal amount of security is adjusted for inflation. See Note 1(h).

[f]Principal amount is stated in Unidad de Inversion Units.

[g]The coupon rate shown represents the rate at period end.

[h]Security was purchased pursuant to Regulation S under the Securities Act of 1933, which exempts from registration securities offered and sold outside of the United States. Such a security cannot be sold in the United States without either an effective registration statement filed pursuant to the Securities Act of 1933, or pursuant to an exemption from registration. These securities have been deemed liquid under guidelines approved by the Trust's Board of Trustees. At June 30, 2016, the aggregate value of these securities was $49,689,037, representing 1.5% of net assets.

[i]A supranational organization is an entity formed by two or more central governments through international treaties.

[j]Non-income producing.

[k]The principal represents the notional amount. See Note 1(d) regarding value recovery instruments.

[l]See Note 1(f) regarding loan participation notes.

[m]The security is traded on a discount basis with no stated coupon rate.

[n]Principal amount is stated in 10 Mexican Peso Units.

[o]See Note 3(e) regarding investments in affiliated management investment companies.

[p]See Note 1(c) regarding joint repurchase agreement.

Notes to Financial Statements (unaudited)

Templeton Global Bond VIP Fund

1. Organization and Significant Accounting Policies

Franklin Templeton Variable Insurance Products Trust (Trust) is registered under the Investment Company Act of 1940 (1940 Act) as an open-end management investment company, consisting of nineteen separate funds and applies the specialized accounting and reporting guidance in U.S. Generally Accepted Accounting Principles (U.S. GAAP). Templeton Global Bond VIP Fund (Fund) is included in this report. The financial statements of the remaining funds in the Trust are presented separately. Shares of the Fund are generally sold only to insurance company separate accounts to fund the benefits of variable life insurance policies or variable annuity contracts. The Fund offers three classes of shares: Class 1, Class 2 and Class 4. Each class of shares differs by its distribution fees, voting rights on matters affecting a single class and its exchange privilege.

The following summarizes the Fund's significant accounting policies.

a. Financial Instrument Valuation

The Fund's investments in financial instruments are carried at fair value daily. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants on the measurement date. The Fund calculates the net asset value (NAV) per share as of 4 p.m. Eastern time each day the New York Stock Exchange (NYSE) is open for trading. Under compliance policies and procedures approved by the Trust's Board of Trustees (the Board), the Fund's administrator has responsibility for oversight of valuation, including leading the cross-functional Valuation Committee (VC). The VC provides administration and oversight of the Fund's valuation policies and procedures, which are approved annually by the Board. Among other things, these procedures allow the Fund to utilize independent pricing services, quotations from securities and financial instrument dealers, and other market sources to determine fair value.

Debt securities generally trade in the over-the-counter (OTC) market rather than on a securities exchange. The Fund's pricing services use multiple valuation techniques to determine fair value. In instances where sufficient market activity exists, the pricing services may utilize a market-based approach through which quotes from market makers are used to determine fair value. In instances where sufficient market activity may not exist or is limited, the pricing services also utilize proprietary valuation models which may consider market characteristics such as benchmark yield curves, credit spreads, estimated default rates, anticipated market interest rate volatility, coupon rates, anticipated timing of principal repayments, underlying collateral, and other unique security features in order to estimate the relevant cash flows, which are then discounted to calculate the fair value. Securities denominated in a foreign currency are converted into their U.S. dollar equivalent at the foreign exchange rate in effect at 4 p.m. Eastern time on the date that the values of the foreign debt securities are determined.

Investments in open-end mutual funds are valued at the closing NAV. Repurchase agreements are valued at cost, which approximates fair value.

Derivative financial instruments (derivatives) listed on an exchange are valued at the official closing price of the day. Certain derivatives trade in the OTC market. The Fund's pricing services use various techniques including industry standard option pricing models and proprietary discounted cash flow models to determine the fair value of those instruments. The Fund's net benefit or obligation under the derivative contract, as measured by the fair value of the contract, is included in net assets.

The Fund has procedures to determine the fair value of financial instruments for which market prices are not reliable or readily available. Under these procedures, the VC convenes on a regular basis to review such financial instruments and considers a number of factors, including significant unobservable valuation inputs, when arriving at fair value. The VC primarily employs a market-based approach which may use related or comparable assets or liabilities, recent transactions, market multiples, book values, and other relevant information for the investment to determine the fair value of the investment. An income-based valuation approach may also be used in which the anticipated future cash flows of the investment are discounted to calculate fair value. Discounts may also be applied due to the nature or duration of any restrictions on the disposition of the investments. Due to the inherent uncertainty of valuations of such investments, the fair values may differ significantly from the values that would have been used had an active market existed. The VC employs various methods for calibrating these valuation approaches including a regular review of key inputs and assumptions, transactional back-testing or disposition analysis, and reviews of any related market activity.

Templeton Global Bond VIP Fund (continued)

1. Organization and Significant Accounting Policies (continued)

b. Foreign Currency Translation

Portfolio securities and other assets and liabilities denominated in foreign currencies are translated into U.S. dollars based on the exchange rate of such currencies against U.S. dollars on the date of valuation. The Fund may enter into foreign currency exchange contracts to facilitate transactions denominated in a foreign currency. Purchases and sales of securities, income and expense items denominated in foreign currencies are translated into U.S. dollars at the exchange rate in effect on the transaction date. Portfolio securities and assets and liabilities denominated in foreign currencies contain risks that those currencies will decline in value relative to the U.S. dollar. Occasionally, events may impact the availability or reliability of foreign exchange rates used to convert the U.S. dollar equivalent value. If such an event occurs, the foreign exchange rate will be valued at fair value using procedures established and approved by the Board.

The Fund does not separately report the effect of changes in foreign exchange rates from changes in market prices on securities held. Such changes are included in net realized and unrealized gain or loss from investments in the Statement of Operations.

Realized foreign exchange gains or losses arise from sales of foreign currencies, currency gains or losses realized between the trade and settlement dates on securities transactions and the difference between the recorded amounts of dividends, interest, and foreign withholding taxes and the U.S. dollar equivalent of the amounts actually received or paid. Net unrealized foreign exchange gains and losses arise from changes in foreign exchange rates on foreign denominated assets and liabilities other than investments in securities held at the end of the reporting period.

c. Joint Repurchase Agreement

The Fund enters into a joint repurchase agreement whereby its uninvested cash balance is deposited into a joint cash account with other funds managed by the investment manager or an affiliate of the investment manager and is used to invest in one or more repurchase agreements. The value and face amount of the joint repurchase agreement are allocated to the funds based on their pro-rata interest. A repurchase agreement is accounted for as a loan by the Fund to the seller, collateralized by securities which are delivered to the Fund's custodian. The fair value, including accrued interest, of the initial collateralization is required to be at least 102% of the dollar amount invested by the funds, with the value of the underlying securities marked to market daily to maintain coverage of at least 100%. Repurchase agreements are subject to the terms of Master Repurchase Agreements (MRAs) with approved counterparties (sellers). The MRAs contain various provisions, including but not limited to events of default and maintenance of collateral for repurchase agreements. In the event of default by either the seller or the Fund, certain MRAs may permit the non-defaulting party to net and close-out all transactions, if any, traded under such agreements. The Fund may sell securities it holds as collateral and apply the proceeds towards the repurchase price and any other amounts owed by the seller to the Fund in the event of default by the seller. This could involve costs or delays in addition to a loss on the securities if their value falls below the repurchase price owed by the seller. The joint repurchase agreement held by the Fund at period end, as indicated in the Statement of Investments, had been entered into on June 30, 2016.

d. Derivative Financial Instruments

The Fund invested in derivatives in order to manage risk or gain exposure to various other investments or markets. Derivatives are financial contracts based on an underlying or notional amount, require no initial investment or an initial net investment that is smaller than would normally be required to have a similar response to changes in market factors, and require or permit net settlement. Derivatives contain various risks including the potential inability of the counterparty to fulfill their obligations under the terms of the contract, the potential for an illiquid secondary market, and/or the potential for market movements which expose the Fund to gains or losses in excess of the amounts shown in the Statement of Assets and Liabilities. Realized gain and loss and unrealized appreciation and depreciation on these contracts for the period are included in the Statement of Operations.

Derivative counterparty credit risk is managed through a formal evaluation of the creditworthiness of all potential counterparties. The Fund attempts to reduce its exposure to counterparty credit risk on OTC derivatives, whenever possible, by entering into International Swaps and Derivatives Association (ISDA) master agreements with certain counterparties. These agreements contain various provisions, including but not limited to collateral requirements, events of default, or early termination. Termination events applicable to the counterparty include

Templeton Global Bond VIP Fund (continued)

certain deteriorations in the credit quality of the counterparty. Termination events applicable to the Fund include failure of the Fund to maintain certain net asset levels and/or limit the decline in net assets over various periods of time. In the event of default or early termination, the ISDA master agreement gives the non-defaulting party the right to net and close-out all transactions traded, whether or not arising under the ISDA agreement, to one net amount payable by one counterparty to the other. However, absent an event of default or early termination, OTC derivative assets and liabilities are presented gross and not offset in the Statement of Assets and Liabilities. Early termination by the counterparty may result in an immediate payment by the Fund of any net liability owed to that counterparty under the ISDA agreement.

Collateral requirements differ by type of derivative. Collateral or initial margin requirements are set by the broker or exchange clearing house for exchange traded and centrally cleared derivatives. Initial margin deposited is held at the exchange and can be in the form of cash and/or securities. For OTC derivatives traded under an ISDA master agreement, posting of collateral is required by either the Fund or the applicable counterparty if the total net exposure of all OTC derivatives with the applicable counterparty exceeds the minimum transfer amount, which typically ranges from $100,000 to $250,000, and can vary depending on the counterparty and the type of the agreement. Generally, collateral is determined at the close of Fund business each day and any additional collateral required due to changes in derivative values may be delivered by the Fund or the counterparty within a few business days. Collateral pledged and/or received by the Fund for OTC derivatives, if any, is held in segregated accounts with the Fund's custodian/counterparty broker and can be in the form of cash and/or securities. Unrestricted cash may be invested according to the Fund's investment objectives. To the extent that the amounts due to the Fund from its counterparties are not subject to collateralization or are not fully collateralized, the Fund bears the risk of loss from counterparty non-performance.

The Fund entered into OTC forward exchange contracts primarily to manage and/or gain exposure to certain foreign currencies. A forward exchange contract is an agreement between the Fund and a counterparty to buy or sell a foreign currency at a specific exchange rate on a future date.

The Fund entered into interest rate swap contracts primarily to manage interest rate risk. An interest rate swap is an agreement between the Fund and a counterparty to exchange cash flows based on the difference between two interest rates, applied to a notional amount. These agreements may be privately negotiated in the over-the-counter market (OTC interest rate swaps) or may be executed on a registered exchange (centrally cleared interest rate swaps). For centrally cleared interest rate swaps, required initial margins are pledged by the Fund, and the daily change in fair value is accounted for as a variation margin payable or receivable in the Statement of Assets and Liabilities. Over the term of the contract, contractually required payments to be paid and to be received are accrued daily and recorded as unrealized depreciation and appreciation until the payments are made, at which time they are realized.

The Fund invests in value recovery instruments (VRI) primarily to gain exposure to growth risk. Periodic payments from VRI are dependent on established benchmarks for underlying variables. VRI has a notional amount, which is used to calculate amounts of payments to holders. Payments are recorded upon receipt as realized gains in the Statement of Operations. The risks of investing in VRI include growth risk, liquidity, and the potential loss of investment.

See Note 9 regarding other derivative information.

e. Restricted Cash

At June 30, 2016, the Fund held restricted cash in connection with investments in certain derivative securities. Restricted cash is held in a segregated account with the Fund's counterparty broker and is reflected in the Statement of Assets and Liabilities.

f. Loan Participation Notes

The Fund invests in loan participation notes (Participations). Participations are loans originally issued to a borrower by one or more financial institutions (the Lender) and subsequently sold to other investors, such as the Fund. Participations typically result in the Fund having a contractual relationship only with the Lender and not with the borrower. The Fund has the right to receive from the Lender any payments of principal, interest and fees which the Lender received from the borrower. The Fund generally has no rights to either enforce compliance by the borrower with the terms of the loan agreement or to any collateral relating to the original loan. As a result, the Fund assumes the credit risk of both the borrower and the Lender that is selling the Participation. The Participations may also involve interest rate risk and liquidity risk, including the potential default or insolvency of the borrower and/or the Lender.

Templeton Global Bond VIP Fund (continued)

1. Organization and Significant Accounting Policies (continued)

g. Income and Deferred Taxes

It is the Fund's policy to qualify as a regulated investment company under the Internal Revenue Code. The Fund intends to distribute to shareholders substantially all of its taxable income and net realized gains to relieve it from federal income and if applicable, excise taxes. As a result, no provision for U.S. federal income taxes is required.

The Fund may be subject to foreign taxation related to income received, capital gains on the sale of securities and certain foreign currency transactions in the foreign jurisdictions in which it invests. Foreign taxes, if any, are recorded based on the tax regulations and rates that exist in the foreign markets in which the Fund invests. When a capital gain tax is determined to apply, the Fund records an estimated deferred tax liability in an amount that would be payable if the securities were disposed of on the valuation date.

The Fund may recognize an income tax liability related to its uncertain tax positions under U.S. GAAP when the uncertain tax position has a less than 50% probability that it will be sustained upon examination by the tax authorities based on its technical merits. As of June 30, 2016, the Fund has determined that no tax liability is required in its financial statements related to uncertain tax positions for any open tax years (or expected to be taken in future tax years). Open tax years are those that remain subject to examination and are based on each tax jurisdiction's statute of limitation.

h. Security Transactions, Investment Income, Expenses and Distributions

Security transactions are accounted for on trade date. Realized gains and losses on security transactions are determined on a specific identification basis. Interest income and estimated expenses are accrued daily. Amortization of premium and accretion of discount on debt securities are included in interest income. Distributions to shareholders are recorded on the ex-dividend date and are determined according to income tax regulations (tax basis). Distributable earnings determined on a tax basis may differ from earnings recorded in accordance with U.S. GAAP. These differences may be permanent or temporary. Permanent differences are reclassified among capital accounts to reflect their tax character. These reclassifications have no impact on net assets or the results of operations. Temporary differences are not reclassified, as they may reverse in subsequent periods.

Common expenses incurred by the Trust are allocated among the Funds based on the ratio of net assets of each Fund to the combined net assets of the Trust. Fund specific expenses are charged directly to the fund that incurred the expense.

Realized and unrealized gains and losses and net investment income, not including class specific expenses, are allocated daily to each class of shares based upon the relative proportion of net assets of each class. Differences in per share distributions, by class, are generally due to differences in class specific expenses.

Inflation-indexed bonds are adjusted for inflation through periodic increases or decreases in the security's interest accruals, face amount, or principal redemption value, by amounts corresponding to the rate of inflation as measured by an index. Any increase or decrease in the face amount or principal redemption value will be included as inflation principal adjustments in the Statement of Operations.

i. Accounting Estimates

The preparation of financial statements in accordance with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the amounts of income and expenses during the reporting period. Actual results could differ from those estimates.

j. Guarantees and Indemnifications

Under the Trust's organizational documents, its officers and trustees are indemnified by the Trust against certain liabilities arising out of the performance of their duties to the Trust. Additionally, in the normal course of business, the Trust, on behalf of the Fund, enters into contracts with service providers that contain general indemnification clauses. The Trust's maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Trust that have not yet occurred. Currently, the Trust expects the risk of loss to be remote.

Templeton Global Bond VIP Fund (continued)

2. Shares of Beneficial Interest

At June 30, 2016, there were an unlimited number of shares authorized (without par value). Transactions in the Fund's shares were as follows:

	Six Months Ended June 30, 2016		Year Ended December 31, 2015	
	Shares	Amount	Shares	Amount
Class 1 Shares:				
Shares sold	1,095,974	$ 17,496,721	3,348,667	$ 58,944,948
Shares issued in reinvestment of distributions	14,671	230,623	1,514,753	25,781,090
Shares redeemed	(1,684,007)	(26,887,226)	(4,380,221)	(76,674,014)
Net increase (decrease)	(573,362)	$ (9,159,882)	483,199	$ 8,052,024
Class 2 Shares:				
Shares sold	6,966,062	$ 107,599,786	15,666,500	$ 268,873,539
Shares issued in reinvestment of distributions	161,118	2,445,769	15,904,078	261,940,170
Shares redeemed	(11,574,219)	(178,275,366)	(20,123,134)	(337,699,111)
Net increase (decrease)	(4,447,039)	$ (68,229,811)	11,447,444	$ 193,114,598
Class 4 Shares:				
Shares sold	376,857	$ 5,953,469	1,068,838	$ 18,598,516
Shares issued in reinvestment of distributions	5,231	81,295	527,080	8,897,114
Shares redeemed	(651,097)	(10,292,661)	(1,276,578)	(21,792,395)
Net increase (decrease)	(269,009)	$ (4,257,897)	319,340	$ 5,703,235

3. Transactions with Affiliates

Franklin Resources, Inc. is the holding company for various subsidiaries that together are referred to as Franklin Templeton Investments. Certain officers and trustees of the Fund are also officers and/or directors of the following subsidiaries:

Subsidiary	Affiliation
Franklin Advisers, Inc. (Advisers)	Investment manager
Franklin Templeton Services, LLC (FT Services)	Administrative manager
Franklin Templeton Distributors, Inc. (Distributors)	Principal underwriter
Franklin Templeton Investor Services, LLC (Investor Services)	Transfer agent

a. Management Fees

The Fund pays an investment management fee to Advisers based on the average daily net assets of the Fund as follows:

Annualized Fee Rate	Net Assets
0.625%	Up to and including $100 million
0.500%	Over $100 million, up to and including $250 million
0.450%	Over $250 million, up to and including $7.5 billion
0.440%	Over $7.5 billion, up to and including $10 billion
0.430%	Over $10 billion, up to and including $12.5 billion
0.420%	Over $12.5 billion, up to and including $15 billion
0.400%	In excess of $15 billion

For the period ended June 30, 2016, the effective management fee rate was 0.458% of the Fund's average daily net assets.

Templeton Global Bond VIP Fund (continued)

3. Transactions with Affiliates (continued)

b. Administrative Fees

Under an agreement with Advisers, FT Services provides administrative services to the Fund. The fee is paid by Advisers based on the Fund's average daily net assets, and is not an additional expense of the Fund.

c. Distribution Fees

The Board has adopted distribution plans for Class 2 and Class 4 shares pursuant to Rule 12b-1 under the 1940 Act. Under the Fund's compensation distribution plans, the Fund pays Distributors for costs incurred in connection with the servicing, sale and distribution of the Fund's shares up to 0.25% and 0.35% per year of its average daily net assets of Class 2 and Class 4, respectively. The plan year, for purposes of monitoring compliance with the maximum annual plan rates, is February 1 through January 31.

d. Transfer Agent Fees

Investor Services, under terms of an agreement, performs shareholder servicing for the Fund and is not paid by the Fund for the services.

e. Investments in Affiliated Management Investment Companies

The Fund invests in one or more affiliated management investment companies for purposes other than exercising a controlling influence over the management or policies. Management fees paid by the Fund are waived on assets invested in the affiliated management investment companies, as noted in the Statement of Operations, in an amount not to exceed the management and administrative fees paid directly or indirectly by each affiliate.

	Number of Shares Held at Beginning of Period	Gross Additions	Gross Reductions	Number of Shares Held at End of Period	Value at End of Period	Investment Income	Realized Gain (Loss)	% of Affiliated Fund Shares Outstanding Held at End of Period
Non-Controlled Affiliates								
Institutional Fiduciary Trust Money Market Portfolio	420,632,565	339,715,815	(351,070,425)	409,277,955	$409,277,955	$ —	$ —	2.1%

4. Expense Offset Arrangement

The Fund has entered into an arrangement with its custodian whereby credits realized as a result of uninvested cash balances are used to reduce a portion of the Fund's custodian expenses. During the period ended June 30, 2016, the custodian fees were reduced as noted in the Statement of Operations.

5. Income Taxes

At June 30, 2016, the cost of investments and net unrealized appreciation (depreciation) for income tax purposes were as follows:

Cost of investments	$3,242,512,437
Unrealized appreciation	$ 74,103,507
Unrealized depreciation	(194,075,204)
Net unrealized appreciation (depreciation)	$ (119,971,697)

Differences between income and/or capital gains as determined on a book basis and a tax basis are primarily due to differing treatments of foreign currency transactions and inflation related adjustments on foreign securities.

6. Investment Transactions

Purchases and sales of investments (excluding short term securities) for the period ended June 30, 2016, aggregated $819,373,666 and $596,492,510, respectively.

Templeton Global Bond VIP Fund (continued)

7. Credit Risk

At June 30, 2016, the Fund had 19.1% of its portfolio invested in high yield or other securities rated below investment grade. These securities may be more sensitive to economic conditions causing greater price volatility and are potentially subject to a greater risk of loss due to default than higher rated securities.

8. Concentration of Risk

Investing in foreign securities may include certain risks and considerations not typically associated with investing in U.S. securities, such as fluctuating currency values and changing local and regional economic, political and social conditions, which may result in greater market volatility. In addition, certain foreign securities may not be as liquid as U.S. securities.

9. Other Derivative Information

At June 30, 2016, the Fund's investments in derivative contracts are reflected in the Statement of Assets and Liabilities as follows:

	Asset Derivatives		Liability Derivatives	
Derivative Contracts Not Accounted for as Hedging Instruments	**Statement of Assets and Liabilities Location**	**Fair Value**	**Statement of Assets and Liabilities Location**	**Fair Value**
Interest rate contracts	Variation margin	$ —[a]	Variation margin	$ 43,351,971[a]
	Unrealized appreciation on OTC swap contracts	—	Unrealized depreciation on OTC swap contracts	14,638,640
Foreign exchange contracts	Unrealized appreciation on OTC forward exchange contracts	26,393,217	Unrealized depreciation on OTC forward exchange contracts	121,021,815
Value Recovery Instruments	Investments in securities, at value	9,855,268		
Totals		$36,248,485		$179,012,426

[a]This amount reflects the cumulative appreciation (depreciation) of centrally cleared swaps contracts as reported in the Statement of Investments. Only the variation margin receivable/payable at period end is separately reported within the Statement of Assets and Liabilities. Prior variation margin movements were recorded to cash upon receipt or payment.

For the period ended June 30, 2016, the effect of derivative contracts in the Fund's Statement of Operations was as follows:

Derivative Contracts Not Accounted for as Hedging Instruments	**Statement of Operations Locations**	**Net Realized Gain (Loss) for the Period**	**Statement of Operations Locations**	**Net Change in Unrealized Appreciation (Depreciation) for the Period**
	Net realized gain (loss) from:		Net change in unrealized appreciation (depreciation) on:	
Interest rate contracts	Swap contracts	$ (5,253,316)	Swap contracts	$ (42,663,972)
Foreign exchange contracts	Foreign currency transactions	(59,110,552)[a]	Translation of other assets and liabilities denominated in foreign currencies	(116,352,198)[a]
Value Recovery Instruments	Investments	—	Investments	(2,248,351)
Totals		$(64,363,868)		$(161,264,521)

[a]Forward exchange contracts are included in net realized gain (loss) from foreign currency transactions and net change in unrealized appreciation (depreciation) on translation of other assets and liabilities denominated in foreign currencies in the Statement of Operations.

Templeton Global Bond VIP Fund (continued)

9. Other Derivative Information (continued)

At June 30, 2016, the Fund's OTC derivative assets and liabilities are as follows:

	Gross and Net Amounts of Assets and Liabilities Presented in the Statement of Assets and Liabilities	
	Assets[a]	Liabilities[a]
Derivatives		
Forward Exchange Contracts	$26,393,217	$121,021,815
Swap Contracts	—	14,638,640
Total	$26,393,217	$135,660,455

[a]Absent an event of default or early termination, OTC derivative assets and liabilities are presented gross and not offset in the Statement of Assets and Liabilities.

At June 30, 2016, the Fund's OTC derivative assets, which may be offset against the Fund's OTC derivative liabilities and collateral received from the counterparty, are as follows:

		Amounts Not Offset in the Statement of Assets and Liabilities			
	Gross and Net Amounts of Assets Presented in the Statement of Assets and Liabilities	Financial Instruments Available for Offset	Financial Instruments Collateral Received	Cash Collateral Received	Net Amount (Not less than zero)
Counterparty					
BOFA	$ 2,753,423	$ (2,741,763)	$ —	$ 630,000	$ 641,660

10. Credit Facility

The Fund, together with other U.S. registered and foreign investment funds (collectively, Borrowers), managed by Franklin Templeton Investments, are borrowers in a joint syndicated senior unsecured credit facility totaling $2 billion (Global Credit Facility) which matures on February 10, 2017. This Global Credit Facility provides a source of funds to the Borrowers for temporary and emergency purposes, including the ability to meet future unanticipated or unusually large redemption requests.

Under the terms of the Global Credit Facility, the Fund shall, in addition to interest charged on any borrowings made by the Fund and other costs incurred by the Fund, pay its share of fees and expenses incurred in connection with the implementation and maintenance of the Global Credit Facility, based upon its relative share of the aggregate net assets of all of the Borrowers, including an annual commitment fee of 0.07% based upon the unused portion of the Global Credit Facility. Effective February 12, 2016, the annual commitment fee is 0.15%. These fees are reflected in other expenses in the Statement of Operations. During the period ended June 30, 2016, the Fund did not use the Global Credit Facility.

Templeton Global Bond VIP Fund (continued)

11. Fair Value Measurements

The Fund follows a fair value hierarchy that distinguishes between market data obtained from independent sources (observable inputs) and the Fund's own market assumptions (unobservable inputs). These inputs are used in determining the value of the Fund's financial instruments and are summarized in the following fair value hierarchy:

- Level 1 – quoted prices in active markets for identical financial instruments
- Level 2 – other significant observable inputs (including quoted prices for similar financial instruments, interest rates, prepayment speed, credit risk, etc.)
- Level 3 – significant unobservable inputs (including the Fund's own assumptions in determining the fair value of financial instruments)

The input levels are not necessarily an indication of the risk or liquidity associated with financial instruments at that level.

For movements between the levels within the fair value hierarchy, the Fund has adopted a policy of recognizing the transfers as of the date of the underlying event which caused the movement.

A summary of inputs used as of June 30, 2016, in valuing the Fund's assets and liabilities carried at fair value, is as follows:

	Level 1	Level 2	Level 3	Total
Assets:				
Investments in Securities:				
Foreign Government and Agency Securities[a]	$ —	$2,355,886,298	$ —	$2,355,886,298
Quasi-Sovereign and Corporate Bonds[a]	—	2,631,087	—	2,631,087
Short Term Investments	409,277,955	354,745,400	—	764,023,355
Total Investments in Securities	$409,277,955	$2,713,262,785	$ —	$3,122,540,740
Other Financial Instruments				
Forward Exchange Contracts	$ —	$ 26,393,217	$ —	$ 26,393,217
Liabilities:				
Other Financial Instruments				
Forward Exchange Contracts	$ —	$ 121,021,815	$ —	$ 121,021,815
Swap Contracts	—	57,990,611	—	57,990,611
Total Other Financial Instruments	$ —	$ 179,012,426	$ —	$ 179,012,426

[a]For detailed categories, see the accompanying Statement of Investments.

12. Subsequent Events

The Fund has evaluated subsequent events through the issuance of the financial statements and determined that no events have occurred that require disclosure.

Index Descriptions

The indexes are unmanaged and include reinvestment of any income or distributions. They do not reflect any fees, expenses or sales charges.

For Russell Indexes: Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of Russell Investment Group.

See www.franklintempletondatasources.com for additional data provider information.

Barclays U.S. Aggregate Bond Index is a market capitalization-weighted index representing the U.S. investment-grade, fixed-rate, taxable bond market with index components for government and corporate, mortgage pass-through and asset-backed securities. All issues included are SEC registered, taxable, dollar denominated and nonconvertible, must have at least one year to final maturity and must be rated investment grade (Baa3/BBB-/BBB- or higher) using the middle rating of Moody's, Standard & Poor's and Fitch, respectively.

Barclays U.S. Government Index: Intermediate Component is the intermediate component of the Barclays U.S. Government Index, which includes public obligations of the U.S. Treasury with at least one year to final maturity and publicly issued debt of U.S. government agencies, quasi-federal corporations, and corporate or foreign debt guaranteed by the U.S. government.

Bloomberg Commodity Index comprises exchange-traded futures on physical commodities, which are weighted to account for economic significance and market liquidity.

Citigroup World Government Bond Index is a market capitalization-weighted index consisting of investment-grade world government bond markets.

Consumer Price Index (CPI) is a commonly used measure of the inflation rate.

Credit Suisse (CS) High Yield Index is designed to mirror the investable universe of the U.S. dollar-denominated high yield debt market.

FTSE® EPRA®/NAREIT® Developed Index is a free float-adjusted index designed to measure the performance of publicly traded real estate securities in the North American, European and Asian real estate markets.

J.P. Morgan (JPM) Global Government Bond Index (GGBI) tracks total returns for liquid, fixed-rate, domestic government bonds with maturities greater than one year issued by developed countries globally.

Lipper Multi-Sector Income Funds Classification Average is calculated by averaging the total returns of all funds within the Lipper Multi-Sector Income Funds classification in the Lipper Open-End underlying funds universe. Lipper Multi-Sector Income Funds are defined as funds that seek current income by allocating assets among different fixed income securities sectors (not primarily in one sector except for defensive purposes), including U.S. and foreign governments, with a significant portion rated below investment grade. For the six-month period ended 6/30/16, there were 313 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

Lipper VIP Equity Income Funds Classification Average is an equally weighted average calculation of performance figures for all funds within the Lipper Equity Income Funds classification in the Lipper VIP underlying funds universe. Lipper Equity Income Funds seek relatively high current income and growth of income through investing 60% or more of their portfolios in equities. For the six-month period ended 6/30/16, there were 72 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

Lipper VIP General U.S. Government Funds Classification Average is an equally weighted average calculation of performance figures for all funds within the Lipper General U.S. Government Funds classification in the Lipper VIP underlying funds universe. Lipper General U.S. Government Funds invest primarily in U.S. government and agency issues. For the six-month period ended 6/30/16, there were 55 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

Lipper VIP High Yield Funds Classification Average is an equally weighted average calculation of performance figures for all funds within the Lipper High Yield Funds Classification in the Lipper VIP underlying funds universe. Lipper High Yield Funds aim at high (relative) current yield from fixed income securities, have no quality or maturity restrictions, and tend to invest in lower grade debt issues. For the six-month period

ended 6/30/16, there were 109 funds in this category. Lipper calculations do not include contract fees, expenses or sales charges, and may have been different if such charges had been considered.

MSCI All Country World Index (ACWI) is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global developed and emerging markets.

MSCI All Country World Index (ACWI) ex USA Index captures large- and mid-capitalization representation across 22 of 23 developed markets countries (excluding the U.S.) and 23 emerging markets countries. The index covers approximately 85% of the global equity opportunity set outside the U.S.

MSCI Emerging Markets (EM) Index is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global emerging markets.

MSCI Europe, Australasia, Far East (EAFE) Index is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global developed markets excluding the U.S. and Canada.

MSCI World Index is a free float-adjusted, market capitalization-weighted index designed to measure equity market performance in global developed markets.

Russell 1000® Growth Index is market capitalization weighted and measures performance of those Russell 1000® Index companies with higher price-to-book ratios and higher forecasted growth values.

Russell 1000® Index is market capitalization weighted and measures performance of the largest companies in the Russell 3000® Index, which represents the majority of the U.S. market's total capitalization.

Russell 2500™ Index is market capitalization weighted and measures performance of the smallest companies in the Russell 3000® Index, which represent a modest amount of the Russell 3000® Index's total market capitalization.

Russell 2500™ Value Index is market capitalization weighted and measures performance of those Russell 2500™ Index companies with lower price-to-book ratios and lower forecasted growth values.

Russell 3000® Growth Index is market capitalization weighted and measures performance of those Russell 3000® Index companies with higher price-to-book ratios and higher forecasted growth values.

Russell Midcap® Growth Index is market capitalization weighted and measures performance of those Russell Midcap® Index companies with higher price-to-book ratios and higher forecasted growth values.

Russell Midcap® Index is market capitalization weighted and measures performance of the smallest companies in the Russell 1000® Index, which represent a modest amount of the Russell 1000® Index's total market capitalization.

Standard & Poor's® 500 Index (S&P 500®) is a market capitalization-weighted index of 500 stocks designed to measure total U.S. equity market performance.

Standard & Poor's®/International Finance Corporation Investable (S&P/IFCI) Composite Index is a free float-adjusted, market capitalization-weighted index designed to measure equity performance in global emerging markets.

Shareholder Information

Board Review of Investment Management Agreement

At a meeting held April 12, 2016, the Board of Trustees (Board), including a majority of trustees that are not "interested persons" as such term is defined in section 2(a)(19) of the Investment Company Act of 1940 (hereinafter referred to as "non-interested Trustees" or "independent Trustees"), approved renewal of the investment management agreement and investment sub-advisory agreement, as applicable, for each of the separate funds within the Trust (Fund(s)). In reaching this decision, the Board took into account information furnished throughout the year at regular Board meetings, as well as information prepared specifically in connection with the annual renewal review process. Information furnished and discussed throughout the year included investment performance reports and related financial information for each Fund, along with periodic reports on expenses, shareholder services, legal and compliance matters, risk control, pricing, brokerage commissions and execution, and other services provided by each Investment Manager and investment sub-adviser (Manager(s)) and their affiliates, as well as marketing support payments made to financial intermediaries. Information furnished specifically in connection with the renewal process included reports for each Fund prepared by Broadridge Financial Solutions, Inc. (Broadridge), an independent organization, as well as additional material, including a Fund profitability analysis prepared by management. The Broadridge reports, which utilize data from Lipper, Inc. (Lipper), compared each Fund's investment performance and expenses with those of other mutual funds deemed comparable to the Fund as selected by Lipper. The Fund profitability analysis discussed the profitability to Franklin Templeton Investments (FTI) from its overall U.S. fund operations, as well as on an individual fund-by-fund basis. Additional material accompanying such profitability analysis included information on a fund-by-fund basis listing portfolio managers and other accounts they manage, as well as information on management fees charged by the Managers and their affiliates to U.S. mutual funds and other accounts, including management's explanation of differences where relevant. Such material also included a memorandum prepared by management describing project initiatives and capital investments relating to the services provided to the Funds by the FTI organization, as well as a memorandum relating to economies of scale and an analysis concerning transfer agent fees charged by an affiliate of the Managers. The Board also received a report on all marketing support payments made by FTI to financial intermediaries during the past year, as well as a memorandum relating to third-party servicing arrangements in response to a Guidance Update from the U.S. Securities and Exchange Commission (SEC) relating to mutual fund distribution and sub-accounting fees.

In considering such materials, the independent Trustees received assistance and advice from and met separately with independent counsel. While the investment management agreements and investment sub-advisory agreements, as applicable, for all Funds were considered at the same Board meeting, the Board dealt with each Fund separately. In approving continuance of the investment management agreement and investment sub-advisory agreement, as applicable, for each Fund, the Board, including a majority of independent Trustees, determined that the existing management fee structure was fair and reasonable and that continuance of each investment management agreement and investment sub-advisory agreement, as applicable, was in the best interests of such Fund and its shareholders. While attention was given to all information furnished, the following discusses some primary factors relevant to the Board's decision.

NATURE, EXTENT AND QUALITY OF SERVICE. The Board was satisfied with the nature and quality of the overall services provided by the Managers and their affiliates to the Funds and their shareholders, except as noted later with respect to investment performance and expenses. The Board's opinion was based, in part, upon periodic reports furnished it showing that the investment policies and restrictions for each Fund were consistently complied with as well as other reports periodically furnished the Board covering matters such as the compliance of portfolio managers and other management personnel with the code of ethics adopted throughout the Franklin Templeton fund complex, the adherence to fair value pricing procedures established by the Board, and the accuracy of net asset value calculations. Favorable consideration was given to management's continual efforts and expenditures in establishing effective business continuity plans and developing strategies to address cybersecurity threats. Additionally, the Board noted the Managers' continued attention to pricing and valuation issues, particularly with respect to complex securities. Among other factors taken into account by the Board was the Managers' best execution trading policies, including a favorable report by an independent portfolio trading analytical firm that also covered FOREX transactions. Consideration was also given to the experience of each Fund's portfolio management team, the

number of accounts managed and general method of compensation. In this latter respect, the Board noted that a primary factor in management's determination of a portfolio manager's bonus compensation was the relative investment performance of the funds he or she managed and that a portion of such bonus was required to be invested in a pre-designated list of funds within such person's fund management area so as to be aligned with the interests of shareholders. The Board also took into account the quality of transfer agent and shareholder services provided Fund shareholders by an affiliate of the Manager and steps taken by FTI to enhance analytical support to the investment management groups and provide additional oversight of liquidity risk and complex securities. The Board also took into account, among other things, management's efforts in establishing a global credit facility for the benefit of the Funds and other accounts managed by FTI to provide a source of cash for temporary and emergency purposes or to meet unusual redemption requests as well as the strong financial position of the Managers' parent company and its commitment to the mutual fund business as evidenced by its continued introduction of new funds and reassessment of the fund offerings in response to the market environment.

INVESTMENT PERFORMANCE. The Board placed significant emphasis on the investment performance of each of the Funds in view of its importance to shareholders. While consideration was given to performance reports and discussions with portfolio managers at Board meetings throughout the year, particular attention in assessing performance was given to the Broadridge reports furnished for the agreement renewals of all Funds. The Broadridge reports prepared for each of the individual Funds showed the investment performance of Class 1 shares for those having such class of shares and Class 2 shares for those Funds that did not have Class 1 shares, in comparison to a performance universe selected by Lipper. Comparative performance for each Fund was shown for the one-year period ended January 31, 2016, and previous periods ended that date of up to 10 years unless otherwise noted. Performance was shown on a total return basis for each Fund. In certain cases, income return was indicated as well. The following summarizes the performance results for each of the Funds and the Board's view of such performance.

Franklin Founding Funds Allocation VIP Fund – The performance universe for this Fund consisted of the Fund and all mixed-asset target allocation growth funds underlying variable insurance products as selected by Lipper. The Fund has been in operation less than 10 years. The Broadridge report showed its income return to be in the highest quintile of such Lipper universe for the one-year period, and on an annualized basis to also be in the highest quintile of such universe for each of the previous three- and five-year periods. The Broadridge report showed the Fund's total return for the one-year period to be in the lowest performing quintile of such performance universe, and on an annualized basis to also be in the lowest performing quintile of such universe for the previous three- and five-year periods. In assessing the relevance of such comparative performance, the Board noted the Fund is not actively managed and that its performance reflects those of the three underlying funds in which it invests in equal portions, which are not perfectly aligned to the investment style of comparative funds. The Board found the Fund's performance as shown in the Broadridge report to be acceptable in light of the unique investment strategy of the Fund.

Franklin Global Real Estate VIP Fund – The performance universe for this Fund consisted of the Fund and all global real estate funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return to be in the highest performing quintile of such universe for the one-year period, and on an annualized basis to also be in the highest performing quintile of such universe for the previous three- and five-year periods, but in the lowest performing quintile of such universe for the previous 10-year period. Noting the marked improvement in performance in recent years, the Board was satisfied with the Fund's comparative performance as shown in the Broadridge report.

Franklin Growth and Income VIP Fund – The performance universe for this Fund consisted of the Fund and all equity income funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return during the one-year period to be in the highest quintile of its Lipper performance universe, and on an annualized basis in each of the previous three-, five- and 10-year periods to also be in the highest quintile of such universe. The Broadridge report showed the Fund's total return for the one-year period to be in the highest performing quintile of its performance universe, and on an annualized basis to be in the second-highest performing quintile of such universe for each of the previous three-, five-, and 10-year periods. The Board found the Fund's comparative performance as shown in the Broadridge report to be satisfactory.

Franklin High Income VIP Fund – The performance universe for this Fund consisted of the Fund and all high yield funds underlying variable insurance products as selected by Lipper.

The Broadridge report showed the Fund's income return for the one-year period to be in the second-highest quintile of such performance universe, and on an annualized basis to be in the highest and second-highest quintile of such universe for the previous three- and five-year periods, respectively, and to be in the middle quintile of such universe for the previous 10-year period. The Broadridge report showed the Fund's total return to be in the lowest performing quintile of its performance universe for the one-year period, and on an annualized basis to be in the lowest performing quintile of such universe for the previous three-year period, and in the second-lowest performing quintile of such universe for the previous five- and 10-year periods. The Board found the Fund's comparative performance as shown in the Broadridge report to be acceptable given the Fund's income objective.

Franklin Income VIP Fund – The performance universe for this Fund consisted of the Fund and all mixed-asset target allocation moderate funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return to be in the highest quintile of such performance universe for the one-year period and to also be in the highest quintile of such universe for each of the previous three-, five- and 10-year periods on an annualized basis. The Broadridge report showed the Fund's total return to be in the lowest performing quintile of its performance universe for the one-year period, and on an annualized basis to be in the lowest performing quintile of such universe for the previous three- and five-year periods, and the middle performing quintile of such universe for the previous 10-year period. The Board found the Fund's comparative performance as shown in the Broadridge report to be acceptable, noting the Fund's income objective.

Franklin Large Cap Growth VIP Fund – The performance universe for this Fund consisted of the Fund and all multi-cap growth funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return to be in the second-highest performing quintile of such universe for the one-year period, and on an annualized basis to be in the middle performing quintile of such universe for the previous three-, five- and 10-year periods. The Board found the Fund's comparative performance as shown in the Broadridge report to be acceptable.

Franklin Mutual Global Discovery VIP Fund – The performance universe for this Fund consisted of the Fund and all global multi-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return to be in the highest performing quintile of such universe for the one-year period, and on an annualized basis to also be in the highest performing quintile of such universe for the previous three-, five- and 10-year periods. The Board found the Fund's overall comparative performance as set forth in the Broadridge report to be satisfactory.

Franklin Mutual Shares VIP Fund – The performance universe for this Fund consisted of the Fund and all large-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of the performance universe, and on an annualized basis to be in the lowest performing quintile of such universe for the previous three- and five-year periods, and to be in the second-lowest performing quintile for the previous 10-year period. The Board found the Fund's overall performance as set forth in the Broadridge report to be unacceptable, but acknowledged management's explanation that the Fund is managed conservatively and the Fund's cash holdings detract from relative performance in sharply rising markets. The Board indicated it would continue to monitor the Fund.

Franklin Rising Dividends VIP Fund – The performance universe for this Fund consisted of the Fund and all multi-cap core funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's comparative total return to be in the highest performing quintile of the performance universe for the one-year period, and on an annualized basis to be in the middle performing quintile of such universe for the previous three-year period, the second-highest performing quintile of such universe for the previous five-year period, and the highest performing quintile of such universe for the previous 10-year period. The Board found the Fund's comparative performance as set forth in the Broadridge report to be satisfactory.

Franklin Small Cap Value VIP Fund – The performance universe for this Fund consisted of the Fund and all small-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the highest performing quintile of such performance universe, and on an annualized basis to be in the second-lowest performing quintile of such universe for the previous three-year period, and in the second-highest performing quintile of such universe for each of the previous five- and 10-year periods. The Board found the Fund's comparative performance as set forth in the Broadridge report to be satisfactory, noting the Fund's improved performance over the past year.

Franklin Small-Mid Cap Growth VIP Fund – The performance universe for this Fund consisted of the Fund and all mid-cap growth funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of such universe, and on an annualized basis to be in the middle performing quintile of such universe for the previous three-year period, and the second-lowest performing quintile of such universe for each of the previous five- and 10-year periods. The Board discussed with management its ongoing attention to the Fund. The Board found the Fund's performance to be acceptable and noted that the three-year annualized total return performance was eight basis points above the median.

Franklin Strategic Income VIP Fund – The performance universe for this Fund consisted of the Fund and all general bond funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return to be in the highest quintile of such Lipper universe for the one-year period, and on an annualized basis to also be in the highest quintile of such universe during each of the previous three-, five- and 10-year periods. The Broadridge report showed the Fund's total return to be in the lowest performing quintile of such universe during the one-year period, and on an annualized basis to be in the second-lowest performing quintile of such universe for the previous three- and five-year periods, and the second-highest performing quintile of such universe for the previous 10-year period. The Board found the Fund's performance as shown in the Broadridge report to be acceptable, noting its income orientation.

Franklin U.S. Government Securities VIP Fund – The performance universe for this Fund consisted of the Fund and all general U.S. government funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return for the one-year period to be in the highest quintile of such universe, and on an annualized basis to also be in the highest quintile of such universe for each of the previous three-, five- and 10-year periods. The Broadridge report showed the Fund's total return to be in the highest performing quintile of such universe for the one-year period, and on an annualized basis to be in the middle performing quintile of such universe for the previous three- and 10-year periods, and in the second-lowest performing quintile of such universe for the previous five-year period. The Board found the Fund's comparative performance as shown in the Broadridge report to be satisfactory, noting the Fund's income objective and the nature of the Fund's investments, which were primarily in U.S. mortgage backed securities.

Templeton Developing Markets VIP Fund – The performance universe for this Fund consisted of the Fund and all emerging markets funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's comparative total return for the one-year period to be in the lowest performing quintile of such performance universe, and on an annualized basis to also be in the lowest performing quintile of such universe for the previous three-year period and in the second-lowest performing quintile of such universe for each of the previous five- and 10-year periods. The Board found the performance of the Fund as set forth in the Broadridge report to be unacceptable and discussed with management measures it was implementing to address the performance, including a more rigorous selling discipline. The Board concluded that continued monitoring is warranted in light of the Fund's underperformance, but did not believe a portfolio management change was needed at this time given management's attention to the Fund.

Templeton Foreign VIP Fund – The performance universe for this Fund consisted of the Fund and all international large-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's comparative total return for the one-year period to be in the lowest performing quintile of such performance universe and on an annualized basis to be in the lowest performing quintile of such universe for the previous three-year period, in the second-lowest performing quintile of such universe for the previous five-year period, and in the second-highest performing quintile of such universe for the previous 10-year period. The Board found the Fund's comparative investment performance as set forth in the Broadridge report to be acceptable, noting that performance was in the highest or second-highest quintile in seven of the previous eight years.

Templeton Global Bond VIP Fund – The performance universe for this Fund consisted of the Fund and all global income funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's income return for the one-year period to be in the highest quintile of such Lipper universe, and on an annualized basis to also be in the highest quintile of such universe for the previous three-, five- and 10-year periods. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of its performance universe, and on an annualized basis to be in the highest performing quintile of such universe for each of the previous three-, five- and 10-year annualized periods. The Board was satisfied with the Fund's comparative performance as set forth in the Broadridge report.

Templeton Growth VIP Fund – The performance universe for this Fund consisted of the Fund and all global large-cap value funds underlying variable insurance products as selected by Lipper. The Broadridge report showed the Fund's total return for the one-year period to be in the second-lowest performing quintile of such performance universe, and on an annualized basis to also be in the second-lowest performing quintile of such universe for each of the previous three- and five-year periods. (Although the Fund has been in operation for 10 years, Lipper comparative data is not available for this longer period.) The Board found the Fund's comparative performance as set forth in the Broadridge report to be acceptable, noting that the Fund's performance had been in the highest or second-highest quintile in three of the previous five one-year periods. They also observed that the Fund's annualized performance was within 1% of the median for the five- year period and at the median for the 10-year period.

COMPARATIVE EXPENSES. Consideration was given to information contained in the Broadridge reports furnished for each Fund, which compared its management fee and total expense ratio with those of a group of other funds selected by Lipper as its appropriate Lipper expense group. Lipper expense data is based upon information taken from each fund's most recent annual report, which reflects historical asset levels that may be quite different from those currently existing, particularly in a period of market volatility. While recognizing such inherent limitation and the fact that expense ratios generally increase as assets decline and decrease as assets grow, the Board believed the independent analysis conducted by Lipper to be an appropriate measure of comparative expenses. In reviewing comparative costs, Lipper provides information on the Funds' contractual investment management fee rate in comparison with the contractual investment management fee rate that would have been charged by other funds within its Lipper expense group assuming they were similar in size to the Fund, as well as the actual total expense ratio of the Fund in comparison with those of its Lipper expense group. The Lipper contractual investment management fee analysis includes administrative charges at the fund level as being part of a management fee, and actual total expenses, for comparative consistency, are shown by Lipper for the same class of shares for all funds within a particular Lipper expense group.

The results of such comparisons showed that both the contractual investment management fee rates and actual total expense ratios of the following Funds were in the least expensive quintiles of their respective Lipper expense groups: Franklin Small Cap Value VIP Fund, Franklin Growth and Income VIP Fund, Franklin High Income VIP Fund, Franklin Income VIP Fund and Templeton Global Bond VIP Fund. The Board was satisfied with the comparative contractual investment management fees and expenses of these Funds as shown in their Broadridge reports.

The contractual investment management fee rates and actual total expense ratios of each of Franklin Global Real Estate VIP Fund, Franklin Large Cap Growth VIP Fund, Franklin Mutual Global Discovery VIP Fund and Templeton Developing Markets VIP Fund were above the medians of their Lipper expense groups. In the case of contractual management fees, Franklin Mutual Global Discovery VIP Fund exceeds the median by 23.6 basis points, while the other Funds exceed the median by less than 16 basis points. The Board found the comparative contractual investment management fees and expenses of these Funds as shown in their Broadridge reports to be acceptable.

The contractual investment management fee rates of the following Funds were above the median of their Lipper expense groups, while the actual total expense ratios were at the median: Franklin Small-Mid Cap Growth VIP Fund and Templeton Growth VIP Fund. The Board found the comparative expenses of these Funds as shown in the Broadridge reports to be acceptable.

The contractual investment management fee rates of the following Funds were at or above the median of their Lipper expense groups, while the actual total expense ratios were at or below the median: Franklin Founding Funds Allocation VIP Fund and Franklin Mutual Shares VIP Fund. The Board found the comparative expenses of these Funds as shown in their Broadridge reports to be acceptable, noting that a fee waiver was in place for Franklin Founding Funds Allocation VIP Fund.

The contractual investment management fee rate and actual total expense ratio for Franklin Rising Dividends VIP Fund were both below the median of its Lipper expense group. The Board found the comparative expenses of Franklin Rising Dividends VIP Fund as shown in the Broadridge reports to be acceptable.

The contractual investment management fee rates and actual total expense ratios for the following Funds were in the first or second quintiles of their expense groups, meaning they were among the least expensive of their peers: Franklin Strategic Income VIP Fund, Franklin U.S. Government Securities VIP Fund and Templeton Foreign VIP Fund. The Board was satisfied with the comparative expenses of these Funds as shown in their Broadridge reports.

MANAGEMENT PROFITABILITY. The Board also considered the level of profits realized by the Managers and their affiliates in connection with the operation of each Fund. In this respect, the Board reviewed the Fund profitability analysis that addresses the overall profitability of Franklin Templeton's U.S. fund business, as well as its profits in providing management and other services to each of the individual funds during the 12-month period ended September 30, 2015, being the most recent fiscal year-end for Franklin Resources, Inc., the Managers' parent. In reviewing the analysis, the Board recognized that allocation methodologies are inherently subjective and various allocation methodologies may be reasonable while producing different results. In this respect, the Board noted that while management continually makes refinements to its methodologies in response to organizational and product related changes, the overall approach as defined by the primary drivers and activity measurements has remained consistent with that used in the Funds' profitability report presentations from prior years. Additionally, the Funds' independent registered public accounting firm had been engaged by the Manager to periodically review the reasonableness of the allocation methodologies to be used solely by the Funds' Board in reference to the profitability analysis. In reviewing and discussing such analysis, management discussed with the Board its belief that costs incurred in establishing the infrastructure necessary for the type of mutual fund operations conducted by the Managers and their affiliates may not be fully reflected in the expenses allocated to each Fund in determining its profitability, as well as the fact that the level of profits, to a certain extent, reflected operational cost savings and efficiencies initiated by management. The Board also took into account management's expenditures in improving services provided the Funds, as well as the need to implement systems to meet additional regulatory and compliance requirements resulting from statutes such as the Sarbanes-Oxley and Dodd-Frank Acts and recent SEC and other regulatory requirements. In addition, the Board considered a third-party study comparing the profitability of the Managers' parent on an overall basis to other publicly held managers broken down to show profitability from management operations exclusive of distribution expenses, as well as profitability including distribution expenses. The Board also considered the extent to which the Managers and their affiliates might derive ancillary benefits from Fund operations, including potential benefits resulting from personnel and systems enhancements necessitated by fund growth, increased leverage with the service providers and counterparties, allocation of fund brokerage and the use of commission dollars to pay for research. Based upon its consideration of all these factors, the Board determined that the level of profits realized by the Managers and their affiliates from providing services to each Fund was not excessive in view of the nature, quality and extent of services provided.

ECONOMIES OF SCALE. The Board also considered whether economies of scale are realized by the Manager as the Funds grow larger and the extent to which this is reflected in the level of management fees charged. While recognizing that any precise determination is inherently subjective, the Board noted that based upon the Fund profitability analysis, it appears that as some funds get larger, at some point economies of scale do result in a Manager realizing a larger profit margin on management services provided such a fund. The Board also noted that economies of scale are shared with a fund and its shareholders through management fee breakpoints so that as a fund grows in size, its effective management fee rate declines. In the case of Franklin Founding Funds Allocation VIP Fund, the management fees of the underlying funds in which it invests have management fee breakpoints that extend beyond their existing asset sizes, and in the case of each of the other Funds, other than Franklin Rising Dividends VIP Fund, their management fees contain breakpoints that extend beyond their existing asset sizes. To the extent economies of scale may be realized by the Managers and their affiliates, the Board believed the schedule of investment management fees provides a sharing of benefits for each Fund and its shareholders. The investment management structure of the Franklin Rising Dividends VIP Fund provides for a fee of 0.750% on the first $500 million of net assets; 0.625% on the next $500 million of net assets; and 0.500% on assets in excess of $1 billion. This Fund had assets of approximately $1.5 billion at December 31, 2015, and in reviewing its fee structure, management stated its belief that this fee structure reaches a relatively low rate quickly, reflecting anticipated economies of scale. In support of such position, management pointed out the favorable management fee and total expense comparisons of this Fund within its Lipper expense group as previously discussed under "Comparative Expenses." In light of such position and taking into account the fact that the reduced rate on assets in excess of the last breakpoint lowers the Fund's overall investment management fee rate, the Board believed that the schedule of investment management fees provides a sharing of benefits for the Fund and its shareholders, but intends to monitor future growth and the appropriateness of adding additional breakpoints.

Proxy Voting Policies and Procedures

The Trust's investment manager has established Proxy Voting Policies and Procedures (Policies) that the Trust uses to

determine how to vote proxies relating to portfolio securities. Shareholders may view the Trust's complete Policies online at franklintempleton.com. Alternatively, shareholders may request copies of the Policies free of charge by calling the Proxy Group collect at (954) 527-7678 or by sending a written request to: Franklin Templeton Companies, LLC, 300 S.E. 2nd Street, Fort Lauderdale, FL 33301, Attention: Proxy Group. Copies of the Trust's proxy voting records are also made available online at franklintempleton.com and posted on the U.S. Securities and Exchange Commission's website at sec.gov and reflect the most recent 12-month period ended June 30.

Quarterly Statement of Investments

The Trust files a complete statement of investments with the U.S. Securities and Exchange Commission for the first and third quarters for each fiscal year on Form N-Q. Shareholders may view the filed Form N-Q by visiting the Commission's website at sec.gov. The filed form may also be viewed and copied at the Commission's Public Reference Room in Washington, DC. Information regarding the operations of the Public Reference Room may be obtained by calling (800) SEC-0330.

Semi-Annual Report
June 30, 2016

Goldman Sachs Variable Insurance Trust Funds

Market Review

During the six months ended June 30, 2016 (the "Reporting Period"), the broad U.S. equities and fixed income markets recorded positive returns.

Equity Markets

As the Reporting Period began in January 2016, U.S. equities were embroiled in a global rout, triggered by investor concerns about an intensifying economic slowdown in China and exacerbated by an oil price plunge. Following a December 2015 interest rate hike, the January 2016 Federal Reserve ("Fed") statement acknowledged these external risks and tightening financial conditions. U.S. equities stabilized in February 2016, as market sentiment improved on the more dovish tone set by global central banks. (Dovish language tends to suggest lower interest rates.) U.S. equities were also supported by stronger economic data, rallying as fourth quarter U.S. Gross Domestic Product ("GDP") came in above consensus expectations. In March 2016, the Fed kept interest rates on hold and surprised on the dovish side, reducing its forecast to two interest rate hikes in 2016, down from four. Along with receding global economic concerns, we believe this helped to drive a recovery in U.S. equities. Released in March 2016, February 2016 unemployment data came in ahead of market consensus, with unemployment steady at 4.9% in spite of higher participation rates and declining underemployment.

Following the rebound in March 2016, market sentiment appeared to remain sanguine in April 2016, as oil prices rose and China's economic growth concerns abated. U.S. equities fell near the end of the month as investors were disappointed by a lack of additional stimulus from the Bank of Japan and by a weaker than consensus expected first quarter U.S. GDP rate of 0.5%. Hawkish Fed minutes released in May 2016 temporarily revived market expectations for a Fed interest rate hike in June 2016, but weaker than expected May 2016 payroll data subsequently drove such expectations lower. (Hawkish language tends to suggest higher interest rates; opposite of dovish.) The Fed ultimately held interest rates steady in June 2016 and signaled a slower pace of hikes, acknowledging the slowdown in the labor market. Markets were otherwise dominated in June 2016 by the U.K. referendum on membership in the European Union, popularly known as Brexit. U.S. equities sold off in the global risk-off, or heightened risk averse sentiment in June 2016 following the surprise "leave" result. Markets rebounded in the latter days of the month owing to improving risk sentiment as markets digested the Brexit vote outcome and on dovish remarks from Bank of England Governor Carney.

U.S. equities, as represented by the S&P 500® Index, gained 3.84% during the Reporting Period. Telecommunication services and utilities were the best performing sectors in the S&P 500® Index by a wide margin. Energy and consumer staples also posted double-digit gains. The energy sector was the largest positive contributor to S&P 500® Index returns, as measured by weight times performance. The weakest performing sectors in the S&P 500® Index during the Reporting Period were financials and information technology, the only two to post negative absolute returns, followed by consumer discretionary and health care, which were also weak but generated modestly positive returns during the Reporting Period.

Within the U.S. equity market, there was significant disparity in performance not only among sectors but also among the various capitalization and style segments. While all capitalization segments posted positive returns, mid-cap stocks, as measured by the Russell Midcap® Index, performed best, followed by large-cap stocks, as measured by the Russell 1000® Index, and then, small-cap stocks, as measured by the Russell 2000® Index. From a style perspective, value-oriented stocks significantly outpaced growth-oriented stocks across the capitalization spectrum. Value outperformed relative to growth during the Reporting Period primarily due to weaker performance of the growth-oriented health care sector. (All as measured by the Russell Investments indices.)

Fixed Income Markets

When the Reporting Period began, spread (or non-government bond) sectors retreated, selling off significantly from January to mid-February 2016. The selloff was driven by an increase in a number of perceived risks, such as slowing Chinese economic activity, the possibility of persistent oil oversupply and deteriorating corporate bond fundamentals, as the U.S. credit cycle entered its later stage. Some of these risks eased in the second half of the first calendar quarter, as economic news from China improved, U.S. oil production showed signs of slowing, and commodity prices appeared to stabilize. As a result, spread sectors largely retraced their losses by the end of March 2016. Global central banks remained accommodative. The Bank of Japan, in a surprise move at its January 2016 policy meeting, introduced a -0.1% interest rate, reaffirming its commitment to achieving a 2% inflation target. The European Central Bank shifted its focus from currency depreciation to credit creation by leaving the deposit rate unchanged, expanding its asset purchase program to include purchases of non-financial corporate credit and announcing a new

series of easing measures in the form of targeted long-term refinancing operations ("TLTRO II"). (TLTRO II is designed to offer attractive long-term funding conditions to Eurozone banks to further ease private sector credit conditions and to stimulate credit creation.) In the U.S., the Fed left interest rates unchanged and reduced its forecast to two rate hikes in 2016 from four. After a sustained period of appreciation, the U.S. dollar weakened during the first quarter of 2016 due to generally tighter financial conditions, mixed U.S. economic data and the Fed's more dovish commentary.

During the second quarter of 2016, spread sectors rallied on stabilization of commodities prices as well as on declining fears about slowing Chinese economic growth and the potential for a U.S. economic recession. Global interest rates broadly declined amid continued accommodative monetary policy from the world's central banks. In the U.S., minutes from the Fed's April 2016 policy meeting, released in mid-May 2016, suggested Fed policymakers might raise interest rates in June 2016 if U.S. economic growth strengthened, employment data firmed and inflation rose toward the Fed's 2% target. In early June 2016, however, the release of weak May 2016 employment data raised concerns about the health of the U.S. economy, pushing down expectations of a Fed rate hike. Indeed, the Fed did not raise interest rates at its June 2016 policy meeting. In the last week of June 2016, the unexpected "leave" vote in the U.K.'s referendum regarding Brexit renewed investor uncertainty about the path of global economic growth. Spread sectors withstood the Brexit vote relatively well, selling off at first but then recovering most of their losses afterwards. The U.S. dollar strengthened versus most global currencies during the second calendar quarter, though it weakened against the Japanese yen.

For the Reporting Period overall, sovereign emerging markets debt and high yield corporate bonds outperformed U.S Treasuries, followed at some distance by asset-backed securities and investment grade corporate bonds. Commercial mortgage-backed securities, agency securities and mortgage-backed securities generally performed in line with U.S. Treasuries. The U.S. Treasury yield curve, or spectrum of maturities, flattened during the Reporting Period as yields of six months and longer fell. The yield on the bellwether 10-year U.S. Treasury dropped approximately 80 basis points to end the Reporting Period at 1.47%. (A basis point is 1/100th of a percentage point. A flattening yield curve is one wherein the differential in yields between longer-term and shorter-term maturities narrows.)

Looking Ahead

Equity Markets

At the end of the Reporting Period, persistently low economic growth, interest rates and visibility reinforced our expectation for lower than average returns across asset classes for the remainder of 2016. In our view, equities remain relatively attractive in this environment. We believe equities can still generate positive returns for calendar year 2016, driven by earnings growth.

We consider economic and corporate fundamentals to be strongest in the U.S. relative to many other global regions, which we believe should buoy near-term U.S. equity performance. However, valuations increasingly reflect this scenario, which makes stock selection all the more important. We continue to seek what we believe are good investment opportunities with a focus on companies exposed to long-term secular growth trends and/or that are trading at discounts to their intrinsic value.

Overall, we believe many companies could benefit from increasing domestic consumption while being more insulated from currency volatility. We expect the strong U.S. dollar to continue to be a headwind for many globally-exposed companies but believe the consumer remains healthy.

Fixed Income Markets

At the end of the Reporting Period, we expected global economic growth to remain slow. We believed the impact of Brexit would take time to play out, with much of the effects, in our view, coming during 2017. Near term, we expect Brexit to add downside risk to the U.K. and European outlook. In terms of the U.K., we have reduced our forecast for 2016 economic growth from 1.8% to 1.2% and our 2017 forecast down from 2.0% to 0.5%. We also believe there is the potential for the U.K. to experience a recession during the next one to two years. In terms of the European Union, we have revised our 2016 economic growth forecast down from 1.4% to 1.3% and our 2017 forecast down from 1.2% to 0.6%. Our forecasts for the U.S., Japan and China remain unchanged, as we expect Brexit to have limited effects on these economies unless there is broader contagion. We believe the U.S. economy could see some near-term improvement as a number of headwinds fade, including the oil price-driven decline in business investment. That said, we see a growing risk of a U.S. recession in 2017 as tight labor markets put pressure on corporate sector profits. At the end of the Reporting Period, we generally expected inflation to stay low across developed economies.

INVESTMENT OBJECTIVE

The Fund seeks a total return consisting of capital appreciation and income that exceeds the total return of the Barclays U.S. Aggregate Bond Index.

Portfolio Management Discussion and Analysis

Below, the Goldman Sachs Fixed Income Portfolio Management Team discusses the Goldman Sachs Variable Insurance Trust — Goldman Sachs Core Fixed Income Fund's (the "Fund") performance and positioning for the six-month period ended June 30, 2016 (the "Reporting Period").

How did the Fund perform during the Reporting Period?

During the Reporting Period, the Fund's Institutional and Service Shares generated cumulative total returns of 4.95% and 4.82%, respectively. These returns compare to the 5.31% cumulative total return of the Fund's benchmark, the Barclays U.S. Aggregate Bond Index (the "Barclays Index"), during the same time period.

What key factors were responsible for the Fund's performance during the Reporting Period?

During the Reporting Period, the Fund's tactical duration and yield curve positioning detracted from its relative performance. Duration is a measure of the Fund's sensitivity to changes in interest rates. Yield curve indicates a spectrum of maturities. In addition, the Fund's top-down country strategy hurt relative returns. Early in the Reporting Period, the Fund was hampered by its long positions in the European peripheral countries of Italy and Spain. Later in the Reporting Period, a long position in Canada versus a short position in the U.S. detracted from performance. Our top-down currency strategy, especially the Fund's short position in the Japanese yen, also dampened results during the Reporting Period.

On the positive side, the Fund benefited from our top-down cross-sector strategy. In our cross-sector strategy, we invest Fund assets across a variety of fixed income sectors, including some that may not be included in the Barclays Index. Additionally, our bottom-up individual issue selection within the corporate bond sector added to results during the Reporting Period.

Which fixed income market sectors most affected Fund performance during the Reporting Period?

During the Reporting Period, overweight positions relative to the Barclays Index in asset-backed securities ("ABS") and collateralized loan obligations ("CLOs") bolstered Fund performance. This was offset somewhat by the Fund's overweight in U.S. corporate bonds, which underperformed early in the Reporting Period as credit spreads (yield differentials to U.S. Treasuries) widened significantly on concerns about U.S. manufacturing weakness.

In terms of individual issue selection, the Fund benefited from its holdings of long-term corporate bonds. In the government/swaps sector, selection of U.S. Treasury inflation protected securities ("TIPS") was also positive for Fund performance. Offsetting this somewhat was our issue selection among CLOs and external emerging markets debt.

Did the Fund's duration and yield curve positioning strategy help or hurt its results during the Reporting Period?

Tactical management of the Fund's duration and yield curve positioning detracted overall from relative returns during the Reporting Period. In particular, the Fund was hurt by its short duration position relative to the Barclays Index as U.S. interest rates fell.

How did the Fund use derivatives and similar instruments during the Reporting Period?

As market conditions warranted during the Reporting Period, currency transactions were carried out using primarily over-the-counter ("OTC") forward foreign exchange contracts. Currency transactions were used as we sought both to enhance returns and to hedge the Fund's portfolio against currency exchange rate fluctuations. OTC forward foreign exchange contracts detracted from Fund performance during the Reporting Period. In addition, Treasury futures were employed as warranted to facilitate specific duration, yield curve and country strategies. During the Reporting Period, Treasury futures contributed positively to Fund results. Swaptions (options on interest rate swap contracts), which were used to express our interest rate views and to hedge volatility and yield curve risks in the Fund, did not have a meaningful impact on the Fund's performance during the Reporting Period. Interest rate swaps were used to manage exposure to fluctuations in interest rates. They detracted from Fund performance during the Reporting Period. In addition, the Fund employed credit default swaps to implement specific credit-related investment strategies,

including management of the Fund's exposure to credit spreads. Credit default swaps had a negative impact on the Fund's results during the Reporting Period. Overall, we employ derivatives and similar instruments for the efficient management of the Fund's portfolio. Derivatives and similar instruments allow us to manage interest rate, credit and currency risks more effectively by allowing us both to hedge and to apply active investment views with greater versatility and to afford greater risk management precision than we would otherwise be able to implement.

Were there any notable changes in the Fund's weightings during the Reporting Period?

The Fund began the Reporting Period with a long duration position relative to that of the Barclays Index, which we shifted to a neutral position in February 2016 and then to a short position in March 2016. We maintained this short duration positioning through the end of the Reporting Period because we expected U.S. economic growth to continue improving amid positive inflation and wage data.

Also, at the start of the Reporting Period, we maintained the Fund's overweight compared to the Barclays Index in corporate credit. We moved to a small underweight within the sector in June 2016 in anticipation of summer seasonal pressures and due to our view that Brexit volatility would cause credit spreads to drift wider. (Brexit refers to the U.K. "leave" vote on membership in the European Union.)

Were there any changes to the Fund's portfolio management team during the Reporting Period?

There were no changes to the Fund's portfolio management team during the Reporting Period.

How was the Fund positioned relative to the Barclays Index at the end of the Reporting Period?

At the end of the Reporting Period, the Fund was underweight U.S. government securities compared to the Barclays Index on a market-value weighted basis. It was also underweight mortgage pass-through securities. (Pass-through mortgages consist of a pool of residential mortgage loans, where homeowners' monthly payments of principal, interest and prepayments pass from the original bank through a government agency or investment bank to investors.) The Fund was overweight investment grade corporate bonds, ABS, agency commercial mortgage obligations, agency mortgage-backed securities and commercial mortgage-backed securities. It was marginally overweight non-agency mortgage-backed securities and emerging markets debt. The Fund was neutral relative to the Barclays Index in quasi-government bonds and covered bonds at the end of the Reporting Period. (Covered bonds are securities created from either mortgage loans or public sector loans.)

Core Fixed Income Fund

as of June 30, 2016

STANDARDIZED TOTAL RETURNS[1]

For the period ended 6/30/16	One Year	Five Years	Ten Years	Since Inception	Inception Date
Institutional	5.56%	N/A	N/A	2.81%	4/30/13
Service	5.31	4.01%	4.66%	4.34	1/09/06

[1] **The Standardized Total Returns are average annual total returns as of the most recent calendar quarter-end. They assume reinvestment of all distributions at net asset value ("NAV"). Because Institutional and Service Shares do not involve a sales charge, such a charge is not applied to their Standardized Total Returns.**

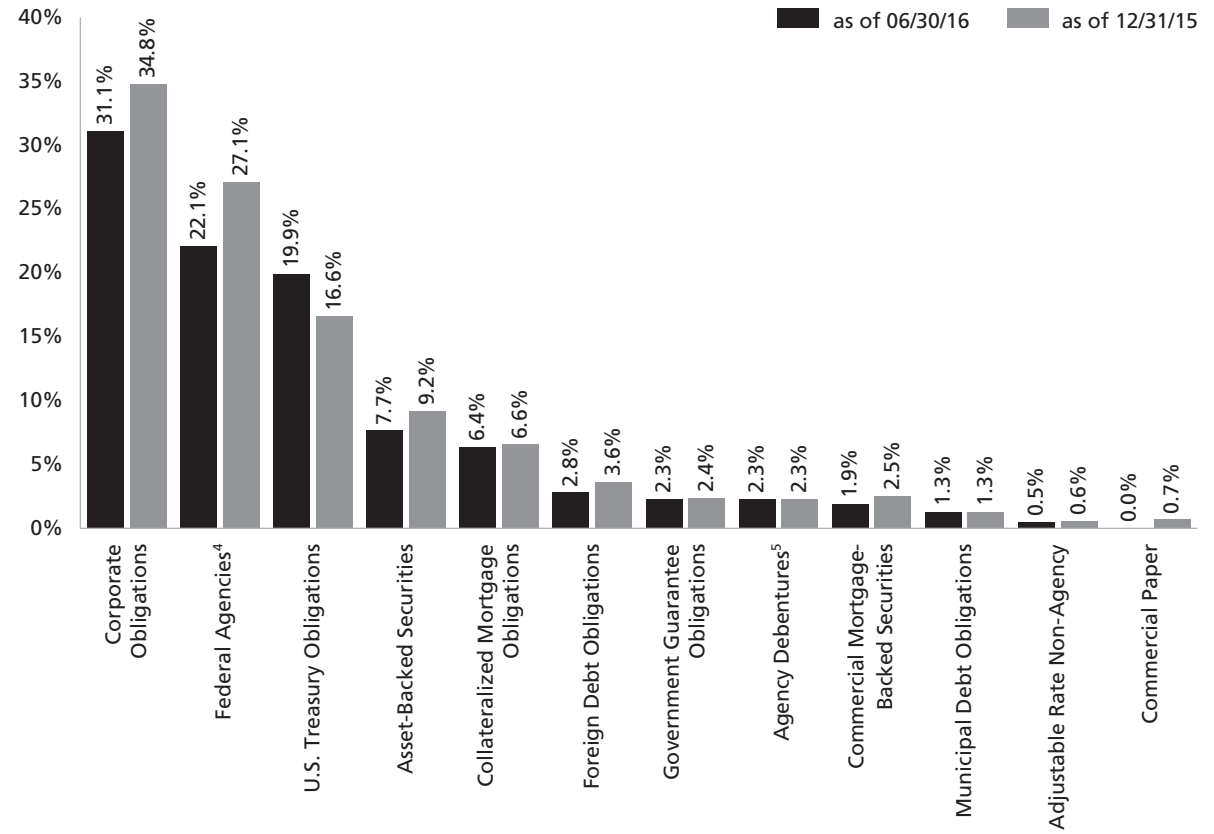
Total return figures in the above chart represent past performance and do not indicate future results, which will vary. The investment return and principal value of an investment will fluctuate and, therefore, an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the total return figures in the above chart. Please visit www.GSAMFUNDS.com to obtain the most recent month-end returns. Performance reflects fee waivers and/or expense limitations in effect during the periods shown. In their absence, performance would be reduced.

EXPENSE RATIOS[2]

	Net Expense Ratio (Current)	Gross Expense Ratio (Before Waivers)
Institutional	0.42%	0.74%
Service	0.67	0.99

[2] The expense ratios of the Fund, both current (net of any fee waivers or expense limitations) and before waivers (gross of any fee waivers or expense limitations) are as set forth above according to the most recent publicly available Prospectus for the Fund and may differ from the expense ratios disclosed in the Financial Highlights in this report. Pursuant to a contractual arrangement, the Fund's waivers and/or expense limitations will remain in place through at least April 29, 2017 and prior to such date the Investment Adviser may not terminate the arrangements without the approval of the Fund's Board of Trustees. If these arrangements are discontinued in the future, the expense ratios may change without shareholder approval.

FUND COMPOSITION[3]



[3] The percentage shown for each investment category reflects the value of investments in that category as a percentage of net assets. Figures in the graph may not sum to 100% due to the exclusion of other assets and liabilities. The graph depicts the Fund's investments but may not represent the Fund's market exposure due to the exclusion of certain derivatives, if any, as listed in the Additional Investment Information section of the Schedule of Investments.

[4] "Federal Agencies" are mortgage-backed securities guaranteed by the Government National Mortgage Association ("GNMA"), the Federal National Mortgage Association ("FNMA") or the Federal Home Loan Mortgage Corp. ("FHLMC"). GNMA instruments are backed by the full faith and credit of the United States Government.

[5] "Agency Debentures" include agency securities offered by companies such as FNMA and FHLMC, which operate under a government charter. While they are required to report to a government regulator, their assets are not explicitly guaranteed by the government and they otherwise operate like any other publicly traded company.

INVESTMENT OBJECTIVE

The Fund seeks to achieve investment results that correspond to the aggregate price and yield performance of a benchmark index that measures the investment returns of large capitalization stocks.

Portfolio Management Discussion and Analysis

Below, SSgA Funds Management, Inc. ("SSgA"), the Fund's Subadvisor, discusses the Goldman Sachs Variable Insurance Trust — Goldman Sachs Equity Index Fund's (the "Fund") performance and positioning for the six-month period ended June 30, 2016 (the "Reporting Period").

How did the Fund perform during the Reporting Period?

During the Reporting Period, the Fund's Service Shares generated a cumulative total return of 3.59%. This return compares to the 3.84% cumulative total return of the Fund's benchmark, the Standard & Poor's 500® Index (with dividends reinvested) (the "S&P 500® Index"), during the same time period.

During the Reporting Period, which sectors and which industries in the S&P 500® Index were the strongest contributors to the Fund's performance?

Seven of the 10 sectors in the S&P 500® Index advanced during the Reporting Period. In terms of total return, the sectors that made the strongest positive contributions to the S&P 500® Index and to the Fund were telecommunication services, utilities and energy. The largest sector by weighting in the S&P 500® Index at the end of the Reporting Period was information technology at a weighting of 19.77%. The industries with the strongest performance in terms of total return were precious metals; construction materials; casinos/gambling; oil and gas pipelines; and major telecommunications.

On the basis of impact (which takes both total returns and weightings into account), the sectors that made the strongest positive contributions to the S&P 500® Index and to the Fund were consumer staples, energy and utilities. The industries with the strongest performance on the basis of impact were electric utilities, major telecommunications, integrated oil, major pharmaceuticals and industrial conglomerates.

Which sectors and industries in the S&P 500® Index were the weakest contributors to the Fund's performance?

In terms of total return, during the Reporting Period, the weakest performing sectors were financials, information technology and health care. The weakest performing industries in terms of total return were other pharmaceuticals, airlines, real estate development, generic pharmaceuticals and movies/entertainment.

On the basis of impact, the weakest performing sectors were financials, information technology and health care. The weakest performing industries on the basis of impact were biotechnology, major banks, financial conglomerates, generic pharmaceuticals and telecommunications equipment.

Which individual stocks were the top performers, and which were the greatest detractors?

On the basis of impact, the stocks that made the strongest positive contribution during the Reporting Period were Exxon Mobil, Verizon Communications, AT&T, Johnson & Johnson and Chevron. The weakest performers were Apple, Allergan, Bank of America, Citigroup and Wells Fargo.

How did the Fund use derivatives and similar instruments during the Reporting Period?

During the Reporting Period, the Fund did not use derivatives as part of an active management strategy to add value to the Fund's results. However, equity index futures were used to equitize the Fund's cash holdings. In other words, we put the Fund's cash holdings to work by using them as collateral for the purchase of equity index futures. We also used these equity index futures to provide liquidity for daily cash flow requirements. Equity index futures had a neutral impact on the Fund's performance during the Reporting Period.

Were there any changes to the Fund's portfolio management team during the Reporting Period?

There were no changes to the Fund's portfolio management team during the Reporting Period.

What changes were made to the makeup of the S&P 500® Index during the Reporting Period?

Twenty-one stocks were removed from the S&P 500® Index during the Reporting Period. They were Airgas, Baxalta, Broadcom, Cablevision Systems, Cameron International, Chubb, Coca-Cola Enterprises, Consol Energy, Ensco, Fossil Group, GameStop, Ingevity, Keurig Green Mountain, Pepco Holdings, Plum Creek Timber, Precision Castparts, SanDisk, Tenet Healthcare, ADT, Time Warner Cable and Vistana Signature Experiences. There were 22 stocks added to the S&P 500® Index during the Reporting Period. They were Acuity Brands, Alaska Air Group, American Water Works, Centene, Citizens Financial Group, Concho Resources, Digital Realty Trust, Extra Space Storage, Federal Realty Investment Trust, Foot Locker, Fortune Brands Home & Security, Arthur J. Gallagher & Co., Global Payments, Hologic, Ingevity, LKQ, TransDigm Group, UDR, Ulta Salon Cosmetics & Fragrance, Under Armour Class C, Vistana Signature Experiences and Willis Group Holdings.

The source of the data included in the above Portfolio Management Discussion and Analysis with respect to the Goldman Sachs Equity Index Fund is FactSet as of 6/30/16.

Characteristics presented are calculated using the month end market value of holdings, except for beta and standard deviation, if shown, which use month end return values. Averages reflect the market weight of securities in the portfolio. Market data, prices, and dividend estimates for characteristics calculations provided by FactSet Research Systems, Inc. All other portfolio data provided by SSGA. Characteristics are as of the date indicated, are subject to change, and should not be relied upon as current thereafter.

Past performance is not a guarantee of future results.

Index returns are unmanaged and do not reflect the deduction of any fees or expenses. Index returns reflect all items of income, gain and loss and the reinvestment of dividends and other income.

SSgA may have or may seek investment management or other business relationships with companies discussed in this material or affiliates of those companies, such as their officers, directors and pension plans.

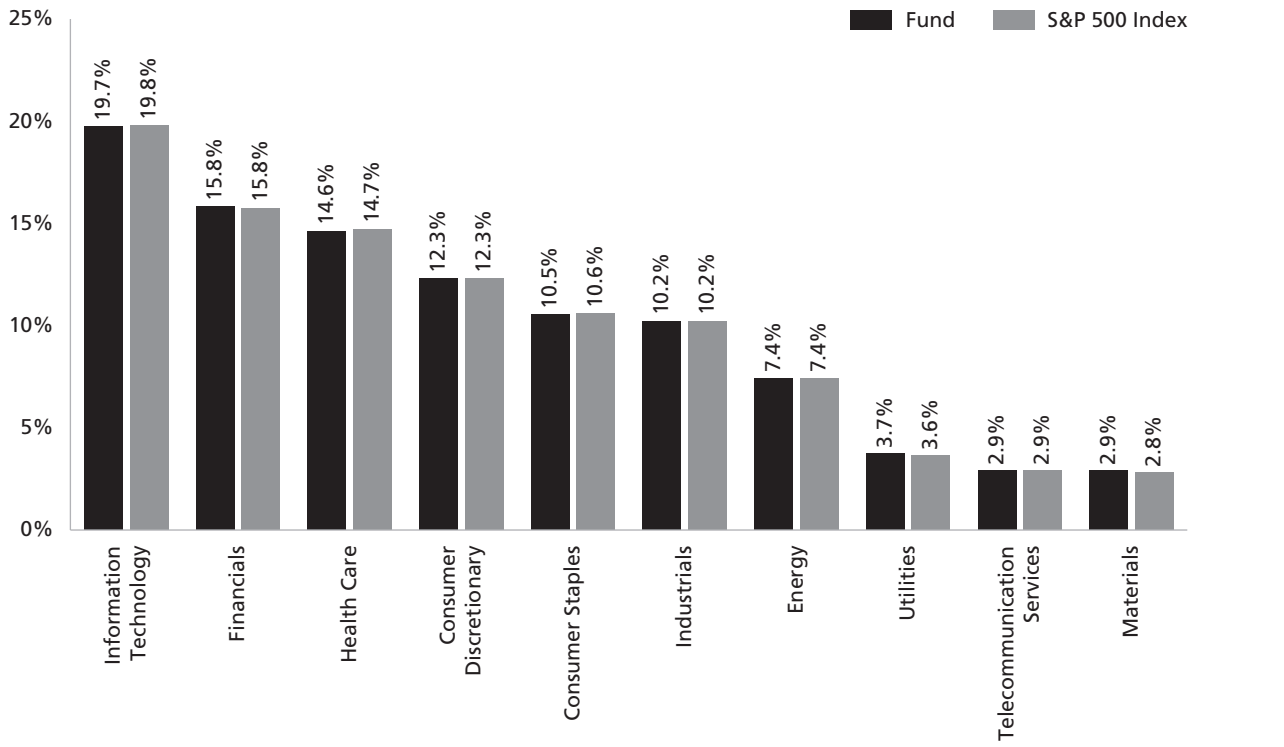
FUND VS. BENCHMARK SECTOR ALLOCATIONS[4]

As of June 30, 2016



[4] The Fund is actively managed and, as such, its composition may differ over time. Consequently, the Fund's overall sector allocations may differ from percentages contained in the graph above. The graph categorizes investments using Global Industry Classification Standard ("GICS"), however, the sector classifications used by the portfolio management team may differ from GICS. The percentage shown for each investment category reflects the value of investments in that category as a percentage of market value. Underlying sector allocations of Exchange Traded Funds and Investment Companies held by the Fund are not reflected in the graph above. The graph depicts the Fund's investments but may not represent the Fund's market exposure due to the exclusion of certain derivatives, if any, as listed in the Additional Investment Information section of the Schedule of Investments.

INVESTMENT OBJECTIVE

The Fund seeks long-term growth of capital.

Portfolio Management Discussion and Analysis

Below, the Goldman Sachs Growth Investment Team discusses the Goldman Sachs Variable Insurance Trust — Goldman Sachs Growth Opportunities Fund's ("Fund") performance and positioning for the six-month period ended June 30, 2016 (the "Reporting Period").

How did the Fund perform during the Reporting Period?

During the Reporting Period, the Fund's Institutional and Service Shares generated cumulative total returns of 2.38% and 2.25%, respectively. These returns compare to the -2.15% cumulative total return of the Fund's benchmark, the Russell Midcap® Growth Index (with dividends reinvested) (the "Russell Index"), during the same time period.

What key factors were responsible for the Fund's performance during the Reporting Period?

The Fund outperformed the Russell Index during the Reporting Period as a result of stock selection.

Which equity market sectors helped and hurt Fund performance?

Our bottom-up approach focuses on security selection, and as a result, we do not make active sector-level investment decisions. That said, on a sector level, stock selection in the consumer staples, financials and health care sectors added to the Fund's relative performance. Stock choices in the information technology, energy and industrials sectors detracted from Fund returns.

Which individual stocks added to the Fund's relative performance during the Reporting Period?

The Fund benefited most relative to the Russell Index from its positions in McCormick, a manufacturer of spices, herbs and flavorings; Ulta Salon, Cosmetics & Fragrances, a beauty products retailer; and Equinix, a data center real estate investment trust ("REIT").

McCormick was the top positive contributor to the Fund's relative results during the Reporting Period. Its share price rose in April 2016 after the company walked away from the acquisition of Premier Foods due to the lack of a price agreement, demonstrating, in our view, management discipline. The stock continued to perform well thereafter with the appreciation of its share price accelerating near the end of the Reporting Period on news of strong fiscal second quarter results. At the end of the Reporting Period, we remained optimistic about strong 2016 performance for the stock, as we believe McCormick continues to meet consumer demand for healthy flavor and high quality products through an expanding product pipeline. The Fund maintained a position in the stock at the end of the Reporting Period.

Ulta Salon, Cosmetics & Fragrance was another notable positive contributor to Fund performance during the Reporting Period. After a challenging start to 2016, its share price picked up momentum in early April 2016 after the company issued strong first quarter 2016 earnings, and the stock was added to the S&P 500® Index. The first quarter 2016 results were driven by better than expected margins, revenues and e-commerce growth. In our view, Ulta Salon, Cosmetics & Fragrance is a strong brand that continues to gain recognition. We believe the company has a potential opportunity to grow market share through higher brand awareness, increasing loyalty to existing stores, expansion of new stores and e-commerce. At the end of the Reporting Period, the Fund continued to hold Ulta Salon, Cosmetics & Fragrance.

Equinix was a leading positive contributor to Fund returns during the Reporting Period. Its stock advanced on first quarter 2016 results that beat market expectations for organic revenue growth and earnings growth. Its share price also benefited from a decline in U.S. Treasury yields, given the attractive yield and growth potential of REITs compared to bonds. At the end of the Reporting Period, we believed Equinix had substantial pipeline opportunities, particularly with enterprise customers willing to pay a higher price. We also thought the continued integration of the company's Telecity Group acquisition and its strategic partnership with Datang Telecom could further increase Equinix's global presence and strengthen its competitive advantage. In our view, Equinix remains an asset with robust upside to its revenues and free cash flows as it balances organic growth, low leverage and a sound capital structure. Accordingly, we maintained the Fund's position in Equinix at the end of the Reporting Period.

Which individual stocks detracted from the Fund's performance during the Reporting Period?

Leading detractors from the Fund's relative performance were LinkedIn, an online professional networking service; Restoration Hardware, a home furnishings retailer; and Sensata Technologies, a leading supplier of sensing, electrical, control and power management solutions.

The Fund's top relative detractor during the Reporting Period was LinkedIn. The company reported solid fourth quarter 2015 results, but its outlook was well below market expectations. Given that the company is a high multiple growth stock in a challenging market environment, its share price fell sharply. At the end of the Reporting Period, we believed there was room for progress in better monetizing LinkedIn's business model, but we had a positive outlook on the company's competitive positioning, offering and long-term growth. As a result, the Fund continued to hold LinkedIn at the end of the Reporting Period.

Restoration Hardware was a key detractor from the Fund's relative performance during the Reporting Period. The company experienced headwinds in an increasingly challenging retail environment, especially relative to the high-end consumer. Restoration Hardware also saw a sequential gross margin decline in markets, such as South America, where currency has been a factor. In early June 2016, the company released first quarter 2016 earnings that were generally in line with market expectations, but the stock fell on news of lower gross margins, a slightly downward adjustment in earnings per share, increased inventory guidance and higher capital expenditures. In our view, its fiscal year 2016 results may be impacted by cost control efforts, including product delays, investments and timing issues. Given the higher costs suggested by its management's guidance and what we see as lower and rather volatile consumer demand for the company's products, we decided to exit the Fund's position in Restoration Hardware during the Reporting Period and reallocate the proceeds to what we consider better risk/reward opportunities.

Another relative detractor from the Fund's returns was Sensata Technologies. Although the company released earnings in line with expectations for both the fourth quarter of 2015 and first quarter of 2016, the market reacted negatively. Its stock also fell following the announcement that the company's South Korean subsidiary would be investigated for violations of a law related to subcontractors. At the end of the Reporting Period, we believed Sensata Technologies was a strong growth company that was undervalued. In our opinion, the company continues to drive margin expansion through the successful integration of acquisitions, especially in sensing technology for autonomous driving. At the end of the Reporting Period, we maintained the Fund's position in its stock.

Did the Fund make any significant purchases or sales during the Reporting Period?

Among the purchases initiated during the Reporting Period, we established a Fund position in off-price retailer Ross Stores. Off-price retailers seek to take advantage of excess inventory from full-price retailers by purchasing goods at a significant discount to their original price. We believe Ross Stores is well positioned within its industry and is attractively valued for a high quality company that has delivered consistent sales and earnings growth over time. In our view, Ross Stores has also provided strong free cash flow and demonstrated a track record of returning capital to shareholders.

We added a Fund position in Sherwin-Williams, which manufactures and distributes paint and coating brands globally. We believe Sherwin-Williams is a strong business franchise with attractive market positioning and a focus on innovative products. In our view, Sherwin-Williams has a solid business model supported by a high quality management team.

In addition to the sale of Restoration Hardware, already mentioned, among notable sales during the Reporting Period was the Fund's position in LKQ, an American auto parts company. We believe its sales were vulnerable to cyclicality and weather sensitivity. Further, there were longer term concerns, in our view, related to collision avoidance technology, which could have negative implications for LKQ. Therefore, we decided to exit the Fund's position in the stock in favor of what we considered to be more attractive risk/return opportunities.

Were there any notable changes in the Fund's weightings during the Reporting Period?

During the Reporting Period, we reduced the size of the Fund's underweight position relative to the Russell Index in the financials sector. We increased the Fund's overweight in telecommunication services and its underweight in consumer discretionary. In addition, we shifted the Fund from a neutral position compared to the Russell Index in consumer staples to an overweight position. We moved from neutral positions in energy and information technology to underweight positions relative to the Russell Index. Also, we shifted the Fund from overweight positions in health care and industrials to neutral positions compared to the Russell Index. In addition, during the Reporting Period, we moved the Fund from an underweight position relative to the Russell Index in the materials sector to a neutral position.

How did the Fund use derivatives and similar instruments during the Reporting Period?

The Fund did not use derivatives or similar instruments within its investment process during the Reporting Period.

Were there any changes to the Fund's portfolio management team during the Reporting Period?

There were no changes to the Fund's portfolio management team during the Reporting Period.

How was the Fund positioned relative to the Russell Index at the end of the Reporting Period?

As mentioned, the Fund's sector positioning relative to the Russell Index is the result of our stock selection, as we take a pure bottom-up, research-intensive approach to investing. From that perspective, then, at the end of the Reporting Period, the Fund's portfolio was broadly diversified with overweight positions compared to the Russell Index in the telecommunication services and consumer staples sectors. The Fund had smaller weightings than the Russell Index in the consumer discretionary, financials and information technology sectors at the end of the Reporting Period. It was relatively neutral compared to the Russell Index at the end of the Reporting Period in the energy, health care, industrials, materials and utilities sectors.

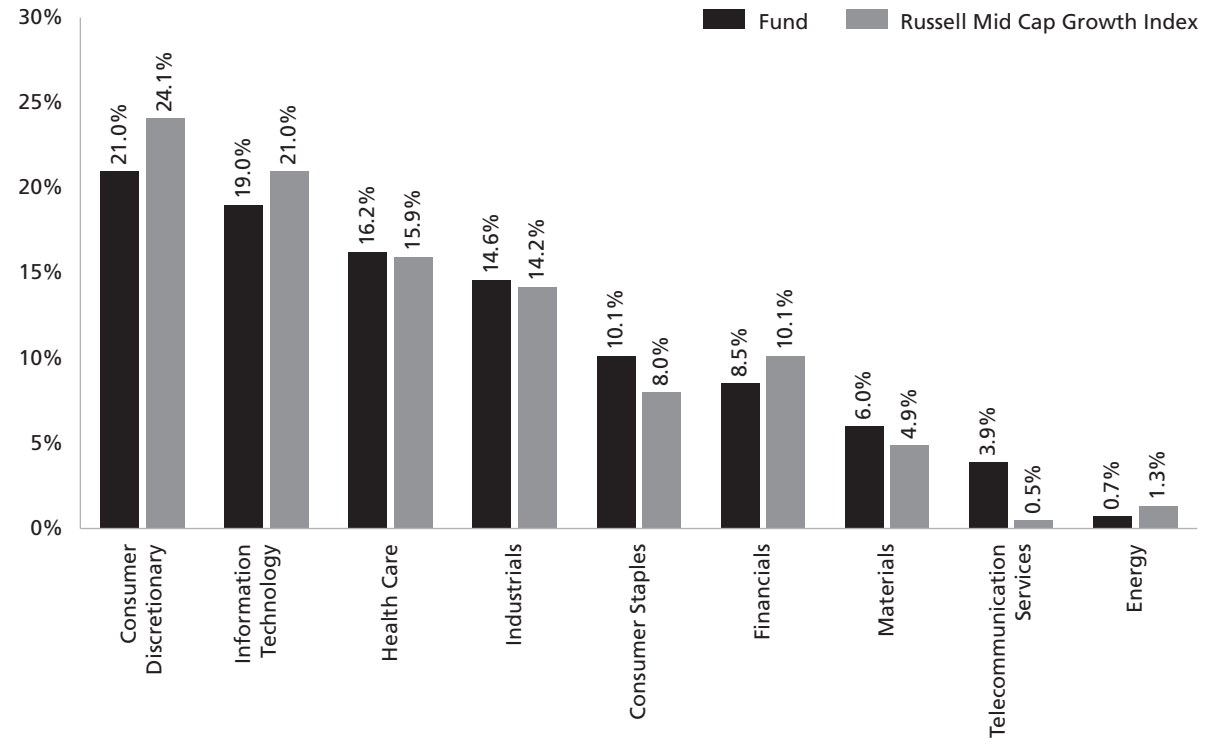
FUND vs. BENCHMARK SECTOR ALLOCATIONS[4]

As of June 30, 2016



[4] The Fund is actively managed and, as such, its composition may differ over time. Consequently, the Fund's overall sector allocations may differ from percentages contained in the graph above. The graph categorizes investments using Global Industry Classification Standard ("GICS"), however, the sector classifications used by the portfolio management team may differ from GICS. The percentage shown for each investment category reflects the value of investments in that category as a percentage of market value. Underlying sector allocations of Exchange Traded Funds and Investment Companies held by the Fund are not reflected in the graph above. The graph depicts the Fund's investments but may not represent the Fund's market exposure due to the exclusion of certain derivatives, if any, as listed in the Additional Investment Information section of the Schedule of Investments.

Were there any changes to the Fund's portfolio management team during the Reporting Period?

On February 11, 2016, co-portfolio manager James McCarthy announced his intention to retire from the firm and, as of that date, he no longer had portfolio management responsibilities for the Fund. Effective February 11, 2016, joining Dave Fishman, portfolio manager and head of the Fund's global liquidity management strategy, were John Olivo, head of the Fund's short duration strategy, and Matthew Kaiser. By design, the portfolio management team is organized into a series of specialist teams which focus on generating and implementing investment ideas within their area of expertise. Both top-down and bottom-up decisions are made by these small strategy teams, rather than by one portfolio manager or committee. Ultimate accountability for the portfolio resides with the portfolio managers, who set the long-term risk budget and oversee the portfolio construction process.

How was the Fund positioned relative to the BofA Index at the end of the Reporting Period?

At the end of the Reporting Period, the Fund had very little exposure to U.S. government securities, which represent 100% of the BofA Index. The Fund had positions in ABS, U.S. and non-U.S. residential mortgage-backed securities, agency adjustable-rate mortgage-backed securities, agency collateralized mortgage obligations, mortgage pass-through securities and commercial mortgage-backed securities, none of which are represented in the BofA Index. Pass-through mortgages consist of a pool of residential mortgage loans, where homeowners' monthly payments of principal, interest and prepayments pass from the original bank through a government agency or investment bank to investors.

If these arrangements are discontinued in the future, the expense ratios may change without shareholder approval.

INVESTMENT OBJECTIVE

The Fund seeks to provide a high level of current income, consistent with low volatility of principal.

Portfolio Management Discussion and Analysis

Below, the Goldman Sachs Fixed Income Portfolio Management Team discusses the Goldman Sachs Variable Insurance Trust — Goldman Sachs High Quality Floating Rate Fund's (the "Fund") performance and positioning for the six-month period ended June 30, 2016 (the "Reporting Period").

How did the Fund perform during the Reporting Period?

During the Reporting Period, the Fund's Advisor, Institutional and Service Shares generated cumulative total returns of 0.12%, 0.30% and 0.18%, respectively. These returns compare to the 0.15% cumulative total return of the Fund's benchmark, the Bank of America Merrill Lynch Three-Month U.S. Treasury Bill Index (the "BofA Index"), during the Reporting Period.

We note that the Fund's benchmark being the BofA Index is a means of emphasizing that the Fund has an unconstrained strategy. That said, this Fund employs a benchmark agnostic strategy and thus comparisons to a benchmark index are not particularly relevant.

What key factors had the greatest impact on the Fund's performance during the Reporting Period?

During the Reporting Period, our top-down cross-sector strategy added positively to relative performance. In our cross-sector strategy, we invest Fund assets based on a discipline of valuing each fixed income sector in the context of all investment opportunities within the Fund's universe.

Conversely, the Fund's tactical duration and U.S. yield curve positioning detracted from results. Duration is a measure of the Fund's sensitivity to changes in interest rates. Yield curve indicates a spectrum of maturities.

Which fixed income market sectors helped or hurt Fund performance during the Reporting Period?

Within our cross-sector strategy, the Fund benefited from its overweight in asset-backed securities ("ABS") and mortgage-backed securities.

Individual issue selection had a neutral impact on relative performance during the Reporting Period. Selection among government securities added positively to results, while selection among ABS and mortgage-backed securities detracted.

Did the Fund's duration and yield curve positioning strategy help or hurt its results during the Reporting Period?

Tactical management of the Fund's duration and yield curve positioning detracted overall from relative returns during the Reporting Period. More specifically, the Fund's limited exposure to the three-month, five-year and 20-year segments of the U.S. Treasury yield curve hurt performance.

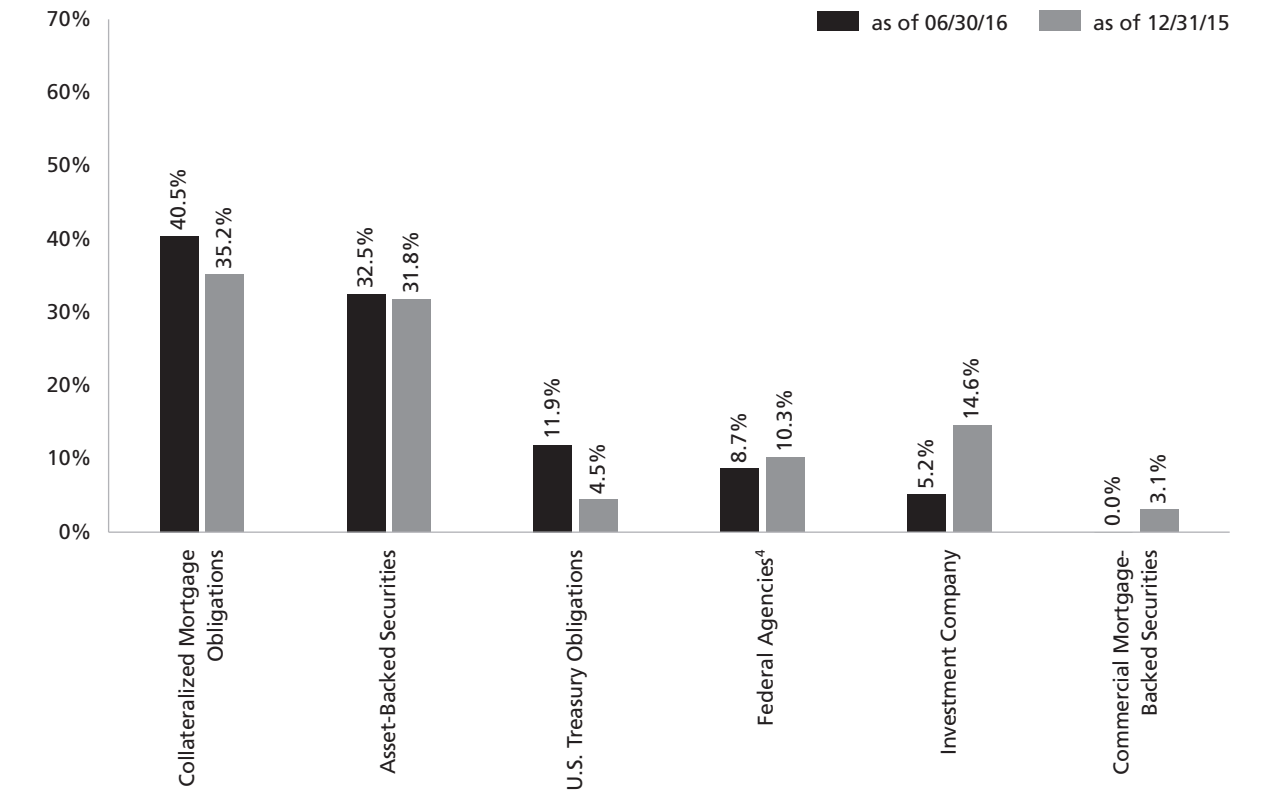
Were there any notable changes in the Fund's weightings during the Reporting Period?

We slightly increased the Fund's short duration position relative to the BofA Index during the Reporting Period. We increased the Fund's position in the longer-term segments of the U.S. Treasury yield curve and decreased its position in the shorter-term segments. In addition, we increased the Fund's exposure to government securities and residential mortgage-backed securities.

How did the Fund use derivatives and similar instruments during the Reporting Period?

As market conditions warranted, the Fund used U.S. Treasury futures to manage the duration and term structure of the Fund. (Term structure, most often depicted as a yield curve, refers to the term structure of interest rates, which is the relationship between the yield to maturity and the time to maturity for pure discount bonds.) Treasury futures detracted from Fund performance during the Reporting Period.

FUND COMPOSITION[3]



[3] The percentage shown for each investment category reflects the value of investments in that category as a percentage of net assets. Figures in the above graph may not sum to 100% due to the exclusion of other assets and liabilities. Underlying sector allocations of Investment Companies held by the Fund are not reflected in the graph above. The graph depicts the Fund's investments but may not represent the Fund's market exposure due to the exclusion of certain derivatives, if any, as listed in the Additional Investment Information section of the Schedule of Investments.

[4] "Federal Agencies" are mortgage-backed securities guaranteed by the Government National Mortgage Association ("GNMA"), the Federal National Mortgage Association ("FNMA") or the Federal Home Loan Mortgage Corp. ("FHLMC"). GNMA instruments are backed by the full faith and credit of the United States Government.

Index Definitions

Barclays U.S. Aggregate Bond Index is a broad based index that follows the U.S. dollar denominated investment grade fixed rate taxable bond market. It includes U.S. Treasuries, agency and corporate securities, mortgage-backed securities, asset-backed securities and commercial mortgage-backed securities.

The S&P 500® Index is a U.S. stock market index based on the market capitalizations of 500 large companies having common stock listed on the New York Stock Exchange or NASDAQ. The S&P 500® Index components and their weightings are determined by S&P Dow Jones Indices.

Russell Midcap® Index measures the performance of the mid-cap segment of the U.S. equity universe. The Russell Midcap® Index is a subset of the Russell 1000® Index. The Russell Midcap® Index includes approximately 800 of the smallest securities based on a combination of their market cap and current index membership. The Russell Midcap® Index represents approximately 31% of the total market capitalization of the Russell 1000® Index companies. The Russell Midcap® Index is constructed to provide a comprehensive and unbiased barometer for the mid-cap segment. The Russell Midcap® Index is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true mid-cap opportunity set.

Russell Midcap® Growth Index is an unmanaged index that measures the performance of those companies in the Russell Midcap® Index with higher price-to-book ratios and higher forecasted growth values. Its figures do not reflect any deduction for fees, expenses or taxes.

Russell 1000® Index measures the performance of the large-cap segment of the U.S. equity universe. The Russell 1000® Index is a subset of the Russell 3000® Index and includes approximately 1000 of the largest securities based on a combination of their market cap and current index membership. The Russell 1000® Index represents approximately 92% of the U.S. market. The Russell 1000® Index is constructed to provide a comprehensive and unbiased barometer for the large-cap segment and is completely reconstituted annually to ensure new and growing equities are reflected.

Russell 2000® Index measures the performance of the small-cap segment of the U.S. equity universe. The Russell 2000® Index is a subset of the Russell 3000® Index representing approximately 10% of the total market capitalization of that index. The Russell 2000® Index includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership. The Russell 2000® Index is constructed to provide a comprehensive and unbiased small-cap barometer and is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true small-cap opportunity set.

Bank of America Merrill Lynch Three-Month U.S. Treasury Bill Index is an unmanaged market index of U.S. Treasury securities maturing in 90 days that assumes reinvestment of all income. It is composed of a single issue purchased at the beginning of the month and held for a full month. At the end of the month that issue is sold and rolled into a newly selected issue. The issue selected at each month-end rebalancing is the outstanding U.S. Treasury Bill that matures closest to, but not beyond, three months from the rebalancing date. To qualify for selection, an issue must have settled on or before the month-end rebalancing date. While the index will often hold the U.S. Treasury Bill issued at the most recent three-month auction, it is also possible for a seasoned six-month U.S. Treasury Bill to be selected.

1,900,000	0.000	11/15/27	1,581,370
TOTAL U.S. TREASURY OBLIGATIONS (Cost $20,531,530)			$ 22,651,746
TOTAL INVESTMENTS – 98.3% (Cost $107,071,917)			$111,850,339
OTHER ASSETS IN EXCESS OF LIABILITIES – 1.7%			1,889,065
NET ASSETS – 100.0%			$113,739,404

The percentage shown for each investment category reflects the value of investments in that category as a percentage of net assets.

(a) Securities with "Call" features. Maturity dates disclosed are the final maturity dates.

(b) Variable rate security. Interest rate or distribution rate disclosed is that which is in effect on June 30, 2016.

(c) Exempt from registration under Rule 144A of the Securities Act of 1933. Under procedures approved by the Board of Trustees, such securities may be deemed liquid by the Investment Adviser and may be resold, normally to qualified institutional buyers in transactions exempt from registration. Total market value of Rule 144A securities amounts to $14,867,927, which represents approximately 13.1% of net assets as of June 30, 2016.

(d) Interest is based on the weighted net interest rate of the collateral.

(e) TBA (To Be Announced) Securities are purchased on a forward commitment basis with an approximate principal amount and no defined maturity date. The actual principal and maturity date will be determined upon settlement when the specific mortgage pools are assigned. Total market value of TBA securities (excluding forward sales contracts, if any) amounts to $6,387,304 which represents approximately 5.6% of net assets as of June 30, 2016.

(f) Guaranteed by the United States Government. Total market value of these securities amounts to 1,619,618, which represents 1.4% of net assets as of June 30, 2016.

(g) Guaranteed by a foreign government until maturity. Total market value of these securities amounts to 1,006,543, which represents 0.9% of net assets as of June 30, 2016.

(h) All or a portion of security is segregated as collateral for initial margin requirements on futures transactions.

(i) Issued with a zero coupon. Income is recognized through the accretion of discount.

NET ASSETS – 100.0%			$69,018,659

The percentage shown for each investment category reflects the value of investments in that category as a percentage of net assets.

(a) Variable rate security. Interest rate or distribution rate disclosed is that which is in effect on June 30, 2016.

(b) Exempt from registration under Rule 144A of the Securities Act of 1933. Under procedures approved by the Board of Trustees, such securities may be deemed liquid by the Investment Adviser and may be resold, normally to qualified institutional buyers in transactions exempt from registration. Total market value of Rule 144A securities amounts to $13,548,391, which represents approximately 19.6% of net assets as of June 30, 2016.

(c) Securities with "Call" features with resetting interest rates. Maturity dates disclosed are the final maturity dates.

(d) Represents an affiliated issuer.

Investment Abbreviations:

FHLMC—Federal Home Loan Mortgage Corp.
FNMA —Federal National Mortgage Association
GNMA —Government National Mortgage Association
REMIC —Real Estate Mortgage Investment Conduit

Notes to Financial Statements

June 30, 2016 (Unaudited)

1. ORGANIZATION

Goldman Sachs Variable Insurance Trust (the "Trust" or "VIT") is a Delaware statutory trust registered under the Investment Company Act of 1940, as amended (the "Act"), as an open-end management investment company. The following table lists those series of the Trust that are included in this report (collectively, the "Funds" or individually a "Fund"), along with their corresponding share classes and respective diversification status under the Act:

Fund	Share Classes Offered	Diversified/ Non-diversified
High Quality Floating Rate	Institutional, Service and Advisor	Diversified
Core Fixed Income and Growth Opportunities	Institutional and Service	Diversified
Equity Index	Service	Diversified

Goldman Sachs Asset Management, L.P. ("GSAM"), an affiliate of Goldman, Sachs & Co. ("Goldman Sachs"), serves as investment adviser to the Funds pursuant to management agreements (the "Agreements") with the Trust.

2. SIGNIFICANT ACCOUNTING POLICIES

The financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America ("GAAP") and require management to make estimates and assumptions that may affect the reported amounts and disclosures. Actual results may differ from those estimates and assumptions.

A. Investment Valuation — The Funds' valuation policy is to value investments at fair value.

B. Investment Income and Investments — Investment income includes interest income, dividend income, net of any foreign withholding taxes, less any amounts reclaimable, and securities lending income. Interest income is accrued daily and adjusted for amortization of premiums and accretion of discounts. Dividend income is recognized on ex-dividend date or, for certain foreign securities, as soon as such information is obtained subsequent to the ex-dividend date. Investment transactions are reflected on trade date. Realized gains and losses are calculated using identified cost. Investment transactions are recorded on the following business day for daily net asset value ("NAV") calculations. Any foreign capital gains tax is accrued daily based upon net unrealized gains, and is payable upon sale of such investments. Distributions received from the Funds' investments in United States ("U.S.") real estate investment trusts ("REITs") may be characterized as ordinary income, net capital gain or a return of capital. A return of capital is recorded by the Funds as a reduction to the cost basis of the REIT.

For derivative contracts, realized gains and losses are recorded upon settlement of the contract. Upfront payments, if any, are made or received upon entering into a swap agreement and are reflected in the Statements of Assets and Liabilities. Upfront payments are recognized over the contract's term/event as realized gains or losses, with the exception of forward starting interest rate swaps whose realized gains or losses are recognized from the effective start date. For securities with paydown provisions, principal payments received are treated as a proportionate reduction to the cost basis of the securities, and excess or shortfall amounts are recorded as income. For treasury inflation protected securities ("TIPS"), adjustments to principal due to inflation/deflation are reflected as increases/decreases to interest income with a corresponding adjustment to cost.

C. Class Allocations and Expenses — Investment income, realized and unrealized gain (loss), and non-class specific expenses of each Fund are allocated daily based upon the proportion of net assets of each class. Non-class specific expenses directly incurred by a Fund are charged to that Fund, while such expenses incurred by the Trust are allocated across the applicable Funds on a straight-line and/or pro-rata basis depending upon the nature of the expenses. Class specific expenses, where applicable, are borne by the respective share classes and include Distribution and Service and Transfer Agency fees.

D. Federal Taxes and Distributions to Shareholders — It is each Fund's policy to comply with the requirements of the Internal Revenue Code of 1986, as amended (the "Code"), applicable to regulated investment companies (mutual funds) and to distribute each year substantially all of its investment company taxable income and capital gains to its shareholders. Accordingly,

2. SIGNIFICANT ACCOUNTING POLICIES (continued)

the Funds are not required to make any provisions for the payment of federal income tax. Distributions to shareholders are recorded on the ex-dividend date. Income and capital gains distributions, if any, are declared and paid according to the following schedule:

Fund	Income Distributions Declared/Paid	Capital Gains Distributions Declared/Paid
Core Fixed Income and High Quality Floating Rate	Quarterly	Annually
Equity Index and Growth Opportunities	Annually	Annually

Net capital losses are carried forward to future fiscal years and may be used to the extent allowed by the Code to offset any future capital gains. Utilization of capital loss carryforwards will reduce the requirement of future capital gains distributions.

Under the Regulated Investment Company Modernization Act of 2010, the Funds are permitted to carry forward capital losses incurred in taxable years beginning after December 22, 2010 for an unlimited period. However, any losses incurred during those future taxable years will be required to be utilized prior to the losses incurred in pre-enactment taxable years. As a result of this ordering rule, pre-enactment capital loss carryforwards may be more likely to expire unused. Additionally, post-enactment capital losses that are carried forward will retain their character as either short-term or long-term capital losses rather than being considered all short-term as under previous law.

The characterization of distributions to shareholders for financial reporting purposes is determined in accordance with federal income tax rules, which may differ from GAAP. The source of each Fund's distributions may be shown in the accompanying financial statements as either from net investment income, net realized gain or capital. Certain components of the Funds' net assets on the Statements of Assets and Liabilities reflect permanent GAAP/tax differences based on the appropriate tax character.

E. Foreign Currency Translation — The accounting records and reporting currency of the Funds are maintained in U.S. dollars. Assets and liabilities denominated in foreign currencies are translated into U.S. dollars using the current exchange rates at the close of each business day. The effect of changes in foreign currency exchange rates on investments is included within net realized and unrealized gain (loss) on investments. Changes in the value of other assets and liabilities as a result of fluctuations in foreign exchange rates are included in the Statements of Operations within net change in unrealized gain (loss) on foreign currency translations. Transactions denominated in foreign currencies are translated into U.S. dollars on the date the transaction occurred, the effects of which are included within net realized gain (loss) on foreign currency transactions.

F. Commission Recapture — GSAM, on behalf of certain Funds, may direct portfolio trades, subject to seeking best execution, to various brokers who have agreed to rebate a portion of the commissions generated. Such rebates are made directly to a Fund as cash payments and are included in net realized gain (loss) from investments on the Statements of Operations.

3. INVESTMENTS AND FAIR VALUE MEASUREMENTS

The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (i.e., the exit price). GAAP establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). The levels used for classifying investments are not necessarily an indication of the risk associated with investing in these investments. The three levels of the fair value hierarchy are described below:

Level 1 — Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities;

Level 2 — Quoted prices in markets that are not active or financial instruments for which significant inputs are observable (including, but not limited to, quoted prices for similar investments, interest rates, foreign exchange rates, volatility and credit spreads), either directly or indirectly;

Notes to Financial Statements (continued)

June 30, 2016 (Unaudited)

3. INVESTMENTS AND FAIR VALUE MEASUREMENTS (continued)

Level 3 — Prices or valuations that require significant unobservable inputs (including GSAM's assumptions in determining fair value measurement).

Changes in valuation techniques may result in transfers into or out of an assigned level within the hierarchy. In accordance with the Funds' policy, transfers between different levels of the fair value hierarchy resulting from such changes are deemed to have occurred as of the beginning of the reporting period.

The Board of Trustees ("Trustees") has approved Valuation Procedures that govern the valuation of the portfolio investments held by the Funds, including investments for which market quotations are not readily available. The Trustees have delegated to GSAM day-to-day responsibility for implementing and maintaining internal controls and procedures related to the valuation of the Funds' portfolio investments. To assess the continuing appropriateness of pricing sources and methodologies, GSAM regularly performs price verification procedures and issues challenges as necessary to third party pricing vendors or brokers, and any differences are reviewed in accordance with the Valuation Procedures.

A. Level 1 and Level 2 Fair Value Investments — The valuation techniques and significant inputs used in determining the fair values for investments classified as Level 1 and Level 2 are as follows:

Equity Securities — Equity securities traded on a U.S. securities exchange or the NASDAQ system, or those located on certain foreign exchanges, including but not limited to the Americas, are valued daily at their last sale price or official closing price on the principal exchange or system on which they are traded. If there is no sale or official closing price or such price is believed by GSAM to not represent fair value, equity securities are valued at the last bid price for long positions and at the last ask price for short positions. To the extent these investments are actively traded, they are classified as Level 1 of the fair value hierarchy, otherwise they are generally classified as Level 2.

Unlisted equity securities for which market quotations are available are valued at the last sale price on the valuation date, or if no sale occurs, at the last bid price. These investments are generally classified as Level 2 of the fair value hierarchy.

Money Market Funds — Investments in the Goldman Sachs Financial Square Government Fund ("Underlying Fund") are valued at the NAV of the FST Institutional Share class on the day of valuation. These investments are generally classified as Level 1 of the fair value hierarchy. For information regarding an Underlying Fund's accounting policies and investment holdings, please see the Underlying Fund's shareholder report.

Debt Securities — Debt securities for which market quotations are readily available are valued daily on the basis of quotations supplied by dealers or an independent pricing service approved by the Trustees. The pricing services may use valuation models or matrix pricing, which consider: (i) yield or price with respect to bonds that are considered comparable in characteristics such as rating, interest rate and maturity date or (ii) quotations from securities dealers to determine current value. Short-term debt obligations that mature in sixty days or less and that do not exhibit signs of credit deterioration are valued at amortized cost, which approximates fair value. With the exception of treasury securities of G8 countries (not held in money market funds), which are generally classified as Level 1, these investments are generally classified as Level 2 of the fair value hierarchy.

i. Mortgage-Backed and Asset-Backed Securities — Mortgage-backed securities represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by residential and/or commercial real estate property. Asset-backed securities include securities whose principal and interest payments are collateralized by pools of other assets or receivables. The value of certain mortgage-backed and asset-backed securities (including adjustable rate mortgage loans) may be particularly sensitive to changes in prevailing interest rates. The value of these securities may also fluctuate in response to the market's perception of the creditworthiness of the issuers.

Asset-backed securities may present credit risks that are not presented by mortgage-backed securities because they generally do not have the benefit of a security interest in collateral that is comparable to mortgage assets. Some asset-backed securities may only have a subordinated claim on collateral.

Stripped mortgage-backed securities are usually structured with two different classes: one that receives substantially all interest payments (interest-only, or "IO" and/or high coupon rate with relatively low principal amount, or "IOette"), and the

3. INVESTMENTS AND FAIR VALUE MEASUREMENTS (continued)

other that receives substantially all principal payments (principal-only, or "PO") from a pool of mortgage loans. Little to no principal will be received at the maturity of an IO; as a result, periodic adjustments are recorded to reduce the cost of the security until maturity. These adjustments are included in interest income.

ii. Mortgage Dollar Rolls — Mortgage dollar rolls are transactions whereby a Fund sells mortgage-backed-securities and simultaneously contracts with the same counterparty to repurchase similar securities on a specified future date. During the settlement period, a Fund will not be entitled to accrue interest and receive principal payments on the securities sold. The Funds account for mortgage dollar roll transactions as purchases and sales and realize gains and losses on these transactions.

iii. Treasury Inflation Protected Securities — TIPS are treasury securities in which the principal amount is adjusted daily to keep pace with inflation, as measured by the U.S. Consumer Pricing Index for Urban Consumers. The repayment of the original bond principal upon maturity is guaranteed by the full faith and credit of the U.S. Government.

iv. When-Issued Securities and Forward Commitments — When-issued securities, including TBA ("To Be Announced") securities, are securities that are authorized but not yet issued in the market and purchased in order to secure what is considered to be an advantageous price or yield to a Fund. A forward commitment involves entering into a contract to purchase or sell securities, typically on an extended settlement basis, for a fixed price at a future date. The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, the Fund may dispose of when-issued securities or forward commitments prior to settlement, which may result in a realized gain or loss.

Derivative Contracts — A derivative is an instrument whose value is derived from underlying assets, indices, reference rates or a combination of these factors. The Funds enter into derivative transactions to hedge against changes in interest rates, securities prices, and/or currency exchange rates, to increase total return, or to gain access to certain markets or attain exposure to other underliers.

Exchange-traded derivatives, including futures and options contracts, are valued at the last sale or settlement price and typically fall within Level 1 of the fair value hierarchy. Over-the-counter ("OTC") and centrally cleared derivatives are valued using market transactions and other market evidence, including market-based inputs to models, calibration to market-clearing transactions, broker or dealer quotations, or other alternative pricing sources. Where models are used, the selection of a particular model to value OTC and centrally cleared derivatives depends upon the contractual terms of, and specific risks inherent in, the instrument, as well as the availability of pricing information in the market. Valuation models require a variety of inputs, including contractual terms, market prices, yield curves, credit curves, measures of volatility, voluntary and involuntary prepayment rates, loss severity rates and correlations of such inputs. For OTC and centrally cleared derivatives that trade in liquid markets, model inputs can generally be verified and model selection does not involve significant management judgment. OTC and centrally cleared derivatives are classified within Level 2 of the fair value hierarchy when significant inputs are corroborated by market evidence.

i. Forward Contracts — A forward contract is a contract between two parties to buy or sell an asset at a specified price on a future date. A forward contract settlement can occur on a cash or delivery basis. Forward contracts are marked-to-market daily using independent vendor prices, and the change in value, if any, is recorded as an unrealized gain or loss. Cash and certain investments may be used to collateralize forward contracts.

A *forward foreign currency contract* is a forward contract in which a Fund agrees to receive or deliver a fixed quantity of one currency for another, at a pre-determined price at a future date. All forward foreign currency exchange contracts are marked-to-market daily at the applicable forward rate. Non-deliverable forward foreign currency exchange contracts are settled with the counterparty in cash without the delivery of foreign currency.

ii. Futures Contracts — Futures contracts are contracts to buy or sell a standardized quantity of a specified commodity or security and are valued based on exchanged settlement prices or independent market quotes. Futures contracts are valued at the

Notes to Financial Statements (continued)

June 30, 2016 (Unaudited)

3. INVESTMENTS AND FAIR VALUE MEASUREMENTS (continued)

last settlement price, or in the absence of a sale, the last bid price for long positions and at the last ask price for short positions, at the end of each day on the board of trade or exchange upon which they are traded. Upon entering into a futures contract, a Fund deposits cash or securities in an account on behalf of the broker in an amount sufficient to meet the initial margin requirement. Subsequent payments are made or received by a Fund equal to the daily change in the contract value and are recorded as variation margin receivable or payable with a corresponding offset to unrealized gains or losses.

iii. Swap Contracts — Bilateral swap contracts are agreements in which a Fund and a counterparty agree to exchange periodic payments on a specified notional amount or make a net payment upon termination. Bilateral swap transactions are privately negotiated in the OTC market and payments are settled through direct payments between a Fund and the counterparty. By contrast, certain swap transactions are subject to mandatory central clearing. These swaps are executed through a derivatives clearing member ("DCM"), acting in an agency capacity, and submitted to a central counterparty ("CCP") ("centrally cleared swaps"), in which case all payments are settled with the CCP through the DCM. Swaps are marked-to-market daily using pricing vendor quotations, counterparty or clearinghouse prices or model prices, and the change in value, if any, is recorded as an unrealized gain or loss. Upon entering into a swap contract, a Fund is required to satisfy an initial margin requirement by delivering cash or securities to the counterparty (or in some cases, segregated in a triparty account on behalf of the counterparty), which can be adjusted by any mark-to-market gains or losses pursuant to bilateral or centrally cleared arrangements. For centrally cleared swaps the daily change in valuation, if any, is recorded as a receivable or payable for variation margin.

An *interest rate swap* is an agreement that obligates two parties to exchange a series of cash flows at specified intervals, based upon or calculated by reference to changes in interest rates on a specified notional principal amount. The payment flows are usually netted against each other, with the difference being paid by one party to the other.

A *credit default swap* is an agreement that involves one party (the buyer of protection) making a stream of payments to another party (the seller of protection) in exchange for the right to receive protection on a reference security or obligation, including a group of assets or exposure to the performance of an index. A Fund's investment in credit default swaps may involve greater risks than if the Fund had invested in the referenced obligation directly. Credit events are contract specific but may include bankruptcy, failure to pay, restructuring and obligation acceleration. If a Fund buys protection through a credit default swap and no credit event occurs, its payments are limited to the periodic payments previously made to the counterparty. Upon the occurrence of a specified credit event, a Fund, as a buyer of credit protection, is entitled to receive an amount equal to the notional amount of the swap and deliver to the seller the defaulted reference obligation in a physically settled trade. A Fund may also receive a net settlement amount in the form of cash or securities equal to the notional amount of the swap reduced by the recovery value of the reference obligation in a cash settled trade.

As a seller of protection, a Fund generally receives a payment stream throughout the term of the swap, provided that there is no credit event. In addition, if a Fund sells protection through a credit default swap, a Fund could suffer a loss because the value of the referenced obligation and the premium payments received may be less than the notional amount of the swap paid to the buyer of protection. Upon the occurrence of a specified credit event, a Fund, as a seller of credit protection, may be required to take possession of the defaulted reference obligation and pay the buyer an amount equal to the notional amount of the swap in a physically settled trade. A Fund may also pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap reduced by the recovery value of the reference obligation in cash settled trade. Recovery values are at times established through the credit event auction process in which market participants are ensured that a transparent price has been set for the defaulted security or obligation. In addition, a Fund is entitled to a return of any assets, which have been pledged as collateral to the counterparty upon settlement.

The maximum potential amount of future payments (undiscounted) that a Fund as seller of protection could be required to make under a credit default swap would be an amount equal to the notional amount of the agreement. These potential amounts would be partially offset by any recovery values of the respective referenced obligations or net amounts received from a settlement of a credit default swap for the same reference security or obligation where a Fund bought credit protection.

3. INVESTMENTS AND FAIR VALUE MEASUREMENTS (continued)

Short Term Investments — Short-term investments having a maturity of 60 days or less are generally valued at amortized cost which approximates fair market value. These investments are classified as Level 2 of the fair value hierarchy.

B. Level 3 Fair Value Investments — To the extent that significant inputs to valuation models and other alternative pricing sources are unobservable, or if quotations are not readily available, or if GSAM believes that such quotations do not accurately reflect fair value, the fair value of the Funds' investments may be determined under Valuation Procedures approved by the Trustees. GSAM, consistent with its procedures and applicable regulatory guidance, may make an adjustment to the most recent valuation prices of either domestic or foreign securities in light of significant events to reflect what it believes to be the fair value of the securities at the time of determining a Fund's NAV. Significant events which could affect a large number of securities in a particular market may include, but are not limited to: significant fluctuations in U.S. or foreign markets; market dislocations; market disruptions; or unscheduled market closings. Significant events which could also affect a single issuer may include, but are not limited to: corporate actions such as reorganizations, mergers and buy-outs; ratings downgrades; and bankruptcies.

C. Fair Value Hierarchy — The following is a summary of the Funds' investments and derivatives classified in the fair value hierarchy as of June 30, 2016:

CORE FIXED INCOME

Investment Type	Level 1	Level 2	Level 3
Assets			
Fixed Income			
Corporate Obligations	$ —	$35,472,509	$—
Mortgage-Backed Obligations	—	35,180,902	—
U.S. Treasury Obligations and/or Other U.S. Government Agencies	22,651,746	—	—
Agency Debentures	—	2,574,391	—
Asset-Backed Securities	—	8,708,766	—
Foreign Debt Obligations	356,932	2,795,162	—
Municipal Debt Obligations	—	1,483,770	—
Government Guarantee Obligations	—	2,626,161	—
Total	$23,008,678	$88,841,661	$—

(a) Amount shown represents unrealized gain (loss) at period end.
(b) Amounts are disclosed by continent to highlight the impact of time zone differences between local market close and the calculation of NAV. Security valuations are based on the principal exchange or system on which they are traded, which may differ from country of domicile noted in table.

For further information regarding security characteristics, see the Schedules of Investments.

4. INVESTMENTS IN DERIVATIVES

The following tables set forth, by certain risk types, the gross value of derivative contracts as of June 30, 2016. These instruments were used as part of the Funds' investment strategies and to obtain and/or manage exposure related to the risks below. The values in the tables below exclude the effects of cash collateral received or posted pursuant to these derivative contracts, and therefore are not representative of the Funds' net exposure.

4. INVESTMENTS IN DERIVATIVES (continued)

Core Fixed Income

Risk	Statements of Assets and Liabilities	Assets	Statements of Assets and Liabilities	Liabilities
Interest Rate	Variation margin on certain derivative contracts	$267,907[(a)]	Variation margin on certain derivative contracts	$(168,939)[(a)]
Credit	Variation margin on certain derivative contracts	—	Variation margin on certain derivative contracts	(2,947)
Currency	Receivables for unrealized gain on forward foreign currency exchange contracts	185,107	Payable for unrealized loss on forward foreign currency exchange contracts	(224,243)
Total		$453,014		$(396,129)

Fund	Risk	Statements of Assets and Liabilities	Assets[(a)]	Statements of Assets and Liabilities	Liabilities[(a)]
Equity Index	Equity	Variation margin on certain derivative contracts	$ 12,075	Variation margin on certain derivative contracts	$ —
High Quality Floating Rate	Interest Rate	Variation margin on certain derivative contracts	—	Variation margin on certain derivative contracts	(146,058)

(a) Includes unrealized gain (loss) on futures contracts and swap contracts described in the Additional Investment Information sections of the Schedules of Investments. Only current day's variation margin is reported within the Statements of Assets and Liabilities.

The following table sets forth, by certain risk types, the Fund's gains (losses) related to these derivatives and their indicative volumes for the six months ended June 30, 2016. These gains (losses) should be considered in the context that these derivative contracts may have been executed to create investment opportunities and/or economically hedge certain investments, and accordingly, certain gains (losses) on such derivative contracts may offset certain (losses) gains attributable to investments. These gains (losses) are included in "Net realized gain (loss)" or "Net change in unrealized gain (loss)" on the Statements of Operations:

Core Fixed Income

Risk	Statements of Operations	Net Realized Gain (Loss)	Net Change in Unrealized Gain (Loss)	Average Number of Contracts[(a)]
Interest Rate	Net realized gain (loss) from investments, futures contracts and swap contracts/Net change in unrealized gain (loss) on futures contracts and swap contracts	$ 10,668	$119,696	130
Credit	Net realized gain (loss) from swap contracts/Net change in unrealized gain (loss) on swap contracts	(53,001)	$ (2,947)	1
Currency	Net realized gain (loss) from forward foreign currency exchange contracts/Net change in unrealized gain (loss) on forward foreign currency exchange contracts	(168,072)	(13,269)	184
Total		$(210,405)	$103,480	315

(a) Average number of contracts is based on the average of month end balances for the six months ended June 30, 2016.

Notes to Financial Statements (continued)

June 30, 2016 (Unaudited)

4. INVESTMENTS IN DERIVATIVES (continued)

The following table represents gains (losses) which are included in "Net realized gain (loss) from future transactions" and "Net change in unrealized gain (loss) on futures" in the Statements of Operations:

Fund	Risk	Net Realized Gain (Loss)	Net Change in Unrealized Gain (Loss)	Average Number of Contracts[a]
Equity Index	Equity	$ 23,384	$ 12,969	10
High Quality Floating Rate	Interest Rate	(97,689)	(157,313)	50

(a) Average number of contracts is based on the average of month end balances for the period ended June 30, 2016.

5. AGREEMENTS AND AFFILIATED TRANSACTIONS

A. Management Agreements — Under the Agreements, GSAM manages the Funds, subject to the general supervision of the Trustees.

As compensation for the services rendered pursuant to the Agreements, the assumption of the expenses related thereto and administration of the Funds' business affairs, including providing facilities, GSAM is entitled to a management fee, accrued daily and paid monthly, equal to an annual percentage rate of each Fund's average daily net assets.

For the six months ended June 30, 2016, contractual and effective net management fees with GSAM were at the following rates:

	Contractual Management Rate						
Fund	First $1 billion	Next $1 billion	Next $3 billion	Next $3 billion	Over $8 billion	Effective Rate	Effective Net Management Rate^
Core Fixed Income	0.40%	0.36%	0.34%	0.33%	0.32%	0.40%	0.40%
Growth Opportunities	1.00	1.00	0.90	0.86	0.84	1.00	0.87*
High Quality Floating Rate	0.40	0.36	0.34	0.33	0.32	0.40	0.30*

^ Effective Net Management Rate includes the impact of management fee waivers of affiliated underlying funds, if any.

* GSAM agreed to waive a portion of its management fee in order to achieve net management rates, as defined in the Funds' most recent prospectuses. These waivers will be effective through at least April 29, 2017 and prior to such date GSAM may not terminate the arrangements without approval of the Trustees.

The Core Fixed Income and High Quality Floating Rate Funds invest in FST Institutional Shares of the Goldman Sachs Financial Square Government Fund, which is an affiliated Underlying Fund. GSAM has agreed to waive a portion of its management fee payable by the Funds in an amount equal to the management fee it earns as an investment adviser to any of the affiliated Underlying Funds in which the Funds invest. For the six months ended June 30, 2016, GSAM waived $662 and $3,428 of the Core Fixed Income and High Quality Floating Rate Funds' management fees, respectively.

The Agreement for the Equity Index Fund provides for a contractual management fee at an annual rate equal to 0.30% of the Fund's average daily net assets. For the six months ended June 30, 2016, GSAM agreed to waive a portion of its management fee in order to achieve the following effective annual rates which will remain in effect through April 29, 2017 and prior to such date GSAM may not terminate the arrangement without the approval of the Trustees:

	Management Rate		
Fund	$0-$400 million	Over $400 million	Effective Rate
Equity Index	0.21%	0.20%	0.21%

5. AGREEMENTS AND AFFILIATED TRANSACTIONS (continued)

As authorized by the Agreement, GSAM has entered into a Sub-advisory Agreement with SSgA Funds Management, Inc. ("SSgA") which serves as the sub-adviser to the Equity Index Fund and provides the day-to-day advice regarding the Fund's portfolio transactions. As compensation for its services, SSgA is entitled to a fee, accrued daily and paid monthly by GSAM, at the following annual rates of the Fund's average daily net assets: 0.03% on the first $50 million, 0.02% on the next $200 million, 0.01% on the next $750 million and 0.008% over $1 billion. The effective Sub-advisory fee was 0.02% for the six months ended June 30, 2016.

B. Distribution and Service Plans — The Trust, on behalf of each Fund, has adopted Distribution and Service Plans (the "Plans"). Under the Plans, Goldman Sachs, which serves as distributor (the "Distributor"), is entitled to a fee accrued daily and paid monthly, for distribution services and personal and account maintenance services, which may then be paid by Goldman Sachs to authorized dealers, equal to, on an annual basis, 0.25% and 0.40% of the Fund's average daily net assets attributable to Service and Advisor Shares, respectively. For the six months ended June 30, 2016 for the Growth Opportunities Fund, Goldman Sachs agreed to waive distribution and services fees so as not to exceed an annual rate of 0.16% of average daily net assets of the Fund. This distribution and service fee waiver will remain in place through at least April 29, 2017, and prior to such date Goldman Sachs may not terminate the arrangement without the approval of the Trustees.

C. Transfer Agency Agreement — Goldman Sachs also serves as the transfer agent of the Funds for a fee pursuant to the Transfer Agency Agreement. The fees charged for such transfer agency services are accrued daily and paid monthly at an annual rate of 0.02% of the average daily net assets for Institutional, Service and Advisor Shares.

D. Other Expense Agreements and Affiliated Transactions — GSAM has agreed to limit certain "Other Expenses" of the Funds (excluding acquired fund fees and expenses, transfer agency fees and expenses, taxes, interest, brokerage fees, shareholder meeting, litigation, indemnification and extraordinary expenses) to the extent such expenses exceed, on an annual basis, a percentage rate of the average daily net assets of each Fund. Such Other Expense reimbursements, if any, are accrued daily and paid monthly. In addition, the Funds are not obligated to reimburse GSAM for prior fiscal year expense reimbursements, if any. The Other Expense limitations as an annual percentage rate of average daily net assets for Core Fixed Income, Equity Index, Growth Opportunities and High Quality Floating Rate Funds are 0.004%, 0.004%, 0.004% and 0.074%, respectively. These Other Expense limitations will remain in place through at least April 29, 2017, and prior to such date GSAM may not terminate the arrangements without the approval of the Trustees. In addition, the Funds have entered into certain offset arrangements with the custodian and the transfer agent, which may result in a reduction of the Funds' expenses and are received irrespective of the application of the "Other Expense" limitations described above.

For the six months ended June 30, 2016, these expense reductions, including any fee waivers and Other Expense reimbursements, were as follows:

Fund	Management Fee Waiver	Distribution and Service Fee Waiver	Custody Fee Credits	Other Expense Reimbursement	Total Expense Reductions
Core Fixed Income	$ 662	$ —	$1,409	$143,189	$145,260
Equity Index	72,195	—	195	136,638	209,028
Growth Opportunities	103,949	71,951	1,330	106,629	283,859
High Quality Floating Rate	34,525	—	50	84,704	119,279

E. Line of Credit Facility — As of June 30, 2016, the Funds participated in a $1,100,000,000 committed, unsecured revolving line of credit facility (the "facility") together with other funds of the Trust and registered investment companies having management agreements with GSAM or its affiliates ("Other Borrowers"). This facility is to be used for temporary or emergency purposes, or to allow for an orderly liquidation of securities to meet redemption requests. The interest rate on borrowings is based

Notes to Financial Statements (continued)

June 30, 2016 (Unaudited)

5. AGREEMENTS AND AFFILIATED TRANSACTIONS (continued)

on the federal funds rate. The facility also requires a fee to be paid by the Funds based on the amount of the commitment that has not been utilized. For the six months ended June 30, 2016, the Funds did not have any borrowings under the facility.

F. Other Transactions with Affiliates — The following table provides information about the investment in shares of issuers of which a Fund is an affiliate as of and for the six months ended June 30, 2016:

Fund	Name of Affiliated Issuer	Market Value 12/31/2015	Purchases at Cost	Proceeds from Sales	Net Realized Gain (Loss)	Change in Unrealized Appreciation (Depreciation)	Market Value 6/30/2016	Dividend Income
Equity Index	The Goldman Sachs Group, Inc.	$669,374	$—	$(41,383)	$7,261	$(123,245)	$512,007	$4,679

The following table provides information about the Funds' investment in the Goldman Sachs Financial Square Government Fund as of and for the six months ended June 30, 2016:

Fund	Market Value 12/31/2015	Purchases at Cost	Proceeds from Sales	Market Value 6/30/2016	Dividend Income
Core Fixed Income	$ —	$16,291,827	$(16,291,827)	$ —	$1,091
High Quality Floating Rate	10,347,519	14,296,533	(21,020,873)	3,623,179	5,264

As of June 30, 2016, the Goldman Sachs Group, Inc. was the beneficial owner of approximately 100% of the Institutional Shares of the Core Fixed Income, Growth Opportunities and High Quality Floating Rate Funds.

6. PORTFOLIO SECURITIES TRANSACTIONS

The cost of purchases and proceeds from sales and maturities of long-term securities for the six months ended June 30, 2016, were as follows:

Fund	Purchases of U.S. Government and Agency Obligations	Purchases (Excluding U.S. Government and Agency Obligations)	Sales and Maturities of U.S. Government and Agency Obligations	Sales and Maturities (Excluding U.S. Government and Agency Obligations)
Core Fixed Income	$186,112,616	$10,791,463	$198,791,261	$14,997,272
Equity Index	—	2,797,748	—	12,449,766
Growth Opportunities	—	50,932,764	—	55,661,965
High Quality Floating Rate	15,975,906	5,633,469	9,000,182	7,211,192

7. TAX INFORMATION

As of the Funds' most recent fiscal year end, December 31, 2015, the Funds' capital loss carryforwards and certain timing differences, on a tax-basis were as follows:

	Core Fixed Income	Equity Index	Growth Opportunities	High Quality Floating Rate
Capital loss carryforwards:[1]				
Expiring 2017	$ (264,763)	$ —	$ —	$ —
Expiring 2018	(4,488,774)	—	—	—
Perpetual short-term	—	—	—	(275,908)
Perpetual long-term	—	—	—	(595,824)
Total capital loss carryforwards	$(4,753,537)	$ —	$ —	$(871,732)
Timing differences (Qualified late year loss and straddle loss deferrals and certain REIT dividends)	(1,266,922)	4,012	(336,485)	(12,359)

(1) Expiration occurs on December 31 of the year indicated.

As of June 30, 2016, the Funds' aggregate security unrealized gains and losses based on cost for U.S. federal income tax purposes were as follows:

	Core Fixed Income	Equity Index	Growth Opportunities	High Quality Floating Rate
Tax cost	$107,078,933	$ 88,503,256	$130,621,115	$68,207,960
Gross unrealized gain	5,331,700	88,164,150	36,517,182	370,675
Gross unrealized loss	(560,294)	(13,982,914)	(3,692,779)	(396,173)
Net unrealized security gain (loss)	$ 4,771,406	$ 74,181,236	$ 32,824,403	$ (25,498)

The difference between GAAP-basis and tax-basis unrealized gains (losses) is attributable primarily to wash sales, net mark to market gains (losses) on regulated futures and foreign currency contracts, and differences in the tax treatment of underlying fund investments, foreign currency transactions, real estate investment trust investments and inflation-protected securities.

GSAM has reviewed the Funds' tax positions for all open tax years (the current and prior three years, as applicable) and has concluded that no provision for income tax is required in the Funds' financial statements. Such open tax years remain subject to examination and adjustment by tax authorities.

8. OTHER RISKS

The Funds' risks include, but are not limited to, the following:

Derivatives Risk — Loss may result from the Funds' investments in derivative instruments. These instruments may be illiquid, difficult to price and leveraged so that small changes in the value of the underlying instruments may produce disproportionate losses to the Funds. Derivatives are also subject to counterparty risk, which is the risk that the other party in the transaction will not fulfill its contractual obligation. Losses from investments in derivatives can also result from a lack of correlation between changes in the value of derivative instruments and the portfolio assets (if any) being hedged.

Interest Rate Risk — When interest rates increase, fixed income securities or instruments held by the Funds will generally decline in value. Long-term fixed income securities or instruments will normally have more price volatility because of this risk than short-term fixed income securities or instruments. The risks associated with increasing rates are heightened given that interest rates

Notes to Financial Statements (continued)

June 30, 2016 (Unaudited)

8. OTHER RISKS (continued)

are near historic lows, but may be expected to increase in the future with unpredictable effects on the markets and the Fund's investments.

Investments in Other Investment Companies — As a shareholder of another investment company, including an exchange traded fund ("ETF"), a Fund will indirectly bear its proportionate share of any net management fees and other expenses paid by such other investment companies, in addition to the fees and expenses regularly borne by the Fund. ETFs are subject to risks that do not apply to conventional mutual funds, including but not limited to the following: (i) the market price of the ETF's shares may trade at a premium or a discount to their NAV; and (ii) an active trading market for an ETF's shares may not develop or be maintained.

Large Shareholder Transactions Risk — A Fund may experience adverse effects when certain large shareholders, such as other funds, participating insurance companies, accounts and Goldman Sachs affiliates, purchase or redeem large amounts of shares of a Fund. Such large shareholder redemptions may cause a Fund to sell portfolio securities at times when it would not otherwise do so, which may negatively impact a Fund's NAV and liquidity. These transactions may also accelerate the realization of taxable income to shareholders if such sales of investments resulted in gains, and may also increase transaction costs. In addition, a large redemption could result in a Fund's current expenses being allocated over a smaller asset base, leading to an increase in the Fund's expense ratio. Similarly, large Fund share purchases may adversely affect a Fund's performance to the extent that the Fund is delayed in investing new cash and is required to maintain a larger cash position than it ordinarily would.

Liquidity Risk — A Fund may make investments that are illiquid or that may become less liquid in response to market developments or adverse investor perceptions. Illiquid investments may be more difficult to value. Liquidity risk may also refer to the risk that a Fund will not be able to pay redemption proceeds within the allowable time period because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. To meet redemption requests, a Fund may be forced to sell investments at an unfavorable time and/or under unfavorable conditions. Liquidity risk may be the result of, among other things, the reduced number and capacity of traditional market participants to make a market in fixed income securities or the lack of an active market. The potential for liquidity risk may be magnified by a rising interest rate environment or other circumstances where investor redemptions from fixed income mutual funds may be higher than normal, potentially causing increased supply in the market due to selling activity.

Market and Credit Risks — In the normal course of business, a fund trades financial instruments and enters into financial transactions where risk of potential loss exists due to changes in the market (market risk). Additionally, a Fund may also be exposed to credit risk in the event that an issuer or guarantor fails to perform or that an institution or entity with which the Fund has unsettled or open transactions defaults.

Short Position Risk — A Fund may enter into a short position through a futures contract, an option or swap agreement or through short sales of any instrument that a Fund may purchase for investment. Taking short positions involves leverage of a Fund's assets and presents various risks. If the value of the underlying instrument or market in which a Fund has taken a short position increases, then the Fund will incur a loss equal to the increase in value from the time that the short position was entered into plus any related interest payments or other fees. Taking short positions involves the risk that losses may be disproportionate, may exceed the amount invested, and may be unlimited.

9. INDEMNIFICATIONS

Under the Trust's organizational documents, its Trustees, officers, employees and agents are indemnified, to the extent permitted by the Act and state law, against certain liabilities that may arise out of performance of their duties to the Funds. Additionally, in the course of business, the Funds enter into contracts that contain a variety of indemnification clauses. The Funds' maximum exposure under these arrangements is unknown, as this would involve future claims that may be made against the Funds that have not yet occurred. However, GSAM believes the risk of loss under these arrangements to be remote.

10. SUBSEQUENT EVENTS

Subsequent events after the Statements of Assets and Liabilities date have been evaluated through the date the financial statements were issued. GSAM has concluded that there is no impact requiring adjustment or disclosure in the financial statements.

11. SUMMARY OF SHARE TRANSACTIONS

Share activity is as follows:

	Core Fixed Income Fund			
	For the Six Months Ended June 30, 2016 (Unaudited)		For the Fiscal Year Ended December 31, 2015

Fund Expenses — Six Month Period Ended June 30, 2016 (Unaudited)

As a shareholder of Institutional, Service or Advisor Shares of the Fund, you incur ongoing costs, including management fees, distribution and service (12b-1) fees (with respect to Service and Advisor Shares) and other Fund expenses. This example is intended to help you understand your ongoing costs (in dollars) of investing in the Institutional Shares, Service Shares and Advisor Shares of the Funds and to compare these costs with the ongoing costs of investing in other mutual funds.

The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire period from January 1, 2016 through June 30, 2016, which represents a period of 182 days of a 366 day year.

Actual Expenses — The first line under each share class in the table below provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000=8.6), then multiply the result by the number in the first line under the heading entitled "Expenses Paid" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes — The second line under each share class in the table below provides information about hypothetical account values and hypothetical expenses based on the Funds' actual net expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Funds' actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Funds and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight your ongoing costs only. As a shareholder of the Fund you do not incur any transaction costs, such as sales charges, redemption fees, or exchange fees, but shareholders of other funds may incur such costs. The second line of the table is useful in comparing ongoing costs only, and will not help you determine the relative total costs of owning different funds whose shareholders may incur transaction costs.

	Core Fixed Income Fund			Equity Index Fund			Growth Opportunities Fund			High Quality Floating Rate Fund		
Share Class	Beginning Account Value 01/01/16	Ending Account Value 06/30/16	Expenses Paid for the 6 Months Ended 06/30/16*	Beginning Account Value 01/01/16	Ending Account Value 06/30/16	Expenses Paid for the 6 Months Ended 06/30/16*	Beginning Account Value 01/01/16	Ending Account Value 06/30/16	Expenses Paid for the 6 Months Ended 06/30/16*	Beginning Account Value 01/01/16	Ending Account Value 06/30/16	Expenses Paid for the 6 Months Ended 06/30/16*

Advisor												
Actual	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	1,000	1,001.20	3.98
Hypothetical 5% return	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	1,000	1,020.89+	4.02

* Expenses are calculated using each Fund's annualized net expense ratio for each class, which represents the ongoing expenses as a percentage of net assets for the six months ended June 30, 2016. Expenses are calculated by multiplying the annualized net expense ratio by the average account value for the period; then multiplying the result by the number of days in the most recent fiscal half year; and then dividing that result by the number of days in the fiscal year. The annualized net expense ratios for the period were as follows:

Fund	Institutional	Service	Advisor
Core Fixed Income	0.41%	0.67%	N/A
Equity Index	N/A	0.48	N/A
Growth Opportunities	0.90	1.05	N/A
High Quality Floating Rate	0.39	0.64	0.80%

\+ Hypothetical expenses are based on each Fund's actual annualized net expense ratios and an assumed rate of return of 5% per year before expenses.

Statement Regarding Basis for Approval of Management Agreements (Unaudited)

Background

The Goldman Sachs Core Fixed Income, Goldman Sachs Equity Index, Goldman Sachs Growth Opportunities and Goldman Sachs High Quality Floating Rate Funds (the "Funds") are investment portfolios of Goldman Sachs Variable Insurance Trust (the "Trust"). The Board of Trustees oversees the management of the Trust and reviews the investment performance and expenses of the Funds at regularly scheduled meetings held throughout the year. In addition, the Board of Trustees determines annually whether to approve the continuance of the Trust's investment management agreements (the "Management Agreements") with Goldman Sachs Asset Management, L.P. (the "Investment Adviser") on behalf of the Funds and the sub-advisory agreement (the "Sub-Advisory Agreement," and together with the Management Agreements, the "Agreements") between the Investment Adviser and SSgA Funds Management, Inc. (the "Sub-Adviser") on behalf of the Equity Index Fund.

The Agreements were most recently approved for continuation until June 30, 2017 by the Board of Trustees, including those Trustees who are not parties to the Agreements or "interested persons" (as defined in the Investment Company Act of 1940, as amended) of any party thereto (the "Independent Trustees"), at a meeting held on June 15-16, 2016 (the "Annual Meeting").

The review process undertaken by the Trustees spans the course of the year and culminates with the Annual Meeting. To assist the Trustees in their deliberations, the Trustees have established a Contract Review Committee (the "Committee"), comprised of the Independent Trustees. The Committee held three meetings over the course of the year since the Agreements were last approved. At those Committee meetings, regularly scheduled Board or other committee meetings, and/or the Annual Meeting, matters relevant to the renewal of the Agreements were considered by the Board, or the Independent Trustees, as applicable. With respect to each Fund, such matters included:

(a) the nature and quality of the advisory, administrative, and other services provided to the Fund by the Investment Adviser and its affiliates, including information about:
  (i) the structure, staff, and capabilities of the Investment Adviser and its portfolio management teams;
  (ii) the groups within the Investment Adviser and its affiliates that support the portfolio management teams or provide other types of necessary services, including fund services groups (*e.g.*, accounting and financial reporting, tax, shareholder services, and operations); controls and risk management groups (*e.g.*, legal, compliance, valuation oversight, credit risk management, internal audit, compliance testing, market risk analysis, finance, and central funding); sales and distribution support groups, and others (*e.g.*, information technology and training);
  (iii) trends in employee headcount;
  (iv) the Investment Adviser's financial resources and ability to hire and retain talented personnel and strengthen its operations; and
  (v) the parent company's support of the Investment Adviser and its mutual fund business, as expressed by the firm's senior management;

(b) information on the investment performance of the Fund, including comparisons to the performance of similar mutual funds, as provided by a third-party mutual fund data provider engaged as part of the contract review process (the "Outside Data Provider"), and benchmark performance indices, and (in the case of the Core Fixed Income, Growth Opportunities and High Quality Floating Rate Funds) a composite of accounts with comparable investment strategies managed by the Investment Adviser; and general investment outlooks in the markets in which the Fund invests;

(c) information provided by the Investment Adviser indicating the Investment Adviser's views on whether the Fund's peer group and/or benchmark index had high, medium, or low relevance given the Fund's particular investment strategy;

(d) the terms of the Agreements and other agreements with affiliated service providers entered into by the Trust on behalf of the Fund;

(e) fee and expense information for the Fund, including:
  (i) the relative management fee and expense level of the Fund as compared to those of comparable funds managed by other advisers, as provided by the Outside Data Provider;
  (ii) the Fund's expense trends over time; and
  (iii) to the extent the Investment Adviser manages other types of accounts (such as bank collective trusts, private wealth management accounts, institutional separate accounts, sub-advised mutual funds, and non-U.S. funds) having investment objectives and policies similar to those of the Fund, comparative information on the advisory fees charged and services provided to those accounts by the Investment Adviser;

(f) with respect to the extensive investment performance and expense comparison data provided by the Outside Data Provider, its processes in producing that data for the Fund;

(g) the undertaking of the Investment Adviser and its affiliates to waive certain fees (with respect to the Equity Index, Growth Opportunities and High Quality Floating Rate Funds) and to limit certain expenses of the Fund that exceed a

Statement Regarding Basis for Approval of Management Agreements (Unaudited) (continued)

specified level; the undertaking of Goldman, Sachs & Co. ("Goldman Sachs"), the Fund's affiliated distributor, to waive a portion of the distribution and service fees payable by the Growth Opportunities Fund's Service Shares, and a summary of contractual fee reductions made by the Investment Adviser and/or its affiliates over the past several years with respect to the Fund;

(h) information relating to the profitability of the Management Agreements and the transfer agency and distribution and service arrangements of the Fund and the Trust as a whole to the Investment Adviser and its affiliates;

(i) whether the Fund's existing management fee schedule adequately addressed any economies of scale;

(j) a summary of the "fall-out" benefits derived by the Investment Adviser and its affiliates from their relationships with the Fund, including the fees received by the Investment Adviser's affiliates from the Fund for transfer agency, portfolio trading, distribution and other services;

(k) a summary of potential benefits derived by the Fund as a result of its relationships with the Investment Adviser;

(l) information regarding commissions paid by the Equity Index and Growth Opportunities Funds (the "Equity Funds") and broker oversight, an update on the Investment Adviser's soft dollars practices (with respect to the Growth Opportunities Fund), other information regarding portfolio trading, and how the Investment Adviser carries out its duty to seek best execution;

(m) the manner in which portfolio manager compensation is determined; and the number and types of accounts managed by the portfolio managers;

(n) the nature and quality of the services provided to the Fund by its unaffiliated service providers (including the Sub-Adviser for the Equity Index Fund), and the Investment Adviser's general oversight and evaluation (including reports on due diligence) of those service providers as part of the administration services provided under the Management Agreements; and

(o) the Investment Adviser's processes and policies addressing various types of potential conflicts of interest; its approach to risk management; the annual review of the effectiveness of the Fund's compliance program; and periodic compliance reports.

The Trustees also received an overview of the Funds' distribution arrangements. They received information regarding the Funds' assets, share purchase and redemption activity, and payment of distribution and service fees. Information was also provided to the Trustees relating to revenue sharing payments made by and services provided by the Investment Adviser and its affiliates to intermediaries that promote the sale, distribution, and/or servicing of Fund shares. The Independent Trustees also discussed the broad range of other investment choices that are available to Fund investors, including the availability of comparable funds managed by other advisers.

The presentations made at the Board and Committee meetings and at the Annual Meeting encompassed the Funds and other mutual funds for which the Board of Trustees has responsibility. In evaluating the Management Agreements at the Annual Meeting, the Trustees relied upon their knowledge, resulting from their meetings and other interactions throughout the year, of the Investment Adviser and its affiliates, their services, and the Funds. In conjunction with these meetings, the Trustees received written materials and oral presentations on the topics covered, and the Investment Adviser addressed the questions and concerns of the Trustees, including concerns regarding the investment performance of certain of the funds they oversee. The Independent Trustees were advised by their independent legal counsel regarding their responsibilities and other regulatory requirements related to the approval and continuation of mutual fund investment management agreements under applicable law. In addition, the Investment Adviser and its affiliates provided the Independent Trustees with a written response to a formal request for information sent on behalf of the Independent Trustees by their independent legal counsel. During the course of their deliberations, the Independent Trustees met in executive sessions with their independent legal counsel, without representatives of the Investment Adviser or its affiliates present.

Nature, Extent, and Quality of the Services Provided Under the Management Agreements

As part of their review, the Trustees considered the nature, extent, and quality of the services provided to the Funds by the Investment Adviser. In this regard, the Trustees considered both the investment advisory services and non-advisory services (including, with respect to the Equity Index Fund, the Investment Adviser's oversight of the Sub-Adviser) that are provided by the Investment Adviser and its affiliates. The Trustees noted the transition in the leadership and changes in personnel of various of the Investment Adviser's portfolio management teams that had occurred in recent periods, and the ongoing recruitment efforts aimed at bringing high quality investment talent to the Investment Adviser. They also noted the Investment Adviser's commitment to maintaining high quality systems and expending substantial resources to respond to ongoing changes to the regulatory and control environment in which the Funds and their service providers operate, as well as the efforts of the Investment Adviser and its

Statement Regarding Basis for Approval of Management Agreements (Unaudited) (continued)

affiliates to combat cyber security risks. The Trustees concluded that the Investment Adviser continued to commit substantial financial and operational resources to the Funds and expressed confidence that the Investment Adviser would continue to do so in the future. The Trustees also recognized that the Investment Adviser had made significant commitments to address regulatory compliance requirements applicable to the Funds and the Investment Adviser and its affiliates.

Investment Performance

The Trustees also considered the investment performance of the Funds. In this regard, they compared the investment performance of each Fund to its peers using rankings and ratings compiled by the Outside Data Provider as of December 31, 2015, and updated performance information prepared by the Investment Adviser using the peer group identified by the Outside Data Provider as of March 31, 2016. The information on each Fund's investment performance was provided for the one-, three-, five- and ten-year periods ending on the applicable dates, to the extent that each Fund has been in existence for those periods. The Trustees also reviewed each Fund's investment performance relative to its performance benchmark. As part of this review, they considered the investment performance trends of the Funds over time, and reviewed the investment performance of each Fund in light of its investment objective and policies and market conditions. The Trustees also received information comparing the Core Fixed Income, Growth Opportunities and High Quality Floating Rate Funds' performance to that of composites of accounts with comparable investment strategies managed by the Investment Adviser.

In addition, the Trustees considered materials prepared and presentations made by the Investment Adviser's senior management and portfolio management personnel in which Fund performance was assessed. The Trustees also considered the Investment Adviser's periodic reports with respect to the Funds' risk profiles, and how the Investment Adviser's approach to risk monitoring and management influences portfolio management.

The Trustees observed that the Core Fixed Income Fund's Institutional Shares had placed in the top half of the Fund's peer group and had underperformed the Fund's benchmark index for the one-year period ended March 31, 2016. The Trustees also observed that the Equity Index Fund's Service Shares had placed in the top half of the Fund's peer group and had underperformed the Fund's benchmark index by an amount approximately equal to Fund fees and expenses for the one-, three-, five-, and ten-year periods ended March 31, 2016. The Trustees noted that the Growth Opportunities Fund's Institutional Shares had placed in the third quartile of the Fund's peer group and had underperformed the Fund's benchmark index for the one-year period ended March 31, 2016. They also noted that the High Quality Floating Rate Fund had placed in the fourth quartile of the Fund's peer group and had underperformed the Fund's benchmark index for the one-year period ended March 31, 2016.

Costs of Services Provided and Competitive Information

The Trustees considered the contractual terms of the Agreements and the fee rates payable by each Fund under its respective Management Agreement and, with respect to the Equity Index Fund, payable by the Investment Adviser under the Sub-Advisory Agreement. In this regard, the Trustees considered information on the services rendered by the Investment Adviser to the Funds, which included both advisory and administrative services that were directed to the needs and operations of the Funds as registered mutual funds.

In particular, the Trustees reviewed analyses prepared by the Outside Data Provider regarding the expense rankings of the Funds. The analyses provided a comparison of each Fund's management fees and breakpoints (as applicable) to those of a relevant peer group and category universe; an expense analysis which compared each Fund's overall net and gross expenses to a peer group and a category universe; and a five-year history (or, in the case of Funds that commenced investment operations within a shorter period, since the year in which it commenced operations) comparing each Fund's net expenses to the peer and category medians. The analyses also compared each Fund's transfer agency, custody and distribution fees, other expenses and fee waivers/reimbursements to those of the peer group and category medians. The Trustees concluded that the comparisons provided by the Outside Data Provider were useful in evaluating the reasonableness of the management fees and total expenses paid by the Funds.

In addition, the Trustees considered the Investment Adviser's undertaking to waive a portion of its management fees (with respect to the Equity Index, Growth Opportunities, and High Quality Floating Rate Funds) and to limit certain expenses of the Funds that exceed specified levels as well as the undertaking of Goldman Sachs to waive a portion of the distribution and service fees payable by the Growth Opportunities Fund's Service Shares. The Trustees also noted that certain changes were being made to existing fee waiver or expense limitation arrangements of the Growth Opportunities and High Quality Floating Rate Funds that would have the effect of decreasing total Fund expenses, with such changes taking effect in connection with the Funds' next annual registration statement update. They also considered, to the extent that the Investment Adviser manages other types of accounts having investment objectives and policies similar to those of the Funds, comparative fee information for services provided by the Investment Adviser to those accounts, and information that indicated that services provided to the Funds differed in various

Statement Regarding Basis for Approval of Management Agreements (Unaudited) (continued)

significant respects from the services provided to other types of accounts which, in many cases, operated under less stringent legal and regulatory structures, required fewer services from the Investment Adviser to a smaller number of client contact points, and were less time-intensive.

In addition, the Trustees noted that shareholders are able to redeem their Fund shares at any time if shareholders believe that the Fund fees and expenses are too high or if they are dissatisfied with the performance of a Fund.

Profitability

The Trustees reviewed the Investment Adviser's revenues and pre-tax profit margins with respect to the Trust and each of the Funds. In this regard the Trustees noted that they had received, among other things, profitability analyses and summaries, revenue and expense schedules by Fund and by function (*i.e.*, investment management, transfer agency and distribution and service), and information on the Investment Adviser's expense allocation methodology. They observed that the profitability and expense figures are substantially similar to those used by the Investment Adviser for many internal purposes, including compensation decisions among various business groups, and are thus subject to a vigorous internal debate about how certain revenue and expenses should be allocated. The Trustees also noted that the internal audit group within the Goldman Sachs organization had audited the expense allocation methodology and was satisfied with the reasonableness, consistency, and accuracy of the Investment Adviser's expense allocation methodology and profitability analysis calculations. Profitability data for the Trust and each Fund were provided for 2015 and 2014, and the Trustees considered this information in relation to the Investment Adviser's overall profitability. The Trustees considered the Investment Adviser's revenues and pre-tax profit margins both in absolute terms and in comparison to information on the reported pre-tax profit margins earned by certain other asset management firms.

Economies of Scale

The Trustees considered the information that had been provided regarding the Investment Adviser's profitability. The Trustees also considered the breakpoints in the fee rate payable under the Management Agreement for each of the Core Fixed Income, Growth Opportunities and High Quality Floating Rate Funds at the following annual percentage rates of the average daily net assets of the Funds:

	Core Fixed Income Fund	High Quality Floating Rate Fund
First $1 billion	0.40%	0.40%
Next $1 billion	0.36	0.36
Next $3 billion	0.34	0.34
Next $3 billion	0.33	0.33
Over $8 billion	0.32	0.32

	Growth Opportunities Fund
First $2 billion	1.00%
Next $3 billion	0.90
Next $3 billion	0.86
Over $8 billion	0.84

The Trustees noted that the breakpoints were designed to share potential economies of scale, if any, with the Funds and their shareholders as assets under management reach those asset levels. The Trustees considered the amounts of assets in the Funds; the Funds' recent share purchase and redemption activity; the information provided by the Investment Adviser relating to the costs of the services provided by the Investment Adviser and its affiliates and their realized profits; information comparing fee rates charged by the Investment Adviser with fee rates charged to other funds in the peer groups; and the Investment Adviser's undertaking to waive a portion of its management fees (with respect to the Equity Index, Growth Opportunities and High Quality Floating Rate Funds) and to limit certain expenses of the Funds that exceed specified levels. Upon reviewing these matters at the Annual Meeting, the Trustees concluded that the fee breakpoints represented a means of assuring that benefits of scalability, if any, would be passed along to shareholders at the specified asset levels.

Statement Regarding Basis for Approval of Management Agreements (Unaudited) (continued)

With respect to the Equity Index Fund, the Trustees noted that, while its Management Agreement did not have breakpoints, the Investment Adviser had agreed to waive a portion of its management fee in order to achieve the following effective annual rates: 0.21% on the first $400 million of average daily net assets and 0.20% of average daily net assets in excess of $400 million. The Trustees noted that, in addition to the Investment Adviser's management fee waiver mentioned above, the Fund's total expenses were further reduced by the Investment Adviser's undertaking to limit certain expenses of the Fund that exceed a specified level.

Other Benefits to the Investment Adviser and Its Affiliates

The Trustees also considered the other benefits derived by the Investment Adviser and its affiliates from their relationships with the Funds as stated above, including: (a) transfer agency fees received by Goldman Sachs; (b) brokerage and futures commissions earned by Goldman Sachs for executing securities transactions on behalf of the Equity Funds and futures transactions on behalf of the Funds; (c) research received by the Investment Adviser from broker-dealers in exchange for executing certain transactions on behalf of the Growth Opportunities Fund; (d) trading efficiencies resulting from aggregation of orders of the Funds with those for other funds or accounts managed by the Investment Adviser; (e) the Investment Adviser's ability to leverage the infrastructure designed to service the Funds on behalf of its other clients; (f) the Investment Adviser's ability to cross-market other products and services to Fund shareholders; (g) Goldman Sachs' retention of certain fees as Fund Distributor; (h) the Investment Adviser's ability to negotiate better pricing with custodians on behalf of its other clients, as a result of the relationship with the Funds; and (i) the possibility that the working relationship between the Investment Adviser and the Funds' third-party service providers may cause those service providers to be more likely to do business with other areas of Goldman Sachs. In the course of considering the foregoing, the Independent Trustees requested and received further information quantifying certain of these fall-out benefits.

Other Benefits to the Funds and Their Shareholders

The Trustees also noted that the Funds receive certain potential benefits as a result of their relationship with the Investment Adviser, including: (a) trading efficiencies resulting from aggregation of orders of the Funds with those of other funds or accounts managed by the Investment Adviser; (b) enhanced servicing from vendors because of the volume of business generated by the Investment Adviser and its affiliates; (c) enhanced servicing from broker-dealers because of the volume of business generated by the Investment Adviser and its affiliates; (d) the Investment Adviser's ability to negotiate favorable terms with derivatives counterparties on behalf of the Funds as a result of the size and reputation of the Goldman Sachs organization; (e) the Investment Adviser's knowledge and experience gained from managing other accounts and products; (f) the Investment Adviser's ability to hire and retain qualified personnel to provide services to the Funds because of the reputation of the Goldman Sachs organization; (g) the Funds' access, through the Investment Adviser, to certain firmwide resources (*e.g.*, proprietary risk management systems and databases), subject to certain restrictions; and (h) the Funds' access to certain affiliated distribution channels. In addition, the Trustees noted the competitive nature of the mutual fund marketplace, and considered that many of the Funds' shareholders invested in the Funds in part because of the Funds' relationship with the Investment Adviser and that those shareholders have a general expectation that the relationship will continue.

Conclusion

In connection with their consideration of the Agreements, the Trustees gave weight to each of the factors described above, but did not identify any particular factor as controlling their decision. After deliberation and consideration of all of the information provided, including the factors described above, the Trustees concluded, in the exercise of their business judgment, that the management fees paid by each of the Funds were reasonable in light of the services provided to it by the Investment Adviser, the Investment Adviser's costs and each Fund's current and reasonably foreseeable asset levels. The Trustees unanimously concluded that the Investment Adviser's continued management likely would benefit each Fund and its shareholders and that the Management Agreements should be approved and continued with respect to each Fund until June 30, 2017.

Sub-Advisory Agreement for the Equity Index Fund

Nature, Extent, and Quality of the Services Provided Under the Sub-Advisory Agreement and Investment Performance

In evaluating the Sub-Advisory Agreement, the Trustees relied upon materials furnished and presentations made by the Investment Adviser and the Sub-Adviser. In evaluating the nature, extent, and quality of services provided by the Sub-Adviser, the Trustees considered information on the services provided to the Equity Index Fund by the Sub-Adviser, including information about the Sub-Adviser's (a) personnel and organizational structure; (b) experience in index investing and track record in tracking

Statement Regarding Basis for Approval of Management Agreements (Unaudited) (continued)

the performance of the Fund's benchmark in line with the investment objective of the Fund; (c) policies and procedures in place to address potential conflicts of interest; and (d) compliance program and code of ethics. The Trustees noted that the Fund had commenced operations in January 2006, and reviewed the Fund's operations and investment performance since its inception. The Trustees reviewed the services provided to the Fund under the Sub-Advisory Agreement. They noted that the Fund's Service Shares had placed in the top half of the Fund's peer group and had underperformed the Fund's benchmark index by an amount approximately equal to Fund fees and expenses for the one-, three-, five-, and ten-year periods ended March 31, 2016.

Costs of Services Provided.

The Trustees reviewed the terms of the Sub-Advisory Agreement, including the fee schedule for the Sub-Adviser. They considered the breakpoints in the sub-advisory fee rate payable under the Sub-Advisory Agreement at the following annual percentage rates of the average daily net assets of the Fund:

Average Daily Net Assets	Sub-Advisory Fee Annual Rate
First $50 Million	0.030%
Next $200 Million	0.020%
Next $750 Million	0.010%
Over $1 Billion	0.008%

Statement Regarding Basis for Approval of Management Agreements (Unaudited) (continued)

The Trustees noted that the Sub-Adviser's compensation is paid by the Investment Adviser, not by the Fund, and that the retention of the Sub-Adviser does not increase the fees incurred by the Fund for advisory services. They noted that the Investment Adviser believes that the relationship between the management fees paid by the Fund and the sub-advisory fees paid by the Investment Adviser is appropriate given the level of services the Investment Adviser provides to the Fund and the significant differences in cost drivers and risks associated with the respective services offered by the Investment Adviser and the Sub-Adviser, as well as the management fee waivers and expense limitations that substantially reduce the fees retained by the Investment Adviser.

Conclusion

After deliberation and consideration of the information provided, the Trustees concluded that the sub-advisory fee to be paid by the Investment Adviser to the Sub-Adviser with respect to the Equity Index Fund is reasonable in light of the services to be provided by the Sub-Adviser and the Fund's reasonably foreseeable asset levels, and that the Sub-Advisory Agreement with respect to the Equity Index Fund should be approved and continued until June 30, 2017.

The reports concerning the Funds included in this shareholder report may contain certain forward-looking statements about the factors that may affect the performance of the Funds in the future. These statements are based on Fund management's predictions and expectations concerning certain future events and their expected impact on the Funds, such as performance of the economy as a whole and of specific industry sectors, changes in the levels of interest rates, the impact of developing world events, and other factors that may influence the future performance of the Funds. Management believes these forward-looking statements to be reasonable, although they are inherently uncertain and difficult to predict. Actual events may cause adjustments in portfolio management strategies from those currently expected to be employed.

A description of the policies and procedures that the Funds use to determine how to vote proxies relating to portfolio securities and information regarding how the Funds voted proxies relating to portfolio securities for the 12-month period ended June 30 is available (i) without charge, upon request by calling 1-800-621-2550; and (ii) on the Securities and Exchange Commission ("SEC") web site at *http://www.sec.gov.*

The Funds file their complete schedule of portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. The Funds' Form N-Qs are available on the SEC's web site at http://www.sec.gov within 60 days after the Funds' first and third fiscal quarters. The Funds' Form N-Qs may be reviewed and copied at the SEC's Public Reference Room in Washington, D.C. and information on the operation of the Public Reference Room may also be obtained by calling 1-800-SEC-0330. Form N-Qs may be obtained upon request and without charge by calling 1-800-621-2550.

Fund holdings and allocations shown are as of June 30, 2016 and may not be representative of future investments. Fund holdings should not be relied on in making investment decisions and should not be construed as research or investment advice regarding particular securities. Current and future holdings are subject to risk.

References to indices, benchmarks or other measures of relative market performance over a specified period of time are provided for your information only and do not imply that the portfolio will achieve similar results. The index composition may not reflect the manner in which a portfolio is constructed. While an adviser seeks to design a portfolio which reflects appropriate risk and return features, portfolio characteristics may deviate from those of the benchmark.

The Global Industry Classification Standard ("GICS") was developed by and is the exclusive property and a service mark of Morgan Stanley Capital International Inc. ("MSCI") and Standard & Poor's, a division of The McGraw-Hill Companies, Inc. ("S&P") and is licensed for use by Goldman Sachs. Neither MSCI, S&P nor any other party involved in making or compiling the GICS or any GICS classifications makes any express or implied warranties or representations with respect to such standard or classification (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such standard or classification. Without limiting any of the foregoing, in no event shall MSCI, S&P, any of their affiliates or any third party involved in making or compiling the GICS or any GICS classifications have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

The portfolio risk management process includes an effort to monitor and manage risk, but does not imply low risk.

Shares of the Goldman Sachs VIT Funds are offered to separate accounts of participating life insurance companies for the purpose of funding variable annuity contracts and variable life insurance policies. Shares of the Fund are not offered directly to the general public. The variable annuity contracts and variable life insurance policies are described in the separate prospectuses issued by participating insurance companies. You should refer to those prospectuses for information about surrender charges, mortality and expense risk fees and other charges that may be assessed by participating insurance companies under the variable annuity contracts or variable life insurance policies. Such fees or charges, if any, may affect the return you may realize with respect to your investments. Ask your representative for more complete information. Please consider a fund's objectives, risks and charges and expenses, and read the prospectus carefully before investing. The prospectus contains this and other information about the Fund.

This material is not authorized for distribution to prospective investors unless preceded or accompanied by a current Prospectus or summary prospectus, if applicable. Investors should consider a Fund's objective, risks, and charges and expenses, and read the summary prospectus, if available, and/or the Prospectus carefully before investing or sending money. The summary prospectus, if available, and the Prospectus contain this and other information about a Fund and may be obtained from your Authorized Institution or from Goldman, Sachs & Co. by calling 1-800-621-2550.

This report is prepared for the general information of contract owners and is not an offer of shares of the Goldman Sachs Variable Insurance Trust Funds.

Goldman, Sachs & Co. is the distributor of the Goldman Sachs Funds and the Goldman Sachs Variable Insurance Trust Funds.

Invesco

Semiannual Report to Shareholders **June 30, 2016**

Invesco V.I. Global Real Estate Fund

The Fund provides a complete list of its holdings four times in each fiscal year, at the quarter-ends. For the second and fourth quarters, the lists appear in the Fund's semiannual and annual reports to shareholders. For the first and third quarters, the Fund files the lists with the Securities and Exchange Commission (SEC) on Form N-Q. The Fund's Form N-Q filings are available on the SEC website, sec.gov. Copies of the Fund's Forms N-Q may be reviewed and copied at the SEC Public Reference Room in Washington, D.C. You can obtain information on the operation of the Public Reference Room, including information about duplicating fee charges, by calling 202 551 8090 or 800 732 0330, or by electronic request at the following email address: publicinfo@sec.gov. The SEC file numbers for the Fund are 811-07452 and 033-57340. The Fund's most recent portfolio holdings, as filed on Form N-Q, have also been made available to insurance companies issuing variable annuity contracts and variable life insurance policies ("variable products") that invest in the Fund.

A description of the policies and procedures that the Fund uses to determine how to vote proxies relating to portfolio securities is available without charge, upon request, from our Client Services department at 800 959 4246 or at invesco.com/proxyguidelines. The information is also available on the SEC website, sec.gov.

Information regarding how the Fund voted proxies related to its portfolio securities during the most recent 12-month period ended June 30 is available at invesco.com/proxysearch. The information is also available on the SEC website, sec.gov.

Invesco Advisers, Inc. is an investment adviser; it provides investment advisory services to individual and institutional clients and does not sell securities. Invesco Distributors, Inc. is the US distributor for Invesco Ltd.'s retail mutual funds, exchange-traded funds and institutional money market funds. Both are wholly owned, indirect subsidiaries of Invesco Ltd.

This report must be accompanied or preceded by a currently effective Fund prospectus and variable product prospectus, which contain more complete information, including sales charges and expenses. Investors should read each carefully before investing.

Series II Shares	6.60
MSCI World Index▼ (Broad Market Index)	0.66
Custom Invesco Global Real Estate Index■ (Style-Specific Index)	8.35
Lipper VUF Real Estate Funds Classification Average◆ (Peer Group)	11.31

Source(s): ▼FactSet Research Systems Inc.; ■Invesco, FactSet Research Systems Inc.; ◆Lipper Inc.

The **MSCI World Index℠** is an unmanaged index considered representative of stocks of developed countries. The index is computed using the net return, which withholds applicable taxes for non-resident investors.

The **Custom Invesco Global Real Estate Index** is composed of the FTSE EPRA/NAREIT Developed Index (net) through June 30, 2014; and the FTSE EPRA/NAREIT Global Index (net) since July 1, 2014.

The **Lipper VUF Real Estate Funds Classification Average** represents an average of all of the variable insurance underlying funds in the Lipper Real Estate Funds classification.

The **FTSE EPRA/NAREIT Developed Index** is an unmanaged index considered representative of listed real estate companies and REITs worldwide.

The **FTSE EPRA/NAREIT Global Index** is a free float, market capitalization-weighted real estate index designed to represent publicly-traded equity REITs and listed property companies in 38 countries worldwide, covering both the developed and emerging markets.

The Fund is not managed to track the performance of any particular index, including the index(es) described here, and consequently, the performance of the Fund may deviate significantly from the performance of the index(es).

A direct investment cannot be made in an index. Unless otherwise indicated, index results include reinvested dividends, and they do not reflect sales charges. Performance of the peer group, if applicable, reflects fund expenses; performance of a market index does not.

Average Annual Total Returns

As of 6/30/16

Series I Shares	
Inception (3/31/98)	8.24%
10 Years	4.14
5 Years	7.01
1 Year	7.26
Series II Shares	
Inception (4/30/04)	8.38%
10 Years	3.88
5 Years	6.74
1 Year	6.97

The performance of the Fund's Series I and Series II share classes will differ primarily due to different class expenses.

The performance data quoted represent past performance and cannot guarantee comparable future results; current performance may be lower or higher. Please contact your variable product issuer or financial adviser for the most recent month-end variable product performance. Performance figures reflect Fund expenses, reinvested distributions and changes in net asset value. Investment return and principal value will fluctuate so that you may have a gain or loss when you sell shares.

The total annual Fund operating expense ratio set forth in the most recent Fund prospectus as of the date of this report for Series I and Series II shares was 1.11% and 1.36%, respectively. The expense ratios presented above may vary from the expense ratios presented in other sections of this report that are based on expenses incurred during the period covered by this report.

Invesco V.I. Global Real Estate Fund, a series portfolio of AIM Variable Insurance Funds (Invesco Variable Insurance Funds), is currently offered through insurance companies issuing variable products. You cannot purchase shares of the Fund directly. Performance figures given represent the Fund and are not intended to reflect actual variable product values. They do not reflect sales charges, expenses and fees assessed in connection with a variable product. Sales charges, expenses and fees, which are determined by the variable product issuers, will vary and will lower the total return.

The most recent month-end performance at the Fund level, excluding variable product charges, is available at 800 451 4246. As mentioned above, for the most recent month-end performance including variable product charges, please contact your variable product issuer or financial adviser.

Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information.

REIT – Real Estate Investment Trust

Notes to Schedule of Investments:

(a) Non-income producing security.
(b) Security purchased or received in a transaction exempt from registration under the Securities Act of 1933, as amended (the "1933 Act"). The security may be resold pursuant to an exemption from registration under the 1933 Act, typically to qualified institutional buyers. The aggregate value of these securities at June 30, 2016 was $1,642,242, which represented less than 1% of the Fund's Net Assets.
(c) The money market fund and the Fund are affiliated by having the same investment adviser. The rate shown is the 7-day SEC standardized yield as of June 30, 2016.

Series II	15,580,028	19,285,906
Net increase (decrease) in net assets resulting from share transactions	(27,566,709)	29,177,067
Net increase (decrease) in net assets	(684,470)	6,667,905
Net assets:		
Beginning of period	416,796,223	410,128,318
End of period (includes undistributed net investment income of $3,810,791 and $(1,060,884), respectively)	$416,111,753	$416,796,223

Notes to Financial Statements

June 30, 2016
(Unaudited)

NOTE 1—Significant Accounting Policies

Invesco V.I. Global Real Estate Fund (the "Fund") is a series portfolio of AIM Variable Insurance Funds (Invesco Variable Insurance Funds) (the "Trust"). The Trust is a Delaware statutory trust registered under the Investment Company Act of 1940, as amended (the "1940 Act"), as an open-end series management investment company consisting of twenty-four separate portfolios, (each constituting a "Fund"). The assets, liabilities and operations of each portfolio are accounted for separately. Information presented in these financial statements pertains only to the Fund. Matters affecting each Fund or class will be voted on exclusively by the shareholders of such Fund or class. Current Securities and Exchange Commission ("SEC") guidance, however, requires participating insurance companies offering separate accounts to vote shares proportionally in accordance with the instructions of the contract owners whose investments are funded by shares of each Fund or class.

The Fund's investment objective is total return through growth of capital and current income.

The Fund currently offers two classes of shares, Series I and Series II, both of which are offered to insurance company separate accounts funding variable annuity contracts and variable life insurance policies ("variable products").

The following is a summary of the significant accounting policies followed by the Fund in the preparation of its financial statements.

A. Security Valuations – Securities, including restricted securities, are valued according to the following policy.

A security listed or traded on an exchange (except convertible securities) is valued at its last sales price or official closing price as of the close of the customary trading session on the exchange where the security is principally traded, or lacking any sales or official closing price on a particular day, the security may be valued at the closing bid price on that day. Securities traded in the over-the-counter market are valued based on prices furnished by independent pricing services or market makers. When such securities are valued by an independent pricing service they may be considered fair valued. Futures contracts are valued at the final settlement price set by an exchange on which they are principally traded. Listed options are valued at the mean between the last bid and asked prices from the exchange on which they are principally traded. Options not listed on an exchange are valued by an independent source at the mean between the last bid and asked prices. For purposes of determining net asset value ("NAV") per share, futures and option contracts generally are valued 15 minutes after the close of the customary trading session of the New York Stock Exchange ("NYSE").

Investments in open-end and closed-end registered investment companies that do not trade on an exchange are valued at the end-of-day net asset value per share. Investments in open-end and closed-end registered investment companies that trade on an exchange are valued at the last sales price or official closing price as of the close of the customary trading session on the exchange where the security is principally traded.

Debt obligations (including convertible securities) and unlisted equities are fair valued using an evaluated quote provided by an independent pricing service. Evaluated quotes provided by the pricing service may be determined without exclusive reliance on quoted prices, and may reflect appropriate factors such as institution-size trading in similar groups of securities, developments related to specific securities, dividend rate (for unlisted equities), yield (for debt obligations), quality, type of issue, coupon rate (for debt obligations), maturity (for debt obligations), individual trading characteristics and other market data. Debt obligations are subject to interest rate and credit risks. In addition, all debt obligations involve some risk of default with respect to interest and/or principal payments.

Foreign securities' (including foreign exchange contracts) prices are converted into U.S. dollar amounts using the applicable exchange rates as of the close of the NYSE. If market quotations are available and reliable for foreign exchange-traded equity securities, the securities will be valued at the market quotations. Because trading hours for certain foreign securities end before the close of the NYSE, closing market quotations may become unreliable. If between the time trading ends on a particular security and the close of the customary trading session on the NYSE, events occur that the Adviser determines are significant and make the closing price unreliable, the Fund may fair value the security. If the event is likely to have affected the closing price of the security, the security will be valued at fair value in good faith using procedures approved by the Board of Trustees. Adjustments to closing prices to reflect fair value may also be based on a screening process of an independent pricing service to indicate the degree of certainty, based on historical data, that the closing price in the principal market where a foreign security trades is not the current value as of the close of the NYSE. Foreign securities' prices meeting the approved degree of certainty that the price is not reflective of current value will be priced at the indication of fair value from the independent pricing service. Multiple factors may be considered by the independent pricing service in determining adjustments to reflect fair value and may include information relating to sector indices, American Depositary Receipts and domestic and foreign index futures. Foreign securities may have additional risks including exchange rate changes, potential for sharply devalued currencies and high inflation, political and economic upheaval, the relative lack of issuer information, relatively low market liquidity and the potential lack of strict financial and accounting controls and standards.

Securities for which market prices are not provided by any of the above methods may be valued based upon quotes furnished by independent sources. The last bid price may be used to value equity securities. The mean between the last bid and asked prices is used to value debt obligations, including corporate loans.

Securities for which market quotations are not readily available or became unreliable are valued at fair value as determined in good faith by or under the supervision of the Trust's officers following procedures approved by the Board of Trustees. Issuer specific events, market trends, bid/asked quotes of brokers and information providers and other market data may be reviewed in the course of making a good faith determination of a security's fair value.

The Fund may invest in securities that are subject to interest rate risk, meaning the risk that the prices will generally fall as interest rates rise and, conversely, the prices will generally rise as interest rates fall. Specific securities differ in their sensitivity to changes in interest rates depending on their individual characteristics. Changes in interest rates may result in increased market volatility, which may affect the value and/or liquidity of certain Fund investments.

Valuations change in response to many factors including the historical and prospective earnings of the issuer, the value of the issuer's assets, general economic conditions, interest rates, investor perceptions and market liquidity. Because of the inherent uncertainties of valuation, the values reflected in the financial statements may materially differ from the value received upon actual sale of those investments.

B. Securities Transactions and Investment Income – Securities transactions are accounted for on a trade date basis. Realized gains or losses on sales are computed on the basis of specific identification of the securities sold. Interest income (net of withholding tax, if any) is recorded on the accrual basis from settlement date. Dividend income (net of withholding tax, if any) is recorded on the ex-dividend date.

The Fund may periodically participate in litigation related to Fund investments. As such, the Fund may receive proceeds from litigation settlements. Any proceeds received are included in the Statement of Operations as realized gain (loss) for investments no longer held and as unrealized gain (loss) for investments still held.

Brokerage commissions and mark ups are considered transaction costs and are recorded as an increase to the cost basis of securities purchased and/or a reduction of proceeds on a sale of securities. Such transaction costs are included in the determination of net realized and unrealized gain (loss) from investment securities reported in the Statement of Operations and the Statement of Changes in Net Assets and the net realized and unrealized gains (losses) on securities per share in the Financial Highlights. Transaction costs are included in the calculation of the Fund's net asset value and, accordingly, they reduce the Fund's total returns. These transaction costs are not considered operating expenses and are not reflected in net investment income reported in the Statement of Operations and the Statement of Changes in Net Assets, or the net investment income per share and the ratios of expenses and net investment income reported in the Financial Highlights, nor are they limited by any expense limitation arrangements between the Fund and the investment adviser.

The Fund allocates income and realized and unrealized capital gains and losses to a class based on the relative net assets of each class.

The Fund recharacterizes distributions received from REIT investments based on information provided by the REIT into the following categories: ordinary income, long-term and short-term capital gains, and return of capital. If information is not available on a timely basis from the REIT, the recharacterization will be based on available information which may include the previous year's allocation. If new or additional information becomes available from the REIT at a later date, a recharacterization will be made in the following year. The Fund records as dividend income the amount recharacterized as ordinary income and as realized gain the amount recharacterized as capital gain in the Statement of Operations, and the amount recharacterized as return of capital as a reduction to the cost of investments in the Statement of Assets and Liabilities. These recharacterizations are reflected in the accompanying financial statements.

C. Country Determination – For the purposes of making investment selection decisions and presentation in the Schedule of Investments, the investment adviser may determine the country in which an issuer is located and/or credit risk exposure based on various factors. These factors include the laws of the country under which the issuer is organized, where the issuer maintains a principal office, the country in which the issuer derives 50% or more of its total revenues and the country that has the primary market for the issuer's securities, as well as other criteria. Among the other criteria that may be evaluated for making this determination are the country in which the issuer maintains 50% or more of its assets, the type of security, financial guarantees and enhancements, the nature of the collateral and the sponsor organization. Country of issuer and/or credit risk exposure has been determined to be the United States of America, unless otherwise noted.

D. Distributions – Distributions from net investment income and net realized capital gain, if any, are generally declared and paid to separate accounts of participating insurance companies annually and recorded on the ex-dividend date.

E. Federal Income Taxes – The Fund intends to comply with the requirements of Subchapter M of the Internal Revenue Code of 1986, as amended (the "Internal Revenue Code"), necessary to qualify as a regulated investment company and to distribute substantially all of the Fund's taxable earnings to shareholders. As such, the Fund will not be subject to federal income taxes on otherwise taxable income (including net realized capital gain) that is distributed to shareholders. Therefore, no provision for federal income taxes is recorded in the financial statements.

The Fund recognizes the tax benefits of uncertain tax positions only when the position is more likely than not to be sustained. Management has analyzed the Fund's uncertain tax positions and concluded that no liability for unrecognized tax benefits should be recorded related to uncertain tax positions. Management is not aware of any tax positions for which it is reasonably possible that the total amounts of unrecognized tax benefits will change materially in the next 12 months.

The Fund files tax returns in the U.S. Federal jurisdiction and certain other jurisdictions. Generally, the Fund is subject to examinations by such taxing authorities for up to three years after the filing of the return for the tax period.

F. Expenses – Fees provided for under the Rule 12b-1 plan of a particular class of the Fund and which are directly attributable to that class are charged to the operations of such class. All other expenses are allocated among the classes based on relative net assets.

G. Accounting Estimates – The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America ("GAAP") requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period including estimates and assumptions related to taxation. Actual results could differ from those estimates by a significant amount. In addition, the Fund monitors for material events or transactions that may occur or become known after the period-end date and before the date the financial statements are released to print.

H. Indemnifications – Under the Trust's organizational documents, each Trustee, officer, employee or other agent of the Trust is indemnified against certain liabilities that may arise out of the performance of their duties to the Fund. Additionally, in the normal course of business, the Fund enters into contracts, including the Fund's servicing agreements, that contain a variety of indemnification clauses. The Fund's maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Fund that have not yet occurred. The risk of material loss as a result of such indemnification claims is considered remote.

I. Foreign Currency Translations – Foreign currency is valued at the close of the NYSE based on quotations posted by banks and major currency dealers. Portfolio securities and other assets and liabilities denominated in foreign currencies are translated into U.S. dollar amounts at date of valuation. Purchases and sales of portfolio securities (net of foreign taxes withheld on disposition) and income items denominated in foreign currencies are translated into U.S. dollar amounts on the respective dates of such transactions. The Fund does not separately account for the portion of the results of operations resulting from changes in foreign exchange rates on investments and the fluctuations arising from changes in market prices of securities held. The combined results of changes in foreign exchange rates and the fluctuation of market prices on investments (net of estimated foreign tax withholding) are included with the net realized and unrealized gain or loss from investments in the Statement of Operations. Reported net realized foreign currency gains or losses arise from (1) sales of foreign currencies, (2) currency gains or losses realized between the trade and settlement dates on securities transactions, and (3) the difference between the amounts of dividends, interest, and foreign withholding taxes recorded on the Fund's books and the U.S. dollar equivalent of the amounts actually received or paid. Net unrealized foreign currency gains and losses arise from changes in the fair values of assets and liabilities, other than investments in securities at fiscal period end, resulting from changes in exchange rates.

The Fund may invest in foreign securities, which may be subject to foreign taxes on income, gains on investments or currency repatriation, a portion of which may be recoverable. Foreign taxes, if any, are recorded based on the tax regulations and rates that exist in the foreign markets in which the Fund invests and are shown in the Statement of Operations.

J. Forward Foreign Currency Contracts – The Fund may engage in foreign currency transactions either on a spot (i.e. for prompt delivery and settlement) basis, or through forward foreign currency contracts, to manage or minimize currency or exchange rate risk.

The Fund may also enter into forward foreign currency contracts for the purchase or sale of a security denominated in a foreign currency in order to "lock in" the U.S. dollar price of that security, or the Fund may also enter into forward foreign currency contracts that do not provide for physical settlement of the two currencies, but instead are settled by a single cash payment calculated as the difference between the agreed upon exchange rate and the spot rate at settlement based upon an agreed upon notional amount (non-deliverable forwards). The Fund will set aside liquid assets in an amount equal to daily mark-to-market obligation for forward foreign currency contracts.

A forward foreign currency contract is an obligation between two parties ("Counterparties") to purchase or sell a specific currency for an agreed-upon price at a future date. The use of forward foreign currency contracts does not eliminate fluctuations in the price of the underlying securities the Fund owns or intends to acquire but establishes a rate of exchange in advance. Fluctuations in the value of these contracts are measured by the difference in the contract date and reporting date exchange rates and are recorded as unrealized appreciation (depreciation) until the contracts are closed. When the contracts are closed, realized gains (losses) are recorded. Realized and unrealized gains (losses) on the contracts are included in the Statement of Operations. The primary risks associated with forward foreign currency contracts include failure of the Counterparty to meet the terms of the contract and the value of the foreign currency changing unfavorably. These risks may be in excess of the amounts reflected in the Statement of Assets and Liabilities.

K. Other Risks – The Fund's investments are concentrated in a comparatively narrow segment of the economy. Consequently, the Fund may tend to be more volatile than other mutual funds, and the value of the Fund's investments may tend to rise and fall more rapidly.

Because the Fund concentrates its assets in the real estate industry, an investment in the Fund will be closely linked to the performance of the real estate markets. Property values may fall due to increasing vacancies or declining rents resulting from economic, legal, cultural or technological developments.

NOTE 2—Advisory Fees and Other Fees Paid to Affiliates

The Trust has entered into a master investment advisory agreement with Invesco Advisers, Inc. (the "Adviser" or "Invesco"). Under the terms of the investment advisory agreement, the Fund pays an advisory fee to the Adviser based on the annual rate of the Fund's average daily net assets as follows:

Average Daily Net Assets	Rate
First $250 million	0.75%
Next $250 million	0.74%
Next $500 million	0.73%
Next $1.5 billion	0.72%
Next $2.5 billion	0.71%
Next $2.5 billion	0.70%
Next $2.5 billion	0.69%
Over $10 billion	0.68%

For the six months ended June 30, 2016, the effective advisory fees incurred by the Fund was 0.75%.

Under the terms of a master sub-advisory agreement between the Adviser and each of Invesco Asset Management Deutschland GmbH, Invesco Asset Management Limited, Invesco Asset Management (Japan) Limited, Invesco Hong Kong Limited, Invesco Senior Secured Management, Inc. and Invesco Canada Ltd. (collectively, the "Affiliated Sub-Advisers") the Adviser, not the Fund, may pay 40% of the fees paid to the Adviser to any such Affiliated Sub-Adviser(s) that provide(s) discretionary investment management services to the Fund based on the percentage of assets allocated to such Affiliated Sub-Adviser(s).

The Adviser has contractually agreed, through at least June 30, 2017, to waive advisory fees and/or reimburse expenses of all shares to the extent necessary to limit total annual fund operating expenses after fee waiver and/or expense reimbursement (excluding certain items discussed below) of Series I shares to 2.00% and Series II shares to 2.25% of average daily net assets (the "expense limits"). In determining the Adviser's obligation to waive advisory fees and/or reimburse expenses, the following expenses are not taken into account, and could cause the total annual fund operating expenses after fee waiver and/or expense reimbursement to exceed the numbers reflected above: (1) interest; (2) taxes; (3) dividend expense on short sales; (4) extraordinary or non-routine items, including litigation expenses; and (5) expenses that the Fund has incurred but did not actually pay because of an expense offset arrangement. Unless Invesco continues the fee waiver agreement, it will terminate on June 30, 2017. During its term, the fee waiver agreement cannot be terminated or amended to increase the expense limits without approval of the Board of Trustees. The Adviser did not waive fees and/or reimburse expenses during the period under these expense limits.

Further, the Adviser has contractually agreed, through at least June 30, 2018, to waive the advisory fee payable by the Fund in an amount equal to 100% of the net advisory fees the Adviser receives from the affiliated money market funds on investments by the Fund of uninvested cash in such affiliated money market funds.

For the six months ended June 30, 2016, the Adviser waived advisory fees of $3,429.

The Trust has entered into a master administrative services agreement with Invesco pursuant to which the Fund has agreed to pay Invesco a fee for costs incurred in providing accounting services and fund administrative services to the Fund and to reimburse Invesco for administrative services fees paid to insurance companies that have agreed to provide services to the participants of separate accounts. These administrative services provided by the insurance companies may include, among other things: the printing of prospectuses, financial reports and proxy statements and the delivery of the same to existing participants; the maintenance of master accounts; the facilitation of purchases and redemptions requested by the participants; and the servicing of participants' accounts. Pursuant to such agreement, for the six months ended June 30, 2016, Invesco was paid $50,059 for accounting and fund administrative services and reimbursed $511,359 for services provided by insurance companies.

The Trust has entered into a transfer agency and service agreement with Invesco Investment Services, Inc. ("IIS") pursuant to which the Fund has agreed to pay IIS a fee for providing transfer agency and shareholder services to the Fund and reimburse IIS for certain expenses incurred by IIS in the course of providing such services. For the six months ended June 30, 2016, expenses incurred under the agreement are shown in the Statement of Operations as *Transfer agent fees*.

The Trust has entered into a master distribution agreement with Invesco Distributors, Inc. ("IDI") to serve as the distributor for the Fund. The Trust has adopted a plan pursuant to Rule 12b-1 under the 1940 Act with respect to the Fund's Series II shares (the "Plan"). The Fund, pursuant to the Plan, pays IDI compensation at the annual rate of 0.25% of the Fund's average daily net assets of Series II shares. Of the Plan payments, up to 0.25% of the average daily net assets of the Series II shares may be paid to insurance companies who furnish continuing personal shareholder services to customers who purchase and own Series II shares of the Fund. For the six months ended June 30, 2016, expenses incurred under the Plan are detailed in the Statement of Operations as *Distribution fees*.

Certain officers and trustees of the Trust are officers and directors of the Adviser, IIS and/or IDI.

NOTE 3—Additional Valuation Information

GAAP defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, under current market conditions. GAAP establishes a hierarchy that prioritizes the inputs to valuation methods, giving the highest priority to readily available unadjusted quoted prices in an active market for identical assets (Level 1) and the lowest priority to significant unobservable inputs (Level 3), generally when market prices are not readily available or are unreliable. Based on the valuation inputs, the securities or other investments are tiered into one of three levels. Changes in valuation methods may result in transfers in or out of an investment's assigned level:

Level 1 – Prices are determined using quoted prices in an active market for identical assets.

Level 2 – Prices are determined using other significant observable inputs. Observable inputs are inputs that other market participants may use in pricing a security. These may include quoted prices for similar securities, interest rates, prepayment speeds, credit risk, yield curves, loss severities, default rates, discount rates, volatilities and others.

Level 3 – Prices are determined using significant unobservable inputs. In situations where quoted prices or observable inputs are unavailable (for example, when there is little or no market activity for an investment at the end of the period), unobservable inputs may be used. Unobservable inputs reflect the Fund's own assumptions about the factors market participants would use in determining fair value of the securities or instruments and would be based on the best available information.

The following is a summary of the tiered valuation input levels, as of June 30, 2016. The level assigned to the securities valuations may not be an indication of the risk or liquidity associated with investing in those securities. Because of the inherent uncertainties of valuation, the values reflected in the financial statements may materially differ from the value received upon actual sale of those investments.

During the six months ended June 30, 2016, there were transfers from Level 1 to Level 2 of $14,875,681and from Level 2 to Level 1 of $7,139,307, due to foreign fair value adjustments.

	Level 1	Level 2	Level 3	Total
Australia	$ –	$ 23,346,093	$–	$ 23,346,093

Total Investments	$233,619,908	$177,682,236	$0	$411,302,144

NOTE 4–Trustees' and Officers' Fees and Benefits

Trustees' and Officers' Fees and Benefits include amounts accrued by the Fund to pay remuneration to certain Trustees and Officers of the Fund. Trustees have the option to defer compensation payable by the Fund, and *Trustees' and Officers' Fees and Benefits* also include amounts accrued by the Fund to fund such deferred compensation amounts. Those Trustees who defer compensation have the option to select various Invesco Funds in which their deferral accounts shall be deemed to be invested. Finally, certain current Trustees were eligible to participate in a retirement plan that provided for benefits to be paid upon retirement to Trustees over a period of time based on the number of years of service. The Fund may have certain former Trustees who also participate in a retirement plan and receive benefits under such plan. *Trustees' and Officers' Fees and Benefits* include amounts accrued by the Fund to fund such retirement benefits. Obligations under the deferred compensation and retirement plans represent unsecured claims against the general assets of the Fund.

NOTE 5–Cash Balances

The Fund is permitted to temporarily carry a negative or overdrawn balance in its account with State Street Bank and Trust Company, the custodian bank. Such balances, if any at period-end, are shown in the Statement of Assets and Liabilities under the payable caption *Amount due custodian*. To compensate the custodian bank for such overdrafts, the overdrawn Fund may either (1) leave funds as a compensating balance in the account so the custodian bank can be compensated by earning the additional interest; or (2) compensate by paying the custodian bank at a rate agreed upon by the custodian bank and Invesco, not to exceed the contractually agreed upon rate.

NOTE 6–Tax Information

The amount and character of income and gains to be distributed are determined in accordance with income tax regulations, which may differ from GAAP. Reclassifications are made to the Fund's capital accounts to reflect income and gains available for distribution (or available capital loss carryforward) under income tax regulations. The tax character of distributions paid during the year and the tax components of net assets will be reported at the Fund's fiscal year-end.

Capital loss carryforward is calculated and reported as of a specific date. Results of transactions and other activity after that date may affect the amount of capital loss carryforward actually available for the Fund to utilize. Capital losses generated in years beginning after December 22, 2010 can be carried forward for an unlimited period, whereas previous losses expire in eight tax years. Capital losses with an expiration period may not be used to offset capital gains until all net capital losses without an expiration date have been utilized. Capital loss carryforwards with no expiration date will retain their character as either short-term or long-term capital losses instead of as short-term capital losses as under prior law. The ability to utilize capital loss carryforwards in the future may be limited under the Internal Revenue Code and related regulations based on the results of future transactions.

The Fund did not have a capital loss carryforward as of December 31, 2015.

NOTE 7—Investment Securities

The aggregate amount of investment securities (other than short-term securities, U.S. Treasury obligations and money market funds, if any) purchased and sold by the Fund during the six months ended June 30, 2016 was $167,452,141 and $190,435,009, respectively. Cost of investments on a tax basis includes the adjustments for financial reporting purposes as of the most recently completed federal income tax reporting period-end.

Unrealized Appreciation (Depreciation) of Investment Securities on a Tax Basis

Aggregate unrealized appreciation of investment securities	$ 58,752,602
Aggregate unrealized (depreciation) of investment securities	(11,385,084)
Net unrealized appreciation of investment securities	$ 47,367,518

Cost of investments for tax purposes is $363,934,626.

NOTE 8—Share Information

Summary of Share Activity

	Six months ended June 30, 2016[a]		Year ended December 31, 2015	
	Shares	Amount	Shares	Amount
Sold:				
Series I	787,198	$ 12,815,817	3,027,072	$ 52,252,851
Series II	1,615,536	26,154,837	2,517,858	42,781,073
Issued as reinvestment of dividends:				
Series I	–	–	478,321	7,476,164
Series II	–	–	461,968	7,026,530
Reacquired:				
Series I	(3,341,216)	(55,962,554)	(2,911,646)	(49,837,854)
Series II	(665,652)	(10,574,809)	(1,836,058)	(30,521,697)
Net increase (decrease) in share activity	(1,604,134)	$(27,566,709)	1,737,515	$ 29,177,067

[a] There are entities that are record owners of more than 5% of the outstanding shares of the Fund and in the aggregate own 59% of the outstanding shares of the Fund. The Fund and the Fund's principal underwriter or adviser, are parties to participation agreements with these entities whereby these entities sell units of interest in separate accounts funding variable products that are invested in the Fund. The Fund, Invesco and/or Invesco affiliates may make payments to these entities, which are considered to be related to the Fund, for providing services to the Fund, Invesco and/or Invesco affiliates including but not limited to services such as, securities brokerage, third party record keeping and account servicing and administrative services. The Fund has no knowledge as to whether all or any portion of the shares owned of record by these entities are also owned beneficially.

NOTE 9—Financial Highlights

The following schedule presents financial highlights for a share of the Fund outstanding throughout the periods indicated.

	Net asset value, beginning of period	Net investment income[a]	Net gains (losses) on securities (both realized and unrealized)	Total from investment operations	Dividends from net investment income	Net asset value, end of period	Total return[b]	Net assets, end of period (000's omitted)	Ratio of expenses to average net assets with fee waivers and/or expenses absorbed	Ratio of expenses to average net assets without fee waivers and/or expenses absorbed	Ratio of net investment income to average net assets	Portfolio turnover[c]
Series I												
Six months ended 06/30/16	$16.36	$0.20	$ 0.90	$ 1.10	$ –	$17.46	6.72%	$178,270	1.10%[d]	1.10%[d]	2.48%[d]	41%
Year ended 12/31/15	17.24	0.31	(0.59)	(0.28)	(0.60)	16.36	(1.48)	208,796	1.11	1.11	1.79	72
Year ended 12/31/14	15.29	0.33	1.89	2.22	(0.27)	17.24	14.62	209,829	1.10	1.10	1.99	44
Year ended 12/31/13	15.47	0.22	0.21	0.43	(0.61)	15.29	2.71	189,835	1.10	1.10	1.41	49
Year ended 12/31/12	12.14	0.27	3.14	3.41	(0.08)	15.47	28.12	176,933	1.14	1.14	1.94	51

Series II												
Six months ended 06/30/16	15.91	0.18	0.87	1.05	–	16.96	6.60	237,842	1.35[d]	1.35[d]	2.23[d]	41
Year ended 12/31/15	16.79	0.26	(0.58)	(0.32)	(0.56)	15.91	(1.74)	208,000	1.36	1.36	1.54	72
Year ended 12/31/14	14.90	0.28	1.84	2.12	(0.23)	16.79	14.34	200,299	1.35	1.35	1.74	44
Year ended 12/31/13	15.11	0.18	0.20	0.38	(0.59)	14.90	2.44	170,145	1.35	1.35	1.16	49
Year ended 12/31/12	11.87	0.23	3.07	3.30	(0.06)	15.11	27.85	124,219	1.39	1.39	1.69	51
Year ended 12/31/11	13.31	0.20	(1.13)	(0.93)	(0.51)	11.87	(6.73)	62,349	1.39	1.39	1.52	47

[a] Calculated using average shares outstanding.
[b] Includes adjustments in accordance with accounting principles generally accepted in the United States of America and as such, the net asset value for financial reporting purposes and the returns based upon those net asset values may differ from the net asset value and returns for shareholder transactions. Total returns are not annualized for periods less than one year, if applicable, and do not reflect charges assessed in connection with a variable product, which if included would reduce total returns.
[c] Portfolio turnover is calculated at the fund level and is not annualized for periods less than one year, if applicable.
[d] Ratios are annualized based on average daily net assets (000's omitted) of $200,667 and $215,284 for Series I and Series II shares, respectively.

NOTE 10—Subsequent Event

Effective July 1, 2016, Invesco agreed to reduce any reimbursement made by the Fund to Invesco for administration services fees paid by Invesco to those insurance companies that have agreed to provide services to the participants of separate accounts to an amount not to exceed 0.15% of average daily net assets.

Calculating your ongoing Fund expenses

Example

As a shareholder of the Fund, you incur ongoing costs, including management fees; distribution and/or service fees (12b-1); and other Fund expenses. This example is intended to help you understand your ongoing costs (in dollars) of investing in the Fund and to compare these costs with ongoing costs of investing in other mutual funds. The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire period January 1, 2016 through June 30, 2016.

The actual and hypothetical expenses in the examples below do not represent the effect of any fees or other expenses assessed in connection with a variable product; if they did, the expenses shown would be higher while the ending account values shown would be lower.

Actual expenses

The table below provides information about actual account values and actual expenses. You may use the information in this table, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the table under the heading entitled "Actual Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical example for comparison purposes

The table below also provides information about hypothetical account values and hypothetical expenses based on the Fund's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Fund's actual return.

The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Fund and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight your ongoing costs. Therefore, the hypothetical information is useful in comparing ongoing costs, and will not help you determine the relative total costs of owning different funds.

		ACTUAL		HYPOTHETICAL (5% annual return before expenses)		
Class	Beginning Account Value (01/01/16)	Ending Account Value (06/30/16)[1]	Expenses Paid During Period[2,3]	Ending Account Value (06/30/16)	Expenses Paid During Period[2,4]	Annualized Expense Ratio[2]
Series I	$1,000.00	$1,067.20	$5.65	$1,019.39	$5.52	1.10%
Series II	1,000.00	1,066.00	6.93	1,018.15	6.77	1.35

[1] The actual ending account value is based on the actual total return of the Fund for the period January 1, 2016 through June 30, 2016, after actual expenses and will differ from the hypothetical ending account value which is based on the Fund's expense ratio and a hypothetical annual return of 5% before expenses.

[2] Expenses are equal to the Fund's annualized expense ratio as indicated above multiplied by the average account value over the period, multiplied by 182/366 to reflect the most recent fiscal half year. Effective July 1, 2016, Invesco has agreed to limit administrative services fees reimbursed by the Fund. The annualized ratios restated as if this administrative services fee limitation had been in effect throughout the entire most recent fiscal half year are 1.00% and 1.25%, for Series I and Series II shares, respectively.

[3] The actual expenses paid restated as if the changes discussed above had been in effect throughout the entire most recent fiscal half year are $5.14 and $6.42 for Series I and Series II shares, respectively.

[4] The hypothetical expenses paid restated as if the changes discussed above had been in effect throughout the entire most recent fiscal half year are $5.02 and $6.27 for Series I and Series II shares, respectively.

Approval of Investment Advisory and Sub-Advisory Contracts

The Board of Trustees (the Board) of AIM Variable Insurance Funds (Invesco Variable Insurance Funds) is required under the Investment Company Act of 1940, as amended, to approve annually the renewal of Invesco V.I. Global Real Estate Fund's (the Fund) investment advisory agreements. During contract renewal meetings held on June 7-8, 2016, the Board as a whole, and the disinterested or "independent" Trustees, who comprise over 75% of the Board, voting separately, approved the continuance for the Fund of the Master Investment Advisory Agreement with Invesco Advisers, Inc. (Invesco Advisers and the investment advisory agreement) and the Master Intergroup Sub-Advisory Contract for Mutual Funds with Invesco Asset Management Deutschland GmbH, Invesco Asset Management Limited, Invesco Asset Management (Japan) Limited, Invesco Hong Kong Limited, Invesco Senior Secured Management, Inc. and Invesco Canada Ltd. (collectively, the Affiliated Sub-Advisers and the sub-advisory contracts) for another year, effective July 1, 2016.

In evaluating the fairness and reasonableness of compensation under the Fund's investment advisory agreement and sub-advisory contracts, the Board considered, among other things, the factors discussed below. The Board determined that continuation of the Fund's investment advisory agreement and the sub-advisory contracts is in the best interest of the Fund and its shareholders and that the compensation payable to Invesco Advisers and the Affiliated Sub-Advisers under the agreements is fair and reasonable.

The Board's Fund Evaluation Process

The Board's Investments Committee has established three Sub-Committees, which meet throughout the year to review the performance of funds advised by Invesco Advisers (the Invesco Funds). Over the course of each year, the Sub-Committees meet with portfolio managers for their assigned Invesco Funds and other members of management to review the performance, investment objective(s), policies, strategies, limitations and investment risks of these funds. The Board had the benefit of reports from the Sub-Committees and Investments Committee throughout the year in considering approval of the continuance of each Invesco Fund's investment advisory agreement and sub-advisory contracts for another year.

During the contract renewal process, the Board receives comparative performance and fee data regarding the Invesco Funds prepared by Invesco Advisers and Broadridge Financial Solutions, Inc. (Broadridge), an independent provider of investment company data. The Board also receives an independent written evaluation from the Senior Officer, an officer of the Invesco Funds who reports directly to the independent Trustees. The Senior Officer's evaluation is prepared as part of his responsibility to manage the process by which the Invesco Funds' proposed management fees are negotiated during the annual contract renewal process to ensure they are negotiated in a manner that is at arms' length and reasonable. In addition to meetings with Invesco Advisers and fund counsel, the independent Trustees also discuss the continuance of the investment advisory agreement and sub-advisory contracts in separate sessions with the Senior Officer and with independent legal counsel.

The Trustees recognized that the advisory fee rates for the Invesco Funds are, in many cases, the result of years of review and negotiation. The Trustees' deliberations and conclusions in a particular year may be based in part on their deliberations and conclusions regarding these arrangements throughout the year and in prior years. The Trustees' review and conclusions are based on the comprehensive consideration of all information presented to them and are not the result of any single determinative factor. Moreover, one Trustee may have weighed a particular piece of information or factor differently than another Trustee.

The discussion below is a summary of the Senior Officer's independent written evaluation with respect to the Fund's investment advisory agreement as well as a discussion of the material factors and related conclusions that formed the basis for the Board's approval of the Fund's investment advisory agreement and sub-advisory contracts. Unless otherwise stated, this information is current as of June 8, 2016, and does not reflect consideration of factors that became known to the Board after that date.

Factors and Conclusions and Summary of Independent Written Fee Evaluation

*A. Nature, Extent and Quality of Services Provided by Invesco Advisers and the Affiliated Sub-*Advisers

The Board reviewed the advisory services provided to the Fund by Invesco Advisers under the Fund's investment advisory agreement, the performance of Invesco Advisers in providing these services, and the credentials and experience of the officers and employees of Invesco Advisers who provide these services, including the Fund's portfolio manager or managers. The Board's review of the qualifications of Invesco Advisers to provide advisory services included the Board's consideration of Invesco Advisers' investment process oversight, independent credit analysis and investment risk management. The Board also considered non-advisory services that Invesco Advisers and its affiliates provide to the Invesco Funds such as various back office support functions, trading operations, internal audit, valuation and legal and compliance.

In determining whether to continue the Fund's investment advisory agreement, the Board considered the benefits of reapproving an existing relationship and the greater uncertainty that may be associated with entering into a new relationship. The Board concluded that the nature, extent and quality of the services provided to the Fund by Invesco Advisers are appropriate and satisfactory and consistent with the terms of the Fund's investment advisory agreement.

The Board reviewed the services that may be provided by the Affiliated Sub-Advisers under the sub-advisory contracts and the credentials and experience of the officers and employees of the Affiliated Sub-Advisers who provide these services. The Board noted that the Affiliated Sub-Advisers have offices and personnel that are located in financial centers around the world. As a result, the Board noted that Affiliated Sub-Advisers can provide research and investment analysis on the markets and economies of various countries in which the Fund may invest, make recommendations regarding securities and assist with security trades. The Board concluded that the sub-advisory contracts may benefit the Fund and its shareholders by permitting Invesco Advisers to use the resources and talents of the Affiliated Sub-Advisers in managing the Fund. The Board concluded that the nature, extent and quality of the services that may be provided by the Affiliated Sub-Advisers are appropriate and satisfactory and consistent with the terms of the Fund's sub-advisory contracts.

B. Fund Performance

The Board considered Fund performance as a relevant factor in considering whether to approve the investment advisory agreement as well as the sub-advisory contracts for the Fund, as Invesco Asset Management Limited currently manages certain assets of the Fund.

The Board compared the Fund's performance during the past one, three and five calendar years to the performance of funds in the Broadridge performance universe and against the Lipper Variable Underlying Fund Global Real Estate Funds Index. The Board noted that performance of Series I shares of the Fund was in the fourth quintile of its performance universe for the one and three year periods and the third quintile for the five year period (the first quintile being the best performing funds and the fifth quintile being the worst performing funds). The Board noted that performance of Series I shares of the Fund was below the performance of the Index for the one, three and five year periods. The Trustees also reviewed more recent Fund performance and this review did not change their conclusions.

C. Advisory and Sub-Advisory Fees

The Board compared the Fund's contractual management fee rate to the contractual management fee rates of funds in the Fund's

Broadridge expense group at a common asset level. The Board noted that the contractual management fee rate for Series I shares of the Fund was below the median contractual management fee rate of funds in its expense group. The Board noted that the term "contractual management fee" for funds in the expense group may include both advisory and certain administrative services fees, but that Broadridge does not provide information on a fund by fund basis as to what is included. The Board noted that Invesco Advisers does not separately charge the Invesco Funds for the administrative services included in the term as defined by Broadridge. The Board also reviewed the methodology used by Broadridge in providing expense group information, which includes using each fund's contractual management fee schedule (including any applicable breakpoints) as reported in the most recent prospectus or statement of additional information for each fund in the expense group.

The Board also compared the Fund's effective advisory fee rate (the advisory fee rate after advisory fee waivers and before other expense limitations/waivers) to the effective advisory fee rates of other mutual funds advised by Invesco Advisers and its affiliates with investment strategies comparable to those of the Fund, based on asset balances as of December 31, 2015. The Board noted that the Fund's rate was above the rate of one such mutual fund. The Board also noted how the Fund's rate compared to off-shore funds advised by Invesco Advisers and to the effective sub-adviser fee rate of other funds sub-advised by Invesco Advisers.

The Board also considered the fees charged by Invesco Advisers and the Affiliated Sub-Advisers to other client accounts with investment strategies comparable to those of the Fund. The Board noted that Invesco Advisers or the Affiliated Sub-Advisers may charge lower fees to large institutional clients. Invesco Advisers reviewed with the Board the significantly greater scope of services it provides to the Invesco Funds relative to certain other types of client accounts. These additional services include provision of administrative services, officers and office space, oversight of service providers, preparation of annual registration statement updates and financial information and regulatory compliance under the Investment Company Act of 1940, as amended.

The Board also considered the services provided by the Affiliated Sub-Advisers pursuant to the sub-advisory contracts, as well as the fees payable by Invesco Advisers to the Affiliated Sub-Advisers pursuant to the sub-advisory contracts. The Board noted that Invesco Advisers retains overall responsibility for, and provides services to, sub-advised Invesco Funds, including oversight of the Affiliated Sub-Advisers as well as the additional services described herein other than day-to-day portfolio management. The Board also noted that the sub-advisory fees are not paid directly by the Fund, but rather, are payable by Invesco Advisers to the Affiliated Sub-Advisers.

D. Economies of Scale and Breakpoints

The Board considered the extent to which there are economies of scale in the provision of advisory services to the Fund. The Board also considered whether the Fund benefits from economies of scale through contractual breakpoints in the Fund's advisory fee schedule. The Board also noted that the Fund shares directly in economies of scale through lower fees charged by third party service providers based on the combined size of the Invesco Funds and other clients advised by Invesco Advisers.

E. Profitability and Financial Resources

The Board reviewed information from Invesco Advisers concerning the costs of the advisory and other services that Invesco Advisers and its affiliates provide to the Fund and the Invesco Funds and the profitability of Invesco Advisers and its affiliates in providing these services. The Board received information from Invesco Advisers and a report from an independent consultant engaged by the Senior Officer about the methodology used to prepare the profitability information. The Board noted that Invesco Advisers continues to operate at a net profit from services Invesco Advisers and its affiliates provide to the Invesco Funds and the Fund. The Board did not deem the level of profits realized by Invesco Advisers and its affiliates from providing services to the Fund to be excessive given the nature, quality and extent of the services provided. The Board received and accepted information from Invesco Advisers demonstrating that Invesco Advisers and each Affiliated Sub-Adviser are financially sound and have the resources necessary to perform their obligations under the investment advisory agreement and sub-advisory contracts.

F. Collateral Benefits to Invesco Advisers and its Affiliates

The Board considered various other benefits received by Invesco Advisers and its affiliates from the relationship with the Fund, including the fees received for providing transfer agency and distribution services to the Fund. The Board considered comparative information regarding fees charged for these services, including information provided by Broadridge and other independent sources. The Board considered the performance of Invesco Advisers and its affiliates in providing these services and the organizational structure employed to provide these services. The Board also considered that these services are provided to the Fund pursuant to written contracts that are reviewed and approved on an annual basis by the Board; and that the services are required for the operation of the Fund.

The Board considered the benefits realized by Invesco Advisers and the Affiliated Sub-Advisers as a result of portfolio brokerage transactions executed through "soft dollar" arrangements. The Board noted that soft dollar arrangements shift the payment obligation for research services from Invesco Advisers and the Affiliated Sub-Advisers to the Invesco Funds and that the research received may be used with other clients of Invesco Advisers and may reduce Invesco Advisers' and the Affiliated Sub-Advisers' expenses. The Board also considered that it receives periodic reports from the Chief Compliance Officer of the Invesco Funds demonstrating that these arrangements are consistent with regulatory requirements. The Board did not deem the soft dollar arrangements to be inappropriate.

The Board considered that the Fund's uninvested cash and cash collateral from any securities lending arrangements may be invested in money market funds advised by Invesco Advisers pursuant to procedures approved by the Board. The Board noted that Invesco Advisers receives advisory fees from these affiliated money market funds attributable to such investments, although Invesco Advisers has contractually agreed to waive through varying periods the advisory fees payable by the Invesco Funds with respect to certain investments in the affiliated money market funds. The waiver is in an amount equal to 100% of the net advisory fee Invesco Advisers receives from the affiliated money market funds with respect to the Fund's investment in the affiliated money market funds of uninvested cash, but not cash collateral. The Board concluded that the amount of advisory fees received by Invesco Advisors from the Fund's investment of cash collateral from any securities lending arrangements in the affiliated money market funds is fair and reasonable.

The Board also considered the Fund may use an affiliated broker to execute certain trades for the Fund to, among other things, control information leakage, and were advised that such trades would be executed in compliance with rules under the Investment Company Act of 1940, as amended, and consistent with best execution obligations.

Invesco

Semiannual Report to Shareholders **June 30, 2016**

Invesco V.I. Small Cap Equity Fund

The Fund provides a complete list of its holdings four times in each fiscal year, at the quarter-ends. For the second and fourth quarters, the lists appear in the Fund's semiannual and annual reports to shareholders. For the first and third quarters, the Fund files the lists with the Securities and Exchange Commission (SEC) on Form N-Q. The Fund's Form N-Q filings are available on the SEC website, sec.gov. Copies of the Fund's Forms N-Q may be reviewed and copied at the SEC Public Reference Room in Washington, D.C. You can obtain information on the operation of the Public Reference Room, including information about duplicating fee charges, by calling 202 551 8090 or 800 732 0330, or by electronic request at the following email address: publicinfo@sec.gov. The SEC file numbers for the Fund are 811-07452 and 033-57340. The Fund's most recent portfolio holdings, as filed on Form N-Q, have also been made available to insurance companies issuing variable annuity contracts and variable life insurance policies ("variable products") that invest in the Fund.

A description of the policies and procedures that the Fund uses to determine how to vote proxies relating to portfolio securities is available without charge, upon request, from our Client Services department at 800 959 4246 or at invesco.com/proxyguidelines. The information is also available on the SEC website, sec.gov.

Information regarding how the Fund voted proxies related to its portfolio securities during the most recent 12-month period ended June 30 is available at invesco.com/proxysearch. The information is also available on the SEC website, sec.gov.

Invesco Advisers, Inc. is an investment adviser; it provides investment advisory services to individual and institutional clients and does not sell securities. Invesco Distributors, Inc. is the US distributor for Invesco Ltd.'s retail mutual funds, exchange-traded funds and institutional money market funds. Both are wholly owned, indirect subsidiaries of Invesco Ltd.

This report must be accompanied or preceded by a currently effective Fund prospectus and variable product prospectus, which contain more complete information, including sales charges and expenses. Investors should read each carefully before investing.

Fund Performance

Performance summary

Fund vs. Indexes

Cumulative total returns, 12/31/15 to 6/30/16, excluding variable product issuer charges. If variable product issuer charges were included, returns would be lower.

Series I Shares	1.08%
Series II Shares	0.94
S&P 500 Index▼ (Broad Market Index)	3.84
Russell 2000 Index▼ (Style-Specific Index)	2.22
Lipper VUF Small-Cap Core Funds Index■ (Peer Group Index)	3.78

Source(s): ▼FactSet Research Systems Inc.; ■Lipper Inc.

The **S&P 500® Index** is an unmanaged index considered representative of the US stock market.

The **Russell 2000® Index** is an unmanaged index considered representative of small-cap stocks. The Russell 2000 Index is a trademark/service mark of the Frank Russell Co. Russell® is a trademark of the Frank Russell Co.

The **Lipper VUF Small-Cap Core Funds Index** is an unmanaged index considered representative of small-cap core variable insurance underlying funds tracked by Lipper.

The Fund is not managed to track the performance of any particular index, including the index(es) described here, and consequently, the performance of the Fund may deviate significantly from the performance of the index(es).

A direct investment cannot be made in an index. Unless otherwise indicated, index results include reinvested dividends, and they do not reflect sales charges. Performance of the peer group, if applicable, reflects fund expenses; performance of a market index does not.

Average Annual Total Returns

As of 6/30/16

Series I Shares	
Inception (8/29/03)	8.07%
10 Years	6.22
5 Years	6.58
1 Year	-9.66
Series II Shares	
Inception (8/29/03)	7.82%
10 Years	5.96
5 Years	6.31
1 Year	-9.91

The performance of the Fund's Series I and Series II share classes will differ primarily due to different class expenses.

The performance data quoted represent past performance and cannot guarantee comparable future results; current performance may be lower or higher. Please contact your variable product issuer or financial adviser for the most recent month-end variable product performance. Performance figures reflect Fund expenses, reinvested distributions and changes in net asset value. Investment return and principal value will fluctuate so that you may have a gain or loss when you sell shares.

The total annual Fund operating expense ratio set forth in the most recent Fund prospectus as of the date of this report for Series I and Series II shares was 1.04% and 1.29%, respectively. The expense ratios presented above may vary from the expense ratios presented in other sections of this report that are based on expenses incurred during the period covered by this report.

Invesco V.I. Small Cap Equity Fund, a series portfolio of AIM Variable Insurance Funds (Invesco Variable Insurance Funds), is currently offered through insurance companies issuing variable products. You cannot purchase shares of the Fund directly. Performance figures given represent the Fund and are not intended to reflect actual variable product values. They do not reflect sales charges, expenses and fees assessed in connection with a variable product. Sales charges, expenses and fees, which are determined by the variable product issuers, will vary and will lower the total return.

The most recent month-end performance at the Fund level, excluding variable product charges, is available at 800 451 4246. As mentioned above, for the most recent month-end performance including variable product charges, please contact your variable product issuer or financial adviser.

Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information.

Statement of Assets and Liabilities

June 30, 2016
(Unaudited)

Assets:	
Investments, at value (Cost $249,430,638)*	$283,888,854
Investments in affiliated money market funds, at value and cost	11,700,831
Total investments, at value (Cost $261,131,469)	295,589,685
Receivable for:	
Investments sold	4,537,891
Fund shares sold	85,459
Dividends	186,197
Investment for trustee deferred compensation and retirement plans	68,652
Other assets	894
Total assets	300,468,778
Liabilities:	
Payable for:	
Investments purchased	537,067
Fund shares reacquired	533,153
Collateral upon return of securities loaned	7,290,209
Accrued fees to affiliates	429,008
Accrued trustees' and officers' fees and benefits	712
Accrued other operating expenses	21,158
Trustee deferred compensation and retirement plans	77,889
Total liabilities	8,889,196
Net assets applicable to shares outstanding	$291,579,582
Net assets consist of:	
Shares of beneficial interest	$230,717,310
Undistributed net investment income	(5,593)
Undistributed net realized gain	26,409,649
Net unrealized appreciation	34,458,216
	$291,579,582
Net Assets:	
Series I	$156,448,169
Series II	$135,131,413
Shares outstanding, $0.001 par value per share, with an unlimited number of shares authorized:	
Series I	8,774,987
Series II	7,892,523
Series I:	
Net asset value per share	$ 17.83
Series II:	
Net asset value per share	$ 17.12

* At June 30, 2016, securities with an aggregate value of $7,094,468 were on loan to brokers.

Statement of Operations

For the six months ended June 30, 2016
(Unaudited)

Investment income:	
Dividends	$ 1,689,227
Dividends from affiliated money market funds (includes securities lending income of $34,873)	46,662
Total investment income	1,735,889
Expenses:	
Advisory fees	1,059,732
Administrative services fees	381,810
Custodian fees	7,738
Distribution fees – Series II	159,850
Transfer agent fees	22,609
Trustees' and officers' fees and benefits	12,129
Reports to shareholders	1,939
Professional services fees	24,656
Other	5,072
Total expenses	1,675,535
Less: Fees waived	(4,091)
Net expenses	1,671,444
Net investment income	64,445
Realized and unrealized gain (loss) from:	
Net realized gain from investment securities	4,930,135
Change in net unrealized appreciation (depreciation) of investment securities	(1,437,594)
Net realized and unrealized gain	3,492,541
Net increase in net assets resulting from operations	$ 3,556,986

See accompanying Notes to Financial Statements which are an integral part of the financial statements.

Statement of Changes in Net Assets

For the six months ended June 30, 2016 and the year ended December 31, 2015
(Unaudited)

	June 30, 2016	December 31, 2015
Operations:		
Net investment income (loss)	$ 64,445	$ (307,179)
Net realized gain	4,930,135	22,151,222
Change in net unrealized appreciation (depreciation)	(1,437,594)	(39,686,407)
Net increase (decrease) in net assets resulting from operations	3,556,986	(17,842,364)
Distributions to shareholders from net realized gains:		
Series I	–	(36,411,380)
Series II	–	(27,998,152)
Total distributions from net realized gains	–	(64,409,532)
Share transactions–net:		
Series I	(12,030,834)	8,405,839
Series II	5,032,123	19,398,854
Net increase (decrease) in net assets resulting from share transactions	(6,998,711)	27,804,693
Net increase (decrease) in net assets	(3,441,725)	(54,447,203)
Net assets:		
Beginning of period	295,021,307	349,468,510
End of period (includes undistributed net investment income (loss) of $(5,593) and $(70,038), respectively)	$291,579,582	$295,021,307

Notes to Financial Statements

June 30, 2016
(Unaudited)

NOTE 1–Significant Accounting Policies

Invesco V.I. Small Cap Equity Fund (the "Fund") is a series portfolio of AIM Variable Insurance Funds (Invesco Variable Insurance Funds) (the "Trust"). The Trust is a Delaware statutory trust registered under the Investment Company Act of 1940, as amended (the "1940 Act"), as an open-end series management investment company consisting of twenty-four separate portfolios, (each constituting a "Fund"). The assets, liabilities and operations of each portfolio are accounted for separately. Information presented in these financial statements pertains only to the Fund. Matters affecting each Fund or class will be voted on exclusively by the shareholders of such Fund or class. Current Securities and Exchange Commission ("SEC") guidance, however, requires participating insurance companies offering separate accounts to vote shares proportionally in accordance with the instructions of the contract owners whose investments are funded by shares of each Fund or class.

The Fund's investment objective is long-term growth of capital.

The Fund currently offers two classes of shares, Series I and Series II, both of which are offered to insurance company separate accounts funding variable annuity contracts and variable life insurance policies ("variable products").

The following is a summary of the significant accounting policies followed by the Fund in the preparation of its financial statements.

A. Security Valuations – Securities, including restricted securities, are valued according to the following policy.

A security listed or traded on an exchange (except convertible securities) is valued at its last sales price or official closing price as of the close of the customary trading session on the exchange where the security is principally traded, or lacking any sales or official closing price on a particular day, the security may be valued at the closing bid price on that day. Securities traded in the over-the-counter market are valued based on prices furnished by independent pricing services or market makers. When such securities are valued by an independent pricing service they may be considered fair valued. Futures contracts are valued at the final settlement price set by an exchange on which they are principally traded. Listed options are valued at the mean between the last bid and asked prices from the exchange on which they are principally traded. Options not listed on an exchange are valued by an independent source at the mean between the last bid and asked prices. For purposes of determining net asset value ("NAV") per share, futures and option contracts generally are valued 15 minutes after the close of the customary trading session of the New York Stock Exchange ("NYSE").

Investments in open-end and closed-end registered investment companies that do not trade on an exchange are valued at the end-of-day net asset value per share. Investments in open-end and closed-end registered investment companies that trade on an exchange are valued at the last sales price or official closing price as of the close of the customary trading session on the exchange where the security is principally traded.

Debt obligations (including convertible securities) and unlisted equities are fair valued using an evaluated quote provided by an independent pricing service. Evaluated quotes provided by the pricing service may be determined without exclusive reliance on quoted prices, and may reflect appropriate factors such as institution-size trading in similar groups of securities, developments related to specific securities, dividend rate (for unlisted equities), yield (for debt obligations), quality, type of issue, coupon rate (for debt obligations), maturity (for debt obligations), individual

trading characteristics and other market data. Debt obligations are subject to interest rate and credit risks. In addition, all debt obligations involve some risk of default with respect to interest and/or principal payments.

Foreign securities' (including foreign exchange contracts) prices are converted into U.S. dollar amounts using the applicable exchange rates as of the close of the NYSE. If market quotations are available and reliable for foreign exchange-traded equity securities, the securities will be valued at the market quotations. Because trading hours for certain foreign securities end before the close of the NYSE, closing market quotations may become unreliable. If between the time trading ends on a particular security and the close of the customary trading session on the NYSE, events occur that the Adviser determines are significant and make the closing price unreliable, the Fund may fair value the security. If the event is likely to have affected the closing price of the security, the security will be valued at fair value in good faith using procedures approved by the Board of Trustees. Adjustments to closing prices to reflect fair value may also be based on a screening process of an independent pricing service to indicate the degree of certainty, based on historical data, that the closing price in the principal market where a foreign security trades is not the current value as of the close of the NYSE. Foreign securities' prices meeting the approved degree of certainty that the price is not reflective of current value will be priced at the indication of fair value from the independent pricing service. Multiple factors may be considered by the independent pricing service in determining adjustments to reflect fair value and may include information relating to sector indices, American Depositary Receipts and domestic and foreign index futures. Foreign securities may have additional risks including exchange rate changes, potential for sharply devalued currencies and high inflation, political and economic upheaval, the relative lack of issuer information, relatively low market liquidity and the potential lack of strict financial and accounting controls and standards.

Securities for which market prices are not provided by any of the above methods may be valued based upon quotes furnished by independent sources. The last bid price may be used to value equity securities. The mean between the last bid and asked prices is used to value debt obligations, including corporate loans.

Securities for which market quotations are not readily available or became unreliable are valued at fair value as determined in good faith by or under the supervision of the Trust's officers following procedures approved by the Board of Trustees. Issuer specific events, market trends, bid/asked quotes of brokers and information providers and other market data may be reviewed in the course of making a good faith determination of a security's fair value.

The Fund may invest in securities that are subject to interest rate risk, meaning the risk that the prices will generally fall as interest rates rise and, conversely, the prices will generally rise as interest rates fall. Specific securities differ in their sensitivity to changes in interest rates depending on their individual characteristics. Changes in interest rates may result in increased market volatility, which may affect the value and/or liquidity of certain Fund investments.

Valuations change in response to many factors including the historical and prospective earnings of the issuer, the value of the issuer's assets, general economic conditions, interest rates, investor perceptions and market liquidity. Because of the inherent uncertainties of valuation, the values reflected in the financial statements may materially differ from the value received upon actual sale of those investments.

B. Securities Transactions and Investment Income – Securities transactions are accounted for on a trade date basis. Realized gains or losses on sales are computed on the basis of specific identification of the securities sold. Interest income (net of withholding tax, if any) is recorded on the accrual basis from settlement date. Dividend income (net of withholding tax, if any) is recorded on the ex-dividend date.

The Fund may periodically participate in litigation related to Fund investments. As such, the Fund may receive proceeds from litigation settlements. Any proceeds received are included in the Statement of Operations as realized gain (loss) for investments no longer held and as unrealized gain (loss) for investments still held.

Brokerage commissions and mark ups are considered transaction costs and are recorded as an increase to the cost basis of securities purchased and/or a reduction of proceeds on a sale of securities. Such transaction costs are included in the determination of net realized and unrealized gain (loss) from investment securities reported in the Statement of Operations and the Statement of Changes in Net Assets and the net realized and unrealized gains (losses) on securities per share in the Financial Highlights. Transaction costs are included in the calculation of the Fund's net asset value and, accordingly, they reduce the Fund's total returns. These transaction costs are not considered operating expenses and are not reflected in net investment income reported in the Statement of Operations and the Statement of Changes in Net Assets, or the net investment income per share and the ratios of expenses and net investment income reported in the Financial Highlights, nor are they limited by any expense limitation arrangements between the Fund and the investment adviser.

The Fund allocates income and realized and unrealized capital gains and losses to a class based on the relative net assets of each class.

C. Country Determination – For the purposes of making investment selection decisions and presentation in the Schedule of Investments, the investment adviser may determine the country in which an issuer is located and/or credit risk exposure based on various factors. These factors include the laws of the country under which the issuer is organized, where the issuer maintains a principal office, the country in which the issuer derives 50% or more of its total revenues and the country that has the primary market for the issuer's securities, as well as other criteria. Among the other criteria that may be evaluated for making this determination are the country in which the issuer maintains 50% or more of its assets, the type of security, financial guarantees and enhancements, the nature of the collateral and the sponsor organization. Country of issuer and/or credit risk exposure has been determined to be the United States of America, unless otherwise noted.

D. Distributions – Distributions from net investment income and net realized capital gain, if any, are generally declared and paid to separate accounts of participating insurance companies annually and recorded on the ex-dividend date.

E. Federal Income Taxes – The Fund intends to comply with the requirements of Subchapter M of the Internal Revenue Code of 1986, as amended (the "Internal Revenue Code"), necessary to qualify as a regulated investment company and to distribute substantially all of the Fund's taxable earnings to shareholders. As such, the Fund will not be subject to federal income taxes on otherwise taxable income (including net realized capital gain) that is distributed to shareholders. Therefore, no provision for federal income taxes is recorded in the financial statements.

The Fund recognizes the tax benefits of uncertain tax positions only when the position is more likely than not to be sustained. Management has analyzed the Fund's uncertain tax positions and concluded that no liability for unrecognized tax benefits should be recorded related to uncertain tax positions. Management is not aware of any tax positions for which it is reasonably possible that the total amounts of unrecognized tax benefits will change materially in the next 12 months.

The Fund files tax returns in the U.S. Federal jurisdiction and certain other jurisdictions. Generally, the Fund is subject to examinations by such taxing authorities for up to three years after the filing of the return for the tax period.

F. Expenses – Fees provided for under the Rule 12b-1 plan of a particular class of the Fund and which are directly attributable to that class are charged to the operations of such class. All other expenses are allocated among the classes based on relative net assets.

G. Accounting Estimates – The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America ("GAAP") requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period including estimates and assumptions related to taxation. Actual results could differ from those estimates by a significant amount. In addition, the Fund monitors for material events or transactions that may occur or become known after the period-end date and before the date the financial statements are released to print.

H. Indemnifications – Under the Trust's organizational documents, each Trustee, officer, employee or other agent of the Trust is indemnified against certain liabilities that may arise out of the performance of their duties to the Fund. Additionally, in the normal course of business, the Fund enters into contracts, including the Fund's servicing agreements, that contain a variety of indemnification clauses. The Fund's maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Fund that have not yet occurred. The risk of material loss as a result of such indemnification claims is considered remote.

I. Securities Lending – The Fund may lend portfolio securities having a market value up to one-third of the Fund's total assets. Such loans are secured by collateral equal to no less than the market value of the loaned securities determined daily by the securities lending provider. Such collateral will be cash or debt securities issued or guaranteed by the U.S. Government or any of its sponsored agencies. Cash collateral received in connection with these loans is invested in short-term money market instruments or affiliated money market funds and is shown as such on the Schedule of Investments. The Fund bears the risk of loss with respect to the investment of collateral. It is the Fund's policy to obtain additional collateral from or return excess collateral to the borrower by the end of the next business day, following the valuation date of the securities loaned. Therefore, the value of the collateral held may be temporarily less than the value of the securities on loan. When loaning securities, the Fund retains certain benefits of owning the securities, including the economic equivalent of dividends or interest generated by the security. Lending securities entails a risk of loss to the Fund if, and to the extent that, the market value of the securities loaned were to increase and the borrower did not increase the collateral accordingly, and the borrower failed to return the securities. The securities loaned are subject to termination at the option of the borrower or the Fund. Upon termination, the borrower will return to the Fund the securities loaned and the Fund will return the collateral. Upon the failure of the borrower to return the securities, collateral may be liquidated and the securities may be purchased on the open market to replace the loaned securities. The Fund could experience delays and costs in gaining access to the collateral and the securities may lose value during the delay which could result in potential losses to the Fund. Some of these losses may be indemnified by the lending agent. The Fund bears the risk of any deficiency in the amount of the collateral available for return to the borrower due to any loss on the collateral invested. Dividends received on cash collateral investments for securities lending transactions, which are net of compensation to counterparties, are included in *Dividends from affiliated money market funds* on the Statement of Operations. The aggregate value of securities out on loan, if any, is shown as a footnote on the Statement of Assets and Liabilities.

NOTE 2–Advisory Fees and Other Fees Paid to Affiliates

The Trust has entered into a master investment advisory agreement with Invesco Advisers, Inc. (the "Adviser" or "Invesco"). Under the terms of the investment advisory agreement, the Fund pays an advisory fee to the Adviser based on the annual rate of the Fund's average daily net assets as follows:

Average Daily Net Assets	Rate
First $250 million	0.745%
Next $250 million	0.73%
Next $500 million	0.715%
Next $1.5 billion	0.70%
Next $2.5 billion	0.685%
Next $2.5 billion	0.67%
Next $2.5 billion	0.655%
Over $10 billion	0.64%

For the six months ended June 30, 2016, the effective advisory fees incurred by the Fund was 0.74%.

Under the terms of a master sub-advisory agreement between the Adviser and each of Invesco Asset Management Deutschland GmbH, Invesco Asset Management Limited, Invesco Asset Management (Japan) Limited, Invesco Hong Kong Limited, Invesco Senior Secured Management, Inc. and Invesco Canada Ltd. (collectively, the "Affiliated Sub-Advisers") the Adviser, not the Fund, may pay 40% of the fees paid to the Adviser to any such Affiliated Sub-Adviser(s) that provide(s) discretionary investment management services to the Fund based on the percentage of assets allocated to such Affiliated Sub-Adviser(s).

The Adviser has contractually agreed, through at least June 30, 2017, to waive advisory fees and/or reimburse expenses to the extent necessary to limit total annual fund operating expenses after fee waiver and/or expense reimbursement (excluding certain items discussed below) of Series I shares to 2.00% and Series II shares to 2.25% of average daily net assets (the "expense limits"). In determining the Adviser's obligation to waive advisory fees and/or reimburse expenses, the following expenses are not taken into account, and could cause the total annual fund operating expenses after fee waiver and/or expense reimbursement to exceed the numbers reflected above: (1) interest; (2) taxes; (3) dividend expense on short sales; (4) extraordinary or non-routine items, including litigation expenses; and (5) expenses that the Fund has incurred but did not actually pay because of an expense offset arrangement. Unless Invesco continues the fee waiver agreement, it will terminate on June 30, 2017. During its term, the fee waiver agreement cannot be terminated or amended to increase expense limits without approval of the Board of Trustees. The Adviser did not waive fees and/or reimburse expenses during the period under these expense limits.

Further, the Adviser has contractually agreed, through at least June 30, 2018, to waive the advisory fee payable by the Fund in an amount equal to 100% of the net advisory fees the Adviser receives from the affiliated money market funds on investments by the Fund of uninvested cash (excluding investments of cash collateral from securities lending) in such affiliated money market funds.

For the six months ended June 30, 2016, the Adviser waived advisory fees of $4,091.

The Trust has entered into a master administrative services agreement with Invesco pursuant to which the Fund has agreed to pay Invesco a fee for costs incurred in providing accounting services and fund administrative services to the Fund and to reimburse Invesco for administrative services fees paid to insurance companies that have agreed to provide services to the participants of separate accounts. These administrative services provided by the insurance companies may include, among other things: the printing of prospectuses, financial reports and proxy statements and the delivery of the same to existing participants; the maintenance of master accounts; the facilitation of purchases and redemptions requested by the participants; and the servicing of participants' accounts. Pursuant to such agreement, for the six months ended June 30, 2016, Invesco was paid $35,288 for accounting and fund administrative services and reimbursed $346,522 for services provided by insurance companies.

The Trust has entered into a transfer agency and service agreement with Invesco Investment Services, Inc. ("IIS") pursuant to which the Fund has agreed to pay IIS a fee for providing transfer agency and shareholder services to the Fund and reimburse IIS for certain expenses incurred by IIS in the course of providing such services. For the six months ended June 30, 2016, expenses incurred under the agreement are shown in the Statement of Operations as *Transfer agent fees*.

The Trust has entered into a master distribution agreement with Invesco Distributors, Inc. ("IDI") to serve as the distributor for the Fund. The Trust has adopted a plan pursuant to Rule 12b-1 under the 1940 Act with respect to the Fund's Series II shares (the "Plan"). The Fund, pursuant to the Plan, pays IDI compensation at the annual rate of 0.25% of the Fund's average daily net assets of Series II shares. Of the Plan payments, up to 0.25% of the average daily net assets of the Series II shares may be paid to insurance companies who furnish continuing personal shareholder services to customers who purchase and own Series II shares of the Fund. For the six months ended June 30, 2016, expenses incurred under the Plan are detailed in the Statement of Operations as *Distribution fees*.

For the six months ended June 30, 2016, the Fund incurred $15 in brokerage commissions with Invesco Capital Markets, Inc., an affiliate of the Adviser and IDI, for portfolio transactions executed on behalf of the Fund.

Certain officers and trustees of the Trust are officers and directors of the Adviser, IIS and/or IDI.

NOTE 3—Additional Valuation Information

GAAP defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, under current market conditions. GAAP establishes a hierarchy that prioritizes the inputs to valuation methods, giving the highest priority to readily available unadjusted quoted prices in an active market for identical assets (Level 1) and the lowest priority to significant unobservable inputs (Level 3), generally when market prices are not readily available or are unreliable. Based on the valuation inputs, the securities or other investments are tiered into one of three levels. Changes in valuation methods may result in transfers in or out of an investment's assigned level:

Level 1 – Prices are determined using quoted prices in an active market for identical assets.

Level 2 – Prices are determined using other significant observable inputs. Observable inputs are inputs that other market participants may use in pricing a security. These may include quoted prices for similar securities, interest rates, prepayment speeds, credit risk, yield curves, loss severities, default rates, discount rates, volatilities and others.

Level 3 – Prices are determined using significant unobservable inputs. In situations where quoted prices or observable inputs are unavailable (for example, when there is little or no market activity for an investment at the end of the period), unobservable inputs may be used. Unobservable inputs reflect the Fund's own assumptions about the factors market participants would use in determining fair value of the securities or instruments and would be based on the best available information.

As of June 30, 2016, all of the securities in this Fund were valued based on Level 1 inputs (see the Schedule of Investments for security categories). The level assigned to the securities valuations may not be an indication of the risk or liquidity associated with investing in those securities. Because of the inherent uncertainties of valuation, the values reflected in the financial statements may materially differ from the value received upon actual sale of those investments.

NOTE 4—Security Transactions with Affiliated Funds

The Fund is permitted to purchase or sell securities from or to certain other Invesco Funds under specified conditions outlined in procedures adopted by the Board of Trustees of the Trust. The procedures have been designed to ensure that any purchase or sale of securities by the Fund from or to another fund or portfolio that is or could be considered an affiliate by virtue of having a common investment adviser (or affiliated investment advisers), common Trustees and/or common officers complies with Rule 17a-7 of the 1940 Act. Further, as defined under the procedures, each transaction is effected at the current market price. Pursuant to these procedures, for the six months ended June 30, 2016, the Fund engaged in securities purchases of $1,661,917.

NOTE 5—Trustees' and Officers' Fees and Benefits

Trustees' and Officers' Fees and Benefits include amounts accrued by the Fund to pay remuneration to certain Trustees and Officers of the Fund. Trustees have the option to defer compensation payable by the Fund, and *Trustees' and Officers' Fees and Benefits* also include amounts accrued by the Fund to fund such deferred compensation amounts. Those Trustees who defer compensation have the option to select various Invesco Funds in which their deferral accounts shall be deemed to be invested. Finally, certain current Trustees were eligible to participate in a retirement plan that provided for benefits to be paid upon retirement to Trustees over a period of time based on the number of years of service. The Fund may have certain former Trustees who also participate in a retirement plan and receive benefits under such plan. *Trustees' and Officers' Fees and Benefits* include amounts accrued by the Fund to fund such retirement benefits. Obligations under the deferred compensation and retirement plans represent unsecured claims against the general assets of the Fund.

NOTE 6—Cash Balances

The Fund is permitted to temporarily carry a negative or overdrawn balance in its account with State Street Bank and Trust Company, the custodian bank. Such balances, if any at period-end, are shown in the Statement of Assets and Liabilities under the payable caption *Amount due custodian*. To compensate the custodian bank for such overdrafts, the overdrawn Fund may either (1) leave funds as a compensating balance in the account so the custodian bank can be compensated by earning the additional interest; or (2) compensate by paying the custodian bank at a rate agreed upon by the custodian bank and Invesco, not to exceed the contractually agreed upon rate.

NOTE 7—Tax Information

The amount and character of income and gains to be distributed are determined in accordance with income tax regulations, which may differ from GAAP. Reclassifications are made to the Fund's capital accounts to reflect income and gains available for distribution (or available capital loss carryforward) under income tax regulations. The tax character of distributions paid during the year and the tax components of net assets will be reported at the Fund's fiscal year-end.

Capital loss carryforward is calculated and reported as of a specific date. Results of transactions and other activity after that date may affect the amount of capital loss carryforward actually available for the Fund to utilize. Capital losses generated in years beginning after December 22, 2010 can be carried forward for an unlimited period, whereas previous losses expire in eight tax years. Capital losses with an expiration period may not be used to offset capital gains until all net capital losses without an expiration date have been utilized. Capital loss carryforwards with no expiration date will retain their character as either short-term or long-term capital losses instead of as short-term capital losses as under prior law. The ability to utilize capital loss carryforwards in the future may be limited under the Internal Revenue Code and related regulations based on the results of future transactions.

The Fund did not have a capital loss carryforward as of December 31, 2015.

NOTE 8—Investment Securities

The aggregate amount of investment securities (other than short-term securities, U.S. Treasury obligations and money market funds, if any) purchased and sold by the Fund during the six months ended June 30, 2016 was $52,497,693 and $64,530,672, respectively. Cost of investments on a tax basis includes the adjustments for financial reporting purposes as of the most recently completed federal income tax reporting period-end.

Unrealized Appreciation (Depreciation) of Investment Securities on a Tax Basis

Aggregate unrealized appreciation of investment securities	$ 54,086,768
Aggregate unrealized (depreciation) of investment securities	(19,816,332)
Net unrealized appreciation of investment securities	$ 34,270,436

Cost of investments for tax purposes is $261,319,249.

NOTE 9—Share Information

Summary of Share Activity

	Six months ended June 30, 2016[a]		Year ended December 31, 2015	
	Shares	Amount	Shares	Amount
Sold:				
Series I	726,965	$ 12,009,811	1,161,619	$ 25,722,497
Series II	961,828	15,876,034	1,002,522	22,174,509
Issued as reinvestment of dividends:				
Series I	–	–	2,050,190	36,411,380
Series II	–	–	1,638,277	27,998,152
Reacquired:				
Series I	(1,386,458)	(24,040,645)	(2,406,303)	(53,728,038)
Series II	(652,933)	(10,843,911)	(1,391,179)	(30,773,807)
Net increase (decrease) in share activity	(350,598)	$ (6,998,711)	2,055,126	$ 27,804,693

[a] There are entities that are record owners of more than 5% of the outstanding shares of the Fund and in the aggregate own 59% of the outstanding shares of the Fund. The Fund and the Fund's principal underwriter or adviser, are parties to participation agreements with these entities whereby these entities sell units of interest in separate accounts funding variable products that are invested in the Fund. The Fund, Invesco and/or Invesco affiliates may make payments to these entities, which are considered to be related to the Fund, for providing services to the Fund, Invesco and/or Invesco affiliates including but not limited to services such as, securities brokerage, third party record keeping and account servicing and administrative services. The Fund has no knowledge as to whether all or any portion of the shares owned of record by these entities are also owned beneficially.

NOTE 10—Financial Highlights

The following schedule presents financial highlights for a share of the Fund outstanding throughout the periods indicated.

	Net asset value, beginning of period	Net investment income (loss)[a]	Net gains (losses) on securities (both realized and unrealized)	Total from investment operations	Dividends from net investment income	Distributions from net realized gains	Total distributions	Net asset value, end of period	Total return[b]	Net assets, end of period (000's omitted)	Ratio of expenses to average net assets with feewaivers and/or expenses absorbed	Ratio of expenses to average net assets without fee waivers and/or expenses absorbed	Ratio of net investment income (loss) to average net assets	Portfolio turnover[c]
Series I														
Six months ended 06/30/16	$17.64	$ 0.01	$ 0.18	$ 0.19	$ –	$ –	$ –	$17.83	1.08%	$156,448	1.06%[d]	1.06%[d]	0.16%[d]	19%
Year ended 12/31/15	23.64	0.00	(1.27)	(1.27)	–	(4.73)	(4.73)	17.64	(5.52)	166,407	1.04	1.04	0.02	31
Year ended 12/31/14	25.44	(0.04)	0.47	0.43	–	(2.23)	(2.23)	23.64	2.36	203,963	1.05	1.05	(0.17)	45
Year ended 12/31/13	18.69	(0.04)	7.02	6.98	(0.00)	(0.23)	(0.23)	25.44	37.47	262,261	1.05	1.05	(0.17)	35

[a] Calculated using average shares outstanding.
[b] Includes adjustments in accordance with accounting principles generally accepted in the United States of America and as such, the net asset value for financial reporting purposes and the returns based upon those net asset values may differ from the net asset value and returns for shareholder transactions. Total returns are not annualized for periods less than one year, if applicable and do not reflect charges assessed in connection with a variable product, which if included would reduce total returns.
[c] Portfolio turnover is calculated at the fund level and is not annualized for periods less than one year, if applicable.
[d] Ratios are annualized and based on average daily net assets (000's omitted) of $158,213 and $128,583 for Series I and Series II shares, respectively.

NOTE 11—Subsequent Event

Effective July 1, 2016, Invesco agreed to reduce any reimbursement made by the Fund to Invesco for administration services fees paid by Invesco to those insurance companies that have agreed to provide services to the participants of separate accounts to an amount not to exceed 0.15% of average daily net assets.

Calculating your ongoing Fund expenses

Example

As a shareholder of the Fund, you incur ongoing costs, including management fees; distribution and/or service fees (12b-1); and other Fund expenses. This example is intended to help you understand your ongoing costs (in dollars) of investing in the Fund and to compare these costs with ongoing costs of investing in other mutual funds. The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire period January 1, 2016 through June 30, 2016.

The actual and hypothetical expenses in the examples below do not represent the effect of any fees or other expenses assessed in connection with a variable product; if they did, the expenses shown would be higher while the ending account values shown would be lower.

Actual expenses

The table below provides information about actual account values and actual expenses. You may use the information in this table, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the table under the heading entitled "Actual Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical example for comparison purposes

The table below also provides information about hypothetical account values and hypothetical expenses based on the Fund's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Fund's actual return.

The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Fund and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight your ongoing costs. Therefore, the hypothetical information is useful in comparing ongoing costs, and will not help you determine the relative total costs of owning different funds.

		ACTUAL		HYPOTHETICAL (5% annual return before expenses)		
Class	Beginning Account Value (01/01/16)	Ending Account Value (06/30/16)[1]	Expenses Paid During Period[2]	Ending Account Value (06/30/16)	Expenses Paid During Period[2]	Annualized Expense Ratio
Series I	$1,000.00	$1,010.80	$5.30	$1,019.59	$5.32	1.06%
Series II	1,000.00	1,009.40	6.54	1,018.35	6.57	1.31

[1] The actual ending account value is based on the actual total return of the Fund for the period January 1, 2016 through June 30, 2016, after actual expenses and will differ from the hypothetical ending account value which is based on the Fund's expense ratio and a hypothetical annual return of 5% before expenses.

[2] Expenses are equal to the Fund's annualized expense ratio as indicated above multiplied by the average account value over the period, multiplied by 182/366 to reflect the most recent fiscal half year.

Approval of Investment Advisory and Sub-Advisory Contracts

The Board of Trustees (the Board) of AIM Variable Insurance Funds (Invesco Variable Insurance Funds) is required under the Investment Company Act of 1940, as amended, to approve annually the renewal of Invesco V.I. Small Cap Equity Fund's (the Fund) investment advisory agreements. During contract renewal meetings held on June 7-8, 2016, the Board as a whole, and the disinterested or "independent" Trustees, who comprise over 75% of the Board, voting separately, approved the continuance for the Fund of the Master Investment Advisory Agreement with Invesco Advisers, Inc. (Invesco Advisers and the investment advisory agreement) and the Master Intergroup Sub-Advisory Contract for Mutual Funds with Invesco Asset Management Deutschland GmbH, Invesco Asset Management Limited, Invesco Asset Management (Japan) Limited, Invesco Hong Kong Limited, Invesco Senior Secured Management, Inc. and Invesco Canada Ltd. (collectively, the Affiliated Sub-Advisers and the sub-advisory contracts) for another year, effective July 1, 2016.

In evaluating the fairness and reasonableness of compensation under the Fund's investment advisory agreement and sub-advisory contracts, the Board considered, among other things, the factors discussed below. The Board determined that continuation of the Fund's investment advisory agreement and the sub-advisory contracts is in the best interest of the Fund and its shareholders and that the compensation payable to Invesco Advisers and the Affiliated Sub-Advisers under the agreements is fair and reasonable.

The Board's Fund Evaluation Process

The Board's Investments Committee has established three Sub-Committees, which met throughout the year to review the performance of funds advised by Invesco Advisers (the Invesco Funds). Over the course of each year, the Sub-Committees meet with portfolio managers for their assigned Invesco Funds and other members of management to review the performance, investment objective(s), policies, strategies, limitations and investment risks of these funds. The Board had the benefit of reports from the Sub-Committees and Investments Committee throughout the year in considering approval of the continuance of each Invesco Fund's investment advisory agreement and sub-advisory contracts for another year.

During the contract renewal process, the Board receives comparative performance and fee data regarding the Invesco Funds prepared by Invesco Advisers and Broadridge Financial Solutions (Broadridge), an independent provider of investment company data. The Board also receives an independent written evaluation from the Senior Officer, an officer of the Invesco Funds who reports directly to the independent Trustees. The Senior Officer's evaluation is prepared as part of his responsibility to manage the process by which the Invesco Funds' proposed management fees are negotiated during the annual contract renewal process to ensure they are negotiated in a manner that is at arms' length and reasonable. In addition to meetings with Invesco Advisers and fund counsel, the independent Trustees also discuss the continuance of the investment advisory agreement and sub-advisory contracts in separate sessions with the Senior Officer and with independent legal counsel.

The Trustees recognized that the advisory fee rates for the Invesco Funds are, in many cases, the result of years of review and negotiation. The Trustees' deliberations and conclusions in a particular year may be based in part on their deliberations and conclusions regarding these arrangements throughout the year and in prior years. The Trustees' review and conclusions are based on the comprehensive consideration of all information presented to them and are not the result of any single determinative factor. Moreover, one Trustee may have weighed a particular piece of information or factor differently than another Trustee.

The discussion below is a summary of the Senior Officer's independent written evaluation with respect to the Fund's investment advisory agreement as well as a discussion of the material factors and related conclusions that formed the basis for the Board's approval of the Fund's investment advisory agreement and sub-advisory contracts. Unless otherwise stated, this information is current as of June 8, 2016, and does not reflect consideration of factors that became known to the Board after that date.

Factors and Conclusions and Summary of Independent Written Fee Evaluation

A. Nature, Extent and Quality of Services Provided by Invesco Advisers and the Affiliated Sub-Advisers

The Board reviewed the advisory services provided to the Fund by Invesco Advisers under the Fund's investment advisory agreement, the performance of Invesco Advisers in providing these services, and the credentials and experience of the officers and employees of Invesco Advisers who provide these services, including the Fund's portfolio manager or managers. The Board's review of the qualifications of Invesco Advisers to provide advisory services included the Board's consideration of Invesco Advisers' investment process oversight, independent credit analysis and investment risk management. The Board also considered non-advisory services that Invesco Advisers and its affiliates provide to the Invesco Funds such as various back office support functions, trading operations, internal audit, valuation and legal and compliance.

In determining whether to continue the Fund's investment advisory agreement, the Board considered the benefits of reapproving an existing relationship and the greater uncertainty that may be associated with entering into a new relationship. The Board concluded that the nature, extent and quality of the services provided to the Fund by Invesco Advisers are appropriate and satisfactory and consistent with the terms of the Fund's investment advisory agreement.

The Board reviewed the services that may be provided by the Affiliated Sub-Advisers under the sub-advisory contracts and the credentials and experience of the officers and employees of the Affiliated Sub-Advisers who provide these services. The Board noted that the Affiliated Sub-Advisers have offices and personnel that are located in financial centers around the world. As a result, the Board noted that Affiliated Sub-Advisers can provide research and investment analysis on the markets and economies of various countries in which the Fund may invest, make recommendations regarding securities and assist with security trades. The Board concluded that the sub-advisory contracts may benefit the Fund and its shareholders by permitting Invesco Advisers to use the resources and talents of the Affiliated Sub-Advisers in managing the Fund. The Board concluded that the nature, extent and quality of the services that may be provided by the Affiliated Sub-Advisers are appropriate and satisfactory and consistent with the terms of the Fund's sub-advisory contracts.

B. Fund Performance

The Board considered Fund performance as a relevant factor in considering whether to approve the investment advisory agreement. The Board did not view Fund performance as a relevant factor in considering whether to approve the sub-advisory contracts for the Fund, as no Affiliated Sub-Adviser currently manages assets of the Fund.

The Board compared the Fund's performance during the past one, three and five calendar years to the performance of funds in the Broadridge performance universe and against the Lipper Variable Underlying Fund Small-Cap Core Funds Index. The Board noted that performance of Series I shares of the Fund was in the fourth quintile of its performance universe for the one and five year periods and the fifth quintile for the three year period (the first quintile being the best performing funds and the fifth quintile being the worst performing funds). The Board noted that performance of Series I shares of the Fund was below the performance of the Index for the one, three and five year periods. The Trustees also reviewed more recent Fund performance and this review did not change their conclusions.

C. Advisory and Sub-Advisory Fees

The Board compared the Fund's contractual management fee rate to the contractual management fee rates of funds in the Fund's Broadridge expense group at a common asset level. The Board noted that the contractual management fee rate for Series I shares of the Fund was below the median contractual management fee rate of funds in its expense group. The Board noted that the term "contractual management fee" for funds in the expense group may include both advisory and certain administrative services fees, but that Broadridge does not provide information on a fund by fund basis as to what is included. The Board noted that Invesco Advisers does not separately charge the Invesco Funds for the administrative services included in the term as defined by Broadridge. The Board also reviewed the methodology used by Broadridge in providing expense group information, which includes using each fund's contractual management fee schedule (including any applicable breakpoints) as reported in the most recent prospectus or statement of additional information for each fund in the expense group.

The Board also compared the Fund's effective advisory fee rate (the advisory fee rate after advisory fee waivers and before other expense limitations/waivers) to the effective advisory fee rates of other mutual funds advised by Invesco Advisers and its affiliates with investment strategies comparable to those of the Fund, based on asset balances as of December 31, 2015. The Board noted that the Fund's rate was above the rate of one such mutual fund. The Board also noted how the Fund's rate compared to the effective sub-adviser fee rate of three mutual funds sub-advised by Invesco Advisers.

The Board also considered the fees charged by Invesco Advisers and the Affiliated Sub-Advisers to other client accounts with investment strategies comparable to those of the Fund. The Board noted that Invesco Advisers or the Affiliated Sub-Advisers may charge lower fees to large institutional clients. Invesco Advisers reviewed with the Board the significantly greater scope of services it provides to the Invesco Funds relative to certain other types of client accounts. These additional services include provision of administrative services, officers and office space, oversight of service providers, preparation of annual registration statement updates and financial information and regulatory compliance under the Investment Company Act of 1940, as amended.

Invesco Advisers also reviewed generally the higher frequency of shareholder purchases and redemptions in the Invesco Funds relative to the flow of assets for other client accounts. Invesco Advisers advised the Board that advance notice of redemptions is often provided to Invesco Advisers by institutional clients. The Board did note that sub-advisory fee rates charged by the Affiliated Sub-Advisers to manage the Invesco Funds and to manage other client accounts tended to be more comparable, reflecting a similar scope of services.

The Board also considered the services that may be provided by the Affiliated Sub-Advisers pursuant to the sub-advisory contracts, as well as the fees payable by Invesco Advisers to the Affiliated Sub-Advisers pursuant to the sub-advisory contracts. The Board also noted that the sub-advisory fees are not paid directly by the Fund, but rather, are payable by Invesco Advisers to the Affiliated Sub-Advisers.

D. Economies of Scale and Breakpoints

The Board considered the extent to which there are economies of scale in the provision of advisory services to the Fund. The Board also considered whether the Fund benefits from economies of scale through contractual breakpoints in the Fund's advisory fee schedule. The Board also noted that the Fund shares directly in economies of scale through lower fees charged by third party service providers based on the combined size of the Invesco Funds and other clients advised by Invesco Advisers.

E. Profitability and Financial Resources

The Board reviewed information from Invesco Advisers concerning the costs of the advisory and other services that Invesco Advisers and its affiliates provide to the Fund and the Invesco Funds and the profitability of Invesco Advisers and its affiliates in providing these services. The Board received information from Invesco Advisers and a report from an independent consultant engaged by the Senior Officer about the methodology used to prepare the profitability information. The Board noted that Invesco Advisers continues to operate at a net profit from services Invesco Advisers and its affiliates provide to the Invesco Funds and the Fund. The Board did not deem the level of profits realized by Invesco Advisers and its affiliates from providing services to the Fund to be excessive given the nature, quality and extent of the services provided. The Board received and accepted information from Invesco Advisers demonstrating that Invesco Advisers and each Affiliated Sub-Adviser are financially sound and have the resources necessary to perform their obligations under the investment advisory agreement and sub-advisory contracts.

F. Collateral Benefits to Invesco Advisers and its Affiliates

The Board considered various other benefits received by Invesco Advisers and its affiliates from the relationship with the Fund, including the fees received for providing transfer agency and distribution services to the Fund. The Board considered comparative information regarding fees charged for these services, including information provided by Broadridge and other independent sources. The Board considered the performance of Invesco Advisers and its affiliates in providing these services and the organizational structure employed to provide these services. The Board also considered that these services are provided to the Fund pursuant to written contracts that are reviewed and approved on an annual basis by the Board; and that the services are required for the operation of the Fund.

The Board considered the benefits realized by Invesco Advisers and the Affiliated Sub-Advisers as a result of portfolio brokerage transactions executed through "soft dollar" arrangements. The Board noted that soft dollar arrangements shift the payment obligation for research services from Invesco Advisers and the Affiliated Sub-Advisers to the Invesco Funds and that the research received may be used with other clients of Invesco Advisers and may reduce Invesco Advisers' and the Affiliated Sub-Advisers' expenses. The Board also considered that it receives periodic reports from the Chief Compliance Officer of the Invesco Funds demonstrating that these arrangements are consistent with regulatory requirements. The Board did not deem the soft dollar arrangements to be inappropriate.

The Board considered that the Fund's uninvested cash and cash collateral from any securities lending arrangements may be invested in money market funds advised by Invesco Advisers pursuant to procedures approved by the Board. The Board noted that Invesco Advisers receives advisory fees from these affiliated money market funds attributable to such investments, although Invesco Advisers has contractually agreed to waive through varying periods the advisory fees payable by the Invesco Funds with respect to certain investments in the affiliated money market funds. The waiver is in an amount equal to 100% of the net advisory fee Invesco Advisers receives from the affiliated money market funds with respect to the Fund's investment in the affiliated money market funds of uninvested cash, but not cash collateral. The Board concluded that the amount of advisory fees received by Invesco Advisors from the Fund's investment of cash collateral from any securities lending arrangements in the affiliated money market funds is fair and reasonable.

The Board also considered the Fund may use an affiliated broker to execute certain trades for the Fund to, among other things, control information leakage, and were advised that such trades would be executed in compliance with rules under the Investment Company Act of 1940, as amended, and consistent with best execution obligations.

Shares of the Portfolios are currently offered only to separate accounts established by insurance companies to fund variable annuity contracts and variable life insurance policies. Portfolio shares may also be offered to certain qualified pension and retirement plans and accounts permitting accumulation of assets on a tax-deferred basis.

Please consider a Portfolio's investment objective, risks, charges and expenses carefully before investing. For more complete information about Lazard Retirement Series, Inc. (the "Fund"), you may obtain a prospectus or summary prospectus by calling 800-823-6300, or online, at www.LazardNet.com. Read the prospectus or each Portfolio's summary prospectus carefully before you invest. The prospectus and summary prospectus contain the investment objective, risks, charges, expenses and other information about Portfolios of the Fund, which is not detailed in this report.

Distributed by Lazard Asset Management Securities LLC.

Dear Shareholder,

In the first half of 2016, global equity markets stood firm despite significant bouts of volatility. Concerns about the Chinese economy, commodity price declines, and a series of disappointing earnings announcements pressured equity markets in the early months of 2016. However, they rallied in the latter half of the first quarter and into the second as the US Federal Reserve lowered its forecast for 2016 interest rate increases. Although global equity markets fell again in late-June due to the uncertainty caused by the United Kingdom's vote to leave the European Union, certain regions rebounded by the end of the period. In addition, signs of some stability in commodity prices helped emerging markets assets during the period.

Volatility also played a role in global bond markets as investors traded largely on risk assessment of macro events. In Europe, the 10-year German bund yield fell below zero for the first time, following Swiss and Japanese 10-year government bonds, which have been in negative territory for some time. The surprising outcome of the UK referendum triggered another rally in safe haven assets, pushing some government bond yields even further into negative territory. The low yield, but still positive, environment continued in the United States.

At Lazard Asset Management, we remain focused on active management and are committed to responsibly pursuing the Portfolios' investment objectives. We appreciate your continued confidence in our investment management capabilities, and we feel privileged that you have turned to Lazard for your investment needs.

Sincerely,

Lazard Asset Management LLC

US Equities
The S&P 500® Index rose 3.8% in the first half of 2016. Markets were down as much as 10% in the beginning of the period, on concerns about the Chinese economy, commodity price declines, and a series of disappointing corporate earnings announcements. However, shares rallied in the latter half of the first quarter and into the second, as the US Federal Reserve lowered its forecast for 2016 interest rate increases. Economic data were mixed during the period, as the economy capped its largest two-year private payroll gain since 1999 in March, but followed it with a spate of disappointing jobs growth reports to finish the period. GDP growth in the first half of 2016 generally exceeded expectations, however. Although US markets fell sharply in late-June due to the uncertainty caused by the United Kingdom's affirmative vote to leave the European Union (the so-called "Brexit"), they had largely rebounded by the end of the period. Amid the continuingly uncertain economic and geopolitical backdrop, the Federal Open Market Committee elected not to raise interest rates at its June meeting, and expectations for a rate increase in the summer of 2016 fell sharply.

International Equities
International equities fell slightly in a volatile first half of 2016. Initial concerns centered around faltering Chinese growth and low oil prices, with resultant impacts on credit. This was calmed by evidence of a state-led investment recovery in China, falling US oil supply, and reassurance from the US Federal Reserve that US interest rates would remain low. The resulting weakness in the US dollar, and rise in many commodity prices, supported emerging markets assets alongside sectors such as energy and mining. On the other hand, ventures into negative interest rates in Japan and Europe put extreme pressure on the valuations of financial institutions, while the surprise Brexit vote result put pressure on assumptions for domestic demand growth in Europe. The banking and consumer discretionary sectors were weak as a result, alongside Italy, which has a particularly weak banking sector and upcoming political risk. UK domestic stocks inevitably fell on recession fears, though the UK index overall held up well even in US dollars, as the index is dominated by global multinationals. Sectors seen as stable, such as consumer staples and utilities, also benefited from very low interest rates.

Emerging Markets Equities
Emerging markets equities experienced somewhat of a changed environment in the first half of 2016. Some of the more defensive sector companies, which had led markets for a long time, underperformed while more economy-sensitive industries were relatively strong. Additionally, regions which had been very weak performers, like Latin America, performed very strongly while Asia, which had performed relatively well, finished the period virtually unchanged. The MSCI Emerging Markets® Index (the "EM Index") rose by 6.4%, as measured in US dollar terms, during the six-month period with Asian markets declining marginally while eastern European markets rose by 10% and Latin American markets increased by 25%. The period included important events such as the Brexit referendum in the UK, attempts at renminbi devaluation in China, and a presidential impeachment in Brazil.

Signs of some stability in commodity prices helped shares in Peru and Brazil over the period. The dramatic political events in Brazil during the period, which brought about the successful impeachment votes against President Dilma Rousseff, caused both the Brazilian real and the market to rise. Peru's market was helped towards the end of the period by the narrow election victory of market-friendly presidential candidate Pedro Pablo Kuczynski. Mexican shares were adversely affected by a weak peso.

Returns were highly diverse across Eastern Europe. The bottoming and then rising crude oil price helped Russian equities while the United Kingdom's Brexit referendum vote to leave the European Union undermined shares in several European countries, including Greece and Poland. Turkish equities initially performed well but suffered after Prime Minister Ahmet Davutoglu's resignation, an event which appeared to signal President Recep Tayyip Erdogan's political dominance.

Although most Asian emerging markets generated positive returns over the six-month period, China's attempt to devalue the renminbi at the beginning of 2016 destabilized global markets. In addition, MSCI's

decision not to include Chinese mainland shares or A-shares in its Emerging Markets Index also hurt the Chinese market. These factors resulted in a negative return for China over the period. Indian stocks also did not progress much in the second quarter as investors became concerned by resistance to Prime Minister Narendra Modi's policies. Conversely, strong performance was recorded in Thailand, the Philippines, and Indonesia as economies performed in line with expectations and President-elect Rodrigo Duterte outlined his program for the Philippines.

From a sector perspective, the energy, materials, and consumer staples sectors performed well, while the industrials, consumer discretionary, and health care sectors underperformed the EM Index.

Lazard Retirement US Strategic Equity Portfolio
For the six months ended June 30, 2016, the Lazard Retirement US Strategic Equity Portfolio's Service Shares posted a total return of 0.56%, as compared with the 3.84% return for the S&P 500 Index.

Stock selection in the health care sector contributed to performance. Shares of pharmaceutical company Pfizer rose after the company reported strong quarterly earnings and management raised its guidance for 2016, driven by foreign exchange tailwinds and stronger revenues. Shares also rose after the company announced that it had terminated its proposed $160 billion acquisition of specialty-drug maker Allergan. Stock selection in the industrials sector also helped returns. Shares of salvage vehicle auction holder Copart rose after the company reported quarterly earnings above expectations, due to higher volume growth stemming from market share gains and overall scrap metal industry tailwinds.

In contrast, stock selection in the consumer discretionary sector detracted from performance. Shares of Norwegian Cruise Line Holdings fell in response to disappointing management guidance and macroeconomic instability, as management said it expected slower bookings in the second quarter. Stock selection and an overweight position in the information technology sector also detracted from performance. Shares of Google parent Alphabet fell after the company reported disappointing second quarter results, which were hurt by greater holiday seasonality.

Lazard Retirement US Small-Mid Cap Equity Portfolio
For the six months ended June 30, 2016, the Lazard Retirement US Small-Mid Cap Equity Portfolio's Service Shares posted a total return of -0.14%, as compared with the 3.98% return for the Russell 2500® Index.

Stock selection in the information technology sector contributed to performance. Shares of NCR rose after the payment technology maker reported quarterly earnings above expectations, driven by strong margins. Stock selection and an overweight position in the energy sector also helped returns. Shares of Newfield rose after the exploration and production company reported strong quarterly earnings, driven by strong production and expenses.

In contrast, stock selection in the financials sector detracted from performance. Shares of OneMain fell amid continued concerns about the consumer financial services provider's funding costs in a rising interest rate environment, and as many investors moved away from shares of companies with subprime loan exposure. We exited our position in OneMain in May in pursuit of better opportunities elsewhere. Stock selection and an underweight position in the materials sector also hurt performance. Shares of KapStone Paper and Packaging fell after the pulp and paper company reported quarterly earnings below expectations and management gave a cautious outlook, citing difficult market conditions. We exited our position after the announcement in February in pursuit of better opportunities elsewhere.

Lazard Retirement International Equity Portfolio
For the six months ended June 30, 2016, the Lazard Retirement International Equity Portfolio's Service Shares posted a total return of -2.52%, as compared with the -4.42% return for the MSCI EAFE® Index (the "EAFE Index").

Stock selection in the consumer discretionary sector was the largest driver of relative returns as shares of

Dutch business information services provider Wolters Kluwer performed well on accelerating growth, while shares of Japanese shoe retailer ABC Mart rose on revenue that is growing faster than expectations and from an increasing dividend. Japanese consumer electronics and media company Sony also rose in the weak market, supported by yen strength. The preceding stocks more than compensated for weakness in jewelry retailer Signet, which was hurt by slowing consumer spending, concerns about the company's credit portfolio, and some negative publicity. Elsewhere, Japanese telecoms SoftBank and KDDI both rose as investors expect higher revenues and benefited from the previously mentioned yen strength. Lastly, positioning in emerging markets had a positive impact on relative performance as shares of Taiwan Semiconductor and Brazilian insurance broker BB Seguridade both performed well.

In contrast, stock selection in the health care sector detracted from relative returns where shares of German pharmaceutical company Bayer (which was sold during the period) declined as investors reacted negatively to the proposed acquisition of Monsanto. Shares of Israeli pharmaceutical company Teva also declined during the period. The stock fell as revenues from their multiple sclerosis treatment Copaxone declined and management announced that the company's acquisition of Allergan's generic drug unit might be delayed. Stock selection in the United Kingdom detracted from relative returns as shares of British bank Lloyds (also sold during the period) declined following the Brexit referendum result. Elsewhere in the United Kingdom, shares of personal credit company Provident and grocer Sainsbury fell, while companies with global revenues, such as tobacco company British American Tobacco and health insurance exchange provider Aon, provided a partial offset. Lastly, low exposure to the strong performing materials and utilities sectors hurt the Portfolio's relative returns.

Lazard Retirement Emerging Markets Equity Portfolio
For the six months ended June 30, 2016, the Lazard Retirement Emerging Markets Equity Portfolio's Investor Shares posted a total return of 14.44%, while Service Shares posted a total return of 14.27%, as compared with the 6.41% return for the EM Index.

During the period, Sberbank, a Russian bank, announced strong earnings and upgraded its guidance for return-on-equity. Telekomunikasi Indonesia, an Indonesian telecom services company, experienced strong growth in data usage leading to improving average revenue per user. Shares of Taiwan Semiconductor Manufacturing, a Taiwanese manufacturer of semiconductors, performed well on expectations of a strong third-quarter ramp up from sales of Apple's new iPhone 7. Shares of Cielo, a Brazilian credit card processor, rose on the back of reduced regulatory concerns and improved market sentiment following the impeachment proceedings brought against President Dilma Rousseff. Shares of CCR, a Brazilian toll road operator, rose on expectations for lower interest rates in Brazil after the initiation of impeachment proceedings. Stock selection in the financials, consumer discretionary, industrials, and telecom services sectors, and in China helped performance. A higher-than-index exposure to Brazil and a lower-than-index exposure to China also added value.

In contrast, shares of Baidu, a Chinese search engine, declined after company management guided down expectations on continued weakness in its healthcare vertical after the government clampdown. Shares of Hanwha Life Insurance, a Korean insurance company, fell on expectations for a continued environment of low interest rates in Korea. Punjab National Bank, an Indian bank, experienced share declines after the bank increased provisioning for non-performing loans post a regulatory review of the loan book. Bharat Heavy Electricals, an Indian manufacturer of power plant equipment, posted poor earnings on the back of increased competition. Shares of Commercial International Bank, an Egyptian bank, fell early in the second quarter as Egyptian stocks and the Egyptian pound sold off on the back of macroeconomic concerns.

Lazard Retirement Global Dynamic Multi Asset Portfolio
For the six months ended June 30, 2016, the Lazard Retirement Global Dynamic Multi Asset Portfolio's

Service Shares posted a total return of 2.52%, as compared with the 4.85% return of the blended benchmark, which is a 50/50 blend of the MSCI World® Index and Barclays Capital Global Aggregate Bond® Index (the "GDMA Index").

The Portfolio is managed using a combination of Lazard Asset Management LLC's (the "Investment Manager") domestic and foreign equity and fixed income strategies. The Investment Manager considers a market forecast based on four categories pertinent to allocation decisions among the strategies: Economy, Valuation, Liquidity, and Sentiment.

Changes made to the market forecast during 2016 reflected a consideration of many factors, including monetary policies of central banks around the globe; global macro data readings (particularly the Purchasing Managers Index, which measures economic activity) in China, the United States, the euro zone, and Japan; fiscal policy in developed and emerging markets; geopolitical events and risks; and equity and fixed income valuations, along with other data.

For the six months ended June 30, 2016, stock selection in the health care, consumer discretionary, telecom services, and financials sectors, an underweight position in the financials sector and an overweight position in the telecom services sector added value within the equity allocation, as did stock selection in Norway, China, and Italy. Within fixed income, performance was helped by overweight exposure to Australia, New Zealand, Canada, and Singapore, security selection in the United States, and overweight exposure to the New Zealand dollar and tactical management of the euro implemented via derivative instruments (forward currency contracts for long or short exposure to foreign currencies). In contrast, stock selection in the industrials, consumer staples, and materials sectors, and underweight exposures to energy and materials detracted from performance, as did stock selection in the United Kingdom, Canada, and Japan, and within equities, an underweight to Canada and an overweight to Israel. Within fixed income, performance was negatively impacted by underweight exposure to core Europe and Japan, underweight positions in long maturity government bonds from core markets, and small overweight exposure to the Swedish krona, Australian dollar, and Mexican peso (also implemented via derivative instruments comprised of forward currency contracts for long or short exposure to foreign currencies).

Notes to Investment Overviews:

Total returns reflect reinvestment of all dividends and distributions, if any. Certain expenses of a Portfolio may have been waived or reimbursed by the Investment Manager, State Street Bank and Trust Company, the Fund's administrator ("State Street"), or Boston Financial Data Services, Inc., the Fund's transfer and dividend disbursing agent ("BFDS"); without such waiver/reimbursement of expenses, such Portfolio's returns would have been lower. Performance information does not reflect the fees and charges imposed by participating insurance companies at the separate account level, and such charges will have the effect of reducing performance. Past performance is not indicative, or a guarantee, of future results. Return for a period of less than one year is not annualized.

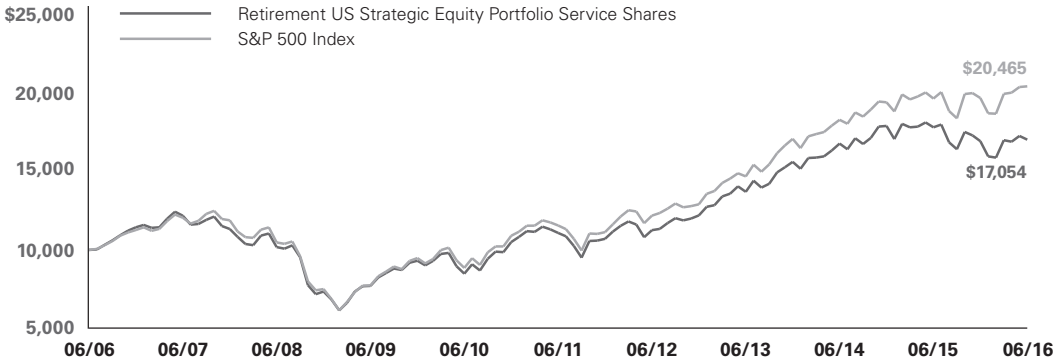
The performance data of the indices and other market data have been prepared from sources and data that the Investment Manager believes to be reliable, but no representation is made as to their accuracy. These indices are unmanaged, have no fees or costs and are not available for investment.

The views of the Investment Manager and the securities described in this report are as of June 30, 2016; these views and portfolio holdings may have changed subsequent to this date. Nothing herein should be construed as a recommendation to buy, sell, or hold a particular security. There is no assurance that the securities discussed herein will remain in a Portfolio at the time you receive this report, or that securities sold will not have been repurchased. The specific securities discussed may, in aggregate, represent only a small percentage of a Portfolio's holdings. It should not be assumed that securities identified and discussed were, or will be, profitable, or that the investment decisions made in the future will be profitable, or equal the investment performance of the securities discussed herein.

The views and opinions expressed are provided for general information only, and do not constitute specific tax, legal, or investment advice to, or recommendations for, any person. There can be no guarantee as to the accuracy of any outlooks for markets, sectors and securities as discussed herein. You should read the Fund's prospectus or each Portfolio's summary prospectus for a more detailed discussion of each Portfolio's investment objective, strategies, risks and fees.

Lazard Retirement US Strategic Equity Portfolio

Comparison of Changes in Value of $10,000 Investment in the Service Shares of Lazard Retirement US Strategic Equity Portfolio and S&P 500® Index*



Average Annual Total Returns*
Periods Ended June 30, 2016

	One Year	Five Years	Ten Years
Service Shares	-4.44%	9.00%	5.48%
S&P 500 Index	3.99%	12.10%	7.42%

* *Total returns reflect reinvestment of all dividends and distributions, if any. Certain expenses of the Portfolio have been waived or reimbursed by the Portfolio's Investment Manager or State Street; without such waiver/reimbursement of expenses, the Portfolio's returns would have been lower. Performance information does not reflect the fees and charges imposed by participating insurance companies at the separate account level, and such charges will have the effect of reducing performance.*

Performance results do not include adjustments made for financial reporting purposes in accordance with accounting principles generally accepted in the United States of America ("GAAP") and may differ from amounts reported in the financial highlights.

The performance quoted represents past performance. Current performance may be lower or higher than the performance quoted. Past performance is not indicative, or a guarantee, of future results; the investment return and principal value of the Portfolio will fluctuate, so that Portfolio shares, when redeemed, may be worth more or less than their original cost. Within the longer periods illustrated there may have been short-term fluctuations, counter to the overall trend of investment results, and no single period of any length may be taken as typical of what may be expected in future periods.

The performance data of the index has been prepared from sources and data that the Investment Manager believes to be reliable, but no representation is made as to its accuracy. The S&P 500 Index is a market capitalization-weighted index of 500 common stocks, designed to measure performance of the broad domestic economy through changes in the aggregate market value of these stocks, which represent all major industries. The index is unmanaged, has no fees or costs and is not available for investment.

Before May 1, 2007, the Portfolio was known as Lazard Retirement Equity Portfolio and had a different investment strategy.

Lazard Retirement US Small-Mid Cap Equity Portfolio

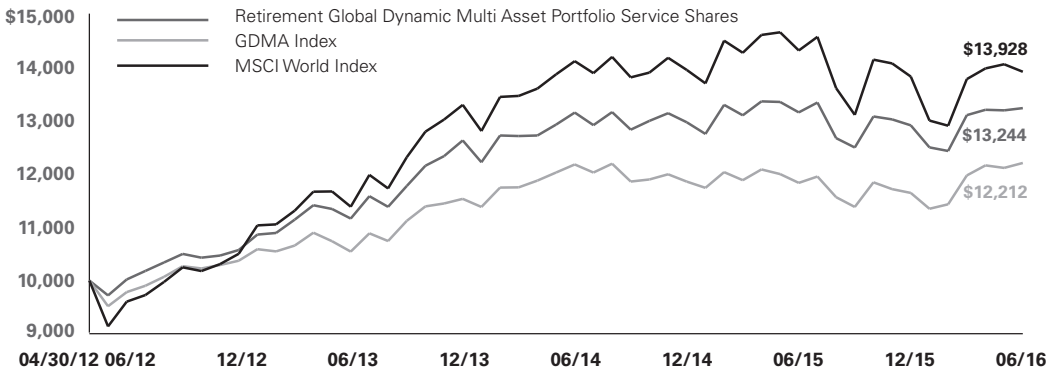
Lazard Retirement Global Dynamic Multi Asset Portfolio

Comparison of Changes in Value of $10,000 Investment in the Service Shares of Lazard Retirement Global Dynamic Multi Asset Portfolio, GDMA Index and MSCI World® Index*



Average Annual Total Returns*
Periods Ended June 30, 2016

	One Year	Since Inception†
Service Shares	0.62%	6.97%
GDMA Index	3.17%	4.91%
MSCI World Index	-2.78%	8.28%

* *Total returns reflect reinvestment of all dividends and distributions, if any. Certain expenses of the Portfolio have been waived or reimbursed by the Portfolio's Investment Manager, State Street or BFDS; without such waiver/reimbursement of expenses, the Portfolio's returns would have been lower. Performance information does not reflect the fees and charges imposed by participating insurance companies at the separate account level, and such charges will have the effect of reducing performance.*

Performance results do not include adjustments made for financial reporting purposes in accordance with GAAP and may differ from amounts reported in the financial highlights.

The performance quoted represents past performance. Current performance may be lower or higher than the performance quoted. Past performance is not indicative, or a guarantee, of future results; the investment return and principal value of the Portfolio will fluctuate, so that Portfolio shares, when redeemed, may be worth more or less than their original cost. Within the longer periods illustrated there may have been short-term fluctuations, counter to the overall trend of investment results, and no single period of any length may be taken as typical of what may be expected in future periods.

The performance data of the indices have been prepared from sources and data that the Investment Manager believes to be reliable, but no representation is made as to their accuracy. The GDMA Index is a 50/50 blend of the MSCI World Index and the Barclays Capital Global Aggregate Bond® Index. The MSCI World Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed markets. The Barclays Capital Global Aggregate Bond Index provides a broad-based measure of global investment-grade fixed-income debt markets, including government-related debt, corporate debt, securitized debt and global Treasury, with maturities of no less than one year. The indices are unmanaged, have no fees or costs and are not available for investment.

Before April 30, 2014, the Portfolio was known as Lazard Retirement Multi-Asset Targeted Volatility Portfolio.

† *The inception date for the Portfolio was April 30, 2012.*

Expense Example
As a shareholder in a Portfolio of the Fund, you incur ongoing costs, including management fees, distribution and service (12b-1) fees (Service Shares only), and other expenses. This Example is intended to help you understand your ongoing costs (in dollars) of investing in a Portfolio and to compare these costs with the ongoing costs of investing in other mutual funds. The Example is based on an investment of $1,000 invested at the beginning of the six month period from January 1, 2016 through June 30, 2016 and held for the entire period.

Actual Expenses
For each Share class of the Portfolios, the first line of the table below provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000=8.6), then multiply the result by the number in the first line under the heading entitled "Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes
For each Share class of the Portfolios, the second line of the table below provides information about hypothetical account values and hypothetical expenses based on the class' actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Portfolio's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Portfolio and other mutual funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholders reports of other mutual funds.

Please note that you also bear fees and charges imposed by participating insurance companies at the separate account level, which are described in the separate prospectuses issued by the insurance companies. Such charges will have the effect of reducing account value.

Portfolio	Beginning Account Value 1/1/16	Ending Account Value 6/30/16	Expenses Paid During Period* 1/1/16 - 6/30/16	Annualized Expense Ratio During Period 1/1/16 - 6/30/16
US Strategic Equity

Total gross unrealized appreciation/depreciation on Forward Currency Contracts						$1,507,461	$997,942

The accompanying notes are an integral part of these financial statements.

(a) Non-income producing security.

(b) For federal income tax purposes, the aggregate cost, aggregate gross unrealized appreciation, aggregate gross unrealized depreciation and the net unrealized appreciation (depreciation) were as follows:

Portfolio	Aggregate Cost	Aggregate Gross Unrealized Appreciation	Aggregate Gross Unrealized Depreciation	Net Unrealized Appreciation (Depreciation)
US Strategic Equity	$ 9,470,065	$ 740,621	$ 348,678	$ 391,943
US Small-Mid Cap Equity	53,436,003	4,835,302	2,131,720	2,703,582
International Equity	580,756,995	106,830,006	37,633,457	69,196,549
Emerging Markets Equity	1,110,363,468	124,742,033	206,182,841	(81,440,808)
Global Dynamic Multi Asset	247,885,275	13,741,699	8,394,656	5,347,043

(c) Security valued using Level 2 inputs, based on reference to a similar security which was trading on an active market, under GAAP hierarchy — see Note 8.

(d) Pursuant to Rule 144A under the Securities Act of 1933, these securities may only be traded among "qualified institutional buyers." At June 30, 2016, the percentage of net assets for each Portfolio was as follows:

Portfolio	Percentage of Net Assets
Emerging Markets Equity	0.3%
Global Dynamic Multi Asset	0.2

(e) Variable and floating rate securities are securities which interest rate changes are based on changes in a designated base rate. The rates shown are those in effect on June 30, 2016.

(f) The Portfolio, at all times, maintains portfolio securities in sufficient amount to cover its obligations related to investments in forward currency contracts.

Security Abbreviations:

ADR — American Depositary Receipt
GDR — Global Depositary Receipt
PJSC — Public Joint Stock Company
REIT — Real Estate Investment Trust
SDR — Swedish Depositary Receipt

Currency Abbreviations:

AUD — Australian Dollar
CAD — Canadian Dollar
CHF — Swiss Franc
CZK — Czech Koruna
DKK — Danish Krone
EUR — Euro
GBP — British Pound Sterling
HKD — Hong Kong Dollar
JPY — Japanese Yen
KRW — South Korean Won
MXN — Mexican New Peso
NOK — Norwegian Krone
NZD — New Zealand Dollar
PLN — Polish Zloty
SEK — Swedish Krone
SGD — Singapore Dollar
USD — United States Dollar

Counterparty Abbreviations:

CAN — Canadian Imperial Bank of Commerce
CIT — Citibank NA
HSB — HSBC Bank USA NA
JPM — JPMorgan Chase Bank NA
RBC — Royal Bank of Canada
SCB — Standard Chartered Bank
SSB — State Street Bank and Trust Co.

(c) Annualized for a period of less than one year.

The accompanying notes are an integral part of these financial statements.

1. Organization

Lazard Retirement Series, Inc. (the "Fund") was incorporated in Maryland on February 13, 1997 and is registered under the Investment Company Act of 1940, as amended (the "1940 Act"), as an open-end management investment company. The Fund, comprised of twenty-one no-load portfolios (each referred to as a "Portfolio"), is currently offered only to separate accounts established by insurance companies to fund variable annuity contracts and variable life insurance policies. Portfolio shares may also be offered to certain qualified pension and retirement plans and accounts permitting accumulation of assets on a tax-deferred basis. Effective January 31, 2006, the Fund designated its existing class of shares as Service Shares and commenced offering Investor Shares. Investor Shares and Service Shares are identical, except as to the services offered to and expenses borne by each class of shares. As of June 30, 2016, only Lazard Retirement Emerging Markets Equity Portfolio had issued Investor Shares. Currently, only the following five Portfolios, each of which is "diversified", as defined in the 1940 Act, are offered: Lazard Retirement US Strategic Equity Portfolio ("US Strategic Equity Portfolio"), Lazard Retirement US Small-Mid Cap Equity Portfolio ("US Small-Mid Cap Equity Portfolio"), Lazard Retirement International Equity Portfolio ("International Equity Portfolio"), Lazard Retirement Emerging Markets Equity Portfolio ("Emerging Markets Equity Portfolio"), and Lazard Retirement Global Dynamic Multi Asset Portfolio ("Global Dynamic Multi Asset Portfolio"). Each of the other sixteen Portfolios had not commenced operations as of June 30, 2016.

2. Significant Accounting Policies

The accompanying financial statements are presented in conformity with GAAP. The Fund is an investment company and therefore applies specialized accounting guidance in Accounting Standards Codification Topic 946. The following is a summary of significant accounting policies consistently followed by the Fund in the preparation of the financial statements:

(a) Valuation of Investments—Market values for securities listed on the New York Stock Exchange ("NYSE"), NASDAQ national market or other US or foreign exchanges or markets are generally based on the last reported sales price on the exchange or market on which the security is principally traded on each valuation date; securities not traded on the valuation date are valued at the most recent quoted bid price. The Fund values NASDAQ-traded securities at the NASDAQ Official Closing Price, which may not be the last reported sales price in certain instances. Forward currency contracts generally are valued using quotations from an independent pricing service. Investments in money market funds are valued at the fund's net asset value ("NAV") per share.

Bonds and other fixed-income securities that are not exchange-traded are valued on the basis of prices provided by independent pricing services which are based on, among other things, trading in securities with similar characteristics, brokers' quotations and/or a matrix system which considers such factors as other security prices, yields and maturities.

The Valuation Committee of the Investment Manager, which meets periodically under the direction of the Board of Directors (the "Board"), may evaluate a variety of factors to determine the fair value of securities for which market quotations are determined not to be readily available or reliable. These factors include, but are not limited to, the type of security, the value of comparable securities, observations from financial institutions and relevant news events. Input from the Investment Manager's portfolio managers/analysts also will be considered.

If a significant event materially affecting the value of securities occurs between the close of the exchange or market on which the security is principally traded and the time when a Portfolio's NAV is calculated, or when current market quotations otherwise are determined not to be readily available or reliable (including restricted or other illiquid securities such as certain derivative instruments), such securities will be valued at their fair value as determined by, or in accordance with procedures approved by, the Board. The fair value of non-US securities may be determined with the assistance of an independent pricing service using correlations between the movement of prices of such securities and indices of US securities and other

appropriate indicators, such as closing market prices of relevant ADRs or futures contracts. Non-US securities may trade on days when a Portfolio is not open for business, thus affecting the value of the Portfolio's assets on days when Portfolio shareholders may not be able to buy or sell Portfolio shares.

The effect of using fair value pricing is that the NAV of a Portfolio will reflect the affected securities' values as determined in the judgment of the Board or its designee instead of being determined by the market. Using a fair value pricing methodology to price securities may result in a value that is different from the most recent closing price of a security and from the prices used by other investment companies to calculate their portfolios' NAVs.

(b) Portfolio Securities Transactions and Investment Income—Portfolio securities transactions are accounted for on trade date. Realized gain (loss) on sales of investments are recorded on a specific identification basis. Dividend income is recorded on the ex-dividend date except for certain dividends from non-US securities where the dividend rate is not available. In such cases, the dividend is recorded as soon as the information is received by the Portfolio. Interest income is accrued daily. The Portfolios amortize premiums and accrete discounts on fixed-income securities using the effective yield method.

During the period ended June 30, 2016, only Global Dynamic Multi Asset Portfolio traded in fixed-income securities.

A Portfolio may be subject to taxes imposed by non-US countries in which it invests. Such taxes are generally based upon income earned or capital gains (realized or unrealized). An affected Portfolio accrues and applies such taxes to net investment income, net realized gains and net unrealized gains concurrent with the recognition of income earned or capital gains (realized and unrealized) from the applicable portfolio securities.

As a result of several court cases in certain countries across the European Union, the International Equity Portfolio has filed additional tax reclaims for previously withheld taxes on dividends earned in those countries. These additional filings are subject to various administrative proceedings by the local jurisdictions' tax authorities within the European Union, as well as a number of related judicial proceedings. Uncertainty exists as to the ultimate resolution of these proceedings, the likelihood of receipt of these claims, and the potential timing of payment, and accordingly no amounts are reflected in the financial statements. Such amounts, if and when recorded, could result in an increase in the International Equity Portfolio's NAV per share.

(c) Foreign Currency Translation and Forward Currency Contracts—The accounting records of the Fund are maintained in US dollars. Portfolio securities and other assets and liabilities denominated in a foreign currency are translated daily into US dollars at the prevailing rates of exchange. Purchases and sales of securities, income receipts and expense payments are translated into US dollars at the prevailing exchange rates on the respective transaction dates.

The Portfolios do not isolate the portion of operations resulting from changes in foreign exchange rates on investments from the fluctuations arising from changes in their market prices. Such fluctuations are included in net realized and unrealized gain (loss) on investments. Net realized gain (loss) on foreign currency transactions and forward currency contracts represents net foreign currency gain (loss) from forward currency contracts, disposition of foreign currencies, currency gain (loss) realized between the trade and settlement dates on securities transactions, and the difference between the amount of dividends, interest and foreign withholding taxes recorded on the Portfolios' accounting records and the US dollar equivalent amounts actually received or paid. Net change in unrealized appreciation (depreciation) on foreign currency translations reflects the impact of changes in exchange rates on the value of assets and liabilities, other than investments in securities, during the period.

A forward currency contract is an agreement between two parties to buy or sell currency at a set price on a future date. Upon entering into these contracts, risks may arise from the potential inability of counterparties to meet the terms of their contracts and from

unanticipated movements in the value of the foreign currency relative to the US dollar.

The US dollar value of forward currency contracts is determined using quotations provided by an independent pricing service. Daily fluctuations in the value of such contracts are recorded as unrealized appreciation (depreciation) on forward currency contracts. When the contract is closed, a Portfolio records a realized gain (loss) equal to the difference between the value at the time it was opened and the value at the time it was closed.

During the period ended June 30, 2016, only Global Dynamic Multi Asset Portfolio traded in forward currency contracts.

(d) Federal Income Taxes—The Fund's policy is to continue to have each Portfolio qualify as a regulated investment company under Subchapter M of the Internal Revenue Code (the "Code") and to distribute all of its taxable income, including any net realized capital gains, to shareholders. Therefore, no federal income tax provision is required.

At December 31, 2015, the following Portfolio had unused realized capital loss carryovers which, for federal income tax purposes, could be used to offset future realized capital gains with no expiration date as follows:

Portfolio	Short-Term	Long-Term
Emerging Markets Equity	$2,845,581	$21,282,968

Under current tax law, certain late year losses, as defined by the Code, within the taxable year may be deferred and treated as occurring on the first day of the following tax year. For the tax year ended December 31, 2015, the following Portfolio elected to defer such losses as follows:

Portfolio	Post October Capital Loss Deferral	Late Year Ordinary Loss Deferral
Global Dynamic Multi Asset	$ —	$(786,134)

Management has analyzed the Portfolios' tax positions, and has concluded that no liability for unrecognized tax benefits should be recorded related to uncertain tax positions taken on returns filed for open tax years (2012-2014), or expected to be taken in the Portfolios' 2015 tax returns.

(e) Dividends and Distributions—Dividends from net investment income, if any, will be declared and paid annually. During any particular year, net realized gains from investment transactions in excess of available capital loss carryforwards would be taxable to the Portfolios, if not distributed. The Portfolios intend to declare and distribute these amounts, at least annually, to shareholders; however, to avoid taxation, a second distribution may be required. Differences in per share distributions, by class, are generally due to differences in class specific expenses.

Income and capital gains distributions are determined in accordance with federal income tax regulations which may differ from GAAP. These book/tax differences, which may result in distribution reclassifications, are primarily due to differing treatments of foreign currency transactions, wash sales, passive foreign investment companies and distributions from real estate investment trusts and partnerships. The book/tax differences relating to shareholder distributions may result in reclassifications among certain capital accounts.

(f) Allocation of Expenses—Expenses not directly chargeable to a specific Portfolio are allocated among all Portfolios primarily on the basis of relative net assets. Portfolios accrue distribution and service (12b-1) fees to Service Shares. The Portfolios' income, expenses (other than class specific expenses) and realized and unrealized gains and losses are allocated proportionally each day between the classes based upon the relative net assets of each class.

(g) Estimates—The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increases and decreases in net assets resulting

from operations during the reporting period. Actual results could differ from those estimates.

(h) Net Asset Value—NAV per share for each class of each Portfolio is determined each day the NYSE is open for trading as of the close of regular trading on the NYSE (generally 4:00 p.m. Eastern time). The Fund will not treat an intraday unscheduled disruption in NYSE trading as a closure of the NYSE, and will price its shares as of 4:00 p.m., if the particular disruption directly affects only the NYSE. NAV per share is determined by dividing the value of the total assets of the Portfolio represented by such class, less all liabilities, by the total number of Portfolio shares of such class outstanding.

3. Investment Management, Administration, Distribution and Transfer Agency Agreements

The Fund, on behalf of the Portfolios, has entered into a management agreement (the "Management Agreement") with the Investment Manager. Pursuant to the Management Agreement, the Investment Manager regularly provides each Portfolio with investment research, advice and supervision and furnishes continuously an investment program for each Portfolio consistent with its investment objective and policies, including the purchase, retention and disposition of securities. For its services provided to the Portfolios, the Investment Manager earns a management fee, accrued daily as a percentage of its average daily net assets and payable by each Portfolio monthly, at the annual rate set forth below:

Portfolio	Annual Rate
US Strategic Equity	0.70%
US Small-Mid Cap Equity	0.75
International Equity	0.75
Emerging Markets Equity	1.00
Global Dynamic Multi Asset (a)	0.80

(a) From January 1, 2016 to June 28, 2016, percentage was 0.85%.

The Investment Manager has voluntarily agreed to reduce its fees and, if necessary, reimburse the Portfolios through May 1, 2017 if annualized operating expenses, exclusive of taxes, brokerage, interest on borrowings, fees and expenses of "Acquired Funds" (as defined in Form N-1A) and extraordinary expenses, but including the management fee stated in the Management Agreement between the Investment Manager and the Fund, on behalf of the Portfolios, exceed the following percentages of the value of the Portfolios' average daily net assets for the respective shares:

Portfolio	Service Shares	Investor Shares
US Strategic Equity	1.00%	N/A
US Small-Mid Cap Equity	1.25	N/A
International Equity	1.10	N/A
Emerging Markets Equity	1.55	1.30%
Global Dynamic Multi Asset	1.05	N/A

During the period ended June 30, 2016, the Investment Manager waived its management fees and reimbursed the following Portfolios for other expenses as follows:

	Service Shares	
Portfolio	Management Fees Waived	Expenses Reimbursed
US Strategic Equity	$ 36,511	$32,658
US Small-Mid Cap Equity	29,609	—
International Equity	7,302	—
Global Dynamic Multi Asset	264,316	—

The aforementioned waivers and/or reimbursements are not subject to recoupment by the Investment Manager.

The Fund has entered into an administration agreement with State Street to provide certain administrative services. Each Portfolio bears the cost of such services at a fixed annual rate of $42,500, plus 0.02% of average daily net assets up to $1 billion and 0.01% of average daily net assets over $1 billion. State Street has agreed to waive up to $18,750 of the $42,500 annual fee for the US Strategic Equity Portfolio until the Portfolio's net assets reach $25 million. During the period ended June 30, 2016, State Street waived $9,375 of its fee for the US Strategic Equity Portfolio.

The Fund has a distribution agreement with Lazard Asset Management Securities LLC (the "Distributor"), a wholly-owned subsidiary of the Investment Manager, to serve as the distributor for shares of each Portfolio. The Distributor bears the cost of printing and mailing prospectuses to potential investors and certain expenses in connection with the offering of Portfolio shares.

Under a distribution and servicing plan adopted pursuant to Rule 12b-1 under the 1940 Act, each Portfolio pays a monthly fee to the Distributor, at an annual rate of 0.25% of the average daily net assets of its Service Shares, for distribution and servicing of accounts. The Distributor may make payments to participating insurance companies, certain financial institutions, securities dealers and other industry professionals for providing these services.

BFDS is the Fund's transfer and dividend disbursing agent. For its services, BFDS receives a monthly fee computed on the basis of the number of shareholder accounts it maintains, subject to a minimum fee amount per share class in each Portfolio, and is reimbursed for certain out-of-pocket expenses. BFDS has agreed to waive the monthly minimum fee for the first six months after a new Portfolio or share class has commenced operations.

4. Directors' Compensation

Certain Directors of the Fund are officers of the Investment Manager. Each Director who is not an affiliated person of the Investment Manager or any of its affiliates is paid by the Fund, The Lazard Funds, Inc., Lazard Global Total Return and Income Fund, Inc. and Lazard World Dividend & Income Fund, Inc. (collectively with the Fund, the "Lazard Fund Complex"), each a registered management investment company advised by the Investment Manager: (1) an annual retainer of $190,000, (2) an additional annual fee of $20,000 to the lead Independent Director (an "Independent Director" is a Director who is not an "interested person" (as defined in the 1940 Act) of the Fund), and (3) an additional annual fee of $10,000 to the Audit Committee Chair. The Independent Directors may be paid additional compensation for participation on ad hoc committees or other work performed on behalf of the Board. The Independent Directors also are reimbursed for travel and other out-of-pocket expenses for attending Board and committee meetings. The Directors do not receive benefits from the Fund pursuant to any pension, retirement or similar arrangement. Independent Directors' fees are allocated among the portfolios in the Lazard Fund Complex at a rate of $5,000 per portfolio with the remainder allocated based upon each portfolio's proportionate share of combined net assets. The Statements of Operations show the Independent Directors' fees and expenses paid by each Portfolio.

5. Securities Transactions and Transactions with Affiliates

Purchases and sales of portfolio securities (excluding short-term investments) for the period ended June 30, 2016 were as follows:

Portfolio	Purchases	Sales
US Strategic Equity	$ 2,946,213	$ 4,534,029
US Small-Mid Cap Equity	24,893,093	28,341,328
International Equity	79,556,518	89,564,388
Emerging Markets Equity	62,577,166	75,672,032
Global Dynamic Multi Asset	134,185,444	108,183,400

	US Treasury Securities	
Portfolio	Purchases	Sales
Global Dynamic Multi Asset	$2,600,191	$1,389,933

For the period ended June 30, 2016, the Portfolios did not engage in any cross-trades in accordance with Rule 17a-7 under the 1940 Act, and no brokerage commissions were paid to affiliates of the Investment Manager or other affiliates of the Fund for portfolio transactions executed on behalf of the Fund.

6. Investment Risks

(a) Non-US Securities Risk—Certain Portfolios may invest in securities of foreign entities and in instruments denominated in foreign currencies which involve risks not typically associated with investments in US securities. Such Portfolios' performance will be influenced by political, social and economic factors affecting the non-US countries and companies in which the Portfolios invest. Non-US securities carry special risks, such as less developed or less efficient trading markets, political instability, a lack of company information, differing auditing and legal standards, and, potentially, less liquidity. In addition, investments denominated in currencies other than US dollars may experience a decline in value, in US dollar terms, due solely to fluctuations in currency exchange rates. The Portfolios' investments could be adversely affected by delays in, or a refusal to grant, repatriation of funds or conversion of emerging market currencies. Emerging market countries can generally have economic structures that are less diverse and mature, and political

systems that are less stable, than those of developed countries. The economies of countries with emerging markets may be based predominantly on only a few industries, may be highly vulnerable to changes in local or global trade conditions, and may suffer from extreme debt burdens or volatile inflation rates. The securities markets of emerging market countries have historically been extremely volatile. These market conditions may continue or worsen. Significant devaluation of emerging market currencies against the US dollar may occur subsequent to acquisition of investments denominated in emerging market currencies. Investments in these countries may be subject to political, economic, legal, market and currency risks. The risks may include less protection of property rights and uncertain political and economic policies, the imposition of capital controls and/or foreign investment limitations by a country, nationalization of businesses and the imposition of sanctions by other countries, such as the US.

(b) Fixed-Income and Debt Securities Risk—Global Dynamic Multi Asset Portfolio invests in fixed-income securities. The market value of a debt security may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. The debt securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity can decline unpredictably in response to overall economic conditions or credit tightening. Prices of bonds and other debt securities tend to move inversely with changes in interest rates. Interest rate risk is usually greater for fixed-income securities with longer maturities or durations. A rise in interest rates (or the expectation of a rise in interest rates) may result in periods of volatility, decreased liquidity and increased redemptions, and, as a result, the Portfolio may have to liquidate portfolio securities at disadvantageous prices. Risks associated with rising interest rates are heightened given that interest rates in the US and other countries are at or near historic lows.

The Portfolio's investments in lower-rated, higher-yielding securities ("junk bonds") are subject to greater credit risk than its higher rated investments. Credit risk is the risk that the issuer will not make interest or principal payments, or will not make payments on a timely basis. Non-investment grade securities tend to be more volatile, less liquid and are considered speculative. If there is a decline, or perceived decline, in the credit quality of a debt security (or any guarantor of payment on such security), the security's value could fall, potentially lowering the Portfolio's share price. The prices of non-investment grade securities, unlike investment grade debt securities, may fluctuate unpredictably and not necessarily inversely with changes in interest rates. The market for these securities may be less liquid and therefore these securities may be harder to value or sell at an acceptable price, especially during times of market volatility or decline.

Some debt securities may give the issuer the option to call, or redeem, the securities before their maturity, and, during a time of declining interest rates, the Portfolio may have to reinvest the proceeds in an investment offering a lower yield (and the Portfolio may not fully benefit from any increase in the value of its portfolio holdings as a result of declining interest rates).

7. Contractual Obligations

The Fund enters into contracts in the normal course of business that contain a variety of indemnifications. A Portfolio's maximum exposure under these arrangements is unknown. Management has reviewed the Fund's existing contracts and expects the risk of loss to be remote.

8. Fair Value Measurements

Fair value is defined as the price that a Portfolio would receive to sell an asset, or would pay to transfer a liability, in an orderly transaction between market participants at the date of measurement. The Fair Value Measurements and Disclosures provisions of GAAP also establish a framework for measuring fair value, and a three-level hierarchy for fair value measurement that is based upon the transparency of inputs to the valuation of an asset or liability. Inputs may be observable or unobservable and refer, broadly, to the assumptions that market participants would use in pricing the asset or liability. Observable inputs reflect the assumptions that market participants would use in

pricing the asset or liability based on market data obtained from sources independent of the Fund. Unobservable inputs reflect the Fund's own assumptions about the assumptions that market participants would use in pricing the asset or liability, developed based on the best information available in the circumstances. Each investment's fair value measurement level within the fair value hierarchy is based on the lowest level of any input that is significant to the overall fair value measurement. The three-level hierarchy of inputs is summarized below:

- Level 1 – unadjusted quoted prices in active markets for identical investments
- Level 2 – other significant observable inputs (including unadjusted quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)
- Level 3 – significant unobservable inputs (including the Fund's own assumptions in determining the fair value of investments)

Changes in valuation technique may result in transfer into or out of the current assigned level within the hierarchy.

The inputs or methodology used for valuing securities are not necessarily an indication of the risks associated with investing in these securities.

The following table summarizes the valuation of the Portfolios' investments by each fair value hierarchy level as of June 30, 2016:

Description	Unadjusted Quoted Prices in Active Markets for Identical Investments (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Balance as of June 30, 2016

** Please refer to Portfolios of Investments (page 15 through 33) and Notes to Portfolios of Investments (page 35 through 36) for portfolio holdings by country and industry.*

*** Other financial instruments are derivative instruments which are valued at their respective unrealized appreciation (depreciation).*

Certain securities to which footnote (c) in the Notes to Portfolios of Investments apply are included in Level 2 and were valued based on reference to similar securities which were trading on active markets.

In connection with the periodic implementation of fair value pricing procedures with respect to non-US securities (see Note 2(a)), certain equity securities (other than those securities described in footnote (c) in the Notes to Portfolios of Investments) in the International Equity, Emerging Markets Equity and Global Dynamic Multi Asset Portfolios can transfer from Level 1 to Level 2 as a result of fair value pricing procedure triggers being met and would revert to Level 1 when the fair value pricing procedure triggers are no longer met. Accordingly, a significant portion of the Portfolios' investments are categorized as Level 2 investments. A Portfolio recognizes all transfers between levels as though they were transferred at the beginning of the reporting period.

At June 30, 2016, securities valued at the following amounts were transferred from Level 2 to Level 1:

Portfolio	Amount
International Equity	$ 4,577,992
Emerging Markets Equity	62,990,444

There were no other transfers into or out of Levels 1, 2 or 3 during the period ended June 30, 2016.

For further information regarding security characteristics see Portfolios of Investments.

9. Derivative Instruments

Certain Portfolios may use derivative instruments, including forward currency contracts.

Forward currency contracts may be used for hedging purposes or to seek to increase returns.

Global Dynamic Multi Asset Portfolio

During the period ended June 30, 2016, the approximate average monthly notional exposure for derivative instruments was as follows:

Forward currency contracts	$73,300,000

The following table summarizes the fair value of derivative instruments on the Statement of Assets and Liabilities as of June 30, 2016:

	Fair Value
Asset Derivatives	
Foreign Exchange Risk:	
Gross unrealized appreciation on forward currency contracts	$1,507,461
Liability Derivatives	
Foreign Exchange Risk:	
Gross unrealized depreciation on forward currency contracts	$ 997,942

The effect of derivative instruments on the Statement of Operations for the period ended June 30, 2016 was:

	Amount
Realized Gain (Loss) on Derivatives	
Foreign Exchange Risk:	
Net realized gain (loss) on foreign currency transactions and forward currency contracts	$989,672
Net Change in Unrealized Appreciation (Depreciation) on Derivatives	
Foreign Exchange Risk:	
Net change in unrealized appreciation (depreciation) on foreign currency translations and forward currency contracts	$ 74,102

See Note 2(c) and the Portfolios of Investments for additional disclosures about derivative instruments.

None of the other Portfolios presented traded in derivative instruments during the period ended June 30, 2016.

As of June 30, 2016, Global Dynamic Multi Asset Portfolio holds derivative instruments that are eligible for offset in the Statement of Assets and Liabilities and are subject to master netting arrangements. A master netting arrangement is an agreement between two counterparties who have multiple contracts with each other that provides for the net settlement of all contracts, as well as any cash collateral, through a single payment in the event of default on, or termination of, any one contract.

The required information for the affected Portfolio is presented in the below table, as of June 30, 2016:

Global Dynamic Multi Asset Portfolio

Description	Gross Amounts of Recognized Assets	Gross Amounts Offset in the Statement of Assets and Liabilities	Net Amounts of Assets Presented in the Statement of Assets and Liabilities

Independent Directors[3]:		
Franci J. Blassberg (62)	Director (August 2014)	Debevoise & Plimpton LLP, a law firm, *Of Counsel* (2013 – present); previously, *Partner* (through 2012)
		Cornell Law School, *Visiting Professor of Practice* (2015 – present); previously, *Distinguished Practitioner in Residence* (Fall 2013 and Fall 2014)
Kenneth S. Davidson (71)	Director (April 1997)	Davidson Capital Management Corporation, an investment manager, *President* (1978 – present)
		Landseer Advisors LLC, an investment manager, *Senior Advisor* (2012 – 2014)
		Aquiline Holdings LLC, an investment manager, *Partner* (2006 – 2012)
Nancy A. Eckl (53)	Director (May 2007)	College Retirement Equities Fund (eight accounts), *Trustee* (2007 – present)
		TIAA-CREF Funds (67 funds) and TIAA-CREF Life Funds (11 funds), *Trustee* (2007 – present)
		TIAA Separate Account VA-1, *Member of the Management Committee* (2007 – present)
		American Beacon Advisors, Inc. ("American Beacon") and certain funds advised by American Beacon, *Vice President* (1990 – 2006)
Trevor W. Morrison (45)	Director (April 2014)	New York University School of Law, *Dean and Eric M. and Laurie B. Roth Professor of Law* (2013 – present)
		Columbia Law School, *Professor of Law* (2008 – 2013)
Richard Reiss, Jr. (72)	Director (April 1997)	Georgica Advisors LLC, an investment manager, *Chairman* (1997 – present)
		Resource Americas, Inc., a real estate asset management company, *Director* (2016 – present)
		O'Charley's, Inc., a restaurant chain, *Director* (1984 – 2012)
Robert M. Solmson (68)	Director (September 2004)	Fairwood Capital, LLC, a private investment corporation engaged primarily in real estate and hotel investments, *President* (2008 – present)

Name (Age) Address[1]	Position(s) with the Fund (Since) and Term[2]	Principal Occupation(s) and Other Public Company Directorships Held During the Past Five Years[2]
Interested Directors[4]:		
Charles L. Carroll (55)	Chief Executive Officer, President and Director (June 2004)	Investment Manager, *Deputy Chairman and Head of Global Marketing* (2004 – present)
Ashish Bhutani (56)	Director (July 2005)	Investment Manager, *Chief Executive Officer* (2004 – present) Lazard Ltd, *Vice Chairman and Director* (2010 – present)

(1) The address of each Director of the Fund is Lazard Asset Management LLC, 30 Rockefeller Plaza, New York, New York 10112-6300.

(2) Each Director serves as a Director for each of the funds in the Lazard Fund Complex (comprised of, as of July 31, 2016, 40 active investment portfolios). Each Director serves an indefinite term, until his or her successor is elected, and each Director serves in the same capacity for the other funds in the Lazard Fund Complex.

(3) "Independent Directors" are not "interested persons" (as defined in the 1940 Act) of the Fund.

(4) Messrs. Bhutani and Carroll are "interested persons" (as defined in the 1940 Act) of the Fund because of their positions with the Investment Manager.

The Fund's Statement of Additional Information contains further information about the Directors and is available without charge by calling 800-823-6300, or online, at www.LazardNet.com.

Name (Age) Address[1]	Position(s) with the Fund (Since) and Term[2]	Principal Occupation(s) During the Past Five Years
Officers[3]:		
Nathan A. Paul (43)	Vice President and Secretary (April 2002)	Managing Director and General Counsel of the Investment Manager
Christopher Snively (31)	Chief Financial Officer (March 2016)	Senior Vice President of the Investment Manager (since November 2015)
		Assurance Manager at PricewaterhouseCoopers LLP (2008 – November 2015)
Stephen St. Clair (57)	Treasurer (May 2003)	Vice President of the Investment Manager
Mark R. Anderson (46)	Chief Compliance Officer (September 2014)	Director and Chief Compliance Officer of the Investment Manager (since September 2014)
		Senior Vice President, Counsel and Deputy Chief Compliance Officer of AllianceBernstein L.P. (2004 – August 2014)
Tamar Goldstein (41)	Assistant Secretary (February 2009)	Director (since February 2016, previously Senior Vice President), and Director of Legal Affairs (since July 2015) of the Investment Manager
Shari L. Soloway (34)	Assistant Secretary (November 2015)	Senior Vice President, Legal and Compliance, of the Investment Manager (since September 2015)
		Vice President and Associate General Counsel of GE Asset Management (July 2011 – September 2015)
		Associate at Clifford Chance US LLP (2006 – July 2011)
Cesar A. Trelles (41)	Assistant Treasurer (December 2004)	Vice President of the Investment Manager

(1) The address of each officer of the Fund is Lazard Asset Management LLC, 30 Rockefeller Plaza, New York, New York 10112-6300.

(2) Each officer serves for an indefinite term, until his or her successor is elected and qualifies or until his or her earlier resignation or removal. Each officer serves in the same capacity for the other funds in the Lazard Fund Complex.

(3) In addition to Charles L. Carroll, President, whose information is included in the Interested Directors section.

Proxy Voting

A description of the policies and procedures used to determine how proxies relating to Fund portfolio securities are voted is available (1) without charge, upon request, by calling (800) 823-6300 or (2) on the Securities and Exchange Commission (the "SEC") website at http://www.sec.gov.

The Fund's proxy voting record for the most recent 12-month period ended June 30 is available (1) without charge, upon request, by calling (800) 823-6300 or (2) on the SEC's website at http://www.sec.gov. Information as of June 30 each year will generally be available by the following August 31.

Form N-Q

The Fund files a complete schedule of each Portfolio's holdings for the first and third quarters of its fiscal year with the SEC on Form N-Q. The Fund's Forms N-Q are available on the SEC's website at http://www.sec.gov and may be reviewed and copied at the SEC's Public Reference Room in Washington, D.C. Information on the operation of the SEC's Public Reference Room may be obtained by calling 1-800-SEC-0330.

Board Consideration of Management Agreement

All Portfolios except Lazard Retirement Emerging Markets Equity Advantage Portfolio, Lazard Retirement International Equity Advantage Portfolio, Lazard Retirement International Equity Concentrated Portfolio and Lazard Retirement Managed Equity Volatility Portfolio

At a meeting of the Board held on June 28-29, 2016, the Board considered the approval, for an additional annual period, of the Management Agreement between the Fund, on behalf of the Portfolios, and the Investment Manager. The Independent Directors were assisted in their review by independent legal counsel, who advised the Board on relevant legal standards and met with the Independent Directors in executive session separate from representatives of the Investment Manager.

Services Provided

Representatives of the Investment Manager discussed with the Board the Investment Manager's written presentation provided in advance of the meeting addressing, among other matters, the nature, extent and quality of services that the Investment Manager provides the Fund, including a discussion of the Investment Manager and its clients (of which the Lazard Funds complex of 40 active funds comprised approximately $28 billion (as of April 30, 2016) of the approximately $191 billion of total assets under the management of the Investment Manager and its global affiliates as of March 31, 2016). The Investment Manager's representatives noted that the Investment Manager believes that the Fund and its shareholders continue to be able to obtain significant benefits as a result of the resources and support of the Investment Manager's global research, portfolio management, operations, technology, legal and compliance and marketing infrastructure. The Directors also considered information provided by the Investment Manager regarding its personnel, resources, financial condition and experience; the Fund's distribution channels and the relationships with various intermediaries; marketing activities on behalf of the Portfolios; and Portfolio asset flows and the growth or decline in asset levels.

The Directors considered the various services provided by the Investment Manager including the Investment Manager's research and portfolio management capabilities and oversight of day-to-day operations, including supervision of fund accounting and administration-related services and assistance in meeting legal and regulatory requirements. The Directors also considered the Investment Manager's infrastructure and agreed that the Fund benefits from the services and infrastructure provided by the Investment Manager. The Directors accepted management's assertion that such services and infrastructure are greater than those typically provided to a $28 billion fund complex not managed by a large, global firm such as the Investment Manager.

Comparative Fee, Expense Ratio and Performance Information

The Directors reviewed comparative fee, expense ratio and performance (through March 31, 2016) information prepared by Strategic Insight, noting the limitations of certain Strategic Insight comparison groups (each, a "Group") and broader Morningstar categories (each, a "Category"). Strategic Insight's analyses were for the Service Shares class of each Portfolio

except for the Emerging Markets Equity Portfolio, which has both Service Shares and Investor Shares classes outstanding.

Advisory Fees and Expense Ratios. The Directors discussed the management fees paid to the Investment Manager (referred to in the Strategic Insight materials as "advisory fees") and expense ratios for each Portfolio. They noted the methodology and assumptions used by Strategic Insight. The Directors considered that the Investment Manager continues to voluntarily enter into fee waiver and expense reimbursement agreements for all of the active Portfolios and that for certain of these Portfolios the Investment Manager was waiving advisory fees and/or reimbursing expenses.

Except for the Capital Allocator Opportunistic Strategies, Enhanced Opportunities, Fundamental Long/Short, Global Dynamic Multi Asset, Global Listed Infrastructure, Global Strategic Equity and US Strategic Equity Portfolios (of which only the Global Dynamic Multi Asset and US Strategic Equity Portfolios are active), the current gross advisory fee was at or lower than the Portfolio's relevant Group median. It was noted that the Investment Manager proposed to lower the advisory fee for the Global Dynamic Multi Asset Portfolio by five basis points, which would bring the fee closer to the median, and that, for the US Strategic Equity Portfolio, the gross advisory fee was only one tenth of a basis point above the median.

For the active Portfolios, total expenses were at or below the median of the relevant Group, except for the Global Dynamic Multi Asset Portfolio (only nine basis points above the median), the US Small-Mid Cap Equity Portfolio and the Emerging Markets Equity Portfolio (Investor Shares total expenses less than two basis points above the Group median).

The Directors also considered fees paid to the Investment Manager by funds advised or sub-advised by the Investment Manager utilizing the same investment strategies as the Portfolios, as well as the Investment Manager's separately managed accounts with similar investment objectives, policies and strategies (for each Portfolio, collectively with such funds, "Similar Accounts"). The Directors discussed the fees paid to the Investment Manager by the Fund's Portfolios compared to the fees paid to the Investment Manager by Similar Accounts. Representatives of the Investment Manager discussed the nature of the Similar Accounts and the extensive differences, from the Investment Manager's perspective, in services provided to the different types of Similar Accounts as compared to the services provided to the Portfolios. The Directors considered the relevance of the fee information provided for Similar Accounts managed by the Investment Manager, in light of the significant differences in services provided, to evaluate the fees paid to the Investment Manager by the Portfolios.

Performance. Strategic Insight's performance analyses compared each Portfolio's investment returns to those of the funds in the relevant Group and Category over one-, three-, five- and ten-year periods ended March 31, 2016 (as applicable).

The Directors noted that performance of the International Equity Portfolio was above the Group and Category averages in all periods; US Small-Mid Cap Equity Portfolio was generally below the Group average and generally above the Category average in all periods; the Emerging Markets Equity Portfolio was below the Group and Category averages for the one- and three-year periods (except for the one-year period where Investor Shares were slightly above the Category average) and above the averages for all other periods; the US Strategic Equity Portfolio was below the Group and Category averages in all periods; and the Global Dynamic Multi Asset Portfolio was above the Group and Category averages in all periods.

At the meeting, the Directors received and would continue to receive regular updates on the Investment Manager's efforts in respect of underperforming Portfolios.

Investment Manager Profitability and Economies of Scale

The Directors reviewed information prepared by the Investment Manager for each Portfolio concerning profits realized by the Investment Manager and its affiliates resulting from the Management Agreement, calculated using the actual revenues received for the calendar year ended December 31, 2015 and the Investment Manager's cost allocation methodology to compute an estimate of each Portfolio's costs to the Investment Manager. The Investment Manager's rep-

resentatives stated that neither the Investment Manager nor its affiliates receive any significant indirect benefits from the Investment Manager acting as investment adviser to the Portfolios. The Investment Manager's representatives reviewed with the Board information provided on the Investment Manager's brokerage practices and the Portfolios' brokerage allocation, commission payments and soft dollar commissions and benefits. The representatives of the Investment Manager reminded the Board that the Investment Manager is continuing to support distribution relationships through direct payments from its or its affiliates' own resources to third parties in connection with distribution and shareholder servicing and/or administrative and recordkeeping services, and noted that the Fund does not bear any related costs other than the 0.25% 12b-1 fee pursuant to the Distribution and Servicing Plan adopted for the Portfolios' Service Shares.

The profitability percentages were within ranges determined by relevant court cases not to be so disproportionately large that they bore no reasonable relationship to the services rendered. Representatives of the Investment Manager stated that the Investment Manager believed the profits are not unreasonable in light of the services provided and other factors. The Directors considered the Investment Manager's estimated profitability with respect to each Portfolio as part of their evaluation of whether the Portfolio's fee under the Management Agreement, considered in relation to the mix of services provided by the Investment Manager, including the nature, extent and quality of such services, and evaluated profitability in light of the relevant circumstances for each Portfolio, including the size of each Portfolio and the trend in asset growth or decline, supported the renewal of the Management Agreement. Representatives of the Investment Manager and the Directors discussed ways economies of scale could be realized and how they could be shared, including the Investment Manager's reinvestment of money back into its business, waiving or reimbursing Portfolio management fees and expenses (including for some Portfolios amending the Management Agreement to lower contractual management fees), adding discounts to a Portfolio's management fee schedule as a Portfolio's assets increase or by instituting relatively low management fees from inception. It was noted that, for Portfolios with declining or stable assets or a low level of assets, the extent to which the Investment Manager may have realized any economies of scale would be reduced.

At the conclusion of these discussions, each of the Directors expressed the opinion that he or she had been furnished with such information as may reasonably be necessary to make an informed business decision with respect to evaluation of the renewal of the Management Agreement. Based on its discussions and considerations as described above, the Board made the following conclusions and determinations.

- The Board concluded that the nature, extent and quality of the services provided by the Investment Manager are adequate and appropriate, noting the benefits of advisory and research services and other services and infrastructure (as discussed above) associated with an approximately $191 billion global asset management business.

- The Board was generally satisfied with the overall performance of most of the Portfolios, either because relative performance in the Group and/or Category was satisfactory or performance was otherwise consistent with the investment approach employed for a Portfolio. For certain Portfolios that were not performing in accordance with expectations, the Board would continue to monitor performance.

- The Board concluded that each Portfolio's fee paid to the Investment Manager supported the renewal of the Management Agreement in light of the considerations discussed above.

- The Board recognized that economies of scale may be realized as the assets of the Portfolios increase and determined that they would continue to consider potential material economies of scale.

In evaluating the Management Agreement, the Board relied on the information described above as well as other information provided by the Investment Manager, in addition to information received on a routine and regular basis throughout the year relating to the

operations of the Fund and the investment management and other services provided under the Management Agreement, including information on the investment performance of the Portfolios in comparison to similar mutual funds and benchmark performance indices; general market outlook as applicable to the Portfolios; and compliance reports. The Board also relied on its previous knowledge, gained through meetings and other interactions with the Investment Manager, of the Fund and the services provided to the Fund by the Investment Manager. The Board considered these conclusions and determinations in their totality and determined to approve the Fund's Management Agreement for each Portfolio. In deciding whether to vote to approve the Management Agreement for each Portfolio, each Director may have accorded different weights to different factors so that each Director may have had a different basis for his or her decision.

LETTER FROM THE CHAIRMAN

Dear Contract Owners:

Global headwinds continue to restrain growth and profits, though developed market equities have remained resilient, underpinned by record-low interest rates. Rates are likely to stay low over the medium term, as many central banks have implemented accommodative monetary policies in an effort to reinvigorate their economies. Markets will have to deal with an additional headwind in the coming months and years as investors grapple with the fallout from the United Kingdom's decision to leave the European Union. That process will take a considerable period of time to play out against a highly uncertain backdrop. Weakness in the pound sterling in the wake of the referendum has been a welcome shock absorber for UK financial markets.

Emerging markets have been beneficiaries of firmer commodity prices and diminishing fears of sharply higher interest rates from the U.S. Federal Reserve. China remains a source of concern for investors, as overcapacity in its manufacturing sector inhibits the government's attempt to change its domestic economy from one driven by exports to a consumer-driven model.

At MFS®, we believe it is best to view markets through a long lens and not react to short-term swings. That makes it possible to filter out market noise and focus on long-term fundamentals.

In our view, the professional guidance of a financial advisor, along with a patient, long-term approach, will help you reach your investment objectives.

Respectfully,

Robert J. Manning

BB	7.2%
B	2.7%
CCC	0.4%
C (o)	0.0%
U.S. Government	11.4%
Federal Agencies	24.8%
Not Rated	(0.5)%
Non-Fixed Income (o)	0.0%
Cash & Cash Equivalents	1.1%
Other	0.6%

Portfolio facts (i)

Average Duration (d)	5.4
Average Effective Maturity (m)	8.1 yrs.

(a) For all securities other than those specifically described below, ratings are assigned to underlying securities utilizing ratings from Moody's, Fitch, and Standard & Poor's rating agencies and applying the following hierarchy: If all three agencies provide a rating, the middle rating (after dropping the highest and lowest ratings) is assigned; if two of the three agencies rate a security, the lower of the two is assigned. Ratings are shown in the S&P and Fitch scale (e.g., AAA). Securities rated BBB or higher are considered investment grade. All ratings are subject to change. U.S. Government includes securities issued by the U.S. Department of the Treasury. Federal Agencies includes rated and unrated U.S. Agency fixed-income securities, U.S. Agency mortgage-backed securities, and collateralized mortgage obligations of U.S. Agency mortgage-backed securities. Not Rated includes fixed income securities, including fixed income futures contracts, which have not been rated by any rating agency. Non-Fixed Income includes any equity securities (including convertible bonds and equity derivatives) and/or commodity-linked derivatives. The fund may not hold all of these instruments. The fund is not rated by these agencies.

(d) Duration is a measure of how much a bond's price is likely to fluctuate with general changes in interest rates, e.g., if rates rise 1.00%, a bond with a 5-year duration is likely to lose about 5.00% of its value due to the interest rate move.

(i) For purposes of this presentation, the components include the value of securities, and reflect the impact of the equivalent exposure of derivative positions, if any. These amounts may be negative from time to time. Equivalent exposure is a calculated amount that translates the derivative position into a reasonable approximation of the amount of the underlying asset that the portfolio would have to hold at a given point in time to have the same price sensitivity that results from the portfolio's ownership of the derivative contract. When dealing with derivatives, equivalent exposure is a more representative measure of the potential impact of a position on portfolio performance than value. The bond component will include any accrued interest amounts.

(m) In determining an instrument's effective maturity for purposes of calculating the fund's dollar-weighted average effective maturity, MFS uses the instrument's stated maturity or, if applicable, an earlier date on which MFS believes it is probable that a maturity-shortening device (such as a put, pre-refunding or prepayment) will cause the instrument to be repaid. Such an earlier date can be substantially shorter than the instrument's stated maturity.

(o) Less than 0.1%.

Where the fund holds convertible bonds, these are treated as part of the equity portion of the portfolio.

Cash & Cash Equivalents includes any cash, investments in money market funds, short-term securities, and other assets less liabilities. Please see the Statement of Assets and Liabilities for additional information related to the fund's cash position and other assets and liabilities.

Other includes equivalent exposure from currency derivatives and/or any offsets to derivative positions.

Percentages are based on net assets as of 6/30/16.

The portfolio is actively managed and current holdings may be different.

EXPENSE TABLE

Fund Expenses Borne by the Contract Holders during the Period, January 1, 2016 through June 30, 2016

As a contract holder of the fund, you incur ongoing costs, including management fees; distribution and/or service (12b-1) fees; and other fund expenses. This example is intended to help you understand your ongoing costs (in dollars) of investing in the fund and to compare these costs with the ongoing costs of investing in other mutual funds.

The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire period January 1, 2016 through June 30, 2016.

Actual Expenses

The first line for each share class in the following table provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the first line under the heading entitled "Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes

The second line for each share class in the following table provides information about hypothetical account values and hypothetical expenses based on the fund's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the fund's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the fund and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight the fund's ongoing costs only and do not take into account the fees and expenses imposed under the variable contracts through which your investment in the fund is made. Therefore, the second line for each share class in the table is useful in comparing ongoing costs associated with an investment in vehicles (such as the fund) which fund benefits under variable annuity and variable life insurance contracts and to qualified pension and retirement plans only, and will not help you determine the relative total costs of investing in the fund through variable annuity and variable life insurance contracts. If the fees and expenses imposed under the variable contracts were included, your costs would have been higher.

Share Class		Annualized Expense Ratio	Beginning Account Value 1/01/16	Ending Account Value 6/30/16	Expenses Paid During Period (p) 1/01/16-6/30/16
Initial Class	Actual	0.53%	$1,000.00	$1,056.92	$2.71
	Hypothetical (h)	0.53%	$1,000.00	$1,022.23	$2.66
Service Class	Actual	0.78%	$1,000.00	$1,055.56	$3.99
	Hypothetical (h)	0.78%	$1,000.00	$1,020.98	$3.92

(h) 5% class return per year before expenses.

(p) "Expenses Paid During Period" are equal to each class's annualized expense ratio, as shown above, multiplied by the average account value over the period, multiplied by 182/366 (to reflect the one-half year period).

PORTFOLIO OF INVESTMENTS – 6/30/16 (unaudited)

The Portfolio of Investments is a complete list of all securities owned by your fund. It is categorized by broad-based asset classes.

Issuer	Shares/Par	Value ($)

(f) All or a portion of the security has been segregated as collateral for open futures contracts.

(i) Interest only security for which the fund receives interest on notional principal (Par amount). Par amount shown is the notional principal and does not reflect the cost of the security.

(n) Securities exempt from registration under Rule 144A of the Securities Act of 1933. These securities may be sold in the ordinary course of business in transactions exempt from registration, normally to qualified institutional buyers. At period end, the aggregate value of these securities was $386,579,891 representing 15.2% of net assets.

(q) Interest received was less than stated coupon rate.

(v) Underlying affiliated fund that is available only to investment companies managed by MFS. The rate quoted for the MFS Institutional Money Market Portfolio is the annualized seven-day yield of the fund at period end.

(z) Restricted securities are not registered under the Securities Act of 1933 and are subject to legal restrictions on resale. These securities generally may be resold in transactions exempt from registration or to the public if the securities are subsequently registered. Disposal of these securities may involve time-consuming negotiations and prompt sale at an acceptable price may be difficult. The fund holds the following restricted securities:

Restricted Securities	Acquisition Date	Cost	Value

FINANCIAL STATEMENTS | STATEMENTS OF CHANGES IN NET ASSETS

These statements describe the increases and/or decreases in net assets resulting from operations, any distributions, and any shareholder transactions.

	Six months ended 6/30/16 (unaudited)	Year ended 12/31/15
Change in net assets		
From operations		
Net investment income	$35,973,733	$75,603,283
Net realized gain (loss) on investments	(2,901,814)	12,384,525
Net unrealized gain (loss) on investments	104,454,481	(97,154,043)
Change in net assets from operations	$137,526,400	$(9,166,235)
Distributions declared to shareholders		
From net investment income	$—	$(91,851,876)
Change in net assets from fund share transactions	$(172,295,496)	$(353,129,539)
Total change in net assets	$(34,769,096)	$(454,147,650)
Net assets		
At beginning of period	2,569,757,058	3,023,904,708
At end of period (including undistributed net investment income of $119,112,772 and $83,139,039, respectively)	$2,534,987,962	$2,569,757,058

FINANCIAL STATEMENTS | FINANCIAL HIGHLIGHTS

The financial highlights table is intended to help you understand the fund's financial performance for the semiannual period and the past 5 fiscal years. Certain information reflects financial results for a single fund share. The total returns in the table represent the rate by which an investor would have earned (or lost) on an investment in the fund share class (assuming reinvestment of all distributions) held for the entire period.

Initial Class	Six months ended 6/30/16 (unaudited)	Years ended 12/31				
		2015	2014	2013	2012	2011
Net asset value, beginning of period	$13.00	$13.50	$13.13	$13.49	$13.01	$12.66

Financial Highlights – continued

(a) Annualized.

(d) Per share data is based on average shares outstanding.

(f) Ratios do not reflect reductions from fees paid indirectly, if applicable.

(k) The total return does not reflect expenses that apply to separate accounts. Inclusion of these charges would reduce the total return figures for all periods shown.

(n) Not annualized.

(r) Certain expenses have been reduced without which performance would have been lower.

(s) From time to time the fund may receive proceeds from litigation settlements, without which performance would be lower.

(x) The net asset values and total returns have been calculated on net assets which include adjustments made in accordance with U.S. generally accepted accounting principles required at period end for financial reporting purposes.

See Notes to Financial Statements

NOTES TO FINANCIAL STATEMENTS (unaudited)

(1) Business and Organization

MFS Total Return Bond Series (the fund) is a diversified series of MFS Variable Insurance Trust (the trust). The trust is organized as a Massachusetts business trust and is registered under the Investment Company Act of 1940, as amended, as an open-end management investment company. The shareholders of each series of the trust are separate accounts of insurance companies, which offer variable annuity and/or life insurance products, and qualified retirement and pension plans.

The fund is an investment company and accordingly follows the investment company accounting and reporting guidance of the Financial Accounting Standards Board (FASB) Accounting Standards Codification Topic 946 Financial Services – Investment Companies.

(2) Significant Accounting Policies

General – The preparation of financial statements in conformity with U.S. generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates. In the preparation of these financial statements, management has evaluated subsequent events occurring after the date of the fund's Statement of Assets and Liabilities through the date that the financial statements were issued. The fund invests in high-yield securities rated below investment grade. Investments in high-yield securities involve greater degrees of credit and market risk than investments in higher-rated securities and tend to be more sensitive to economic conditions.

Balance Sheet Offsetting – The fund's accounting policy with respect to balance sheet offsetting is that, absent an event of default by the counterparty or a termination of the agreement, the International Swaps and Derivatives Association (ISDA) Master Agreement does not result in an offset of reported amounts of financial assets and financial liabilities in the Statement of Assets and Liabilities across transactions between the fund and the applicable counterparty. The fund's right to setoff may be restricted or prohibited by the bankruptcy or insolvency laws of the particular jurisdiction to which a specific master netting agreement counterparty is subject. Balance sheet offsetting disclosures, to the extent applicable to the fund, have been included in the fund's Significant Accounting Policies note under the captions for each of the fund's in-scope financial instruments and transactions.

Investment Valuations – Debt instruments and floating rate loans, including restricted debt instruments, are generally valued at an evaluated or composite bid as provided by a third-party pricing service. Short-term instruments with a maturity at issuance of 60 days or less may be valued at amortized cost, which approximates market value. Futures contracts are generally valued at last posted settlement price on their primary exchange as provided by a third-party pricing service. Futures contracts for which there were no trades that day for a particular position are generally valued at the closing bid quotation on their primary exchange as provided by a third-party pricing service. Open-end investment companies are generally valued at net asset value per share. Securities and other assets generally valued on the basis of information from a third-party pricing service may also be valued at a broker/dealer bid quotation. Values obtained from third-party pricing services can utilize both transaction data and market information such as yield, quality, coupon rate, maturity, type of issue, trading characteristics, and other market data. The values of foreign securities and other assets and liabilities expressed in foreign currencies are converted to U.S. dollars using the mean of bid and asked prices for rates provided by a third-party pricing service.

The Board of Trustees has delegated primary responsibility for determining or causing to be determined the value of the fund's investments (including any fair valuation) to the adviser pursuant to valuation policies and procedures approved by the Board. If the adviser determines that reliable market quotations are not readily available, investments are valued at fair value as determined in good faith by the adviser in accordance with such procedures under the oversight of the Board of Trustees. Under the fund's valuation policies and procedures, market quotations are not considered to be readily available for most types of debt instruments and floating rate loans and many types of derivatives. These investments are generally valued at fair value based on information from third-party pricing services. In addition, investments may be valued at fair value if the adviser determines that an investment's value has been materially affected by events occurring after the close of the exchange or market on which the investment is principally traded (such as foreign exchange or market) and prior to the determination of the fund's net asset value, or after the halting of trading of a specific security where trading does not resume prior to the close of the exchange or market on which the security is principally traded. The adviser generally relies on third-party pricing services or other information (such as the correlation with price movements of similar securities in the same or other markets; the type, cost and investment characteristics of the security; the business and financial condition of the issuer; and trading and other market data) to assist in determining whether to fair value and at what value to fair value an investment. The value of an investment for purposes of calculating the fund's net asset value can differ depending on the source and method used to determine value. When fair valuation is used, the value of an investment used to determine the fund's net asset value may differ from quoted or published prices for the same investment. There can be no assurance that the fund could obtain the fair value assigned to an investment if it were to sell the investment at the same time at which the fund determines its net asset value per share.

Various inputs are used in determining the value of the fund's assets or liabilities. These inputs are categorized into three broad levels. In certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, an investment's level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. The fund's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment, and considers factors specific to the investment. Level 1 includes unadjusted quoted prices in active markets for identical assets or liabilities. Level 2 includes other significant observable market-based inputs (including quoted prices for similar securities, interest rates, prepayment speed, and credit risk). Level 3 includes unobservable inputs, which may include the adviser's own assumptions in determining the fair value of investments. Other financial instruments are derivative instruments not reflected in total investments, such as futures contracts. The following is a summary of the levels used as of June 30, 2016 in valuing the fund's assets or liabilities:

Investments at Value	Level 1	Level 2	Level 3	Total
Equity Securities	$105	$—	$—	$105
U.S. Treasury Bonds & U.S. Government Agency & Equivalents	—	348,054,392	—	348,054,392
Non-U.S. Sovereign Debt	—	6,844,892	—	6,844,892
U.S. Corporate Bonds	—	982,164,134	—	982,164,134
Residential Mortgage-Backed Securities	—	571,704,066	—	571,704,066
Commercial Mortgage-Backed Securities	—	261,249,674	—	261,249,674
Asset-Backed Securities (including CDOs)	—	142,405,118	—	142,405,118
Foreign Bonds	—	174,667,797	—	174,667,797
Mutual Funds	47,260,863	—	—	47,260,863

Other Financial Instruments				
Futures Contracts	$183,515	$—	$—	$183,515

For further information regarding security characteristics, see the Portfolio of Investments.

Derivatives – The fund uses derivatives for different purposes, primarily to increase or decrease exposure to a particular market or segment of the market, or security, to increase or decrease interest rate or currency exposure, or as alternatives to direct investments. Derivatives are used for hedging or non-hedging purposes. While hedging can reduce or eliminate losses, it can also reduce or eliminate gains. When the fund uses derivatives as an investment to increase market exposure, or for hedging purposes, gains and losses from derivative instruments may be substantially greater than the derivative's original cost.

The derivative instruments used by the fund were futures contracts. The fund's period end derivatives, as presented in the Portfolio of Investments and the associated Derivative Contract tables, generally are indicative of the volume of its derivative activity during the period.

The following table presents, by major type of derivative contract, the fair value, on a gross basis, of the asset and liability components of derivatives held by the fund at June 30, 2016 as reported in the Statement of Assets and Liabilities:

		Fair Value (a)	
Risk	**Derivative Contracts**	**Asset Derivatives**	**Liability Derivatives**
Interest Rate	Interest Rate Futures	$996,441	$(812,926)

(a) The value of futures contracts includes cumulative appreciation (depreciation) as reported in the fund's Portfolio of Investments. Only the current day net variation margin for futures contracts is separately reported within the fund's Statement of Assets and Liabilities.

The following table presents, by major type of derivative contract, the realized gain (loss) on derivatives held by the fund for the six months ended June 30, 2016 as reported in the Statement of Operations:

Risk	Futures Contracts
Interest Rate	$3,048,147

The following table presents, by major type of derivative contract, the change in unrealized appreciation (depreciation) on derivatives held by the fund for the six months ended June 30, 2016 as reported in the Statement of Operations:

Risk	Futures Contracts
Interest Rate	$(16,813)

Derivative counterparty credit risk is managed through formal evaluation of the creditworthiness of all potential counterparties. On certain, but not all, uncleared derivatives, the fund attempts to reduce its exposure to counterparty credit risk whenever possible by entering into an ISDA Master Agreement on a bilateral basis. The ISDA Master Agreement gives each party to the agreement the

right to terminate all transactions traded under such agreement if there is a certain deterioration in the credit quality of the other party. Upon an event of default or a termination of the ISDA Master Agreement, the non-defaulting party has the right to close out all transactions traded under such agreement and to net amounts owed under each transaction to one net amount payable by one party to the other. This right to close out and net payments across all transactions traded under the ISDA Master Agreement could result in a reduction of the fund's credit risk to such counterparty equal to any amounts payable by the fund under the applicable transactions, if any.

Collateral and margin requirements differ by type of derivative. Margin requirements are set by the clearing broker and the clearing house for cleared derivatives (e.g., futures contracts, cleared swaps, and exchange-traded options) while collateral terms are contract specific for uncleared derivatives (e.g., forward foreign currency exchange contracts, uncleared swap agreements, and uncleared options). For derivatives traded under an ISDA Master Agreement, which contains a collateral support annex, the collateral requirements are netted across all transactions traded under such agreement and one amount is posted from one party to the other to collateralize such obligations. Cash that has been segregated to cover the fund's collateral or margin obligations under derivative contracts, if any, will be reported separately in the Statement of Assets and Liabilities as "Restricted cash" or "Deposits with brokers." Securities pledged as collateral or margin for the same purpose, if any, are noted in the Portfolio of Investments.

Futures Contracts – The fund entered into futures contracts which may be used to hedge against or obtain broad market exposure, interest rate exposure, currency exposure, or to manage duration. A futures contract represents a commitment for the future purchase or sale of an asset at a specified price on a specified date.

Upon entering into a futures contract, the fund is required to deposit with the broker, either in cash or securities, an initial margin in an amount equal to a certain percentage of the notional amount of the contract. Subsequent payments (variation margin) are made or received by the fund each day, depending on the daily fluctuations in the value of the contract, and are recorded for financial statement purposes as unrealized gain or loss by the fund until the contract is closed or expires at which point the gain or loss on futures contracts is realized.

The fund bears the risk of interest rates, exchange rates or securities prices moving unexpectedly, in which case, the fund may not achieve the anticipated benefits of the futures contracts and may realize a loss. While futures contracts may present less counterparty risk to the fund since the contracts are exchange traded and the exchange's clearinghouse guarantees payments to the broker, there is still counterparty credit risk due to the insolvency of the broker. The fund's maximum risk of loss due to counterparty credit risk is equal to the margin posted by the fund to the broker plus any gains or minus any losses on the outstanding futures contracts.

Dollar Roll Transactions – The fund enters into dollar roll transactions, with respect to mortgage-backed securities issued by Ginnie Mae, Fannie Mae, and Freddie Mac, in which the fund sells mortgage-backed securities to financial institutions and simultaneously agrees to purchase similar (same issuer, type and coupon) securities at a later date at an agreed-upon price. During the period between the sale and repurchase in a dollar roll transaction the fund will not be entitled to receive interest and principal payments on the securities sold but is compensated by interest earned on the proceeds of the initial sale and by a lower purchase price on the securities to be repurchased which enhances the fund's total return. The fund accounts for dollar roll transactions as purchases and sales and realizes gains and losses on these transactions.

Indemnifications – Under the fund's organizational documents, its officers and Trustees may be indemnified against certain liabilities and expenses arising out of the performance of their duties to the fund. Additionally, in the normal course of business, the fund enters into agreements with service providers that may contain indemnification clauses. The fund's maximum exposure under these agreements is unknown as this would involve future claims that may be made against the fund that have not yet occurred.

Investment Transactions and Income – Investment transactions are recorded on the trade date. Interest income is recorded on the accrual basis. All premium and discount is amortized or accreted for financial statement purposes in accordance with U.S. generally accepted accounting principles. Interest payments received in additional securities are recorded on the ex-interest date in an amount equal to the value of the security on such date.

The fund may receive proceeds from litigation settlements. Any proceeds received from litigation involving portfolio holdings are reflected in the Statement of Operations in realized gain/loss if the security has been disposed of by the fund or in unrealized gain/loss if the security is still held by the fund. Any other proceeds from litigation not related to portfolio holdings are reflected as other income in the Statement of Operations.

The fund invests a significant portion of its assets in asset-backed and/or mortgage-backed securities. The value of these securities may depend, in part, on the issuer's or borrower's credit quality or ability to pay principal and interest when due and that value may fall if an issuer or borrower defaults on its obligation to pay principal or interest or if the instrument's credit rating is downgraded by a credit rating agency. U.S. Government securities not supported as to the payment of principal or interest by the U.S. Treasury, such as those issued by Fannie Mae, Freddie Mac, and the Federal Home Loan Banks, are subject to greater credit risk than are U.S. Government securities supported by the U.S. Treasury, such as those issued by Ginnie Mae.

The fund purchased or sold debt securities on a when-issued or delayed delivery basis, or in a "To Be Announced" (TBA) or "forward commitment" transaction with delivery or payment to occur at a later date beyond the normal settlement period. At the time a fund enters into a commitment to purchase or sell a security, the transaction is recorded and the value of the security acquired is reflected in the fund's net asset value. The price of such security and the date that the security will be delivered and paid for are fixed at the time the transaction is negotiated. The value of the security may vary with market fluctuations. No interest accrues to the fund until payment takes place. At the time that a fund enters into this type of transaction, the fund is required to have sufficient cash and/or liquid securities to cover its commitments. Losses may arise due to changes in the value of the underlying securities or if the counterparty does not perform under the contract's terms, or if the issuer does not issue the securities due to political, economic or other factors. Additionally, losses may arise due to declines in the value of the securities prior to settlement date.

To mitigate this risk of loss on TBA securities and other types of forward settling mortgage-backed securities, the fund whenever possible enters into a Master Securities Forward Transaction Agreement ("MSFTA") on a bilateral basis with each of the counterparties with whom it undertakes a significant volume of transactions. The MSFTA gives each party to the agreement the right to terminate all transactions traded under such agreement if there is a certain deterioration in the credit quality of the other party. Upon an event of default or a termination of the MSFTA, the non-defaulting party has the right to close out all transactions traded under such agreement and to net amounts owed under each transaction to one net amount payable by one party to the other. This right to close out and net payments across all transactions traded under the MSFTA could result in a reduction of the fund's credit risk to such counterparty equal to any amounts payable by the fund under the applicable transactions, if any.

For mortgage-backed securities traded under a MSFTA, the collateral and margining requirements are contract specific. Collateral amounts across all transactions traded under such agreement are netted and one amount is posted from one party to the other to collateralize such obligations. Cash that has been pledged to cover the fund's collateral or margin obligations under a MSFTA, if any, will be reported separately on the Statement of Assets and Liabilities as restricted cash. Securities pledged as collateral or margin for the same purpose, if any, are noted in the Portfolio of Investments.

Fees Paid Indirectly – Prior to October 1, 2015, the fund's custody fee could be reduced by a credit earned under an arrangement that measured the value of U.S. dollars deposited with the custodian by the fund. For the six months ended June 30, 2016, custody fees were not reduced.

Tax Matters and Distributions – The fund intends to qualify as a regulated investment company, as defined under Subchapter M of the Internal Revenue Code, and to distribute all of its taxable income, including realized capital gains. As a result, no provision for federal income tax is required. The fund's federal tax returns, when filed, will remain subject to examination by the Internal Revenue Service for a three year period. Management has analyzed the fund's tax positions taken on federal and state tax returns for all open tax years and does not believe that there are any uncertain tax positions that require recognition of a tax liability. Foreign taxes, if any, have been accrued by the fund in the accompanying financial statements in accordance with the applicable foreign tax law. Foreign income taxes may be withheld by certain countries in which the fund invests. Additionally, capital gains realized by the fund on securities issued in or by certain foreign countries may be subject to capital gains tax imposed by those countries.

Distributions to shareholders are recorded on the ex-dividend date. Income and capital gain distributions are determined in accordance with income tax regulations, which may differ from U.S. generally accepted accounting principles. Certain capital accounts in the financial statements are periodically adjusted for permanent differences in order to reflect their tax character. These adjustments have no impact on net assets or net asset value per share. Temporary differences which arise from recognizing certain items of income, expense, gain or loss in different periods for financial statement and tax purposes will reverse at some time in the future. Distributions in excess of net investment income or net realized gains are temporary overdistributions for financial statement purposes resulting from differences in the recognition or classification of income or distributions for financial statement and tax purposes.

Book/tax differences primarily relate to amortization and accretion of debt securities and straddle loss deferrals.

The tax character of distributions declared to shareholders for the last fiscal year is as follows:

	12/31/15
Ordinary income (including any short-term capital gains)	$91,851,876

The federal tax cost and the tax basis components of distributable earnings were as follows:

As of 6/30/16	
Cost of investments	$2,483,355,196
Gross appreciation	87,969,545
Gross depreciation	(36,973,700)
Net unrealized appreciation (depreciation)	$50,995,845
As of 12/31/15	
Undistributed ordinary income	83,142,553
Capital loss carryforwards	(4,698,182)
Other temporary differences	(1,903,063)
Net unrealized appreciation (depreciation)	(53,482,842)

The aggregate cost above includes prior fiscal year end tax adjustments, if applicable.

As of December 31, 2015, the fund had capital loss carryforwards available to offset future realized gains. These net capital losses may be carried forward indefinitely and their character is retained as short-term and/or long-term losses. Such losses are characterized as follows:

Long-Term	$(4,698,182)

Multiple Classes of Shares of Beneficial Interest – The fund offers multiple classes of shares, which differ in their respective distribution and/or service fees. The fund's income, realized and unrealized gain (loss), and common expenses are allocated to shareholders based on the daily net assets of each class. Dividends are declared separately for each class. Differences in per share dividend rates are generally due to differences in separate class expenses. The fund's distributions declared to shareholders as reported in the Statements of Changes in Net Assets are presented by class as follows:

	From net investment income	
	Six months ended 6/30/16	Year ended 12/31/15
Initial Class	$—	$36,954,369
Service Class	—	54,897,507
Total	$—	$91,851,876

(3) Transactions with Affiliates

Investment Adviser – The fund has an investment advisory agreement with MFS to provide overall investment management and related administrative services and facilities to the fund. The management fee is computed daily and paid monthly at an annual rate of 0.50% of the fund's average daily net assets.

The investment adviser has agreed in writing to reduce its management fee to 0.45% of average daily net assets in excess of $2.5 billion to $5 billion and 0.40% of average daily net assets in excess of $5 billion. This written agreement will terminate on April 27, 2017. For the six months ended June 30, 2016, this management fee reduction amounted to $9,883, which is included in the reduction of total expenses in the Statement of Operations. MFS has also agreed in writing to reduce its management fee by a specified amount if certain MFS mutual fund assets exceed thresholds agreed to by MFS and the fund's Board of Trustees. For the six months ended June 30, 2016, this management fee reduction amounted to $90,479, which is included in the reduction of total expenses in the Statement of Operations. The management fee incurred for the six months ended June 30, 2016 was equivalent to an annual effective rate of 0.49% of the fund's average daily net assets.

Effective April 28, 2017, the management fee will be computed daily and paid monthly at the following annual rates:

First $2.5 billion of average daily net assets	0.50%
Next $2.5 billion of average daily net assets	0.45%
Average daily net assets in excess of $5 billion	0.40%

Distributor – MFS Fund Distributors, Inc. (MFD), a wholly-owned subsidiary of MFS, is the distributor of shares of the fund. The Trustees have adopted a distribution plan for the Service Class shares pursuant to Rule 12b-1 under the Investment Company Act of 1940.

The fund's distribution plan provides that the fund will pay MFD distribution and/or service fees equal to 0.25% per annum of its average daily net assets attributable to Service Class shares as partial consideration for services performed and expenses incurred by MFD and financial intermediaries (including participating insurance companies that invest in the fund to fund variable annuity and variable life insurance contracts, sponsors of qualified retirement and pension plans that invest in the fund, and affiliates of these

participating insurance companies and plan sponsors) in connection with the sale and distribution of the Service Class shares. MFD may subsequently pay all, or a portion, of the distribution and/or service fees to financial intermediaries.

Shareholder Servicing Agent – MFS Service Center, Inc. (MFSC), a wholly-owned subsidiary of MFS, receives a fee from the fund for its services as shareholder servicing agent. For the six months ended June 30, 2016, the fee was $33,460, which equated to 0.0026% annually of the fund's average daily net assets. MFSC also receives payment from the fund for out-of-pocket expenses paid by MFSC on behalf of the fund. For the six months ended June 30, 2016, these costs amounted to $907.

Administrator – MFS provides certain financial, legal, shareholder communications, compliance, and other administrative services to the fund. Under an administrative services agreement, the fund reimburses MFS the costs incurred to provide these services. The fund is charged an annual fixed amount of $17,500 plus a fee based on average daily net assets. The administrative services fee incurred for the six months ended June 30, 2016 was equivalent to an annual effective rate of 0.0163% of the fund's average daily net assets.

Trustees' and Officers' Compensation – The fund pays compensation to independent Trustees in the form of a retainer, attendance fees, and additional compensation to Board and Committee chairpersons. The fund does not pay compensation directly to Trustees or officers of the fund who are also officers of the investment adviser, all of whom receive remuneration for their services to the fund from MFS. Certain officers and Trustees of the fund are officers or directors of MFS, MFD, and MFSC.

Other – This fund and certain other funds managed by MFS (the funds) have entered into a service agreement (the ISO Agreement) which provides for payment of fees solely by the funds to Tarantino LLC in return for the provision of services of an Independent Senior Officer (ISO) for the funds. Frank L. Tarantino serves as the ISO and is an officer of the funds and the sole member of Tarantino LLC. The funds can terminate the ISO Agreement with Tarantino LLC at any time under the terms of the ISO Agreement. For the six months ended June 30, 2016, the fee paid by the fund under this agreement was $2,520 and is included in "Miscellaneous" expense in the Statement of Operations. MFS has agreed to bear all expenses associated with office space, other administrative support, and supplies provided to the ISO.

The fund invests in the MFS Institutional Money Market Portfolio which is managed by MFS and seeks current income consistent with preservation of capital and liquidity. Income earned on this investment is included in "Dividends from underlying affiliated funds" in the Statement of Operations. This money market fund does not pay a management fee to MFS.

(4) Portfolio Securities

For the six months ended June 30, 2016, purchases and sales of investments, other than short-term obligations, were as follows:

	Purchases	Sales
U.S. Government securities	$211,254,501	$275,711,206
Investments (non-U.S. Government securities)	$160,909,574	$219,917,706

(5) Shares of Beneficial Interest

The fund's Declaration of Trust permits the Trustees to issue an unlimited number of full and fractional shares of beneficial interest. Transactions in fund shares were as follows:

	Six months ended 6/30/16		Year ended 12/31/15	
	Shares	Amount	Shares	Amount
Shares sold				
Initial Class	1,520,808	$20,248,954	5,588,697	$74,620,310

Service Class	(7,269,973)	(94,745,162)	(18,973,507)	(249,885,729)
	(13,073,516)	$(172,295,496)	(26,580,153)	$(353,129,539)

The fund is one of several mutual funds in which certain MFS funds may invest. The MFS funds do not invest in the underlying funds for the purpose of exercising management or control. At the end of the period, the MFS Moderate Allocation Portfolio, the MFS Conservative Allocation Portfolio, and the MFS Growth Allocation Portfolio were the owners of record of approximately 9%, 5%, and 1%, respectively, of the value of outstanding voting shares of the fund.

(6) Line of Credit

The fund and certain other funds managed by MFS participate in a $1.25 billion unsecured committed line of credit, subject to a $1 billion sublimit, provided by a syndication of banks under a credit agreement. Borrowings may be made for temporary financing needs. Interest is charged to each fund, based on its borrowings, generally at a rate equal to the higher of the Overnight Federal Reserve funds rate or daily one month LIBOR plus an agreed upon spread. A commitment fee, based on the average daily, unused portion of the committed line of credit, is allocated among the participating funds at the end of each calendar quarter. In addition, the fund and other funds managed by MFS have established unsecured uncommitted borrowing arrangements with certain banks for temporary financing needs. Interest is charged to each fund, based on its borrowings, at a rate equal to the Overnight Federal Reserve funds rate plus an agreed upon spread. For the six months ended June 30, 2016, the fund's commitment fee and interest expense were $6,762 and $0, respectively, and are included in "Miscellaneous" expense in the Statement of Operations.

(7) Transactions in Underlying Affiliated Funds – Affiliated Issuers

An affiliated issuer may be considered one in which the fund owns 5% or more of the outstanding voting securities, or a company which is under common control. For the purposes of this report, the fund assumes the following to be an affiliated issuer:

Underlying Affiliated Fund	Beginning Shares/Par Amount	Acquisitions Shares/Par Amount	Dispositions Shares/Par Amount	Ending Shares/Par Amount
MFS Institutional Money Market Portfolio	86,235,675	316,366,769	(355,341,581)	47,260,863

Underlying Affiliated Fund	Realized Gain (Loss)	Capital Gain Distributions	Dividend Income	Ending Value
MFS Institutional Money Market Portfolio	$—	$—	$64,779	$47,260,863

PROXY VOTING POLICIES AND INFORMATION

MFS votes proxies on behalf of the fund pursuant to proxy voting policies and procedures that are available without charge, upon request, by calling 1-800-225-2606, by visiting *mfs.com* (once you have selected "Individual Investor" as your role, click on "Individual Investor Home" in the top navigation and then select "Learn More About Proxy Voting" under the "I want to…" header on the left hand column of the page), or by visiting the SEC's Web site at *http://www.sec.gov*.

Information regarding how the fund voted proxies relating to portfolio securities during the most recent twelve-month period ended June 30 is available by August 31 of each year without charge by visiting *mfs.com* (once you have selected "Individual Investor" as your role, click on "Individual Investor Home" in the top navigation and then select "Learn More About Proxy Voting" under the "I want to…" header on the left hand column of the page), or by visiting the SEC's Web site at *http://www.sec.gov*.

QUARTERLY PORTFOLIO DISCLOSURE

The fund will file a complete schedule of portfolio holdings with the Securities and Exchange Commission (the Commission) for the first and third quarters of each fiscal year on Form N-Q. The fund's Form N-Q is available on the EDGAR database on the Commission's Internet Web site at *http://www.sec.gov*, and may be reviewed and copied at the:

Public Reference Room
Securities and Exchange Commission
100 F Street, NE, Room 1580
Washington, D.C. 20549

Information on the operation of the Public Reference Room may be obtained by calling the Commission at 1-800-SEC-0330. Copies of the fund's Form N-Q also may be obtained, upon payment of a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov or by writing the Public Reference Section at the above address.

FURTHER INFORMATION

From time to time, MFS may post important information about the fund or the MFS funds on the MFS web site (*mfs.com*). This information is available on *mfs.com* by following these steps once you have selected "Individual Investor" as your role: (1) Click on the "Individual Investor Home" in the top navigation and then select the "Announcements" option within the "Market Outlooks" drop down, or (2) Click on "Products & Services" and "Variable Insurance Portfolios" and then select the fund's name.

INFORMATION ABOUT FUND CONTRACTS AND LEGAL CLAIMS

The fund has entered into contractual arrangements with an investment adviser, administrator, distributor, shareholder servicing agent, 529 program manager (if applicable), and custodian who each provide services to the fund. Unless expressly stated otherwise, shareholders are not parties to, or intended beneficiaries of these contractual arrangements, and these contractual arrangements are not intended to create any shareholder right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the fund.

Under the Trust's By-Laws and Declaration of Trust, any claims asserted against or on behalf of the MFS Funds, including claims against Trustees and Officers, must be brought in state and federal courts located within the Commonwealth of Massachusetts.

LETTER FROM THE CHAIRMAN

Dear Contract Owners:

Global headwinds continue to restrain growth and profits, though developed market equities have remained resilient, underpinned by record-low interest rates. Rates are likely to stay low over the medium term, as many central banks have implemented accommodative monetary policies in an effort to reinvigorate their economies. Markets will have to deal with an additional headwind in the coming months and years as investors grapple with the fallout from the United Kingdom's decision to leave the European Union. That process will take a considerable period of time to play out against a highly uncertain backdrop. Weakness in the pound sterling in the wake of the referendum has been a welcome shock absorber for UK financial markets.

Emerging markets have been beneficiaries of firmer commodity prices and diminishing fears of sharply higher interest rates from the U.S. Federal Reserve. China remains a source of concern for investors, as overcapacity in its manufacturing sector inhibits the government's attempt to change its domestic economy from one driven by exports to a consumer-driven model.

At MFS®, we believe it is best to view markets through a long lens and not react to short-term swings. That makes it possible to filter out market noise and focus on long-term fundamentals.

In our view, the professional guidance of a financial advisor, along with a patient, long-term approach, will help you reach your investment objectives.

Respectfully,

Robert J. Manning
Chairman
MFS Investment Management

American Electric Power Co., Inc.	2.6%
Calpine Corp.	2.6%
Enel S.p.A.	2.4%
AES Corp.	2.4%

Top five industries

Utilities-Electric Power	53.2%
Natural Gas-Pipeline	14.2%
Telephone Services	6.9%
Natural Gas-Distribution	6.4%
Telecommunications–Wireless	6.4%

Issuer country weightings (x)

United States	74.8%
Portugal	4.8%
United Kingdom	3.3%
Italy	2.6%
Canada	2.6%
China	1.7%
France	1.6%
Sweden	1.5%
Brazil	1.2%
Other Countries	5.9%

(x) Represents the portfolio's exposure to issuer countries as a percentage of the portfolio's net assets. For purposes of this presentation, United States includes Cash & Cash Equivalents and Other.

Where the fund holds convertible bonds, these are treated as part of the equity portion of the portfolio.

Cash & Cash Equivalents includes any cash, investments in money market funds, short-term securities, and other assets less liabilities. Please see the Statement of Assets and Liabilities for additional information related to the fund's cash position and other assets and liabilities.

Other includes equivalent exposure from currency derivatives and/or any offsets to derivative positions.

Percentages are based on net assets as of 6/30/16.

The portfolio is actively managed and current holdings may be different.

EXPENSE TABLE

Fund Expenses Borne by the Contract Holders during the Period, January 1, 2016 through June 30, 2016

As a contract holder of the fund, you incur ongoing costs, including management fees; distribution and/or service (12b-1) fees; and other fund expenses. This example is intended to help you understand your ongoing costs (in dollars) of investing in the fund and to compare these costs with the ongoing costs of investing in other mutual funds.

The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire period January 1, 2016 through June 30, 2016.

Actual Expenses

The first line for each share class in the following table provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the first line under the heading entitled "Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes

The second line for each share class in the following table provides information about hypothetical account values and hypothetical expenses based on the fund's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the fund's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the fund and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight the fund's ongoing costs only and do not take into account the fees and expenses imposed under the variable contracts through which your investment in the fund is made. Therefore, the second line for each share class in the table is useful in comparing ongoing costs associated with an investment in vehicles (such as the fund) which fund benefits under variable annuity and variable life insurance contracts and to qualified pension and retirement plans only, and will not help you determine the relative total costs of investing in the fund through variable annuity and variable life insurance contracts. If the fees and expenses imposed under the variable contracts were included, your costs would have been higher.

Share Class		Annualized Expense Ratio	Beginning Account Value 1/01/16	Ending Account Value 6/30/16	Expenses Paid During Period (p) 1/01/16-6/30/16
Initial Class	Actual	0.78%	$1,000.00	$1,152.19	$4.17
	Hypothetical (h)	0.78%	$1,000.00	$1,020.98	$3.92
Service Class	Actual	1.03%	$1,000.00	$1,151.09	$5.51
	Hypothetical (h)	1.03%	$1,000.00	$1,019.74	$5.17

(h) 5% class return per year before expenses.

(p) "Expenses Paid During Period" are equal to each class's annualized expense ratio, as shown above, multiplied by the average account value over the period, multiplied by 182/366 (to reflect the one-half year period).

PORTFOLIO OF INVESTMENTS – 6/30/16 (unaudited)

The Portfolio of Investments is a complete list of all securities owned by your fund. It is categorized by broad-based asset classes.

FINANCIAL STATEMENTS | FINANCIAL HIGHLIGHTS

The financial highlights table is intended to help you understand the fund's financial performance for the semiannual period and the past 5 fiscal years. Certain information reflects financial results for a single fund share. The total returns in the table represent the rate by which an investor would have earned (or lost) on an investment in the fund share class (assuming reinvestment of all distributions) held for the entire period.

Initial Class	Six months ended 6/30/16 (unaudited)	Years ended 12/31				
		2015	2014	2013	2012	2011

Financial Highlights – continued

(a) Annualized.

(d) Per share data is based on average shares outstanding.

(f) Ratios do not reflect reductions from fees paid indirectly, if applicable.

(k) The total return does not reflect expenses that apply to separate accounts. Inclusion of these charges would reduce the total return figures for all periods shown.

(n) Not annualized.

(r) Certain expenses have been reduced without which performance would have been lower.

(s) From time to time the fund may receive proceeds from litigation settlements, without which performance would be lower.

(x) The net asset values and total returns have been calculated on net assets which include adjustments made in accordance with U.S. generally accepted accounting principles required at period end for financial reporting purposes.

See Notes to Financial Statements

NOTES TO FINANCIAL STATEMENTS (unaudited)

(1) Business and Organization

MFS Utilities Series (the fund) is a diversified series of MFS Variable Insurance Trust (the trust). The trust is organized as a Massachusetts business trust and is registered under the Investment Company Act of 1940, as amended, as an open-end management investment company. The shareholders of each series of the trust are separate accounts of insurance companies, which offer variable annuity and/or life insurance products, and qualified retirement and pension plans.

The fund is an investment company and accordingly follows the investment company accounting and reporting guidance of the Financial Accounting Standards Board (FASB) Accounting Standards Codification Topic 946 Financial Services – Investment Companies.

(2) Significant Accounting Policies

General – The preparation of financial statements in conformity with U.S. generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates. In the preparation of these financial statements, management has evaluated subsequent events occurring after the date of the fund's Statement of Assets and Liabilities through the date that the financial statements were issued. The fund invests primarily in securities of issuers in the utility industry. Issuers in a single industry can react similarly to market, economic, political and regulatory conditions and developments. The fund invests in foreign securities. Investments in foreign securities are vulnerable to the effects of changes in the relative values of the local currency and the U.S. dollar and to the effects of changes in each country's legal, political, and economic environment.

Balance Sheet Offsetting – The fund's accounting policy with respect to balance sheet offsetting is that, absent an event of default by the counterparty or a termination of the agreement, the International Swaps and Derivatives Association (ISDA) Master Agreement does not result in an offset of reported amounts of financial assets and financial liabilities in the Statement of Assets and Liabilities across transactions between the fund and the applicable counterparty. The fund's right to setoff may be restricted or prohibited by the bankruptcy or insolvency laws of the particular jurisdiction to which a specific master netting agreement counterparty is subject. Balance sheet offsetting disclosures, to the extent applicable to the fund, have been included in the fund's Significant Accounting Policies note under the captions for each of the fund's in-scope financial instruments and transactions.

Investment Valuations – Equity securities, including restricted equity securities, are generally valued at the last sale or official closing price on their primary market or exchange as provided by a third-party pricing service. Equity securities, for which there were no sales reported that day, are generally valued at the last quoted daily bid quotation on their primary market or exchange as provided by a third-party pricing service. Debt instruments and floating rate loans, including restricted debt instruments, are generally valued at an evaluated or composite bid as provided by a third-party pricing service. Short-term instruments with a maturity at issuance of 60 days or less may be valued at amortized cost, which approximates market value. Forward foreign currency exchange contracts are generally valued at the mean of bid and asked prices for the time period interpolated from rates provided by a third-party pricing service for proximate time periods. Open-end investment companies are generally valued at net asset value per share. Securities and other assets generally valued on the basis of information from a third-party pricing service may also be valued at a broker/dealer bid quotation. Values obtained from third-party pricing services can utilize both transaction data and market information such as yield, quality, coupon rate, maturity, type of issue, trading characteristics, and other market data. The values of foreign securities and other assets and liabilities expressed in foreign currencies are converted to U.S. dollars using the mean of bid and asked prices for rates provided by a third-party pricing service.

The Board of Trustees has delegated primary responsibility for determining or causing to be determined the value of the fund's investments (including any fair valuation) to the adviser pursuant to valuation policies and procedures approved by the Board. If the adviser determines that reliable market quotations are not readily available, investments are valued at fair value as determined in good faith by the adviser in accordance with such procedures under the oversight of the Board of Trustees. Under the fund's valuation policies and procedures, market quotations are not considered to be readily available for most types of debt instruments and floating rate loans and many types of derivatives. These investments are generally valued at fair value based on information from third-party pricing services. In addition, investments may be valued at fair value if the adviser determines that an investment's value has been materially affected by events occurring after the close of the exchange or market on which the investment is principally traded (such as foreign exchange or market) and prior to the determination of the fund's net asset value, or after the halting of trading of a specific security where trading does not resume prior to the close of the exchange or market on which the security is principally traded. Events that occur on a frequent basis after foreign markets close (such as developments in foreign markets and significant movements in the U.S. markets) and prior to the determination of the fund's net asset value may be deemed to have a material effect on the value of securities traded in foreign markets. Accordingly, the fund's foreign equity securities may often be valued at fair value. The adviser generally relies on third-party pricing services or other information (such as the correlation with price movements of similar securities in the same or other markets; the type, cost and investment characteristics of the security; the business and financial condition of the issuer; and trading and other market data) to assist in determining whether to fair value and

at what value to fair value an investment. The value of an investment for purposes of calculating the fund's net asset value can differ depending on the source and method used to determine value. When fair valuation is used, the value of an investment used to determine the fund's net asset value may differ from quoted or published prices for the same investment. There can be no assurance that the fund could obtain the fair value assigned to an investment if it were to sell the investment at the same time at which the fund determines its net asset value per share.

Various inputs are used in determining the value of the fund's assets or liabilities. These inputs are categorized into three broad levels. In certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, an investment's level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. The fund's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment, and considers factors specific to the investment. Level 1 includes unadjusted quoted prices in active markets for identical assets or liabilities. Level 2 includes other significant observable market-based inputs (including quoted prices for similar securities, interest rates, prepayment speed, and credit risk). Level 3 includes unobservable inputs, which may include the adviser's own assumptions in determining the fair value of investments. Other financial instruments are derivative instruments not reflected in total investments, such as forward foreign currency exchange contracts. The following is a summary of the levels used as of June 30, 2016 in valuing the fund's assets or liabilities:

Investments at Value	**Level 1**	**Level 2**	**Level 3**	**Total**
Equity Securities:

Forward Foreign Currency Exchange Contracts	$—	$5,178,964	$—	$5,178,964

For further information regarding security characteristics, see the Portfolio of Investments.

Of the level 2 investments presented above, equity investments amounting to $5,157,711 would have been considered level 1 investments at the beginning of the period. Of the level 1 investments presented above, equity investments amounting to $74,942,239 would have been considered level 2 investments at the beginning of the period. The primary reason for changes in the classifications between levels 1 and 2 occurs when foreign equity securities are fair valued using other observable market-based inputs in place of the closing exchange price due to events occurring after the close of the exchange or market on which the investment is principally traded. The fund's foreign equity securities may often be valued at fair value. The fund's policy is to recognize transfers between the levels as of the end of the period.

Foreign Currency Translation – Purchases and sales of foreign investments, income, and expenses are converted into U.S. dollars based upon currency exchange rates prevailing on the respective dates of such transactions or on the reporting date for foreign denominated receivables and payables. Gains and losses attributable to foreign currency exchange rates on sales of securities are recorded for financial statement purposes as net realized gains and losses on investments. Gains and losses attributable to foreign exchange rate movements on receivables, payables, income and expenses are recorded for financial statement purposes as foreign currency transaction gains and losses. That portion of both realized and unrealized gains and losses on investments that results from fluctuations in foreign currency exchange rates is not separately disclosed.

Derivatives – The fund uses derivatives for different purposes, primarily to increase or decrease exposure to a particular market or segment of the market, or security, to increase or decrease interest rate or currency exposure, or as alternatives to direct investments. Derivatives are used for hedging or non-hedging purposes. While hedging can reduce or eliminate losses, it can also reduce or eliminate gains. When the fund uses derivatives as an investment to increase market exposure, or for hedging purposes, gains and losses from derivative instruments may be substantially greater than the derivative's original cost.

The derivative instruments used by the fund were forward foreign currency exchange contracts. The fund's period end derivatives, as presented in the Portfolio of Investments and the associated Derivative Contract tables, generally are indicative of the volume of its derivative activity during the period.

The following table presents, by major type of derivative contract, the fair value, on a gross basis, of the asset and liability components of derivatives held by the fund at June 30, 2016 as reported in the Statement of Assets and Liabilities:

		Fair Value	
Risk	**Derivative Contracts**	**Asset Derivatives**	**Liability Derivatives**
Foreign Exchange	Forward Foreign Currency Exchange	$5,502,369	$(323,405)

There is no realized gain (loss) from derivative transactions during the period.

The following table presents, by major type of derivative contract, the change in unrealized appreciation (depreciation) on derivatives held by the fund for the six months ended June 30, 2016 as reported in the Statement of Operations:

Risk	**Translation of Assets and Liabilities in Foreign Currencies**
Foreign Exchange	$(503,026)

Derivative counterparty credit risk is managed through formal evaluation of the creditworthiness of all potential counterparties. On certain, but not all, uncleared derivatives, the fund attempts to reduce its exposure to counterparty credit risk whenever possible by entering into an ISDA Master Agreement on a bilateral basis. The ISDA Master Agreement gives each party to the agreement the right to terminate all transactions traded under such agreement if there is a certain deterioration in the credit quality of the other party. Upon an event of default or a termination of the ISDA Master Agreement, the non-defaulting party has the right to close out all transactions traded under such agreement and to net amounts owed under each transaction to one net amount payable by one party to the other. This right to close out and net payments across all transactions traded under the ISDA Master Agreement could result in a reduction of the fund's credit risk to such counterparty equal to any amounts payable by the fund under the applicable transactions, if any.

Collateral and margin requirements differ by type of derivative. Margin requirements are set by the clearing broker and the clearing house for cleared derivatives (e.g., futures contracts, cleared swaps, and exchange-traded options) while collateral terms are contract specific for uncleared derivatives (e.g., forward foreign currency exchange contracts, uncleared swap agreements, and uncleared options). For derivatives traded under an ISDA Master Agreement, which contains a collateral support annex, the collateral requirements are netted across all transactions traded under such agreement and one amount is posted from one party to the other to collateralize such obligations. Cash that has been segregated to cover the fund's collateral or margin obligations under derivative contracts, if any, will be reported separately in the Statement of Assets and Liabilities as "Restricted cash" or "Deposits with brokers." Securities pledged as collateral or margin for the same purpose, if any, are noted in the Portfolio of Investments.

Forward Foreign Currency Exchange Contracts – The fund entered into forward foreign currency exchange contracts for the purchase or sale of a specific foreign currency at a fixed price on a future date. These contracts may be used to hedge the fund's currency risk or for non-hedging purposes. For hedging purposes, the fund may enter into contracts to deliver or receive foreign currency that the fund will receive from or use in its normal investment activities. The fund may also use contracts to hedge against declines in the value of foreign currency denominated securities due to unfavorable exchange rate movements. For non-hedging purposes, the fund may enter into contracts with the intent of changing the relative exposure of the fund's portfolio of securities to different currencies to take advantage of anticipated exchange rate changes.

Forward foreign currency exchange contracts are adjusted by the daily exchange rate of the underlying currency and any unrealized gains or losses are recorded as a receivable or payable for forward foreign currency exchange contracts until the contract settlement date. On contract settlement date, any gain or loss on the contract is recorded as realized gains or losses on foreign currency.

Risks may arise upon entering into these contracts from unanticipated movements in the value of the contract and from the potential inability of counterparties to meet the terms of their contracts. Generally, the fund's maximum risk due to counterparty credit risk is the unrealized gain on the contract due to the use of Continuous Linked Settlement, an international payment system for the centralized settlement of foreign transactions. This risk is mitigated in cases where there is an ISDA Master Agreement between the fund and the counterparty providing for netting as described above and, where applicable, by the posting of collateral by the counterparty to the fund to cover the fund's exposure to the counterparty under such ISDA Master Agreement.

Security Loans – Under its Securities Lending Agency Agreement with the fund, State Street Bank and Trust Company ("State Street"), as lending agent, loans the securities of the fund to certain qualified institutions (the "Borrowers") approved by the fund. Security loans can be terminated at the discretion of either the lending agent or the fund and the related securities must be returned within the earlier of the standard trade settlement period for such securities or within three business days. The loans are collateralized by cash and/or U.S. Treasury and federal agency obligations in an amount typically at least equal to the market value of the securities loaned. On loans collateralized by cash, the cash collateral is invested in a money market fund. The market value of the

loaned securities is determined at the close of business of the fund and any additional required collateral is delivered to the fund on the next business day. State Street provides the fund with indemnification against Borrower default. In the event of Borrower default, State Street will, for the benefit of the fund, either purchase securities identical to those loaned or, when such purchase is commercially impracticable, pay the fund the market value of the loaned securities. In return, State Street assumes the fund's rights to the related collateral. If the collateral value is less than the cost to purchase identical securities, State Street is responsible for the shortfall, but only to the extent that such shortfall is not due to a decline in collateral value resulting from collateral reinvestment for which the fund bears the risk of loss. At period end, the fund had investment securities on loan, all of which were classified as equity securities in the fund's Portfolio of Investments, with a fair value of $5,703,365. The fair value of the fund's investment securities on loan and a related liability of $4,020,431 for cash collateral received on securities loaned are both presented gross in the Statement of Assets and Liabilities. Additionally, these loans were collateralized by U.S. Treasury Obligations of $1,798,446. The collateral received on securities loaned exceeded the value of securities on loan at period end. The liability for cash collateral for securities loaned is carried at fair value, which is categorized as level 2 within the fair value hierarchy. A portion of the income generated upon investment of the collateral is remitted to the Borrowers, and the remainder is allocated between the fund and the lending agent. On loans collateralized by U.S. Treasury and/or federal agency obligations, a fee is received from the Borrower, and is allocated between the fund and the lending agent. Income from securities lending is included in "Interest" income in the Statement of Operations. The dividend and interest income earned on the securities loaned is accounted for in the same manner as other dividend and interest income.

Indemnifications – Under the fund's organizational documents, its officers and Trustees may be indemnified against certain liabilities and expenses arising out of the performance of their duties to the fund. Additionally, in the normal course of business, the fund enters into agreements with service providers that may contain indemnification clauses. The fund's maximum exposure under these agreements is unknown as this would involve future claims that may be made against the fund that have not yet occurred.

Investment Transactions and Income – Investment transactions are recorded on the trade date. Interest income is recorded on the accrual basis. All premium and discount is amortized or accreted for financial statement purposes in accordance with U.S. generally accepted accounting principles. Dividends received in cash are recorded on the ex-dividend date. Certain dividends from foreign securities will be recorded when the fund is informed of the dividend if such information is obtained subsequent to the ex-dividend date. Dividend and interest payments received in additional securities are recorded on the ex-dividend or ex-interest date in an amount equal to the value of the security on such date.

The fund may receive proceeds from litigation settlements. Any proceeds received from litigation involving portfolio holdings are reflected in the Statement of Operations in realized gain/loss if the security has been disposed of by the fund or in unrealized gain/loss if the security is still held by the fund. Any other proceeds from litigation not related to portfolio holdings are reflected as other income in the Statement of Operations.

Fees Paid Indirectly – Prior to October 1, 2015, the fund's custody fee could be reduced by a credit earned under an arrangement that measured the value of U.S. dollars deposited with the custodian by the fund. For six months ended June 30, 2016, custody fees were not reduced.

Tax Matters and Distributions – The fund intends to qualify as a regulated investment company, as defined under Subchapter M of the Internal Revenue Code, and to distribute all of its taxable income, including realized capital gains. As a result, no provision for federal income tax is required. The fund's federal tax returns, when filed, will remain subject to examination by the Internal Revenue Service for a three year period. Management has analyzed the fund's tax positions taken on federal and state tax returns for all open tax years and does not believe that there are any uncertain tax positions that require recognition of a tax liability. Foreign taxes, if any, have been accrued by the fund in the accompanying financial statements in accordance with the applicable foreign tax law. Foreign income taxes may be withheld by certain countries in which the fund invests. Additionally, capital gains realized by the fund on securities issued in or by certain foreign countries may be subject to capital gains tax imposed by those countries.

Distributions to shareholders are recorded on the ex-dividend date. Income and capital gain distributions are determined in accordance with income tax regulations, which may differ from U.S. generally accepted accounting principles. Certain capital accounts in the financial statements are periodically adjusted for permanent differences in order to reflect their tax character. These adjustments have no impact on net assets or net asset value per share. Temporary differences which arise from recognizing certain items of income, expense, gain or loss in different periods for financial statement and tax purposes will reverse at some time in the future. Distributions in excess of net investment income or net realized gains are temporary overdistributions for financial statement purposes resulting from differences in the recognition or classification of income or distributions for financial statement and tax purposes.

Book/tax differences primarily relate to wash sale loss deferrals, derivative transactions, and partnership adjustments.

The tax character of distributions declared to shareholders for the last fiscal year is as follows:

	12/31/15
Ordinary income (including any short-term capital gains)	$102,302,415
Long-term capital gains	96,025,287
Total distributions	$198,327,702

The federal tax cost and the tax basis components of distributable earnings were as follows:

As of 6/30/16	
Cost of investments	$1,602,197,677
Gross appreciation	244,622,640
Gross depreciation	(143,369,269)
Net unrealized appreciation (depreciation)	$101,253,371
As of 12/31/15	
Undistributed ordinary income	64,805,580
Undistributed long-term capital gain	37,406,828
Other temporary differences	(544,802)
Net unrealized appreciation (depreciation)	(120,774,501)

The aggregate cost above includes prior fiscal year end tax adjustment, if applicable.

Multiple Classes of Shares of Beneficial Interest – The fund offers multiple classes of shares, which differ in their respective distribution and/or service fees. The fund's income, realized and unrealized gain (loss), and common expenses are allocated to shareholders based on the daily net assets of each class. Dividends are declared separately for each class. Differences in per share dividend rates are generally due to differences in separate class expenses. The fund's distributions declared to shareholders as reported in the Statements of Changes in Net Assets are presented by class as follows:

	From net investment income		From net realized gain on investments	
	Six months ended 6/30/16	Year ended 12/31/15	Six months ended 6/30/16	Year ended 12/31/15
Initial Class	$—	$28,015,638	$—	$46,266,869
Service Class	—	45,023,668	—	79,021,527
Total	$—	$73,039,306	$—	$125,288,396

(3) Transactions with Affiliates

Investment Adviser – The fund has an investment advisory agreement with MFS to provide overall investment management and related administrative services and facilities to the fund. The management fee is computed daily and paid monthly at the following annual rates:

First $1 billion of average daily net assets	0.75%
Average daily net assets in excess of $1 billion	0.70%

MFS has agreed in writing to reduce its management fee by a specified amount if certain MFS mutual fund assets exceed thresholds agreed to by MFS and the fund's Board of Trustees. For the six months ended June 30, 2016, this management fee reduction amounted to $55,826, which is included in the reduction of total expenses in the Statement of Operations. The management fee incurred for the six months ended June 30, 2016 was equivalent to an annual effective rate of 0.72% of the fund's average daily net assets.

Effective August 1, 2016, the management fee will be computed daily and paid monthly at the following annual rates:

First $1 billion of average daily net assets	0.75%
Next $2 billion of average daily net assets	0.70%
Average daily net assets in excess of $3 billion	0.65%

Distributor – MFS Fund Distributors, Inc. (MFD), a wholly-owned subsidiary of MFS, is the distributor of shares of the fund. The Trustees have adopted a distribution plan for the Service Class shares pursuant to Rule 12b-1 under the Investment Company Act of 1940.

The fund's distribution plan provides that the fund will pay MFD distribution and/or service fees equal to 0.25% per annum of its average daily net assets attributable to Service Class shares as partial consideration for services performed and expenses incurred by MFD and financial intermediaries (including participating insurance companies that invest in the fund to fund variable annuity and variable life insurance contracts, sponsors of qualified retirement and pension plans that invest in the fund, and affiliates of these participating insurance companies and plan sponsors) in connection with the sale and distribution of the Service Class shares. MFD may subsequently pay all, or a portion, of the distribution and/or service fees to financial intermediaries.

Shareholder Servicing Agent – MFS Service Center, Inc. (MFSC), a wholly-owned subsidiary of MFS, receives a fee from the fund for its services as shareholder servicing agent. For the six months ended June 30, 2016, the fee was $38,901, which equated to 0.0050% annually of the fund's average daily net assets. MFSC also receives payment from the fund for out-of-pocket expenses paid by MFSC on behalf of the fund. For the six months ended June 30, 2016, these costs amounted to $1,886.

Administrator – MFS provides certain financial, legal, shareholder communications, compliance, and other administrative services to the fund. Under an administrative services agreement, the fund reimburses MFS the costs incurred to provide these services. The fund is charged an annual fixed amount of $17,500 plus a fee based on average daily net assets. The administrative services fee incurred for the six months ended June 30, 2016 was equivalent to an annual effective rate of 0.0166% of the fund's average daily net assets.

Trustees' and Officers' Compensation – The fund pays compensation to independent Trustees in the form of a retainer, attendance fees, and additional compensation to Board and Committee chairpersons. The fund does not pay compensation directly to Trustees or officers of the fund who are also officers of the investment adviser, all of whom receive remuneration for their services to the fund from MFS. Certain officers and Trustees of the fund are officers or directors of MFS, MFD, and MFSC.

Other – This fund and certain other funds managed by MFS (the funds) have entered into a service agreement (the ISO Agreement) which provides for payment of fees solely by the funds to Tarantino LLC in return for the provision of services of an Independent Senior Officer (ISO) for the funds. Frank L. Tarantino serves as the ISO and is an officer of the funds and the sole member of Tarantino LLC. The funds can terminate the ISO Agreement with Tarantino LLC at any time under the terms of the ISO Agreement. For the six months ended June 30, 2016, the fee paid by the fund under this agreement was $1,519 and is included in "Miscellaneous" expense in the Statement of Operations. MFS has agreed to bear all expenses associated with office space, other administrative support, and supplies provided to the ISO.

The fund invests in the MFS Institutional Money Market Portfolio which is managed by MFS and seeks current income consistent with preservation of capital and liquidity. Income earned on this investment is included in "Dividends from underlying affiliated funds" in the Statement of Operations. This money market fund does not pay a management fee to MFS.

The fund is permitted to engage in purchase and sale transactions ("cross-trades") with funds and accounts for which MFS serves as investment adviser or sub-adviser pursuant to a policy adopted by the Board of Trustees. This policy has been designed to ensure that cross-trades conducted by the fund comply with Rule 17a-7 under the Investment Company Act of 1940. Under this policy, cross-trades are effected at current market prices with no remuneration paid in connection with the transaction. During the six months ended June 30, 2016, the fund engaged in purchase and sale transactions pursuant to this policy, which amounted to $1,065,209 and $230,871, respectively. The sales transactions resulted in net realized gains (losses) of $(104,353).

(4) Portfolio Securities

For the six months ended June 30, 2016, purchases and sales of investments, other than short-term obligations, aggregated $216,060,406 and $283,577,416, respectively.

(5) Shares of Beneficial Interest

The fund's Declaration of Trust permits the Trustees to issue an unlimited number of full and fractional shares of beneficial interest. Transactions in fund shares were as follows:

	Six months ended 6/30/16		Year ended 12/31/15	
	Shares	Amount	Shares	Amount
Shares sold				
Initial Class	522,759	$14,183,612	661,936	$20,487,219
Service Class	2,679,972	70,197,722	5,092,320	157,180,531
	3,202,731	$84,381,334	5,754,256	$177,667,750
Shares issued to shareholders in reinvestment of distributions				
Initial Class	—	$—	2,750,185	$74,282,507
Service Class	—	—	4,663,353	124,045,195
	—	$—	7,413,538	$198,327,702
Shares reacquired

	(5,064,678)	$(133,263,658)	(12,353,630)	$(387,184,506)
Net change				
Initial Class	(1,000,290)	$(26,089,874)	(257,694)	$(20,382,433)
Service Class	(861,657)	(22,792,450)	1,071,858	9,193,379
	(1,861,947)	$(48,882,324)	814,164	$(11,189,054)

(6) Line of Credit

The fund and certain other funds managed by MFS participate in a $1.25 billion unsecured committed line of credit, subject to a $1 billion sublimit, provided by a syndication of banks under a credit agreement. Borrowings may be made for temporary financing needs. Interest is charged to each fund, based on its borrowings, generally at a rate equal to the higher of the Overnight Federal Reserve funds rate or daily one month LIBOR plus an agreed upon spread. A commitment fee, based on the average daily, unused portion of the committed line of credit, is allocated among the participating funds at the end of each calendar quarter. In addition, the fund and other funds managed by MFS have established unsecured uncommitted borrowing arrangements with certain banks for temporary financing needs. Interest is charged to each fund, based on its borrowings, at a rate equal to the Overnight Federal Reserve funds rate plus an agreed upon spread. For the six months ended June 30, 2016, the fund's commitment fee and interest expense were $4,197 and $0, respectively, and are included in "Miscellaneous" expense in the Statement of Operations.

(7) Transactions in Underlying Affiliated Funds – Affiliated Issuers

An affiliated issuer may be considered one in which the fund owns 5% or more of the outstanding voting securities, or a company which is under common control. For the purposes of this report, the fund assumes the following to be an affiliated issuer:

Underlying Affiliated Fund	Beginning Shares/Par Amount	Acquisitions Shares/Par Amount	Dispositions Shares/Par Amount	Ending Shares/Par Amount
MFS Institutional Money Market Portfolio	31,228,978	170,097,870	(109,711,575)	91,615,273

Underlying Affiliated Fund	Realized Gain (Loss)	Capital Gain Distributions	Dividend Income	Ending Value
MFS Institutional Money Market Portfolio	$—	$—	$73,471	$91,615,273

PROXY VOTING POLICIES AND INFORMATION

MFS votes proxies on behalf of the fund pursuant to proxy voting policies and procedures that are available without charge, upon request, by calling 1-800-225-2606, by visiting *mfs.com* (once you have selected "Individual Investor" as your role, click on "Individual Investor Home" in the top navigation and then select "Learn More About Proxy Voting" under the "I want to…" header on the left hand column of the page), or by visiting the SEC's Web site at *http://www.sec.gov*.

Information regarding how the fund voted proxies relating to portfolio securities during the most recent twelve-month period ended June 30 is available by August 31 of each year without charge by visiting *mfs.com* (once you have selected "Individual Investor" as your role, click on "Individual Investor Home" in the top navigation and then select "Learn More About Proxy Voting" under the "I want to…" header on the left hand column of the page), or by visiting the SEC's Web site at *http://www.sec.gov*.

QUARTERLY PORTFOLIO DISCLOSURE

The fund will file a complete schedule of portfolio holdings with the Securities and Exchange Commission (the Commission) for the first and third quarters of each fiscal year on Form N-Q. The fund's Form N-Q is available on the EDGAR database on the Commission's Internet Web site at http://www.sec.gov, and may be reviewed and copied at the:

Public Reference Room
Securities and Exchange Commission
100 F Street, NE, Room 1580
Washington, D.C. 20549

Information on the operation of the Public Reference Room may be obtained by calling the Commission at 1-800-SEC-0330. Copies of the fund's Form N-Q also may be obtained, upon payment of a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov or by writing the Public Reference Section at the above address.

FURTHER INFORMATION

From time to time, MFS may post important information about the fund or the MFS funds on the MFS web site (*mfs.com*). This information is available on *mfs.com* by following these steps once you have selected "Individual Investor" as your role: (1) Click on the "Individual Investor Home" in the top navigation and then select the "Announcements" option within the "Market Outlooks" drop down, or (2) Click on "Products & Services" and "Variable Insurance Portfolios" and then select the fund's name.

INFORMATION ABOUT FUND CONTRACTS AND LEGAL CLAIMS

The fund has entered into contractual arrangements with an investment adviser, administrator, distributor, shareholder servicing agent, 529 program manager (if applicable), and custodian who each provide services to the fund. Unless expressly stated otherwise, shareholders are not parties to, or intended beneficiaries of these contractual arrangements, and these contractual arrangements are not intended to create any shareholder right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the fund.

Under the Trust's By-Laws and Declaration of Trust, any claims asserted against or on behalf of the MFS Funds, including claims against Trustees and Officers, must be brought in state and federal courts located within the Commonwealth of Massachusetts.

LETTER FROM THE CHAIRMAN

Dear Contract Owners:

Global headwinds continue to restrain growth and profits, though developed market equities have remained resilient, underpinned by record-low interest rates. Rates are likely to stay low over the medium term, as many central banks have implemented accommodative monetary policies in an effort to reinvigorate their economies. Markets will have to deal with an additional headwind in the coming months and years as investors grapple with the fallout from the United Kingdom's decision to leave the European Union. That process will take a considerable period of time to play out against a highly uncertain backdrop. Weakness in the pound sterling in the wake of the referendum has been a welcome shock absorber for UK financial markets.

Emerging markets have been beneficiaries of firmer commodity prices and diminishing fears of sharply higher interest rates from the U.S. Federal Reserve. China remains a source of concern for investors, as overcapacity in its manufacturing sector inhibits the government's attempt to change its domestic economy from one driven by exports to a consumer-driven model.

At MFS®, we believe it is best to view markets through a long lens and not react to short-term swings. That makes it possible to filter out market noise and focus on long-term fundamentals.

In our view, the professional guidance of a financial advisor, along with a patient, long-term approach, will help you reach your investment objectives.

Respectfully,

Robert J. Manning
Chairman
MFS Investment Management

EXPENSE TABLE

Fund Expenses Borne by the Contract Holders during the Period, January 1, 2016 through June 30, 2016

As a contract holder of the fund, you incur ongoing costs, including management fees; distribution and/or service (12b-1) fees; and other fund expenses. This example is intended to help you understand your ongoing costs (in dollars) of investing in the fund and to compare these costs with the ongoing costs of investing in other mutual funds.

The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire period January 1, 2016 through June 30, 2016.

Actual Expenses

The first line for each share class in the following table provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the first line under the heading entitled "Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes

The second line for each share class in the following table provides information about hypothetical account values and hypothetical expenses based on the fund's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the fund's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the fund and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight the fund's ongoing costs only and do not take into account the fees and expenses imposed under the variable contracts through which your investment in the fund is made. Therefore, the second line for each share class in the table is useful in comparing ongoing costs associated with an investment in vehicles (such as the fund) which fund benefits under variable annuity and variable life insurance contracts and to qualified pension and retirement plans only, and will not help you determine the relative total costs of investing in the fund through variable annuity and variable life insurance contracts. If the fees and expenses imposed under the variable contracts were included, your costs would have been higher.

Share Class		Annualized Expense Ratio	Beginning Account Value 1/01/16	Ending Account Value 6/30/16	Expenses Paid During Period (p) 1/01/16-6/30/16
Initial Class	Actual	0.73%	$1,000.00	$1,067.43	$3.75
	Hypothetical (h)	0.73%	$1,000.00	$1,021.23	$3.67
Service Class	Actual	0.98%	$1,000.00	$1,065.67	$5.03
	Hypothetical (h)	0.98%	$1,000.00	$1,019.99	$4.92

(h) 5% class return per year before expenses.

(p) "Expenses Paid During Period" are equal to each class's annualized expense ratio, as shown above, multiplied by the average account value over the period, multiplied by 182/366 (to reflect the one-half year period).

PORTFOLIO OF INVESTMENTS – 6/30/16 (unaudited)

The Portfolio of Investments is a complete list of all securities owned by your fund. It is categorized by broad-based asset classes.

FINANCIAL STATEMENTS | FINANCIAL HIGHLIGHTS

The financial highlights table is intended to help you understand the fund's financial performance for the semiannual period and the past 5 fiscal years. Certain information reflects financial results for a single fund share. The total returns in the table represent the rate by which an investor would have earned (or lost) on an investment in the fund share class (assuming reinvestment of all distributions) held for the entire period.

Initial Class	Six months ended 6/30/16 (unaudited)	Years ended 12/31

See Notes to Financial Statements

Financial Highlights – continued

(a) Annualized.

(d) Per share data is based on average shares outstanding.

(f) Ratios do not reflect reductions from fees paid indirectly, if applicable.

(k) The total return does not reflect expenses that apply to separate accounts. Inclusion of these charges would reduce the total return figures for all periods shown.

(n) Not annualized.

(r) Certain expenses have been reduced without which performance would have been lower.

(s) From time to time the fund may receive proceeds from litigation settlements, without which performance would be lower.

(x) The net asset values and total returns have been calculated on net assets which include adjustments made in accordance with U.S. generally accepted accounting principles required at period end for financial reporting purposes.

See Notes to Financial Statements

NOTES TO FINANCIAL STATEMENTS (unaudited)

(1) Business and Organization

MFS Value Series (the fund) is a diversified series of MFS Variable Insurance Trust (the trust). The trust is organized as a Massachusetts business trust and is registered under the Investment Company Act of 1940, as amended, as an open-end management investment company. The shareholders of each series of the trust are separate accounts of insurance companies, which offer variable annuity and/or life insurance products, and qualified retirement and pension plans.

The fund is an investment company and accordingly follows the investment company accounting and reporting guidance of the Financial Accounting Standards Board (FASB) Accounting Standards Codification Topic 946 Financial Services – Investment Companies.

(2) Significant Accounting Policies

General – The preparation of financial statements in conformity with U.S. generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates. In the preparation of these financial statements, management has evaluated subsequent events occurring after the date of the fund's Statement of Assets and Liabilities through the date that the financial statements were issued.

Balance Sheet Offsetting – The fund's accounting policy with respect to balance sheet offsetting is that, absent an event of default by the counterparty or a termination of the agreement, the International Swaps and Derivatives Association (ISDA) Master Agreement does not result in an offset of reported amounts of financial assets and financial liabilities in the Statement of Assets and Liabilities across transactions between the fund and the applicable counterparty. The fund's right to setoff may be restricted or prohibited by the bankruptcy or insolvency laws of the particular jurisdiction to which a specific master netting agreement counterparty is subject. Balance sheet offsetting disclosures, to the extent applicable to the fund, have been included in the fund's Significant Accounting Policies note under the captions for each of the fund's in-scope financial instruments and transactions.

Investment Valuations – Equity securities, including restricted equity securities, are generally valued at the last sale or official closing price on their primary market or exchange as provided by a third-party pricing service. Equity securities, for which there were no sales reported that day, are generally valued at the last quoted daily bid quotation on their primary market or exchange as provided by a third-party pricing service. Short-term instruments with a maturity at issuance of 60 days or less may be valued at amortized cost, which approximates market value. Open-end investment companies are generally valued at net asset value per share. Securities and other assets generally valued on the basis of information from a third-party pricing service may also be valued at a broker/dealer bid quotation. Values obtained from third-party pricing services can utilize both transaction data and market information such as yield, quality, coupon rate, maturity, type of issue, trading characteristics, and other market data. The values of foreign securities and other assets and liabilities expressed in foreign currencies are converted to U.S. dollars using the mean of bid and asked prices for rates provided by a third-party pricing service.

The Board of Trustees has delegated primary responsibility for determining or causing to be determined the value of the fund's investments (including any fair valuation) to the adviser pursuant to valuation policies and procedures approved by the Board. If the adviser determines that reliable market quotations are not readily available, investments are valued at fair value as determined in good faith by the adviser in accordance with such procedures under the oversight of the Board of Trustees. Under the fund's valuation policies and procedures, market quotations are not considered to be readily available for most types of debt instruments and floating rate loans and many types of derivatives. These investments are generally valued at fair value based on information from third-party pricing services. In addition, investments may be valued at fair value if the adviser determines that an investment's value has been materially affected by events occurring after the close of the exchange or market on which the investment is principally traded (such as foreign exchange or market) and prior to the determination of the fund's net asset value, or after the halting of trading of a specific security where trading does not resume prior to the close of the exchange or market on which the security is principally traded. Events that occur on a frequent basis after foreign markets close (such as developments in foreign markets and significant movements in the U.S. markets) and prior to the determination of the fund's net asset value may be deemed to have a material effect on the value of securities traded in foreign markets. Accordingly, the fund's foreign equity securities may often be valued at fair value. The adviser generally relies on third-party pricing services or other information (such as the correlation with price movements of similar securities in the same or other markets; the type, cost and investment characteristics of the security; the business and financial condition of the issuer; and trading and other market data) to assist in determining whether to fair value and at what value to fair value an investment. The value of an investment for purposes of calculating the fund's net asset value can differ depending on the source and method used to determine value. When fair valuation is used, the value of an investment used to determine the fund's net asset value may differ from quoted or published prices for the same investment. There can be no assurance that the fund could obtain the fair value assigned to an investment if it were to sell the investment at the same time at which the fund determines its net asset value per share.

Various inputs are used in determining the value of the fund's assets or liabilities. These inputs are categorized into three broad levels. In certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, an investment's level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. The fund's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment, and considers factors specific to the investment. Level 1 includes unadjusted quoted prices in active markets for identical assets or liabilities. Level 2 includes other significant observable market-based inputs (including quoted prices for similar securities, interest rates, prepayment speed, and credit risk). Level 3 includes unobservable inputs, which may include the adviser's own assumptions in determining the fair value of investments. The following is a summary of the levels used as of June 30, 2016 in valuing the fund's assets or liabilities:

Investments at Value	Level 1	Level 2	Level 3	Total
Equity Securities:				
United States	$2,105,490,547	$—	$—	$2,105,490,547
Switzerland	—	47,327,975	—	47,327,975
United Kingdom	—	29,617,807	—	29,617,807
France	—	16,434,595	—	16,434,595
Canada	10,984,806	—	—	10,984,806
Mutual Funds	16,096,087	—	—	16,096,087
Total Investments	$2,132,571,440	$93,380,377	$—	$2,225,951,817

For further information regarding security characteristics, see the Portfolio of Investments.

Foreign Currency Translation – Purchases and sales of foreign investments, income, and expenses are converted into U.S. dollars based upon currency exchange rates prevailing on the respective dates of such transactions or on the reporting date for foreign denominated receivables and payables. Gains and losses attributable to foreign currency exchange rates on sales of securities are recorded for financial statement purposes as net realized gains and losses on investments. Gains and losses attributable to foreign exchange rate movements on receivables, payables, income and expenses are recorded for financial statement purposes as foreign currency transaction gains and losses. That portion of both realized and unrealized gains and losses on investments that results from fluctuations in foreign currency exchange rates is not separately disclosed.

Security Loans – Under its Securities Lending Agency Agreement with the fund, State Street Bank and Trust Company ("State Street"), as lending agent, loans the securities of the fund to certain qualified institutions (the "Borrowers") approved by the fund. Security loans can be terminated at the discretion of either the lending agent or the fund and the related securities must be returned within the earlier of the standard trade settlement period for such securities or within three business days. The loans are collateralized by cash and/or U.S. Treasury and federal agency obligations in an amount typically at least equal to the market value of the securities loaned. On loans collateralized by cash, the cash collateral is invested in a money market fund. The market value of the loaned securities is determined at the close of business of the fund and any additional required collateral is delivered to the fund on the next business day. State Street provides the fund with indemnification against Borrower default. In the event of Borrower default, State Street will, for the benefit of the fund, either purchase securities identical to those loaned or, when such purchase is commercially impracticable, pay the fund the market value of the loaned securities. In return, State Street assumes the fund's rights to the related collateral. If the collateral value is less than the cost to purchase identical securities, State Street is responsible for the shortfall, but only to the extent that such shortfall is not due to a decline in collateral value resulting from collateral reinvestment for which the fund bears the risk of loss. A portion of the income generated upon investment of the collateral is remitted to the Borrowers, and the remainder is allocated between the fund and the lending agent. On loans collateralized by U.S. Treasury and/or federal agency obligations, a fee is received from the Borrower, and is allocated between the fund and the lending agent. Income from securities lending is included in "Interest" income in the Statement of Operations. The dividend and interest income earned on the securities loaned is accounted for in the same manner as other dividend and interest income. At June 30, 2016, there were no securities on loan or collateral outstanding.

Indemnifications – Under the fund's organizational documents, its officers and Trustees may be indemnified against certain liabilities and expenses arising out of the performance of their duties to the fund. Additionally, in the normal course of business, the fund enters into agreements with service providers that may contain indemnification clauses. The fund's maximum exposure under these agreements is unknown as this would involve future claims that may be made against the fund that have not yet occurred.

Investment Transactions and Income – Investment transactions are recorded on the trade date. Interest income is recorded on the accrual basis. Dividends received in cash are recorded on the ex-dividend date. Certain dividends from foreign securities will be recorded when the fund is informed of the dividend if such information is obtained subsequent to the ex-dividend date. Dividend payments received in additional securities are recorded on the ex-dividend date in an amount equal to the value of the security on such date.

The fund may receive proceeds from litigation settlements. Any proceeds received from litigation involving portfolio holdings are reflected in the Statement of Operations in realized gain/loss if the security has been disposed of by the fund or in unrealized gain/loss if the security is still held by the fund. Any other proceeds from litigation not related to portfolio holdings are reflected as other income in the Statement of Operations.

Fees Paid Indirectly – Prior to October 1, 2015, the fund's custody fee could be reduced by a credit earned under an arrangement that measured the value of U.S. dollars deposited with the custodian by the fund. For the six months ended June 30, 2016, custody fees were not reduced.

Tax Matters and Distributions – The fund intends to qualify as a regulated investment company, as defined under Subchapter M of the Internal Revenue Code, and to distribute all of its taxable income, including realized capital gains. As a result, no provision for federal income tax is required. The fund's federal tax returns, when filed, will remain subject to examination by the Internal Revenue Service for a three year period. Management has analyzed the fund's tax positions taken on federal and state tax returns for all open tax years and does not believe that there are any uncertain tax positions that require recognition of a tax liability. Foreign taxes, if any, have been accrued by the fund in the accompanying financial statements in accordance with the applicable foreign tax law. Foreign income taxes may be withheld by certain countries in which the fund invests. Additionally, capital gains realized by the fund on securities issued in or by certain foreign countries may be subject to capital gains tax imposed by those countries.

Distributions to shareholders are recorded on the ex-dividend date. Income and capital gain distributions are determined in accordance with income tax regulations, which may differ from U.S. generally accepted accounting principles. Certain capital accounts in the financial statements are periodically adjusted for permanent differences in order to reflect their tax character. These adjustments have no impact on net assets or net asset value per share. Temporary differences which arise from recognizing certain items of income, expense, gain or loss in different periods for financial statement and tax purposes will reverse at some time in the future. Distributions in excess of net investment income or net realized gains are temporary overdistributions for financial statement purposes resulting from differences in the recognition or classification of income or distributions for financial statement and tax purposes.

Book/tax differences primarily relate to wash sale loss deferrals.

The tax character of distributions declared to shareholders for the last fiscal year is as follows:

	12/31/15
Ordinary income (including any short-term capital gains)	$57,140,588
Long-term capital gains	132,192,323
Total distributions	$189,332,911

The federal tax cost and the tax basis components of distributable earnings were as follows:

As of 6/30/16	
Cost of investments	$1,449,666,062
Gross appreciation	794,223,131
Gross depreciation	(17,937,376)
Net unrealized appreciation (depreciation)	$776,285,755
As of 12/31/15	
Undistributed ordinary income	46,253,835
Undistributed long-term capital gain	179,167,999
Other temporary differences	(82,828)
Net unrealized appreciation (depreciation)	682,569,124

The aggregate cost above includes prior fiscal year end tax adjustment, if applicable.

Multiple Classes of Shares of Beneficial Interest – The fund offers multiple classes of shares, which differ in their respective distribution and/or service fees. The fund's income, realized and unrealized gain (loss), and common expenses are allocated to shareholders based on the daily net assets of each class. Dividends are declared separately for each class. Differences in per share dividend rates are generally due to differences in separate class expenses. The fund's distributions declared to shareholders as reported in the Statements of Changes in Net Assets are presented by class as follows:

	From net investment income		From net realized gain on investments	
	Six months ended 6/30/16	Year ended 12/31/15	Six months ended 6/30/16	Year ended 12/31/15
Initial Class	$—	$23,725,000	$—	$59,539,845
Service Class	—	27,773,261	—	78,294,805
Total	$—	$51,498,261	$—	$137,834,650

(3) Transactions with Affiliates

Investment Adviser – The fund has an investment advisory agreement with MFS to provide overall investment management and related administrative services and facilities to the fund. The management fee is computed daily and paid monthly at the following annual rates:

First $1 billion of average daily net assets	0.75%
Average daily net assets in excess of $1 billion	0.65%

The investment adviser has agreed in writing to reduce its management fee to 0.60% of average daily net assets in excess of $2.5 billion. This written agreement will terminate on April 27, 2017. For the six months ended June 30, 2016, the fund's average daily net assets did not exceed $2.5 billion and therefore, the management fee was not reduced in accordance with this agreement. MFS has agreed in writing to reduce its management fee by a specified amount if certain MFS mutual fund assets exceed thresholds agreed to by MFS and the fund's Board of Trustees. For the six months ended June 30, 2016, this management fee reduction amounted to $75,833, which is included in the reduction of total expenses in the Statement of Operations. The management fee incurred for the six months ended June 30, 2016 was equivalent to an annual effective rate of 0.69% of the fund's average daily net assets.

Effective April 28, 2017, the management fee will be computed daily and paid monthly at the following annual rates:

First $1 billion of average daily net assets	0.75%
Next S1.5 billion of average daily net assets	0.65%
Average daily net assets in excess of $2.5 billion	0.60%

The investment adviser has agreed in writing to pay a portion of the fund's total annual operating expenses, excluding interest, taxes, extraordinary expenses, brokerage and transaction costs, and investment-related expenses, such that total annual operating expenses do not exceed 0.90% of average daily net assets for the Initial Class shares and 1.15% of average daily net assets for the Service Class shares. This written agreement will continue until modified by the fund's Board of Trustees, but such agreement will continue at least until April 30, 2018. For the six months ended June 30, 2016, the fund's actual operating expenses did not exceed the limit and therefore, the investment adviser did not pay any portion of the fund's expenses related to this agreement.

Distributor – MFS Fund Distributors, Inc. (MFD), a wholly-owned subsidiary of MFS, is the distributor of shares of the fund. The Trustees have adopted a distribution plan for the Service Class shares pursuant to Rule 12b-1 under the Investment Company Act of 1940.

The fund's distribution plan provides that the fund will pay MFD distribution and/or service fees equal to 0.25% per annum of its average daily net assets attributable to Service Class shares as partial consideration for services performed and expenses incurred by MFD and financial intermediaries (including participating insurance companies that invest in the fund to fund variable annuity and variable life insurance contracts, sponsors of qualified retirement and pension plans that invest in the fund, and affiliates of these participating insurance companies and plan sponsors) in connection with the sale and distribution of the Service Class shares. MFD may subsequently pay all, or a portion, of the distribution and/or service fees to financial intermediaries.

Shareholder Servicing Agent – MFS Service Center, Inc. (MFSC), a wholly-owned subsidiary of MFS, receives a fee from the fund for its services as shareholder servicing agent. For the six months ended June 30, 2016, the fee was $31,390, which equated to 0.0030% annually of the fund's average daily net assets. MFSC also receives payment from the fund for out-of-pocket expenses paid by MFSC on behalf of the fund. For the six months ended June 30, 2016, these costs amounted to $1,685.

Administrator – MFS provides certain financial, legal, shareholder communications, compliance, and other administrative services to the fund. Under an administrative services agreement, the fund reimburses MFS the costs incurred to provide these services. The fund is charged an annual fixed amount of $17,500 plus a fee based on average daily net assets. The administrative services fee incurred for the six months ended June 30, 2016 was equivalent to an annual effective rate of 0.0164% of the fund's average daily net assets.

Trustees' and Officers' Compensation – The fund pays compensation to independent Trustees in the form of a retainer, attendance fees, and additional compensation to Board and Committee chairpersons. The fund does not pay compensation directly to Trustees or officers of the fund who are also officers of the investment adviser, all of whom receive remuneration for their services to the fund from MFS. Certain officers and Trustees of the fund are officers or directors of MFS, MFD, and MFSC.

Other – This fund and certain other funds managed by MFS (the funds) have entered into a service agreement (the ISO Agreement) which provides for payment of fees solely by the funds to Tarantino LLC in return for the provision of services of an Independent Senior Officer (ISO) for the funds. Frank L. Tarantino serves as the ISO and is an officer of the funds and the sole member of Tarantino LLC. The funds can terminate the ISO Agreement with Tarantino LLC at any time under the terms of the ISO Agreement. For the six months ended June 30, 2016, the fee paid by the fund under this agreement was $2,094 and is included in "Miscellaneous" expense in the Statement of Operations. MFS has agreed to bear all expenses associated with office space, other administrative support, and supplies provided to the ISO.

The fund invests in the MFS Institutional Money Market Portfolio which is managed by MFS and seeks current income consistent with preservation of capital and liquidity. Income earned on this investment is included in "Dividends from underlying affiliated funds" in the Statement of Operations. This money market fund does not pay a management fee to MFS.

The fund is permitted to engage in purchase and sale transactions ("cross-trades") with funds and accounts for which MFS serves as investment adviser or sub-adviser pursuant to a policy adopted by the Board of Trustees. This policy has been designed to ensure that cross-trades conducted by the fund comply with Rule 17a-7 under the Investment Company Act of 1940. Under this policy, cross-trades are effected at current market prices with no remuneration paid in connection with the transaction. During the six months ended June 30, 2016, the fund engaged in purchase and sale transactions pursuant to this policy, which amounted to $1,994,607 and $744,596, respectively. The sales transactions resulted in net realized gains (losses) of $188,705.

(4) Portfolio Securities

For the six months ended June 30, 2016, purchases and sales of investments, other than short-term obligations, aggregated $144,642,700 and $160,877,810, respectively.

(5) Shares of Beneficial Interest

The fund's Declaration of Trust permits the Trustees to issue an unlimited number of full and fractional shares of beneficial interest. Transactions in fund shares were as follows:

	Six months ended 6/30/16		Year ended 12/31/15	
	Shares	Amount	Shares	Amount
Shares sold				
Initial Class	2,272,484	$42,189,426	2,231,454	$42,370,134
Service Class	6,013,821	108,671,767	7,197,931	136,498,386
	8,286,305	$150,861,193	9,429,385	$178,868,520
Shares issued to shareholders in reinvestment of distributions				
Initial Class	—	$—	4,874,991	$83,264,845
Service Class	—	—	6,298,579	106,068,066
	—	$—	11,173,570	$189,332,911
Shares reacquired				
Initial Class	(5,063,883)	$(94,591,382)	(9,654,481)	$(191,553,797)
Service Class	(5,547,128)	(101,148,340)	(22,944,915)	(431,339,889)
	(10,611,011)	$(195,739,722)	(32,599,396)	$(622,893,686)
Net change				
Initial Class	(2,791,399)	$(52,401,956)	(2,548,036)	$(65,918,818)
Service Class	466,693	7,523,427	(9,448,405)	(188,773,437)
	(2,324,706)	$(44,878,529)	(11,996,441)	$(254,692,255)

The fund is one of several mutual funds in which certain MFS funds may invest. The MFS funds do not invest in the underlying funds for the purpose of exercising management or control. At the end of the period, the MFS Moderate Allocation Portfolio, the MFS Growth Allocation Portfolio, and the MFS Conservative Allocation Portfolio were the owners of record of approximately 7%, 2%, and 2%, respectively, of the value of outstanding voting shares of the fund.

(6) Line of Credit

The fund and certain other funds managed by MFS participate in a $1.25 billion unsecured committed line of credit, subject to a $1 billion sublimit, provided by a syndication of banks under a credit agreement. Borrowings may be made for temporary financing needs. Interest is charged to each fund, based on its borrowings, generally at a rate equal to the higher of the Overnight Federal Reserve funds rate or daily one month LIBOR plus an agreed upon spread. A commitment fee, based on the average daily, unused portion of the committed line of credit, is allocated among the participating funds at the end of each calendar quarter. In addition, the fund and other funds managed by MFS have established unsecured uncommitted borrowing arrangements with certain banks for temporary financing needs. Interest is charged to each fund, based on its borrowings, at a rate equal to the Overnight Federal Reserve funds rate plus an agreed upon spread. For the six months ended June 30, 2016, the fund's commitment fee and interest expense were $5,721 and $0, respectively, and are included in "Miscellaneous" expense in the Statement of Operations.

(7) Transactions in Underlying Affiliated Funds – Affiliated Issuers

An affiliated issuer may be considered one in which the fund owns 5% or more of the outstanding voting securities, or a company which is under common control. For the purposes of this report, the fund assumes the following to be an affiliated issuer:

Underlying Affiliated Fund	Beginning Shares/Par Amount	Acquisitions Shares/Par Amount	Dispositions Shares/Par Amount	Ending Shares/Par Amount
MFS Institutional Money Market Portfolio	16,597,492	166,181,132	(166,682,537)	16,096,087

Underlying Affiliated Fund	Realized Gain (Loss)	Capital Gain Distributions	Dividend Income	Ending Value
MFS Institutional Money Market Portfolio	$—	$—	$38,670	$16,096,087

PROXY VOTING POLICIES AND INFORMATION

MFS votes proxies on behalf of the fund pursuant to proxy voting policies and procedures that are available without charge, upon request, by calling 1-800-225-2606, by visiting *mfs.com* (once you have selected "Individual Investor" as your role, click on "Individual Investor Home" in the top navigation and then select "Learn More About Proxy Voting" under the "I want to…" header on the left hand column of the page), or by visiting the SEC's Web site at *http://www.sec.gov*.

Information regarding how the fund voted proxies relating to portfolio securities during the most recent twelve-month period ended June 30 is available by August 31 of each year without charge by visiting *mfs.com* (once you have selected "Individual Investor" as your role, click on "Individual Investor Home" in the top navigation and then select "Learn More About Proxy Voting" under the "I want to…" header on the left hand column of the page), or by visiting the SEC's Web site at *http://www.sec.gov*.

QUARTERLY PORTFOLIO DISCLOSURE

The fund will file a complete schedule of portfolio holdings with the Securities and Exchange Commission (the Commission) for the first and third quarters of each fiscal year on Form N-Q. The fund's Form N-Q is available on the EDGAR database on the Commission's Internet Web site at *http://www.sec.gov*, and may be reviewed and copied at the:

Public Reference Room
Securities and Exchange Commission
100 F Street, NE, Room 1580
Washington, D.C. 20549

Information on the operation of the Public Reference Room may be obtained by calling the Commission at 1-800-SEC-0330. Copies of the fund's Form N-Q also may be obtained, upon payment of a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov or by writing the Public Reference Section at the above address.

FURTHER INFORMATION

From time to time, MFS may post important information about the fund or the MFS funds on the MFS web site (*mfs.com*). This information is available on *mfs.com* by following these steps once you have selected "Individual Investor" as your role: (1) Click on the "Individual Investor Home" in the top navigation and then select the "Announcements" option within the "Market Outlooks" drop down, or (2) Click on "Products & Services" and "Variable Insurance Portfolios" and then select the fund's name.

INFORMATION ABOUT FUND CONTRACTS AND LEGAL CLAIMS

The fund has entered into contractual arrangements with an investment adviser, administrator, distributor, shareholder servicing agent, 529 program manager (if applicable), and custodian who each provide services to the fund. Unless expressly stated otherwise, shareholders are not parties to, or intended beneficiaries of these contractual arrangements, and these contractual arrangements are not intended to create any shareholder right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the fund.

Under the Trust's By-Laws and Declaration of Trust, any claims asserted against or on behalf of the MFS Funds, including claims against Trustees and Officers, must be brought in state and federal courts located within the Commonwealth of Massachusetts.

LETTER FROM THE CHAIRMAN

Dear Contract Owners:

Global headwinds continue to restrain growth and profits, though developed market equities have remained resilient, underpinned by record-low interest rates. Rates are likely to stay low over the medium term, as many central banks have implemented accommodative monetary policies in an effort to reinvigorate their economies. Markets will have to deal with an additional headwind in the coming months and years as investors grapple with the fallout from the United Kingdom's decision to leave the European Union. That process will take a considerable period of time to play out against a highly uncertain backdrop. Weakness in the pound sterling in the wake of the referendum has been a welcome shock absorber for UK financial markets.

Emerging markets have been beneficiaries of firmer commodity prices and diminishing fears of sharply higher interest rates from the U.S. Federal Reserve. China remains a source of concern for investors, as overcapacity in its manufacturing sector inhibits the government's attempt to change its domestic economy from one driven by exports to a consumer-driven model.

At MFS®, we believe it is best to view markets through a long lens and not react to short-term swings. That makes it possible to filter out market noise and focus on long-term fundamentals.

In our view, the professional guidance of a financial advisor, along with a patient, long-term approach, will help you reach your investment objectives.

Respectfully,

Robert J. Manning

Autos & Housing	2.3%
Transportation	1.7%

(o) Less than 0.1%.

Cash & Cash Equivalents includes any cash, investments in money market funds, short-term securities, and other assets less liabilities. Please see the Statement of Assets and Liabilities for additional information related to the fund's cash position and other assets and liabilities.

Other includes equivalent exposure from currency derivatives and/or any offsets to derivative positions and may be negative.

Percentages are based on net assets as of 6/30/16.

The portfolio is actively managed and current holdings may be different.

EXPENSE TABLE

Fund Expenses Borne by the Contract Holders during the Period, January 1, 2016 through June 30, 2016

As a contract holder of the fund, you incur ongoing costs, including management fees; distribution and/or service (12b-1) fees; and other fund expenses. This example is intended to help you understand your ongoing costs (in dollars) of investing in the fund and to compare these costs with the ongoing costs of investing in other mutual funds.

The example is based on an investment of $1,000 invested at the beginning of the period and held for the entire period January 1, 2016 through June 30, 2016.

Actual Expenses

The first line for each share class in the following table provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the first line under the heading entitled "Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes

The second line for each share class in the following table provides information about hypothetical account values and hypothetical expenses based on the fund's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the fund's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the fund and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight the fund's ongoing costs only and do not take into account the fees and expenses imposed under the variable contracts through which your investment in the fund is made. Therefore, the second line for each share class in the table is useful in comparing ongoing costs associated with an investment in vehicles (such as the fund) which fund benefits under variable annuity and variable life insurance contracts and to qualified pension and retirement plans only, and will not help you determine the relative total costs of investing in the fund through variable annuity and variable life insurance contracts. If the fees and expenses imposed under the variable contracts were included, your costs would have been higher.

Share Class		Annualized Expense Ratio	Beginning Account Value 1/01/16	Ending Account Value 6/30/16	Expenses Paid During Period (p) 1/01/16-6/30/16
Initial Class	Actual	0.54%	$1,000.00	$1,052.08	$2.76
	Hypothetical (h)	0.54%	$1,000.00	$1,022.18	$2.72
Service Class	Actual	0.79%	$1,000.00	$1,050.71	$4.03
	Hypothetical (h)	0.79%	$1,000.00	$1,020.93	$3.97

(h) 5% class return per year before expenses.

(p) "Expenses Paid During Period" are equal to each class's annualized expense ratio, as shown above, multiplied by the average account value over the period, multiplied by 182/366 (to reflect the one-half year period).

PORTFOLIO OF INVESTMENTS – 6/30/16 (unaudited)

The Portfolio of Investments is a complete list of all securities owned by your fund. It is categorized by broad-based asset classes.

FINANCIAL STATEMENTS | FINANCIAL HIGHLIGHTS

The financial highlights table is intended to help you understand the fund's financial performance for the semiannual period and the past 5 fiscal years. Certain information reflects financial results for a single fund share. The total returns in the table represent the rate by which an investor would have earned (or lost) on an investment in the fund share class (assuming reinvestment of all distributions) held for the entire period.

Initial Class	Six months ended 6/30/16 (unaudited)	Years ended 12/31				
		2015	2014	2013	2012	2011
Net asset value, beginning of period	$12.29	$16.04	$18.24	$13.57	$12.42	$13.12
Income (loss) from investment operations

See Notes to Financial Statements

Financial Highlights – continued

Information prior to the close of business on December 7, 2012, reflects time periods when another adviser or subadviser was responsible for selecting investments for the fund under a different investment objective and different investment strategies.

(a) Annualized.

(d) Per share data is based on average shares outstanding.

(f) Ratios do not reflect reductions from fees paid indirectly, if applicable.

(k) The total return does not reflect expenses that apply to separate accounts. Inclusion of these charges would reduce the total return figures for all periods shown.

(n) Not annualized.

(r) Certain expenses have been reduced without which performance would have been lower.

(s) From time to time the fund may receive proceeds from litigation settlements, without which performance would be lower.

(x) The net asset values and total returns have been calculated on net assets which include adjustments made in accordance with U.S. generally accepted accounting principles required at period end for financial reporting purposes.

See Notes to Financial Statements

NOTES TO FINANCIAL STATEMENTS (unaudited)

(1) Business and Organization

MFS Blended Research Small Cap Equity Portfolio (the fund) is a diversified series of MFS Variable Insurance Trust III (the trust). The trust is organized as a Delaware statutory trust and is registered under the Investment Company Act of 1940, as amended, as an open-end management investment company. The shareholders of each series of the trust are separate accounts of insurance companies, which offer variable annuity and/or life insurance products, and qualified retirement and pension plans.

The fund is an investment company and accordingly follows the investment company accounting and reporting guidance of the Financial Accounting Standards Board (FASB) Accounting Standards Codification Topic 946 Financial Services – Investment Companies.

(2) Significant Accounting Policies

General – The preparation of financial statements in conformity with U.S. generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates. In the preparation of these financial statements, management has evaluated subsequent events occurring after the date of the fund's Statement of Assets and Liabilities through the date that the financial statements were issued. The fund will generally focus on securities of small size companies which may be more volatile than those of larger companies.

Balance Sheet Offsetting – The fund's accounting policy with respect to balance sheet offsetting is that, absent an event of default by the counterparty or a termination of the agreement, the International Swaps and Derivatives Association (ISDA) Master Agreement does not result in an offset of reported amounts of financial assets and financial liabilities in the Statement of Assets and Liabilities across transactions between the fund and the applicable counterparty. The fund's right to setoff may be restricted or prohibited by the bankruptcy or insolvency laws of the particular jurisdiction to which a specific master netting agreement counterparty is subject. Balance sheet offsetting disclosures, to the extent applicable to the fund, have been included in the fund's Significant Accounting Policies note under the captions for each of the fund's in-scope financial instruments and transactions.

Investment Valuations – Equity securities, including restricted equity securities, are generally valued at the last sale or official closing price on their primary market or exchange as provided by a third-party pricing service. Equity securities, for which there were no sales reported that day, are generally valued at the last quoted daily bid quotation on their primary market or exchange as provided by a third-party pricing service. Short-term instruments with a maturity at issuance of 60 days or less may be valued at amortized cost, which approximates market value. Open-end investment companies are generally valued at net asset value per share. Securities and other assets generally valued on the basis of information from a third-party pricing service may also be valued at a broker/dealer bid quotation. Values obtained from third-party pricing services can utilize both transaction data and market information such as yield, quality, coupon rate, maturity, type of issue, trading characteristics, and other market data. The values of foreign securities and other assets and liabilities expressed in foreign currencies are converted to U.S. dollars using the mean of bid and asked prices for rates provided by a third-party pricing service.

The Board of Trustees has delegated primary responsibility for determining or causing to be determined the value of the fund's investments (including any fair valuation) to the adviser pursuant to valuation policies and procedures approved by the Board. If the adviser determines that reliable market quotations are not readily available, investments are valued at fair value as determined in good faith by the adviser in accordance with such procedures under the oversight of the Board of Trustees. Under the fund's valuation policies and procedures, market quotations are not considered to be readily available for most types of debt instruments and floating rate loans and many types of derivatives. These investments are generally valued at fair value based on information from third-party pricing services. In addition, investments may be valued at fair value if the adviser determines that an investment's value has been materially affected by events occurring after the close of the exchange or market on which the investment is principally traded (such as foreign exchange or market) and prior to the determination of the fund's net asset value, or after the halting of trading of a specific security where trading does not resume prior to the close of the exchange or market on which the security is principally traded. Events that occur on a frequent basis after foreign markets close (such as developments in foreign markets and significant movements in the U.S. markets) and prior to the determination of the fund's net asset value may be deemed to have a material effect on the value of securities traded in foreign markets. Accordingly, the fund's foreign equity securities may often be valued at fair value. The adviser generally relies on third-party pricing services or other information (such as the correlation with price movements of similar securities in the same or other markets; the type, cost and investment characteristics of the security; the business and financial condition of the issuer; and trading and other market data) to assist in determining whether to fair value and at what value to fair value an investment. The value of an investment for purposes of calculating the fund's net asset value can differ depending on the source and method used to determine value. When fair valuation is used, the value of an investment used to determine the fund's net asset value may differ from quoted or published prices for the same investment. There can be no assurance that the fund could obtain the fair value assigned to an investment if it were to sell the investment at the same time at which the fund determines its net asset value per share.

Various inputs are used in determining the value of the fund's assets or liabilities. These inputs are categorized into three broad levels. In certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, an investment's level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. The fund's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment, and considers factors specific to the investment. Level 1 includes unadjusted quoted prices in active markets for identical assets or liabilities. Level 2 includes other significant observable market-based inputs (including quoted prices for similar securities, interest rates, prepayment speed, and credit risk). Level 3 includes unobservable inputs, which may include the adviser's own assumptions in determining the fair value of investments. The following is a summary of the levels used as of June 30, 2016 in valuing the fund's assets or liabilities:

Investments at Value	Level 1	Level 2	Level 3	Total
Equity Securities:				
United States	$103,154,678	$—	$19	$103,154,697
Mutual Funds	3,234,513	—	—	3,234,513
Total Investments	$106,389,191	$—	$19	$106,389,210

For further information regarding security characteristics, see the Portfolio of Investments.

The following is a reconciliation of level 3 assets for which significant unobservable inputs were used to determine fair value. The fund's policy is to recognize transfers between the levels as of the end of the period. The table presents the activity of level 3 securities held at the beginning and the end of the period.

	Equity Securities
Balance as of 12/31/15	$22
Change in unrealized appreciation (depreciation)	(3)
Balance as of 6/30/16	$19

The net change in unrealized appreciation (depreciation) from investments still held as level 3 at June 30, 2016 is $(3). At June 30, 2016, the fund held one level 3 security.

Security Loans – Under its Securities Lending Agency Agreement with the fund, State Street Bank and Trust Company ("State Street"), as lending agent, loans the securities of the fund to certain qualified institutions (the "Borrowers") approved by the fund. Security loans can be terminated at the discretion of either the lending agent or the fund and the related securities must be returned within the earlier of the standard trade settlement period for such securities or within three business days. The loans are collateralized by cash and/or U.S. Treasury and federal agency obligations in an amount typically at least equal to the market value of the securities loaned. On loans collateralized by cash, the cash collateral is invested in a money market fund. The market value of the loaned securities is determined at the close of business of the fund and any additional required collateral is delivered to the fund on the next business day. State Street provides the fund with indemnification against Borrower default. In the event of Borrower default, State Street will, for the benefit of the fund, either purchase securities identical to those loaned or, when such purchase is commercially impracticable, pay the fund the market value of the loaned securities. In return, State Street assumes the fund's rights to the related collateral. If the collateral value is less than the cost to purchase identical securities, State Street is responsible for the shortfall, but only to the extent that such shortfall is not due to a decline in collateral value resulting from collateral reinvestment for which the fund bears the risk of loss. At period end, the fund had investment securities on loan, all of which were classified as equity securities in the fund's Portfolio of Investments, with a fair value of $2,610,492. The fair value of the fund's investment securities on loan and a related liability of $2,642,743 for cash collateral received on securities loaned are both presented gross in the Statement of Assets and Liabilities. The collateral received on securities loaned exceeded the value of securities on loan at period end. The liability for cash collateral for securities loaned is carried at fair value, which is categorized as level 2 within the fair value hierarchy. A portion of the income generated upon investment of the collateral is remitted to the Borrowers, and the remainder is allocated between the fund and the lending agent. On loans collateralized by U.S. Treasury and/or federal agency obligations, a fee is received from the Borrower, and is allocated between the fund and the lending agent. Income from securities lending is included in "Interest" income in the Statement of Operations. The dividend and interest income earned on the securities loaned is accounted for in the same manner as other dividend and interest income.

Indemnifications – Under the fund's organizational documents, its officers and Trustees may be indemnified against certain liabilities and expenses arising out of the performance of their duties to the fund. Additionally, in the normal course of business, the fund enters into agreements with service providers that may contain indemnification clauses. The fund's maximum exposure under these agreements is unknown as this would involve future claims that may be made against the fund that have not yet occurred.

Investment Transactions and Income – Investment transactions are recorded on the trade date. Interest income is recorded on the accrual basis. Dividends received in cash are recorded on the ex-dividend date. Certain dividends from foreign securities will be recorded when the fund is informed of the dividend if such information is obtained subsequent to the ex-dividend date. Dividend and interest payments received in additional securities are recorded on the ex-dividend or ex-interest date in an amount equal to the value of the security on such date.

The fund may receive proceeds from litigation settlements. Any proceeds received from litigation involving portfolio holdings are reflected in the Statement of Operations in realized gain/loss if the security has been disposed of by the fund or in unrealized gain/loss if the security is still held by the fund. Any other proceeds from litigation not related to portfolio holdings are reflected as other income in the Statement of Operations.

Fees Paid Indirectly – Prior to October 1, 2015, the fund's custody fee could be reduced by a credit earned under an arrangement that measured the value of U.S. dollars deposited with the custodian by the fund. For the six months ended June 30, 2016, custody fees were not reduced.

Tax Matters and Distributions – The fund intends to qualify as a regulated investment company, as defined under Subchapter M of the Internal Revenue Code, and to distribute all of its taxable income, including realized capital gains. As a result, no provision for federal income tax is required. The fund's federal tax returns, when filed, will remain subject to examination by the Internal Revenue Service for a three year period. Management has analyzed the fund's tax positions taken on federal and state tax returns for all open tax years and does not believe that there are any uncertain tax positions that require recognition of a tax liability. Foreign taxes, if any, have been accrued by the fund in the accompanying financial statements in accordance with the applicable foreign tax law. Foreign income taxes may be withheld by certain countries in which the fund invests. Additionally, capital gains realized by the fund on securities issued in or by certain foreign countries may be subject to capital gains tax imposed by those countries.

Distributions to shareholders are recorded on the ex-dividend date. Income and capital gain distributions are determined in accordance with income tax regulations, which may differ from U.S. generally accepted accounting principles. Certain capital accounts in the financial statements are periodically adjusted for permanent differences in order to reflect their tax character. These adjustments have no impact on net assets or net asset value per share. Temporary differences which arise from recognizing certain items of income, expense, gain or loss in different periods for financial statement and tax purposes will reverse at some time in the future. Distributions in excess of net investment income or net realized gains are temporary overdistributions for financial statement purposes resulting from differences in the recognition or classification of income or distributions for financial statement and tax purposes.

Book/tax differences primarily relate to wash sale loss deferrals.

The tax character of distributions declared to shareholders for the last fiscal year is as follows:

	12/31/15
Ordinary income (including any short-term capital gains)	$5,188,759
Long-term capital gains	16,793,846
Total distributions	$21,982,605

The federal tax cost and the tax basis components of distributable earnings were as follows:

As of 6/30/16	
Cost of investments	$94,917,383
Gross appreciation	16,370,608
Gross depreciation	(4,898,781)
Net unrealized appreciation (depreciation)	$11,471,827
As of 12/31/15	
Undistributed ordinary income	$1,047,426
Undistributed long-term capital gain	10,876,432
Other temporary differences	4,347
Net unrealized appreciation (depreciation)	9,232,508

The aggregate cost above includes prior fiscal year end tax adjustments, if applicable.

Multiple Classes of Shares of Beneficial Interest – The fund offers multiple classes of shares, which differ in their respective distribution and/or service fees. The fund's income, realized and unrealized gain (loss), and common expenses are allocated to shareholders based on the daily net assets of each class. Dividends are declared separately for each class. Differences in per share

dividend rates are generally due to differences in separate class expenses. The fund's distributions declared to shareholders as reported in the Statements of Changes in Net Assets are presented by class as follows:

	From net investment income		From net realized gain on investments	
	Six months ended 6/30/16	Year ended 12/31/15	Six months ended 6/30/16	Year ended 12/31/15
Initial Class	$—	$191,909	$—	$5,442,517
Service Class	—	291,461	—	16,056,718
Total	$—	$483,370	$—	$21,499,235

(3) Transactions with Affiliates

Investment Adviser – The fund has an investment advisory agreement with MFS to provide overall investment management and related administrative services and facilities to the fund. The management fee is computed daily and paid monthly at an annual rate of 0.40% of the fund's average daily net assets.

MFS has agreed in writing to reduce its management fee by a specified amount if certain MFS mutual fund assets exceed thresholds agreed to by MFS and the fund's Board of Trustees. For the six months ended June 30, 2016, this management fee reduction amounted to $3,683, which is included in the reduction of total expenses in the Statement of Operations. The management fee incurred for the six months ended June 30, 2016 was equivalent to an annual effective rate of 0.39% of the fund's average daily net assets.

The investment adviser has agreed in writing to pay a portion of the fund's total annual operating expenses, excluding interest, taxes, extraordinary expenses, brokerage and transaction costs, and investment-related expenses such that total annual operating expenses do not exceed 0.60% of average daily net assets for the Initial Class shares and 0.85% of average daily net assets for the Service Class shares. This written agreement will continue until modified by the fund's Board of Trustees, but such agreement will continue at least until April 30, 2018. For the six months ended June 30, 2016 the fund's actual operating expenses did not exceed the limit and therefore, the investment adviser did not pay any portion of the fund's expenses related to this agreement.

Distributor – MFS Fund Distributors, Inc. (MFD), a wholly-owned subsidiary of MFS, is the distributor of shares of the fund. The Trustees have adopted a distribution plan for the Service Class shares pursuant to Rule 12b-1 under the Investment Company Act of 1940.

The fund's distribution plan provides that the fund will pay MFD distribution and/or service fees equal to 0.25% per annum of its average daily net assets attributable to Service Class shares as partial consideration for services performed and expenses incurred by MFD and financial intermediaries (including participating insurance companies that invest in the fund to fund variable annuity and variable life insurance contracts, sponsors of qualified retirement and pension plans that invest in the fund, and affiliates of these participating insurance companies and plan sponsors) in connection with the sale and distribution of the Service Class shares. MFD may subsequently pay all, or a portion, of the distribution and/or service fees to financial intermediaries.

Shareholder Servicing Agent – MFS Service Center, Inc. (MFSC), a wholly-owned subsidiary of MFS, receives a fee from the fund for its services as shareholder servicing agent. For the six months ended June 30, 2016, the fee was $2,259, which equated to 0.0044% annually of the fund's average daily net assets. MFSC also receives payment from the fund for out-of-pocket expenses paid by MFSC on behalf of the fund. For the six months ended June 30, 2016, these costs amounted to $643.

Administrator – MFS provides certain financial, legal, shareholder communications, compliance, and other administrative services to the fund. Under an administrative services agreement, the fund reimburses MFS the costs incurred to provide these services. The fund is charged an annual fixed amount of $17,500 plus a fee based on average daily net assets. The administrative services fee incurred for the six months ended June 30, 2016 was equivalent to an annual effective rate of 0.0251% of the fund's average daily net assets.

Trustees' and Officers' Compensation – The fund pays compensation to independent Trustees in the form of a retainer, attendance fees, and additional compensation to Board and Committee chairpersons. The fund does not pay compensation directly to Trustees or officers of the fund who are also officers of the investment adviser, all of whom receive remuneration for their services to the fund from MFS. Certain officers and Trustees of the fund are officers or directors of MFS, MFD, and MFSC.

Other – This fund and certain other funds managed by MFS (the funds) have entered into a service agreement (the ISO Agreement) which provides for payment of fees solely by the funds to Tarantino LLC in return for the provision of services of an Independent Senior Officer (ISO) for the funds. Frank L. Tarantino serves as the ISO and is an officer of the funds and the sole member of Tarantino LLC. The funds can terminate the ISO Agreement with Tarantino LLC at any time under the terms of the ISO Agreement. For the six months ended June 30, 2016, the fee paid by the fund under this agreement was $107 and is included in "Miscellaneous" expense in the Statement of Operations. MFS has agreed to bear all expenses associated with office space, other administrative support, and supplies provided to the ISO.

The fund invests in the MFS Institutional Money Market Portfolio which is managed by MFS and seeks current income consistent with preservation of capital and liquidity. Income earned on this investment is included in "Dividends from underlying affiliated funds" in the Statement of Operations. This money market fund does not pay a management fee to MFS.

(4) Portfolio Securities

For the six months ended June 30, 2016, purchases and sales of investments, other than short-term obligations, aggregated $39,893,230 and $50,748,792, respectively.

(5) Shares of Beneficial Interest

The fund's Declaration of Trust permits the Trustees to issue an unlimited number of full and fractional shares of beneficial interest. Transactions in fund shares were as follows:

	Six months ended 6/30/16		Year ended 12/31/15	
	Shares	Amount	Shares	Amount
Shares sold				
Initial Class	54,472	$661,304	390,290	$6,180,402
Service Class	49,646	585,596	416,794	5,331,479
	104,118	$1,246,900	807,084	$11,511,881
Shares issued to shareholders in reinvestment of distributions				
Initial Class	—	$—	477,899	$5,634,426
Service Class	—	—	1,415,427	16,348,179
	—	$—	1,893,326	$21,982,605
Shares reacquired				
Initial Class	(250,216)	$(3,016,520)	(559,295)	$(8,370,958)
Service Class	(862,839)	(10,331,064)	(1,565,716)	(23,299,306)
	(1,113,055)	$(13,347,584)	(2,125,011)	$(31,670,264)
Net change				
Initial Class	(195,744)	$(2,355,216)	308,894	$3,443,870
Service Class	(813,193)	(9,745,468)	266,505	(1,619,648)
	(1,008,937)	$(12,100,684)	575,399	$1,824,222

(6) Line of Credit

The fund and certain other funds managed by MFS participate in a $1.25 billion unsecured committed line of credit, subject to a $1 billion sublimit, provided by a syndication of banks under a credit agreement. Borrowings may be made for temporary financing needs. Interest is charged to each fund, based on its borrowings, generally at a rate equal to the higher of the Overnight Federal Reserve funds rate or daily one month LIBOR plus an agreed upon spread. A commitment fee, based on the average daily, unused portion of the committed line of credit, is allocated among the participating funds at the end of each calendar quarter. In addition, the fund and other funds managed by MFS have established unsecured uncommitted borrowing arrangements with certain banks for temporary financing needs. Interest is charged to each fund, based on its borrowings, at a rate equal to the Overnight Federal Reserve funds rate plus an agreed upon spread. For the six months ended June 30, 2016, the fund's commitment fee and interest expense were $278 and $0, respectively, and are included in "Miscellaneous" expense in the Statement of Operations.

(7) Transactions in Underlying Affiliated Funds – Affiliated Issuers

An affiliated issuer may be considered one in which the fund owns 5% or more of the outstanding voting securities, or a company which is under common control. For the purposes of this report, the fund assumes the following to be an affiliated issuer:

Underlying Affiliated Fund	Beginning Shares/Par Amount	Acquisitions Shares/Par Amount	Dispositions Shares/Par Amount	Ending Shares/Par Amount
MFS Institutional Money Market Portfolio	1,188,569	10,278,419	(10,875,218)	591,770

Underlying Affiliated Fund	Realized Gain (Loss)	Capital Gain Distributions	Dividend Income	Ending Value
MFS Institutional Money Market Portfolio	$—	$—	$1,124	$591,770

PROXY VOTING POLICIES AND INFORMATION

MFS votes proxies on behalf of the fund pursuant to proxy voting policies and procedures that are available without charge, upon request, by calling 1-800-225-2606, by visiting *mfs.com* (once you have selected "Individual Investor" as your role, click on "Individual Investor Home" in the top navigation and then select "Learn More About Proxy Voting" under the "I want to…" header on the left hand column of the page), or by visiting the SEC's Web site at *http://www.sec.gov*.

Information regarding how the fund voted proxies relating to portfolio securities during the most recent twelve-month period ended June 30 is available by August 31 of each year without charge by visiting *mfs.com* (once you have selected "Individual Investor" as your role, click on "Individual Investor Home" in the top navigation and then select "Learn More About Proxy Voting" under the "I want to…" header on the left hand column of the page), or by visiting the SEC's Web site at *http://www.sec.gov*.

QUARTERLY PORTFOLIO DISCLOSURE

The fund will file a complete schedule of portfolio holdings with the Securities and Exchange Commission (the Commission) for the first and third quarters of each fiscal year on Form N-Q. The fund's Form N-Q is available on the EDGAR database on the Commission's Internet Web site at *http://www.sec.gov*, and may be reviewed and copied at the:

Public Reference Room
Securities and Exchange Commission
100 F Street, NE, Room 1580
Washington, D.C. 20549

Information on the operation of the Public Reference Room may be obtained by calling the Commission at 1-800-SEC-0330. Copies of the fund's Form N-Q also may be obtained, upon payment of a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov or by writing the Public Reference Section at the above address.

FURTHER INFORMATION

From time to time, MFS may post important information about the fund or the MFS funds on the MFS web site (*mfs.com*). This information is available on *mfs.com* by following these steps once you have selected "Individual Investor" as your role: (1) Click on the "Individual Investor Home" in the top navigation and then select the "Announcements" option within the "Market Outlooks" drop down, or (2) Click on "Products & Services" and "Variable Insurance Portfolios", then "VIT III" and then select the fund's name.

INFORMATION ABOUT FUND CONTRACTS AND LEGAL CLAIMS

The fund has entered into contractual arrangements with an investment adviser, administrator, distributor, shareholder servicing agent, 529 program manager (if applicable), and custodian who each provide services to the fund. Unless expressly stated otherwise, shareholders are not parties to, or intended beneficiaries of these contractual arrangements, and these contractual arrangements are not intended to create any shareholder right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the fund.

Under the Trust's By-Laws and Declaration of Trust, any claims asserted against or on behalf of the MFS Funds, including claims against Trustees and Officers, must be brought in state and federal courts located within the Commonwealth of Massachusetts.

Expense Example (unaudited)

Global Infrastructure Portfolio

As a shareholder of the Global Infrastructure Portfolio (the "Portfolio"), you incur two types of costs: (1) insurance company charges; and (2) ongoing costs, which may include advisory fees, administration fees, distribution (12b-1) fees and other Portfolio expenses. This example is intended to help you understand your ongoing costs (in dollars) of investing in the Portfolio and to compare these costs with the ongoing costs of investing in other mutual funds.

This example is based on an investment of $1,000 invested at the beginning of the six-month period ended June 30, 2016 and held for the entire six-month period.

Actual Expenses

The table below provides information about actual account values and actual expenses. You may use the information in this table, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the table under the heading entitled "Actual Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes

The table below provides information about hypothetical account values and hypothetical expenses based on the Portfolio's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Portfolio's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Portfolio and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight your ongoing costs only and do not reflect any insurance company charges. Therefore, the table below is useful in comparing ongoing costs, but will not help you determine the relative total cost of owning different funds. In addition, if these insurance company charges were included, your costs would have been higher.

	Beginning Account Value 1/1/16	Actual Ending Account Value 6/30/16	Hypothetical Ending Account Value	Actual Expenses Paid During Period*	Hypothetical Expenses Paid During Period*	Net Expense Ratio During Period**
Global Infrastructure Portfolio Class I	$1,000.00	$1,175.60	$1,020.59	$4.65	$4.32	0.86%
Global Infrastructure Portfolio Class II	1,000.00	1,174.20	1,019.34	6.00	5.57	1.11

* Expenses are calculated using each Portfolio Class' annualized net expense ratio (as disclosed), multiplied by the average account value over the period, and multiplied by 182/366 (to reflect the most recent one-half year period).

** Annualized.

Notes to Financial Statements

The Universal Institutional Funds, Inc. (the "Fund") is registered under the Investment Company Act of 1940, as amended (the "Act"), as an open-end management investment company. The Fund is comprised of eleven separate active, diversified and non-diversified portfolios (individually referred to as a "Portfolio", collectively as the "Portfolios"). The Fund applies investment company accounting and reporting guidance.

The accompanying financial statements relate to the Global Infrastructure Portfolio. The Portfolio's adviser, Morgan Stanley Investment Management Inc. (the "Adviser") and sub-advisers, Morgan Stanley Investment Management Limited ("MSIM Limited") and Morgan Stanley Investment Management Company ("MSIM Company") (together, the "Sub-Advisers"), seek to provide both capital appreciation and current income. The Portfolio offers two classes of shares — Class I and Class II. Both classes of shares have identical voting rights (except that shareholders of a Class have exclusive voting rights regarding any matter relating solely to that Class of shares), dividend, liquidation and other rights.

The Fund is intended to be the funding vehicle for variable annuity contracts and variable life insurance policies offered by the separate accounts of certain life insurance companies.

A. Significant Accounting Policies: The following significant accounting policies are in conformity with U.S. generally accepted accounting principles ("GAAP"). Such policies are consistently followed by the Fund in the preparation of its financial statements. GAAP may require management to make estimates and assumptions that affect the reported amounts and disclosures in the financial statements. Actual results may differ from those estimates.

1. **Security Valuation:** (1) An equity portfolio security listed or traded on an exchange is valued at its latest reported sales price (or at the exchange official closing price if such exchange reports an official closing price), and if there were no sales on a given day and if there is no official exchange closing price for that day, the security is valued at the mean between the last reported bid and asked prices if such bid and asked prices are available on the relevant exchanges; (2) all other equity portfolio securities for which over-the-counter ("OTC") market quotations are readily available are valued at the latest reported sales price (or at the market official closing price if such market reports an official closing price), and if there was no trading in the security on a given day and if there is no official closing price from relevant markets for that day, the security is valued at the mean between the last reported bid and asked prices if such bid and asked prices are available on the relevant markets. Listed equity securities not traded on the valuation date with no reported bid and asked prices available on the exchange are valued at the mean between the current bid and asked prices obtained from one or more reputable brokers or dealers. An unlisted equity security that does not trade on the valuation date and for which bid and asked prices from the relevant markets are unavailable is valued at the mean between the current bid and asked prices obtained from one or more reputable brokers or dealers. In cases where a security is traded on more than one exchange, the security is valued on the exchange designated as the primary market; (3) when market quotations are not readily available, including circumstances under which the Adviser or Sub-Advisers determine that the closing price, last sale price or the mean between the last reported bid and asked prices are not reflective of a security's market value, portfolio securities are valued at their fair value as determined in good faith under procedures established by and under the general supervision of the Fund's Board of Directors (the "Directors"). Occasionally, developments affecting the closing prices of securities and other assets may occur between the times at which valuations of such securities are determined (that is, close of the foreign market on which the securities trade) and the close of business of the New York Stock Exchange ("NYSE"). If developments occur during such periods that are expected to materially affect the value of such securities, such valuations may be adjusted to reflect the estimated fair value of such securities as of the close of the NYSE, as determined in good faith by the Directors or by the Adviser using a pricing service and/or procedures approved by the Directors; (4) quotations of foreign portfolio securities, other assets and liabilities and forward contracts stated in foreign currency are translated into U.S. dollar equivalents at the prevailing market rates prior to the close of the NYSE; (5) investments in mutual funds, including the Morgan Stanley Institutional Liquidity Funds, are valued at the net asset value ("NAV") as of the close of each business day; and (6) short-term debt securities with remaining maturities of 60 days or less at the time of purchase may be valued at amortized cost, unless the Adviser determines such valuation does not reflect the securities' market value, in which case these securities will be valued at their fair market value determined by the Adviser.

   The Directors have responsibility for determining in good faith the fair value of the investments, and the Directors may appoint others, such as the Fund's Adviser or a valuation committee, to assist the Directors in determining fair value and to make the actual calculations pursuant to the fair valuation methodologies previously

Notes to Financial Statements (cont'd)

approved by the Directors. Under procedures approved by the Directors, the Fund's Adviser has formed a Valuation Committee whose members are approved by the Directors. The Valuation Committee provides administration and oversight of the Fund's valuation policies and procedures, which are reviewed at least annually by the Directors. These procedures allow the Fund to utilize independent pricing services, quotations from securities and financial instrument dealers, and other market sources to determine fair value.

The Fund has procedures to determine the fair value of securities and other financial instruments for which market prices are not readily available. Under these procedures, the Valuation Committee convenes on a regular and ad hoc basis to review such securities and considers a number of factors, including valuation methodologies and significant unobservable valuation inputs, when arriving at fair value. The Valuation Committee may employ a market-based approach which may use related or comparable assets or liabilities, recent transactions, market multiples, book values, and other relevant information for the investment to determine the fair value of the investment. An income-based valuation approach may also be used in which the anticipated future cash flows of the investment are discounted to calculate fair value. Discounts may also be applied due to the nature or duration of any restrictions on the disposition of the investments. Due to the inherent uncertainty of valuations of such investments, the fair values may differ significantly from the values that would have been used had an active market existed. The Valuation Committee employs various methods for calibrating these valuation approaches including a regular review of valuation methodologies, key inputs and assumptions, transactional back-testing or disposition analysis, and reviews of any related market activity.

2. Fair Value Measurement: Financial Accounting Standards Board ("FASB") Accounting Standards Codification™ ("ASC") 820, "Fair Value Measurement" ("ASC 820"), defines fair value as the value that the Fund would receive to sell an investment or pay to transfer a liability in a timely transaction with an independent buyer in the principal market, or in the absence of a principal market the most advantageous market for the investment or liability. ASC 820 establishes a three-tier hierarchy to distinguish between (1) inputs that reflect the assumptions market participants would use in valuing an asset or liability developed based on market data obtained from sources independent of the reporting entity (observable inputs) and (2) inputs that reflect the reporting entity's own assumptions about the assumptions market participants would use in valuing an asset or liability developed based on the best information available in the circumstances (unobservable inputs) and to establish classification of fair value measurements for disclosure purposes. Various inputs are used in determining the value of the Fund's investments. The inputs are summarized in the three broad levels listed below.

- Level 1 – unadjusted quoted prices in active markets for identical investments
- Level 2 – other significant observable inputs (including quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)
- Level 3 – significant unobservable inputs including the Fund's own assumptions in determining the fair value of investments. Factors considered in making this determination may include, but are not limited to, information obtained by contacting the issuer, analysts, or the appropriate stock exchange (for exchange-traded securities), analysis of the issuer's financial statements or other available documents and, if necessary, available information concerning other securities in similar circumstances

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities and the determination of the significance of a particular input to the fair value measurement in its entirety requires judgment and considers factors specific to each security.

The following is a summary of the inputs used to value the Portfolio's investments as of June 30, 2016.

Investment Type	Level 1 Unadjusted quoted prices (000)	Level 2 Other significant observable inputs (000)	Level 3 Significant unobservable inputs (000)	Total (000)
Assets:				
Common Stocks				
Airports	$ —	$ 1,690	$—	$ 1,690
Communications	12,128	1,416	—	13,544
Diversified	181	5,385	—	5,566
Electricity Transmission & Distribution	5,575	3,959	—	9,534
Oil & Gas Storage & Transportation	31,105	1,288	—	32,393
PPA Contracted Renewables	3,548	3,651	—	7,199
Railroads	777	—	—	777
Toll Roads	147	8,879	—	9,026
Water	800	5,414	—	6,214
Total Common Stocks	**54,261**	**31,682**	**—**	**85,943**

Notes to Financial Statements (cont'd)

Investment Type	Level 1 Unadjusted quoted prices (000)	Level 2 Other significant observable inputs (000)	Level 3 Significant unobservable inputs (000)	Total (000)
Short-Term Investments				
Investment Companies	$ 8,499	$ —	$—	$ 8,499
Repurchase Agreements	—	831	—	831
Total Short-Term Investments	**8,499**	**831**	**—**	**9,330**
Total Assets	**$62,760**	**$32,513**	**$—**	**$95,273**

Transfers between investment levels may occur as the markets fluctuate and/or the availability of data used in an investment's valuation changes. The Portfolio recognizes transfers between the levels as of the end of the period. As of June 30, 2016, securities with a total value of approximately $147,000 transferred from Level 2 to Level 1. Securities that were valued using other significant observable inputs at December 31, 2015 were valued using unadjusted quoted prices at June 30, 2016. At June 30, 2016, the fair value of certain securities were adjusted due to developments which occurred between the time of the close of the foreign markets on which they trade and the close of business on the NYSE which resulted in their Level 2 classification.

3. Repurchase Agreements: The Portfolio may enter into repurchase agreements under which the Portfolio lends cash and takes possession of securities with an agreement that the counterparty will repurchase such securities. In connection with transactions in repurchase agreements, a bank as custodian for the Portfolio takes possession of the underlying securities which are held as collateral, with a market value at least equal to the amount of the repurchase transaction, including principal and accrued interest. To the extent that any repurchase transaction exceeds one business day, the value of the collateral is marked-to-market on a daily basis to determine that the value of the collateral does not decrease below the repurchase price plus accrued interest as earned. If such a decrease occurs, additional collateral will be requested and, when received, will be added to the account to maintain full collateralization. In the event of default on the obligation to repurchase, the Portfolio has the right to liquidate the collateral and apply the proceeds in satisfaction of the obligation. In the event of default or bankruptcy by the counterparty to the agreement, realization of the collateral proceeds may be subject to cost and delays. The Portfolio, along with other affiliated investment companies, may utilize a joint trading account for the purpose of entering into repurchase agreements.

4. Foreign Currency Translation and Foreign Investments: The books and records of the Portfolio are maintained in U.S. dollars. Foreign currency amounts are translated into U.S. dollars as follows:

— investments, other assets and liabilities at the prevailing rate of exchange on the valuation date;

— investment transactions and investment income at the prevailing rates of exchange on the dates of such transactions.

Although the net assets of the Portfolio are presented at the foreign exchange rates and market values at the close of the period, the Portfolio does not isolate that portion of the results of operations arising as a result of changes in the foreign exchange rates from the fluctuations arising from changes in the market prices of securities held at period end. Similarly, the Portfolio does not isolate the effect of changes in foreign exchange rates from the fluctuations arising from changes in the market prices of securities sold during the period. Accordingly, realized and unrealized foreign currency gains (losses) on investments in securities are included in the reported net realized and unrealized gains (losses) on investment transactions and balances. However, pursuant to U.S. Federal income tax regulations, gains and losses from certain foreign currency transactions and the foreign currency portion of gains and losses realized on sales and maturities of foreign denominated debt securities are treated as ordinary income for U.S. Federal income tax purposes.

Net realized gains (losses) on foreign currency transactions represent net foreign exchange gains (losses) from foreign currency forward exchange contracts, disposition of foreign currencies, currency gains (losses) realized between the trade and settlement dates on securities transactions, and the difference between the amount of investment income and foreign withholding taxes recorded on the Portfolio's books and the U.S. dollar equivalent amounts actually received or paid. Net unrealized currency gains (losses) from valuing foreign currency denominated assets and liabilities at period end exchange rates are reflected as a component of unrealized appreciation (depreciation) in the Statement of Assets and Liabilities. The change in unrealized currency gains (losses) on foreign currency translations for the period is reflected in the Statement of Operations.

Foreign security and currency transactions may involve certain considerations and risks not typically associated with those of U.S. dollar denominated transactions as a result of, among other factors, fluctuations of exchange rates in relation to the U.S. dollar, the possibility of lower

Notes to Financial Statements (cont'd)

levels of governmental supervision and regulation of foreign securities markets and the possibility of political or economic instability.

Governmental approval for foreign investments may be required in advance of making an investment under certain circumstances in some countries, and the extent of foreign investments in domestic companies may be subject to limitation in other countries. Foreign ownership limitations also may be imposed by the charters of individual companies to prevent, among other concerns, violations of foreign investment limitations. As a result, an additional class of shares (identified as "Foreign" in the Portfolio of Investments) may be created and offered for investment. The "local" and "foreign shares" market values may differ. In the absence of trading of the foreign shares in such markets, the Portfolio values the foreign shares at the closing exchange price of the local shares.

5. Securities Lending: The Portfolio lends securities to qualified financial institutions, such as broker-dealers, to earn additional income. Any increase or decrease in the fair value of the securities loaned that might occur and any interest earned or dividends declared on those securities during the term of the loan would remain in the Portfolio. The Portfolio would receive cash or securities as collateral in an amount equal to or exceeding 100% of the current fair value of the loaned securities. The collateral is marked-to-market daily by State Street Bank and Trust Company ("State Street"), the securities lending agent, to ensure that a minimum of 100% collateral coverage is maintained.

Based on pre-established guidelines, the securities lending agent invests any cash collateral that is received in an affiliated money market portfolio and repurchase agreements. Securities lending income is generated from the earnings on the invested collateral and borrowing fees, less any rebates owed to the borrowers and compensation to the lending agent, and is recorded as "Income from Securities Loaned — Net" in the Portfolio's Statement of Operations. Risks in securities lending transactions are that a borrower may not provide additional collateral when required or return the securities when due, and that the value of the short-term investments will be less than the amount of cash collateral plus any rebate that is required to be returned to the borrower.

The Portfolio has the right under the lending agreement to recover the securities from the borrower on demand.

The following table presents financial instruments that are subject to enforceable netting arrangements as of June 30, 2016.

	Gross Amounts Not Offset in the Statement of Assets and Liabilities		
Gross Asset Amounts Presented in Statement of Assets and Liabilities (000)	Financial Instrument (000)	Collateral Received (000)	Net Amount (not less than $0) (000)
$8,607(a)	$—	$8,607(b)(c)	$0

(a) Represents market value of loaned securities at period end.

(b) The Portfolio received cash collateral of approximately $4,285,000, which was subsequently invested in Repurchase Agreements and Morgan Stanley Institutional Liquidity Funds as reported in the Portfolio of Investments. In addition, the Portfolio received non-cash collateral of approximately $4,702,000 in the form of U.S. Government obligations, which the Portfolio cannot sell or repledge, and accordingly are not reflected in the Portfolio of Investments.

(c) The actual collateral received is greater than the amount shown here due to overcollateralization.

The Portfolio has adopted the disclosure provisions of FASB Accounting Standards Update No. 2014-11 ("ASU No. 2014-11"), "Transfers & Servicing (Topic 860): Repurchase-to-Maturity Transactions, Repurchase Financings, and Disclosures". ASU No. 2014-11 is intended to provide increased transparency about the types of collateral pledged in securities lending transactions and other similar transactions that are accounted for as secured borrowing.

The following table displays a breakdown of transactions accounted for as secured borrowings, the gross obligations by class of collateral pledged, and the remaining contractual maturity of those transactions as of June 30, 2016.

	Remaining Contractual Maturity of the Agreements				
	Overnight and Continuous (000)	<30 days (000)	Between 30 & 90 days (000)	>90 days (000)	Total (000)
Securities Lending Transactions					
Common Stocks	$ 4,285	$—	$—	$—	$ 4,285
Total Borrowings	**$4,285**	**$—**	**$—**	**$—**	**$4,285**
Gross amount of recognized liabilities for securities lending transactions					**$4,285**

6. Indemnifications: The Fund enters into contracts that contain a variety of indemnifications. The Fund's maximum exposure under these arrangements is unknown. However, the Fund has not had prior claims or losses pursuant to these contracts and expects the risk of loss to be remote.

7. Security Transactions, Income and Expenses: Security transactions are accounted for on the trade date (date the order to buy or sell is executed). Realized gains

Notes to Financial Statements (cont'd)

and losses on the sale of investment securities are determined on the specific identified cost method. Dividend income and other distributions are recorded on the ex-dividend date (except for certain foreign dividends which may be recorded as soon as the Portfolio is informed of such dividends) net of applicable withholding taxes. Interest income is recognized on the accrual basis except where collection is in doubt. Discounts are accreted and premiums are amortized over the life of the respective securities. Most expenses of the Fund can be directly attributed to a particular Portfolio. Expenses which cannot be directly attributed are apportioned among the Portfolios based upon relative net assets or other appropriate methods. Income, expenses (other than class specific expenses) and realized and unrealized gains or losses are allocated to each class of shares based upon their relative net assets.

The Portfolio owns shares of real estate investment trusts ("REITs"), which report information on the source of their distributions annually in the following calendar year. A portion of distributions received from REITs during the year is estimated to be a return of capital and is recorded as a reduction of their cost.

Settlement and registration of foreign securities transactions may be subject to significant risks not normally associated with investments in the United States. In certain markets, ownership of shares is defined according to entries in the issuer's share register. It is possible that a Portfolio holding these securities could lose its share registration through fraud, negligence or even mere oversight. In addition, shares being delivered for sales and cash being paid for purchases may be delivered before the exchange is complete. This may subject the Portfolio to further risk of loss in the event of a failure to complete the transaction by the counterparty.

8. Dividends and Distributions to Shareholders: Dividend income and distributions to shareholders are recorded on the ex-dividend date. Dividends from net investment income, if any, are declared and paid annually. Net realized capital gains, if any, are distributed at least annually.

B. Advisory/Sub-Advisory Fees: The Adviser, a wholly-owned subsidiary of Morgan Stanley, provides the Portfolio with advisory services under the terms of an Investment Advisory Agreement, paid quarterly, at an annual rate of 0.85% of the daily net assets of the Portfolio.

The Adviser has agreed to reduce its advisory fee and/or reimburse the Portfolio so that total annual portfolio operating expenses, excluding certain investment related expenses, taxes, interest and other extraordinary expenses (including litigation), will not exceed 0.87% for Class I shares and 1.12% for Class II shares. The fee waivers and/or expense reimbursements will continue for at least one year from the date of the Portfolio's prospectus or until such time as the Directors act to discontinue all or a portion of such waivers and/or reimbursements when they deem such action is appropriate. For the six months ended June 30, 2016, approximately $178,000 of advisory fees were waived pursuant to this arrangement.

The Adviser has entered into a Sub-Advisory Agreement with the Sub-Advisers, each a wholly-owned subsidiary of Morgan Stanley. The Sub-Advisers provide the Portfolio with advisory services subject to the overall supervision of the Adviser and the Fund's Officers and Directors. The Adviser pays the Sub-Advisers on a monthly basis a portion of the net advisory fees the Adviser receives from the Portfolio.

C. Administration Fees: The Adviser also serves as Administrator to the Fund and provides administrative services pursuant to an Administration Agreement for an annual fee, accrued daily and paid monthly, of 0.08% of the Portfolio's average daily net assets.

Under a Sub-Administration Agreement between the Administrator and State Street, State Street provides certain administrative services to the Fund. For such services, the Administrator pays State Street a portion of the fee the Administrator receives from the Portfolio.

D. Servicing Fees: The Fund accrues daily and pays quarterly a servicing fee of up to 0.17% of the average daily value of shares of the Portfolio held in an insurance company's account. Certain insurance companies have entered into a servicing agreement with the Fund to provide administrative and other contract-owner related services on behalf of the Portfolio.

E. Distribution Fees: Morgan Stanley Distribution, Inc. ("MSDI" or the "Distributor"), a wholly-owned subsidiary of the Adviser and Sub-Advisers and an indirect subsidiary of Morgan Stanley, serves as the Distributor of the Portfolio and provides the Portfolio's Class II shareholders with distribution services pursuant to a Distribution Plan (the "Plan") in accordance with Rule 12b-1 under the Act. Under the Plan, the Portfolio is authorized to pay the Distributor a distribution fee, which is accrued daily and paid monthly, at an annual rate of 0.25% of the Portfolio's average daily net assets attributable to Class II shares.

F. Dividend Disbursing and Transfer Agent: The Fund's dividend disbursing and transfer agent is Boston Financial Data Services, Inc. ("BFDS"). Pursuant to a Transfer Agency Agreement, the Fund pays BFDS a fee based on the

Notes to Financial Statements (cont'd)

number of classes, accounts and transactions relating to the Portfolios of the Fund.

G. Custodian Fees: State Street (the "Custodian") serves as Custodian for the Fund in accordance with a Custodian Agreement. The Custodian holds cash, securities, and other assets of the Fund as required by the Act. Custody fees are payable monthly based on assets held in custody, investment purchases and sales activity and account maintenance fees, plus reimbursement for certain out-of-pocket expenses.

H. Security Transactions and Transactions with Affiliates: For the six months ended June 30, 2016, purchases and sales of investment securities for the Portfolio, other than long-term U.S. Government securities and short-term investments, were approximately $22,329,000 and $21,618,000, respectively. There were no purchases and sales of long-term U.S. Government securities for the six months ended June 30, 2016.

The Portfolio invests in the Institutional Class of the Morgan Stanley Institutional Liquidity Funds (the "Liquidity Funds"), an open-end management investment company managed by the Adviser, both directly and as a portion of the securities held as collateral on loaned securities. Advisory fees paid by the Portfolio are reduced by an amount equal to its pro-rata share of the advisory and administration fees paid by the Portfolio due to its investment in the Liquidity Funds. For the six months ended June 30, 2016, advisory fees paid were reduced by approximately $2,000 relating to the Portfolio's investment in the Liquidity Funds.

A summary of the Portfolio's transactions in shares of the Liquidity Funds during the six months ended June 30, 2016 is as follows:

Value December 31, 2015 (000)	Purchases at Cost (000)	Sales (000)	Dividend Income (000)	Value June 30, 2016 (000)
$8,569	$18,753	$18,823	$3	$8,499

During the six months ended June 30, 2016, the Portfolio incurred less than $500 in brokerage commissions with Morgan Stanley & Co., LLC, an affiliate of the Adviser/Administrator, Sub-Advisers and Distributor, for portfolio transactions executed on behalf of the Portfolio.

The Portfolio is permitted to purchase and sell securities ("cross-trade") from and to other Morgan Stanley Funds as well as other funds and client accounts for which the Adviser or an affiliate of the Adviser serves as investment adviser, pursuant to procedures approved by the Directors in compliance with Rule 17a-7 under the Act (the "Rule"). Each cross-trade is executed at the current market price in compliance with provisions of the Rule. For the six months ended June 30, 2016, the Portfolio did not engage in any cross-trade transactions.

The Portfolio has an unfunded Deferred Compensation Plan (the "Compensation Plan"), which allows each independent Director to defer payment of all, or a portion, of the fees he or she receives for serving on the Board of Directors. Each eligible Director generally may elect to have the deferred amounts credited with a return equal to the total return on one or more of the Morgan Stanley funds that are offered as investment options under the Compensation Plan. Appreciation/depreciation and distributions received from these investments are recorded with an offsetting increase/decrease in the deferred compensation obligation and do not affect the NAV of the Portfolio.

I. Federal Income Taxes: It is the Portfolio's intention to continue to qualify as a regulated investment company and distribute all of its taxable and tax-exempt income. Accordingly, no provision for Federal income taxes is required in the financial statements.

The Portfolio may be subject to taxes imposed by countries in which it invests. Such taxes are generally based on income and/or capital gains earned or repatriated. Taxes are accrued based on net investment income, net realized gains and net unrealized appreciation as such income and/or gains are earned. Taxes may also be based on transactions in foreign currency and are accrued based on the value of investments denominated in such currency.

FASB ASC 740-10, "Income Taxes – Overall", sets forth a minimum threshold for financial statement recognition of the benefit of a tax position taken or expected to be taken in a tax return. Management has concluded that there are no significant uncertain tax positions that would require recognition in the financial statements. If applicable, the Portfolio recognizes interest accrued related to unrecognized tax benefits in "Interest Expense" and penalties in "Other Expenses" in the Statement of Operations. The Portfolio files tax returns with the U.S. Internal Revenue Service, New York and various states. Each of the tax years in the four-year period ended December 31, 2015, remains subject to examination by taxing authorities.

The tax character of distributions paid may differ from the character of distributions shown in the Statements of Changes in Net Assets due to short-term capital gains being treated as ordinary income for tax purposes. The tax character of distributions paid during fiscal years 2015 and 2014 was as follows:

2015 Distributions Paid From:		2014 Distributions Paid From:	
Ordinary Income (000)	Long-Term Capital Gain (000)	Ordinary Income (000)	Long-Term Capital Gain (000)
$2,030	$8,742	$2,137	$9,953

The amount and character of income and gains to be distributed are determined in accordance with income tax

Notes to Financial Statements (cont'd)

regulations which may differ from GAAP. These book/tax differences are either considered temporary or permanent in nature.

Temporary differences are attributable to differing book and tax treatments for the timing of the recognition of gains (losses) on certain investment transactions and the timing of the deductibility of certain expenses.

Permanent differences, primarily due to differing treatments of gains (losses) related to foreign currency transactions, resulted in the following reclassifications among the components of net assets at December 31, 2015:

Accumulated Undistributed Net Investment Income (000)	Accumulated Undistributed Net Realized Gain (000)	Paid-in-Capital (000)
$(25)	$25	$—

At December 31, 2014, the components of distributable earnings for the Portfolio on a tax basis were as follows:

Undistributed Ordinary Income (000)	Undistributed Long-Term Capital Gain (000)
$2,188	$4,858

J. Credit Facility: As of April 4, 2016, the Fund and other Morgan Stanley funds participate in a $150,000,000 committed, unsecured revolving line of credit facility (the "facility") with State Street. This facility is to be used for temporary emergency purposes or funding of shareholder redemption requests. The interest rate on borrowings is based on the federal funds rate or one month libor rate plus a spread. The facility also has a commitment fee of 0.25% per annum based on the unused portion of the facility. During the period ended June 30, 2016, the Fund did not have any borrowings under the facility.

K. Other: At June 30, 2016, the Portfolio had record owners of 10% or greater. Investment activities of these shareholders could have a material impact on the Portfolio. The aggregate percentage of such owners was 70.7%.

Investment Advisory Agreement Approval (unaudited)

Nature, Extent and Quality of Services

The Board reviewed and considered the nature and extent of the investment advisory services provided by the Adviser (as defined herein) under the advisory agreement, including portfolio management, investment research and equity and fixed income securities trading. The Board reviewed similar information and factors regarding the Sub-Advisers (as defined herein), to the extent applicable. The Board also reviewed and considered the nature and extent of the non-advisory, administrative services provided by the Adviser under the administration agreement, including accounting, operations, clerical, bookkeeping, compliance, business management and planning, legal services and the provision of supplies, office space and utilities at the Adviser's expense. The Board also considered the Adviser's investment in personnel and infrastructure that benefits the Portfolio. (The Adviser and Sub-Advisers together are referred to as the "Adviser" and the advisory, sub-advisory and administration agreements together are referred to as the "Management Agreement.") The Board also considered that the Adviser serves a variety of other investment advisory clients and has experience overseeing service providers. The Board also compared the nature of the services provided by the Adviser with similar services provided by non-affiliated advisers as reported to the Board by Broadridge Financial Solutions, Inc. ("Broadridge").

The Board reviewed and considered the qualifications of the portfolio managers, the senior administrative managers and other key personnel of the Adviser who provide the administrative and advisory services to the Portfolio. The Board determined that the Adviser's portfolio managers and key personnel are well qualified by education and/or training and experience to perform the services in an efficient and professional manner. The Board concluded that the nature and extent of the advisory and administrative services provided were necessary and appropriate for the conduct of the business and investment activities of the Portfolio and supported its decision to approve the Management Agreement.

Performance, Fees and Expenses of the Portfolio

The Board reviewed the performance, fees and expenses of the Portfolio compared to its peers, as determined by Broadridge, and to appropriate benchmarks where applicable. The Board discussed with the Adviser the performance goals and the actual results achieved in managing the Portfolio. When considering a fund's performance, the Board and the Adviser place emphasis on trends and longer-term returns (focusing on one-year, three-year and five-year performance, as of December 31, 2015, or since inception, as applicable). When a fund underperforms its benchmark and/or its peer group average, the Board and the Adviser discuss the causes of such underperformance and, where necessary, they discuss specific changes to investment strategy or investment personnel. The Board noted that the Portfolio's performance was better than its peer group average for the one- and three-year periods but below its peer group average for the five-year period. The Board discussed with the Adviser the level of the advisory and administration fees (together, the "management fee") for this Portfolio relative to comparable funds and/or other accounts advised by the Adviser and/or compared to its peers as determined by Broadridge. In addition to the management fee, the Board also reviewed the Portfolio's total expense ratio. The Board noted that the Portfolio's contractual management fee was higher than but close to its peer group average and the actual management fee and total expense ratio were lower than its peer group averages. After discussion, the Board concluded that the Portfolio's (i) performance was competitive with its peer group average; and (ii) management fee and total expense ratio were competitive with its peer group averages.

Economies of Scale

The Board considered the size and growth prospects of the Portfolio and how that relates to the Portfolio's total expense ratio and particularly the Portfolio's management fee rate, which does not include breakpoints. In conjunction with its review of the Adviser's profitability, the Board discussed with the Adviser how a change in assets can affect the efficiency or effectiveness of managing the Portfolio and whether the management fee level is appropriate relative to current and projected asset levels and/or whether the management fee structure reflects economies of scale as asset levels change. The Board has determined that its review of the actual and/or potential economies of scale of the Portfolio supports its decision to approve the Management Agreement.

Profitability of the Adviser and Affiliates

The Board considered information concerning the costs incurred and profits realized by the Adviser and its affiliates during the last year from their relationship with the Portfolio and during the last two years from their relationship with the Morgan Stanley

Investment Advisory Agreement Approval (unaudited) (cont'd)

Fund Complex and reviewed with the Adviser the cost allocation methodology used to determine the profitability of the Adviser and affiliates. The Board has determined that its review of the analysis of the Adviser's expenses and profitability supports its decision to approve the Management Agreement.

Other Benefits of the Relationship

The Board considered other direct and indirect benefits to the Adviser and/or its affiliates derived from their relationship with the Portfolio and other funds advised by the Adviser. These benefits may include, among other things, fees for trading, distribution and/or shareholder servicing and for transaction processing and reporting platforms used by securities lending agents, and research received by the Adviser generated from commission dollars spent on funds' portfolio trading. The Board reviewed with the Adviser these arrangements and the reasonableness of the Adviser's costs relative to the services performed. The Board has determined that its review of the other benefits received by the Adviser or its affiliates supports its decision to approve the Management Agreement.

Resources of the Adviser and Historical Relationship Between the Portfolio and the Adviser

The Board considered whether the Adviser is financially sound and has the resources necessary to perform its obligations under the Management Agreement. The Board also reviewed and considered the historical relationship between the Portfolio and the Adviser, including the organizational structure of the Adviser, the policies and procedures formulated and adopted by the Adviser for managing the Portfolio's operations and the Board's confidence in the competence and integrity of the senior managers and key personnel of the Adviser. The Board concluded that the Adviser has the financial resources necessary to fulfill its obligations under the Management Agreement and that it is beneficial for the Portfolio to continue its relationship with the Adviser.

Other Factors and Current Trends

The Board considered the controls and procedures adopted and implemented by the Adviser and monitored by the Fund's Chief Compliance Officer and concluded that the conduct of business by the Adviser indicates a good faith effort on its part to adhere to high ethical standards in the conduct of the Portfolio's business.

General Conclusion

After considering and weighing all of the above factors, with various written materials and verbal information presented by the Adviser, the Board concluded that it would be in the best interest of the Portfolio and its shareholders to approve renewal of the Management Agreement for another year. In reaching this conclusion the Board did not give particular weight to any single piece of information or factor referenced above. The Board considered these factors and information over the course of the year and in numerous meetings, some of which were in executive session with only the independent Board members and their counsel present. It is possible that individual Board members may have weighed these factors, and the information presented, differently in reaching their individual decisions to approve the Management Agreement.

Reporting to Shareholders

Each Morgan Stanley fund provides a complete schedule of portfolio holdings in its semi-annual and annual reports within 60 days of the end of the fund's second and fourth fiscal quarters. The semi-annual and annual reports are filed electronically with the Securities and Exchange Commission (SEC) on Form N-CSRS and Form N-CSR, respectively. Morgan Stanley also delivers the semi-annual and annual reports to fund shareholders and makes these reports available on its public website, www.morganstanley.com/im. Each Morgan Stanley fund also files a complete schedule of portfolio holdings with the SEC for the fund's first and third fiscal quarters on Form N-Q. Morgan Stanley does not deliver the reports for the first and third fiscal quarters to shareholders, nor are the reports posted to the Morgan Stanley public website. You may, however, obtain the Form N-Q filings (as well as the Form N-CSR and N-CSRS filings) by accessing the SEC's website, www.sec.gov. You may also review and copy them at the SEC's Public Reference Room in Washington, DC. Information on the operation of the SEC's Public Reference Room may be obtained by calling the SEC toll free at 1 (800) SEC-0330. You can also request copies of these materials, upon payment of a duplicating fee, by electronic request at the SEC's email address (publicinfo@sec.gov) or by writing the Public Reference Room of the SEC, Washington, DC 20549-0102.

Proxy Voting Policies and Procedures and Proxy Voting Record

You may obtain a copy of the Fund's Proxy Voting Policy and Procedures and information regarding how the Fund voted proxies relating to portfolio securities during the most recent twelve-month period ended June 30, without charge, upon request, by calling toll free 1 (800) 548-7786 or by visiting our website at www.morganstanley.com/im. This information is also available on the SEC's website at www.sec.gov.

This report is submitted for the general information of the shareholders of the Portfolio. For more detailed information about the Portfolio, its fees and expenses and other pertinent information, please read its Prospectus. The Fund's Statement of Additional Information contains additional information about the Portfolio, including its Directors. It is available, without charge, by calling 1 (800) 548-7786.

This report is not authorized for distribution to prospective investors in the Portfolio unless preceded or accompanied by an effective Prospectus. Read the Prospectus carefully before investing.

Expense Example (unaudited)

Growth Portfolio

As a shareholder of the Growth Portfolio (the "Portfolio"), you incur two types of costs: (1) insurance company charges; and (2) ongoing costs, which may include advisory fees, administration fees, distribution (12b-1) fees and other Portfolio expenses. This example is intended to help you understand your ongoing costs (in dollars) of investing in the Portfolio and to compare these costs with the ongoing costs of investing in other mutual funds.

This example is based on an investment of $1,000 invested at the beginning of the six-month period ended June 30, 2016 and held for the entire six-month period.

Actual Expenses

The table below provides information about actual account values and actual expenses. You may use the information in this table, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.6), then multiply the result by the number in the table under the heading entitled "Actual Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes

The table below provides information about hypothetical account values and hypothetical expenses based on the Portfolio's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Portfolio's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Portfolio and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight your ongoing costs only and do not reflect any insurance company charges. Therefore, the table below is useful in comparing ongoing costs, but will not help you determine the relative total cost of owning different funds. In addition, if these insurance company charges were included, your costs would have been higher.

	Beginning Account Value 1/1/16	Actual Ending Account Value 6/30/16	Hypothetical Ending Account Value	Actual Expenses Paid During Period*	Hypothetical Expenses Paid During Period*	Net Expense Ratio During Period**
Growth Portfolio Class I	$1,000.00	$961.30	$1,020.93	$3.85	$3.97	0.79%
Growth Portfolio Class II	1,000.00	960.10	1,019.69	5.07	5.22	1.04

* Expenses are calculated using each Portfolio Class' annualized net expense ratio (as disclosed), multiplied by the average account value over the period, and multiplied by 182/366 (to reflect the most recent one-half year period).

** Annualized.

(a) All or a portion of this security was on loan at June 30, 2016.

(b) Non-income producing security.

(c) Security trades on the Hong Kong exchange.

(d) Security has been deemed illiquid at June 30, 2016.

(e) At June 30, 2016, the Portfolio held fair valued securities valued at approximately $7,486,000, representing 3.9% of net assets. These securities have been fair valued as determined in good faith under procedures established by and under the general supervision of the Fund's Directors.

(f) Security cannot be offered for public resale without first being registered under the Securities Act of 1933 and related rules ("restricted security"). Acquisition date represents the day on which an enforceable right to acquire such security is obtained and is presented along with related cost in the security description. The Portfolio has registration rights for certain restricted securities. Any costs related to such registration are borne by the issuer. The aggregate value of restricted securities (excluding 144A holdings) at June 30, 2016, amounts to approximately $7,486,000 and represents 3.9% of net assets.

(g) The approximate fair value and percentage of net assets, $2,406,000 and 1.2%, respectively, represent the securities that have been fair valued under the fair valuation policy for international investments as described in Note A-1 within the Notes to the Financial Statements.

(h) At June 30, 2016, the aggregate cost for Federal income tax purposes approximates the aggregate cost for book purposes. The aggregate gross unrealized appreciation is approximately $77,356,000 and the aggregate gross unrealized depreciation is approximately $8,624,000 resulting in net unrealized appreciation of approximately $68,732,000.

† Per share amount is based on average shares outstanding.

++ Calculated based on the net asset value as of the last business day of the period. Performance does not reflect fees and expenses imposed by your insurance company's separate account. If performance information included the effect of these additional charges, the total return would be lower.

+ The Ratios of Expenses and Net Investment Income (Loss) reflect the rebate of certain Portfolio expenses in connection with the investments in Morgan Stanley affiliates during the period. The effect of the rebate on the ratios is disclosed in the above table as "Ratio of Rebate from Morgan Stanley Affiliates to Average Net Assets."

^ Effective September 9, 2013, the Adviser has agreed to limit the ratio of expenses to average net assets to the maximum ratio of 0.80% for Class I shares. Prior to September 9, 2013, the maximum ratio was 0.85% for Class I shares.

§ Amount is less than 0.005%.

Not Annualized.

* Annualized.

Ratio of Rebate from Morgan Stanley Affiliates to Average Net Assets	0.00%§*	0.00%§	0.00%§	0.00%§	0.00%§	0.00%§
Portfolio Turnover Rate	13%#	33%	30%	32%	48%	30%
(1) Supplemental Information on the Ratios to Average Net Assets:						
Ratios Before Expense Limitation:						
Expenses to Average Net Assets	N/A	1.09%	1.20%	1.25%	1.23%	1.23%
Net Investment Income (Loss) to Average Net Assets	N/A	(0.66)%	(0.62)%	(0.54)%	0.07%	(0.49)%

† Per share amount is based on average shares outstanding.

++ Calculated based on the net asset value as of the last business day of the period. Performance does not reflect fees and expenses imposed by your insurance company's separate account. If performance information included the effect of these additional charges, the total return would be lower.

+ The Ratios of Expenses and Net Investment Income (Loss) reflect the rebate of certain Portfolio expenses in connection with the investments in Morgan Stanley affiliates during the period. The effect of the rebate on the ratios is disclosed in the above table as "Ratio of Rebate from Morgan Stanley Affiliates to Average Net Assets."

^ Effective September 9, 2013, the Adviser has agreed to limit the ratio of expenses to average net assets to the maximum ratio of 1.05% for Class II shares. Prior to September 9, 2013, the maximum ratio was 1.10% for Class II shares.

§ Amount is less than 0.005%.

Not Annualized.

* Annualized.

Notes to Financial Statements

The Universal Institutional Funds, Inc. (the "Fund") is registered under the Investment Company Act of 1940, as amended (the "Act"), as an open-end management investment company. The Fund is comprised of eleven separate active, diversified and non-diversified portfolios (individually referred to as a "Portfolio", collectively as the "Portfolios"). The Fund applies investment company accounting and reporting guidance.

The accompanying financial statements relate to the Growth Portfolio. The Portfolio seeks long-term capital appreciation by investing primarily in growth-oriented equity securities of large capitalization companies. The Portfolio offers two classes of shares — Class I and Class II. Both classes of shares have identical voting rights (except that shareholders of a Class have exclusive voting rights regarding any matter relating solely to that Class of shares), dividend, liquidation and other rights.

The Fund is intended to be the funding vehicle for variable annuity contracts and variable life insurance policies offered by the separate accounts of certain life insurance companies.

A. Significant Accounting Policies: The following significant accounting policies are in conformity with U.S. generally accepted accounting principles ("GAAP"). Such policies are consistently followed by the Fund in the preparation of its financial statements. GAAP may require management to make estimates and assumptions that affect the reported amounts and disclosures in the financial statements. Actual results may differ from those estimates.

1. **Security Valuation:** (1) An equity portfolio security listed or traded on an exchange is valued at its latest reported sales price (or at the exchange official closing price if such exchange reports an official closing price), and if there were no sales on a given day and if there is no official exchange closing price for that day, the security is valued at the mean between the last reported bid and asked prices if such bid and asked prices are available on the relevant exchanges; (2) all other equity portfolio securities for which over-the-counter ("OTC") market quotations are readily available are valued at the latest reported sales price (or at the market official closing price if such market reports an official closing price), and if there was no trading in the security on a given day and if there is no official closing price from relevant markets for that day, the security is valued at the mean between the last reported bid and asked prices if such bid and asked prices are available on the relevant markets. Listed equity securities not traded on the valuation date with no reported bid and asked prices available on the exchange are valued at the mean between the current bid and asked prices obtained from one or more reputable brokers or dealers. An unlisted equity security that does not trade on the valuation date and for which bid and asked prices from the relevant markets are unavailable is valued at the mean between the current bid and asked prices obtained from one or more reputable brokers or dealers. In cases where a security is traded on more than one exchange, the security is valued on the exchange designated as the primary market; (3) listed options are valued at the last reported sales price on the exchange on which they are listed (or at the exchange official closing price if such exchange reports an official closing price). If an official closing price or last reported sales price is unavailable, the listed option should be fair valued at the mean between their latest bid and asked price. Unlisted options and swaps are valued by an outside pricing service approved by the Fund's Board of Directors (the "Directors") or quotes from a broker or dealer; (4) when market quotations are not readily available, including circumstances under which Morgan Stanley Investment Management Inc. (the "Adviser") determines that the closing price, last sale price or the mean between the last reported bid and asked prices are not reflective of a security's market value, portfolio securities are valued at their fair value as determined in good faith under procedures established by and under the general supervision of the Directors. Occasionally, developments affecting the closing prices of securities and other assets may occur between the times at which valuations of such securities are determined (that is, close of the foreign market on which the securities trade) and the close of business of the New York Stock Exchange ("NYSE"). If developments occur during such periods that are expected to materially affect the value of such securities, such valuations may be adjusted to reflect the estimated fair value of such securities as of the close of the NYSE, as determined in good faith by the Directors or by the Adviser using a pricing service and/or procedures approved by the Directors; (5) quotations of foreign portfolio securities, other assets and liabilities and forward contracts stated in foreign currency are translated into U.S. dollar equivalents at the prevailing market rates prior to the close of the NYSE; (6) investments in mutual funds, including the Morgan Stanley Institutional Liquidity Funds, are valued at the net asset value ("NAV") as of the close of each business day; and (7) short-term debt securities with remaining maturities of 60 days or less at the time of purchase may be valued at amortized cost, unless the Adviser determines such valuation does not reflect the securities' market value, in which case these securities will be valued at their fair market value determined by the Adviser.

Notes to Financial Statements (cont'd)

The Directors have responsibility for determining in good faith the fair value of the investments, and the Directors may appoint others, such as the Fund's Adviser or a valuation committee, to assist the Directors in determining fair value and to make the actual calculations pursuant to the fair valuation methodologies previously approved by the Directors. Under procedures approved by the Directors, the Fund's Adviser has formed a Valuation Committee whose members are approved by the Directors. The Valuation Committee provides administration and oversight of the Fund's valuation policies and procedures, which are reviewed at least annually by the Directors. These procedures allow the Fund to utilize independent pricing services, quotations from securities and financial instrument dealers, and other market sources to determine fair value.

The Fund has procedures to determine the fair value of securities and other financial instruments for which market prices are not readily available. Under these procedures, the Valuation Committee convenes on a regular and ad hoc basis to review such securities and considers a number of factors, including valuation methodologies and significant unobservable valuation inputs, when arriving at fair value. The Valuation Committee may employ a market-based approach which may use related or comparable assets or liabilities, recent transactions, market multiples, book values, and other relevant information for the investment to determine the fair value of the investment. An income-based valuation approach may also be used in which the anticipated future cash flows of the investment are discounted to calculate fair value. Discounts may also be applied due to the nature or duration of any restrictions on the disposition of the investments. Due to the inherent uncertainty of valuations of such investments, the fair values may differ significantly from the values that would have been used had an active market existed. The Valuation Committee employs various methods for calibrating these valuation approaches including a regular review of valuation methodologies, key inputs and assumptions, transactional back-testing or disposition analysis, and reviews of any related market activity.

2. Fair Value Measurement: Financial Accounting Standards Board ("FASB") Accounting Standards Codification™ ("ASC") 820, "Fair Value Measurement" ("ASC 820"), defines fair value as the value that the Fund would receive to sell an investment or pay to transfer a liability in a timely transaction with an independent buyer in the principal market, or in the absence of a principal market the most advantageous market for the investment or liability. ASC 820 establishes a three-tier hierarchy to distinguish between (1) inputs that reflect the assumptions market participants would use in valuing an asset or liability developed based on market data obtained from sources independent of the reporting entity (observable inputs) and (2) inputs that reflect the reporting entity's own assumptions about the assumptions market participants would use in valuing an asset or liability developed based on the best information available in the circumstances (unobservable inputs) and to establish classification of fair value measurements for disclosure purposes. Various inputs are used in determining the value of the Fund's investments. The inputs are summarized in the three broad levels listed below.

- Level 1 – unadjusted quoted prices in active markets for identical investments
- Level 2 – other significant observable inputs (including quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)
- Level 3 – significant unobservable inputs including the Fund's own assumptions in determining the fair value of investments. Factors considered in making this determination may include, but are not limited to, information obtained by contacting the issuer, analysts, or the appropriate stock exchange (for exchange-traded securities), analysis of the issuer's financial statements or other available documents and, if necessary, available information concerning other securities in similar circumstances

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities and the determination of the significance of a particular input to the fair value measurement in its entirety requires judgment and considers factors specific to each security.

The following is a summary of the inputs used to value the Portfolio's investments as of June 30, 2016.

Investment Type	Level 1 Unadjusted quoted prices (000)	Level 2 Other significant observable inputs (000)	Level 3 Significant unobservable inputs (000)	Total (000)

Transfers between investment levels may occur as the markets fluctuate and/or the availability of data used in an investment's valuation changes. The Portfolio recognizes transfers between the levels as of the end of the period. As of June 30, 2016, the Portfolio did not have any investments transfer between investment levels. At June 30, 2016, the fair value of certain securities were adjusted due to developments which occurred between the time of the close of the foreign markets on which they trade and the close of business on the NYSE which resulted in their Level 2 classification.

Following is a reconciliation of investments in which significant unobservable inputs (Level 3) were used in determining fair value.

	Common Stock (000)	Preferred Stocks (000)
Beginning Balance	$ 823	$7,312
Purchases	—	—
Sales	(983)	—
Amortization of discount	—	—
Transfers in	—	—
Transfers out	—	—
Corporate actions	—	—
Change in unrealized appreciation (depreciation)	428	174
Realized gains (losses)	(268)	—
Ending Balance	$ —	$7,486
Net change in unrealized appreciation (depreciation) from investments still held as of June 30, 2016	$ —	$ 174

The following table presents additional information about valuation techniques and inputs used for investments that are measured at fair value and categorized within Level 3 as of June 30, 2016. Various valuation techniques were used in the valuation of certain investments and weighted based on the level of significance.

	Fair Value at June 30, 2016 (000)	Valuation Technique	Unobservable Input	Range		Selected Value	Impact to Valuation from an increase in input
Electronic Equipment, Instuments & Components							
Preferred Stock	$1,098	Discounted Cash Flow	Weighted Average Cost of Capital	27.0%	29.0%	28.0%	Decrease
			Perpetual Growth Rate	3.0%	4.0%	3.5%	Increase
		Market Comparable Companies	Enterprise Value/ Revenue	10.8x	24.1x	19.6x	Increase
			Discount for Lack of Marketability	20.0%	20.0%	20.0%	Decrease
Internet & Catalog Retail							
Preferred Stocks	$2,968	Discounted Cash Flow	Weighted Average Cost of Capital	16.0%	18.0%	17.0%	Decrease
			Perpetual Growth Rate	3.0%	4.0%	3.5%	Increase
		Market Comparable Companies	Enterprise Value/ Revenue	8.8x	14.5x	12.0x	Increase

Notes to Financial Statements (cont'd)

3. Repurchase Agreements: The Portfolio may enter into repurchase agreements under which the Portfolio lends cash and takes possession of securities with an agreement that the counterparty will repurchase such securities. In connection with transactions in repurchase agreements, a bank as custodian for the Portfolio takes possession of the underlying securities which are held as collateral, with a market value at least equal to the amount of the repurchase transaction, including principal and accrued interest. To the extent that any repurchase transaction exceeds one business day, the value of the collateral is marked-to-market on a daily basis to determine that the value of the collateral does not decrease below the repurchase price plus accrued interest as earned. If such a decrease occurs, additional collateral will be requested and, when received, will be added to the account to maintain full collateralization. In the event of default on the obligation to repurchase, the Portfolio has the right to liquidate the collateral and apply the proceeds in satisfaction of the obligation. In the event of default or bankruptcy by the counterparty to the agreement, realization of the collateral proceeds may be subject to cost and delays. The Portfolio, along with other affiliated investment companies, may utilize a joint trading account for the purpose of entering into repurchase agreements.

4. Foreign Currency Translation and Foreign Investments: The books and records of the Portfolio are maintained in U.S. dollars. Foreign currency amounts are translated into U.S. dollars as follows:

— investments, other assets and liabilities at the prevailing rate of exchange on the valuation date;

— investment transactions and investment income at the prevailing rates of exchange on the dates of such transactions.

Although the net assets of the Portfolio are presented at the foreign exchange rates and market values at the close of the period, the Portfolio does not isolate that portion of the results of operations arising as a result of changes in the foreign exchange rates from the fluctuations arising from changes in the market prices of securities held at period end. Similarly, the Portfolio does not isolate the effect of changes in foreign exchange rates from the fluctuations arising from changes in the market prices of securities sold during the period. Accordingly, realized and unrealized foreign currency gains (losses) on investments in securities are included in the reported net realized and unrealized gains (losses) on investment transactions and balances. However, pursuant to U.S. Federal income tax regulations, gains and losses from certain foreign currency transactions and the foreign currency portion of gains and losses realized on sales and maturities of foreign denominated debt securities are treated as ordinary income for U.S. Federal income tax purposes.

Net realized gains (losses) on foreign currency transactions represent net foreign exchange gains (losses) from foreign currency forward exchange contracts, disposition of foreign currencies, currency gains (losses) realized between the trade and settlement dates on securities transactions, and the difference between the amount of investment income and foreign withholding taxes recorded on the Portfolio's books and the U.S. dollar equivalent amounts actually received or paid. Net unrealized currency gains (losses) from valuing foreign currency denominated assets and liabilities at period end exchange rates are reflected as a component of unrealized appreciation (depreciation) in the Statement of Assets and Liabilities. The change in unrealized currency gains (losses) on foreign currency translations for the period is reflected in the Statement of Operations.

Notes to Financial Statements (cont'd)

Foreign security and currency transactions may involve certain considerations and risks not typically associated with those of U.S. dollar denominated transactions as a result of, among other factors, fluctuations of exchange rates in relation to the U.S. dollar, the possibility of lower levels of governmental supervision and regulation of foreign securities markets and the possibility of political or economic instability.

Governmental approval for foreign investments may be required in advance of making an investment under certain circumstances in some countries, and the extent of foreign investments in domestic companies may be subject to limitation in other countries. Foreign ownership limitations also may be imposed by the charters of individual companies to prevent, among other concerns, violations of foreign investment limitations. As a result, an additional class of shares (identified as "Foreign" in the Portfolio of Investments) may be created and offered for investment. The "local" and "foreign shares" market values may differ. In the absence of trading of the foreign shares in such markets, the Portfolio values the foreign shares at the closing exchange price of the local shares.

5. Derivatives: The Portfolio may, but is not required to, use derivative instruments for a variety of purposes, including hedging, risk management, portfolio management or to earn income. Derivatives are financial instruments whose value is based, in part, on the value of an underlying asset, interest rate, index or financial instrument. Prevailing interest rates and volatility levels, among other things, also affect the value of derivative instruments. A derivative instrument often has risks similar to its underlying asset and may have additional risks, including imperfect correlation between the value of the derivative and the underlying asset, risks of default by the counterparty to certain transactions, magnification of losses incurred due to changes in the market value of the securities, instruments, indices or interest rates to which the derivative instrument relates, risks that the transactions may not be liquid and risks arising from margin requirements. The use of derivatives involves risks that are different from, and possibly greater than, the risks associated with other portfolio investments. Derivatives may involve the use of highly specialized instruments that require investment techniques and risk analyses different from those associated with other portfolio investments. All of the Portfolio's holdings, including derivative instruments, are marked-to-market each day with the change in value reflected in unrealized appreciation (depreciation). Upon disposition, a realized gain or loss is recognized.

Certain derivative transactions may give rise to a form of leverage. Leverage magnifies the potential for gain and the risk of loss. Leverage associated with derivative transactions may cause the Portfolio to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations or to meet earmarking or segregation requirements, pursuant to applicable Securities and Exchange Commission rules and regulations, or may cause the Portfolio to be more volatile than if the Portfolio had not been leveraged. Although the Adviser seeks to use derivatives to further the Portfolio's investment objectives, there is no assurance that the use of derivatives will achieve this result.

Following is a description of the derivative instruments and techniques that the Portfolio used during the period and their associated risks:

Options: With respect to options, the Portfolio is subject to equity risk, interest rate risk and foreign currency exchange risk in the normal course of pursuing its investment objectives. If the Portfolio buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or foreign currency, or futures contract on the underlying instrument or foreign currency, at an agreed-upon price typically in exchange for a premium paid by the Portfolio. The Portfolio may purchase and/or sell put and call options. Purchasing call options tends to increase the Portfolio's exposure to the underlying (or similar) instrument. Purchasing put options tends to decrease the Portfolio's exposure to the underlying (or similar) instrument. When entering into purchased option contracts, the Portfolio bears the risk of interest or exchange rates or securities prices moving unexpectedly, in which case, the Portfolio may not achieve the anticipated benefits of the purchased option contracts; however the risk of loss is limited to the premium paid. Purchased options are reported as part of "Total Investments in Securities" in the Statement of Assets and Liabilities. Premium paid for purchasing options which expired are treated as realized losses. If the Portfolio sells an option, it sells to another party the right to buy from or sell to the Portfolio a specific amount of the underlying instrument or foreign currency, or futures contract on the underlying instrument or foreign currency, at an agreed-upon price typically in exchange for a premium received by the Portfolio. When options are purchased OTC, the Portfolio bears the risk that the counterparty that wrote the option will be unable or unwilling to perform its obligations under the option contract. Options may also be illiquid and the Portfolio may have difficulty closing out its position. A decision as

Notes to Financial Statements (cont'd)

to whether, when and how to use options involves the exercise of skill and judgment and even a well-conceived option transaction may be unsuccessful because of market behavior or unexpected events. The prices of options can be highly volatile and the use of options can lower total returns.

FASB ASC 815, "Derivatives and Hedging" ("ASC 815"), is intended to improve financial reporting about derivative instruments by requiring enhanced disclosures to enable investors to better understand how and why the Portfolio uses derivative instruments, how these derivative instruments are accounted for and their effects on the Portfolio's financial position and results of operations.

The following table sets forth the fair value of the Portfolio's derivative contracts by primary risk exposure as of June 30, 2016.

	Asset Derivatives Statement of Assets and Liabilities Location	Primary Risk Exposure	Value (000)
Option Purchased	Investments, at Value (Option Purchased)	Currency Risk	$39(a)

(a) Amounts are included in Investments in Securities in the Statement of Assets and Liabilities.

The following tables set forth by primary risk exposure the Portfolio's realized gains (losses) and change in unrealized appreciation (depreciation) by type of derivative contract for the six months ended June 30, 2016 in accordance with ASC 815.

Realized Gain (Loss)

Primary Risk Exposure	Derivative Type	Value (000)
Currency Risk	Investments (Options Purchased)	$(107)(b)

(b) Amounts are included in Investments Sold in the Statement of Operations.

Change in Unrealized Appreciation (Depreciation)

Primary Risk Exposure	Derivative Type	Value (000)
Currency Risk	Investments (Options Purchased)	$(432)(c)

(c) Amounts are included in Investments in the Statement of Operations.

At June 30, 2016, the Portfolio's derivative assets and liabilities are as follows:

Gross Amounts of Assets and Liabilities Presented in the Statement of Assets and Liabilities

Derivatives	Assets(d) (000)	Liabilities(d) (000)
Option Purchased	$39(a)	$—

(a) Amounts are included in Investments in Securities in the Statement of Assets and Liabilities.

(d) Absent an event of default or early termination, OTC derivative assets and liabilities are presented gross and not offset in the Statement of Assets and Liabilities.

The Portfolio typically enters into International Swaps and Derivatives Association, Inc. Master Agreements ("ISDA Master Agreements") or similar master agreements (collectively, "Master Agreements") with its contract counterparties for certain OTC derivatives in order to, among other things, reduce its credit risk to counterparties. ISDA Master Agreements include provisions for general obligations, representations, collateral and events of default or termination. Under an ISDA Master Agreement, the Portfolio typically may offset with the counterparty certain OTC derivative financial instruments' payables and/or receivables with collateral held and/or posted and create one single net payment (close-out netting) in the event of default, termination and/or potential deterioration in the credit quality of the counterparty. Various Master Agreements govern the terms of certain transactions with counterparties, including transactions such as swap, forward, repurchase and reverse repurchase agreements. These Master Agreements typically attempt to reduce the counterparty risk associated with such transactions by specifying credit protection mechanisms and providing standardization that improves legal certainty. Cross-termination provisions under Master Agreements typically provide that a default in connection with one transaction between the Portfolio and a counterparty gives the non-defaulting party the right to terminate any other transactions in place with the defaulting party to create one single net payment due to/due from the defaulting party and may be a feature in certain Master Agreements. In the event the Portfolio exercises its right to terminate a Master Agreement after a counterparty experiences a termination event as defined in the Master Agreement, the return of collateral with market value in excess of the Portfolio's net liability may be delayed or denied.

The following table presents derivative financial instruments that are subject to enforceable netting arrangements as of June 30, 2016.

Gross Amounts Not Offset in the Statement of Assets and Liabilities

Counterparty	Gross Asset Derivatives Presented in Statement of Assets and Liabilities (000)	Financial Instrument (000)	Collateral Received (000)	Net Amount (not less than $0) (000)
Royal Bank of Scotland	$39	$—	$—	$39

Notes to Financial Statements (cont'd)

For the six months ended June 30, 2016, the approximate average monthly amount outstanding for each derivative type is as follows:

Options Purchased:

Average monthly notional amount 30,364,000

6. Securities Lending: The Portfolio lends securities to qualified financial institutions, such as broker-dealers, to earn additional income. Any increase or decrease in the fair value of the securities loaned that might occur and any interest earned or dividends declared on those securities during the term of the loan would remain in the Portfolio. The Portfolio would receive cash or securities as collateral in an amount equal to or exceeding 100% of the current fair value of the loaned securities. The collateral is marked-to-market daily by State Street Bank and Trust Company ("State Street"), the securities lending agent, to ensure that a minimum of 100% collateral coverage is maintained.

Based on pre-established guidelines, the securities lending agent invests any cash collateral that is received in an affiliated money market portfolio and repurchase agreements. Securities lending income is generated from the earnings on the invested collateral and borrowing fees, less any rebates owed to the borrowers and compensation to the lending agent, and is recorded as "Income from Securities Loaned — Net" in the Portfolio's Statement of Operations. Risks in securities lending transactions are that a borrower may not provide additional collateral when required or return the securities when due, and that the value of the short-term investments will be less than the amount of cash collateral plus any rebate that is required to be returned to the borrower.

The Portfolio has the right under the lending agreement to recover the securities from the borrower on demand.

The following table presents financial instruments that are subject to enforceable netting arrangements as of June 30, 2016.

Gross Amounts Not Offset in the Statement of Assets and Liabilities

Gross Asset Amounts Presented in Statement of Assets and Liabilities (000)	Financial Instrument (000)	Collateral Received (000)	Net Amount (not less than $0) (000)
$10,229(e)	$—	$(10,229)(f)(g)	$0

(e) Represents market value of loaned securities at period end.

(f) The Portfolio received cash collateral of approximately $2,449,000, which was subsequently invested in Repurchase Agreements and Morgan Stanley Institutional Liquidity Funds as reported in the Portfolio of Investments. In addition, the Portfolio received non-cash collateral of approximately $7,814,000 in the form of U.S. Government obligations, which the Portfolio cannot sell or repledge, and accordingly are not reflected in the Portfolio of Investments.

(g) The actual collateral received is greater than the amount shown here due to overcollateralization.

The Portfolio has adopted the disclosure provisions of FASB Accounting Standards Update No. 2014-11 ("ASU No. 2014-11"), "Transfers & Servicing (Topic 860): Repurchase-to-Maturity Transactions, Repurchase Financings, and Disclosures". ASU No. 2014-11 is intended to provide increased transparency about the types of collateral pledged in securities lending transactions and other similar transactions that are accounted for as secured borrowing.

The following table displays a breakdown of transactions accounted for as secured borrowings, the gross obligations by class of collateral pledged, and the remaining contractual maturity of those transactions as of June 30, 2016.

Remaining Contractual Maturity of the Agreements

	Overnight and Continuous (000)	<30 days (000)	Between 30 & 90 days (000)	>90 days (000)	Total (000)
Securities Lending Transactions					
Common Stocks	$ 2,449	$—	$—	$—	$ 2,449
Total Borrowings	**$2,449**	**$—**	**$—**	**$—**	**$2,449**
Gross amount of recognized liabilities for securities lending transactions					**$2,449**

7. Restricted Securities: The Portfolio invests in unregistered or otherwise restricted securities. The term "restricted securities" refers to securities that are unregistered or are held by control persons of the issuer and securities that are subject to contractual restrictions on their resale. As a result, restricted securities may be more difficult to value and the Portfolio may have difficulty disposing of such assets either in a timely manner or for a reasonable price. In order to dispose of an unregistered security, the Portfolio, where it has contractual rights to do so, may have to cause such security to be registered. A considerable period may elapse between the time the decision is made to sell the security and the time the security is registered so that the Portfolio could sell it. Contractual restrictions on the resale of securities vary in length and scope and are generally the result of a negotiation between the issuer and acquirer of the securities. The Portfolio would, in either case, bear market risks during that

Notes to Financial Statements (cont'd)

period. Restricted securities are identified in the Portfolio of Investments.

8. **Indemnifications:** The Fund enters into contracts that contain a variety of indemnifications. The Fund's maximum exposure under these arrangements is unknown. However, the Fund has not had prior claims or losses pursuant to these contracts and expects the risk of loss to be remote.

9. **Security Transactions, Income and Expenses:** Security transactions are accounted for on the trade date (date the order to buy or sell is executed). Realized gains and losses on the sale of investment securities are determined on the specific identified cost method. Dividend income and other distributions are recorded on the ex-dividend date (except for certain foreign dividends which may be recorded as soon as the Portfolio is informed of such dividends) net of applicable withholding taxes. Interest income is recognized on the accrual basis except where collection is in doubt. Discounts are accreted and premiums are amortized over the life of the respective securities. Most expenses of the Fund can be directly attributed to a particular Portfolio. Expenses which cannot be directly attributed are apportioned among the Portfolios based upon relative net assets or other appropriate methods. Income, expenses (other than class specific expenses) and realized and unrealized gains or losses are allocated to each class of shares based upon their relative net assets.

10. **Dividends and Distributions to Shareholders:** Dividend income and distributions to shareholders are recorded on the ex-dividend date. Dividends from net investment income, if any, are declared and paid annually. Net realized capital gains, if any, are distributed at least annually.

B. Advisory Fees: The Adviser, a wholly-owned subsidiary of Morgan Stanley, provides the Portfolio with advisory services under the terms of an Investment Advisory Agreement, paid quarterly, at the annual rate based on the daily net assets as follows:

First $1 billion	Next $1 billion	Next $1 billion	Over $3 billion
0.50%	0.45%	0.40%	0.35%

For the six months ended June 30, 2016, the advisory fee rate (net of rebate) was equivalent to an annual effective rate of 0.50% of the Portfolio's average daily net assets.

The Adviser has agreed to reduce its advisory fee and/or reimburse the Portfolio so that total annual portfolio operating expenses, excluding certain investment related expenses, taxes, interest and other extraordinary expenses (including litigation), will not exceed 0.80% for Class I shares and 1.05% for Class II shares. The fee waivers and/or expense reimbursements will continue for at least one year from the date of the Portfolio's prospectus or until such time as the Directors act to discontinue all or a portion of such waivers and/or reimbursements when they deem such action is appropriate. This arrangement had no effect during the most recent reporting period.

C. Administration Fees: The Adviser also serves as Administrator to the Fund and provides administrative services pursuant to an Administration Agreement for an annual fee, accrued daily and paid monthly, of 0.08% of the Portfolio's average daily net assets.

Under a Sub-Administration Agreement between the Administrator and State Street, State Street provides certain administrative services to the Fund. For such services, the Administrator pays State Street a portion of the fee the Administrator receives from the Portfolio.

D. Servicing Fees: The Fund accrues daily and pays quarterly a servicing fee of up to 0.17% of the average daily value of shares of the Portfolio held in an insurance company's account. Certain insurance companies have entered into a servicing agreement with the Fund to provide administrative and other contract-owner related services on behalf of the Portfolio.

E. Distribution Fees: Morgan Stanley Distribution, Inc. ("MSDI" or the "Distributor"), a wholly-owned subsidiary of The Adviser and an indirect subsidiary of Morgan Stanley, serves as the Distributor of the Portfolio and provides the Portfolio's Class II shareholders with distribution services pursuant to a Distribution Plan (the "Plan") in accordance with Rule 12b-1 under the Act. Under the Plan, the Portfolio is authorized to pay the Distributor a distribution fee, which is accrued daily and paid monthly, at an annual rate of 0.25% of the Portfolio's average daily net assets attributable to Class II shares.

F. Dividend Disbursing and Transfer Agent: The Fund's dividend disbursing and transfer agent is Boston Financial Data Services, Inc. ("BFDS"). Pursuant to a Transfer Agency Agreement, the Fund pays BFDS a fee based on the number of classes, accounts and transactions relating to the Portfolios of the Fund.

G. Custodian Fees: State Street (the "Custodian") serves as Custodian for the Fund in accordance with a Custodian Agreement. The Custodian holds cash, securities, and other assets of the Fund as required by the Act. Custody fees are

Notes to Financial Statements (cont'd)

payable monthly based on assets held in custody, investment purchases and sales activity and account maintenance fees, plus reimbursement for certain out-of-pocket expenses.

H. Security Transactions and Transactions with Affiliates: For the six months ended June 30, 2016, purchases and sales of investment securities for the Portfolio, other than long-term U.S. Government securities and short-term investments, were approximately $23,734,000 and $26,450,000, respectively. There were no purchases and sales of long-term U.S. Government securities for the six months ended June 30, 2016.

The Portfolio invests in the Institutional Class of the Morgan Stanley Institutional Liquidity Funds (the "Liquidity Funds"), an open-end management investment company managed by the Adviser, both directly and as a portion of the securities held as collateral on loaned securities. Advisory fees paid by the Portfolio are reduced by an amount equal to its pro-rata share of the advisory and administration fees paid by the Portfolio due to its investments in the Liquidity Funds. For the six months ended June 30, 2016, advisory fees paid were reduced by approximately $3,000 relating to the Portfolio's investment in the Liquidity Funds.

A summary of the Portfolio's transactions in shares of the Liquidity Funds during the six months ended June 30, 2016 is as follows:

Value December 31, 2015 (000)	Purchases at Cost (000)	Sales (000)	Dividend Income (000)	Value June 30, 2016 (000)
$12,180	$25,741	$31,735	$10	$6,186

The Portfolio is permitted to purchase and sell securities ("cross-trade") from and to other Morgan Stanley Funds as well as other funds and client accounts for which the Adviser or an affiliate of the Adviser serves as investment adviser, pursuant to procedures approved by the Directors in compliance with Rule 17a-7 under the Act (the "Rule"). Each cross-trade is executed at the current market price in compliance with provisions of the Rule. For the six months ended June 30, 2016, the Portfolio did not engage in any cross-trade transactions.

The Portfolio has an unfunded Deferred Compensation Plan (the "Compensation Plan"), which allows each independent Director to defer payment of all, or a portion, of the fees he or she receives for serving on the Board of Directors. Each eligible Director generally may elect to have the deferred amounts credited with a return equal to the total return on one or more of the Morgan Stanley funds that are offered as investment options under the Compensation Plan. Appreciation/depreciation and distributions received from these investments are recorded with an offsetting increase/decrease in the deferred compensation obligation and do not affect the NAV of the Portfolio.

I. Federal Income Taxes: It is the Portfolio's intention to continue to qualify as a regulated investment company and distribute all of its taxable and tax-exempt income. Accordingly, no provision for Federal income taxes is required in the financial statements.

The Portfolio may be subject to taxes imposed by countries in which it invests. Such taxes are generally based on income and/or capital gains earned or repatriated. Taxes are accrued based on net investment income, net realized gains and net unrealized appreciation as such income and/or gains are earned. Taxes may also be based on transactions in foreign currency and are accrued based on the value of investments denominated in such currency.

FASB ASC 740-10, "Income Taxes — Overall", sets forth a minimum threshold for financial statement recognition of the benefit of a tax position taken or expected to be taken in a tax return. Management has concluded that there are no significant uncertain tax positions that would require recognition in the financial statements. If applicable, the Portfolio recognizes interest accrued related to unrecognized tax benefits in "Interest Expense" and penalties in "Other Expenses" in the Statement of Operations. The Portfolio files tax returns with the U.S. Internal Revenue Service, New York and various states. Each of the tax years in the four-year period ended December 31, 2015, remains subject to examination by taxing authorities.

The tax character of distributions paid may differ from the character of distributions shown in the Statements of Changes in Net Assets due to short-term capital gains being treated as ordinary income for tax purposes. The tax character of distributions paid during fiscal years 2015 and 2014 was as follows:

2015 Distributions Paid From:		2014 Distributions Paid From:	
Ordinary Income (000)	Long-Term Capital Gain (000)	Ordinary Income (000)	Long-Term Capital Gain (000)
$—	$27,828	$2,039	$13,021

The amount and character of income and gains to be distributed are determined in accordance with income tax regulations which may differ from GAAP. These book/tax differences are either considered temporary or permanent in nature.

Temporary differences are attributable to differing book and tax treatments for the timing of the recognition of gains (losses) on certain investment transactions and the timing of the deductibility of certain expenses.

Notes to Financial Statements (cont'd)

Permanent differences, primarily due to differing treatments of gains (losses) related to foreign currency transactions and a net operating loss, resulted in the following reclassifications among the components of net assets at December 31, 2015:

Accumulated Net Investment Loss (000)	Accumulated Undistributed Net Realized Gain (000)	Paid-in-Capital (000)
$966	$(350)	$(616)

At December 31, 2015, the components of distributable earnings for the Portfolio on a tax basis were as follows:

Undistributed Ordinary Income (000)	Undistributed Long-Term Capital Gain (000)
$—	$31,936

J. Credit Facility: As of April 4, 2016, the Fund and other Morgan Stanley funds participate in a $150,000,000 committed, unsecured revolving line of credit facility (the "facility") with State Street. This facility is to be used for temporary emergency purposes or funding of shareholder redemption requests. The interest rate on borrowings is based on the federal funds rate or one month libor rate plus a spread. The facility also has a commitment fee of 0.25% per annum based on the unused portion of the facility. During the period ended June 30, 2016, the Fund did not have any borrowings under the facility.

K. Other: At June 30, 2016, the Portfolio had record owners of 10% or greater. Investment activities of these shareholders could have a material impact on the Portfolio. The aggregate percentage of such owners was 72.9%.

Investment Advisory Agreement Approval (unaudited)

Nature, Extent and Quality of Services

The Board reviewed and considered the nature and extent of the investment advisory services provided by the Adviser (as defined herein) under the advisory agreement, including portfolio management, investment research and equity and fixed income securities trading. The Board also reviewed and considered the nature and extent of the non-advisory, administrative services provided by the Adviser under the administration agreement, including accounting, operations, clerical, bookkeeping, compliance, business management and planning, legal services and the provision of supplies, office space and utilities at the Adviser's expense. The Board also considered the Adviser's investment in personnel and infrastructure that benefits the Portfolio. (The advisory and administration agreements together are referred to as the "Management Agreement.") The Board also considered that the Adviser serves a variety of other investment advisory clients and has experience overseeing service providers. The Board also compared the nature of the services provided by the Adviser with similar services provided by non-affiliated advisers as reported to the Board by Broadridge Financial Solutions, Inc. ("Broadridge").

The Board reviewed and considered the qualifications of the portfolio managers, the senior administrative managers and other key personnel of the Adviser who provide the administrative and advisory services to the Portfolio. The Board determined that the Adviser's portfolio managers and key personnel are well qualified by education and/or training and experience to perform the services in an efficient and professional manner. The Board concluded that the nature and extent of the advisory and administrative services provided were necessary and appropriate for the conduct of the business and investment activities of the Portfolio and supported its decision to approve the Management Agreement.

Performance, Fees and Expenses of the Portfolio

The Board reviewed the performance, fees and expenses of the Portfolio compared to its peers, as determined by Broadridge, and to appropriate benchmarks where applicable. The Board discussed with the Adviser the performance goals and the actual results achieved in managing the Portfolio. When considering a fund's performance, the Board and the Adviser place emphasis on trends and longer-term returns (focusing on one-year, three-year and five-year performance, as of December 31, 2015, or since inception, as applicable). When a fund underperforms its benchmark and/or its peer group average, the Board and the Adviser discuss the causes of such underperformance and, where necessary, they discuss specific changes to investment strategy or investment personnel. The Board noted that the Portfolio's performance was better than its peer group average for the one-, three- and five-year periods. The Board discussed with the Adviser the level of the advisory and administration fees (together, the "management fee") for this Portfolio relative to comparable funds and/or other accounts advised by the Adviser and/or compared to its peers as determined by Broadridge. In addition to the management fee, the Board also reviewed the Portfolio's total expense ratio. The Board noted that the Portfolio's management fee and total expense ratio were lower than its peer group averages. After discussion, the Board concluded that the Portfolio's (i) performance was competitive with its peer group average; and (ii) management fee and total expense ratio were competitive with its peer group averages.

Economies of Scale

The Board considered the size and growth prospects of the Portfolio and how that relates to the Portfolio's total expense ratio and particularly the Portfolio's management fee rate, which includes breakpoints. In conjunction with its review of the Adviser's profitability, the Board discussed with the Adviser how a change in assets can affect the efficiency or effectiveness of managing the Portfolio and whether the management fee level is appropriate relative to current and projected asset levels and/or whether the management fee structure reflects economies of scale as asset levels change. The Board has determined that its review of the actual and/or potential economies of scale of the Portfolio supports its decision to approve the Management Agreement.

Profitability of the Adviser and Affiliates

The Board considered information concerning the costs incurred and profits realized by the Adviser and its affiliates during the last year from their relationship with the Portfolio and during the last two years from their relationship with the Morgan Stanley Fund Complex and reviewed with the Adviser the cost allocation methodology used to determine the profitability of the Adviser and affiliates. The Board has determined that its review of the analysis of the Adviser's expenses and profitability supports its decision to approve the Management Agreement.

Investment Advisory Agreement Approval (unaudited) (cont'd)

Other Benefits of the Relationship

The Board considered other direct and indirect benefits to the Adviser and/or its affiliates derived from their relationship with the Portfolio and other funds advised by the Adviser. These benefits may include, among other things, fees for trading, distribution and/or shareholder servicing and for transaction processing and reporting platforms used by securities lending agents, and research received by the Adviser generated from commission dollars spent on funds' portfolio trading. The Board reviewed with the Adviser these arrangements and the reasonableness of the Adviser's costs relative to the services performed. The Board has determined that its review of the other benefits received by the Adviser or its affiliates supports its decision to approve the Management Agreement.

Resources of the Adviser and Historical Relationship Between the Portfolio and the Adviser

The Board considered whether the Adviser is financially sound and has the resources necessary to perform its obligations under the Management Agreement. The Board also reviewed and considered the historical relationship between the Portfolio and the Adviser, including the organizational structure of the Adviser, the policies and procedures formulated and adopted by the Adviser for managing the Portfolio's operations and the Board's confidence in the competence and integrity of the senior managers and key personnel of the Adviser. The Board concluded that the Adviser has the financial resources necessary to fulfill its obligations under the Management Agreement and that it is beneficial for the Portfolio to continue its relationship with the Adviser.

Other Factors and Current Trends

The Board considered the controls and procedures adopted and implemented by the Adviser and monitored by the Fund's Chief Compliance Officer and concluded that the conduct of business by the Adviser indicates a good faith effort on its part to adhere to high ethical standards in the conduct of the Portfolio's business.

General Conclusion

After considering and weighing all of the above factors, with various written materials and verbal information presented by the Adviser, the Board concluded that it would be in the best interest of the Portfolio and its shareholders to approve renewal of the Management Agreement for another year. In reaching this conclusion the Board did not give particular weight to any single piece of information or factor referenced above. The Board considered these factors and information over the course of the year and in numerous meetings, some of which were in executive session with only the independent Board members and their counsel present. It is possible that individual Board members may have weighed these factors, and the information presented, differently in reaching their individual decisions to approve the Management Agreement.

Reporting to Shareholders

Each Morgan Stanley fund provides a complete schedule of portfolio holdings in its semi-annual and annual reports within 60 days of the end of the fund's second and fourth fiscal quarters. The semi-annual and annual reports are filed electronically with the Securities and Exchange Commission (SEC) on Form N-CSRS and Form N-CSR, respectively. Morgan Stanley also delivers the semi-annual and annual reports to fund shareholders and makes these reports available on its public website, www.morganstanley.com/im. Each Morgan Stanley fund also files a complete schedule of portfolio holdings with the SEC for the fund's first and third fiscal quarters on Form N-Q. Morgan Stanley does not deliver the reports for the first and third fiscal quarters to shareholders, nor are the reports posted to the Morgan Stanley public website. You may, however, obtain the Form N-Q filings (as well as the Form N-CSR and N-CSRS filings) by accessing the SEC's website, www.sec.gov. You may also review and copy them at the SEC's Public Reference Room in Washington, DC. Information on the operation of the SEC's Public Reference Room may be obtained by calling the SEC toll free at 1 (800) SEC-0330. You can also request copies of these materials, upon payment of a duplicating fee, by electronic request at the SEC's email address (publicinfo@sec.gov) or by writing the Public Reference Room of the SEC, Washington, DC 20549-0102.

Proxy Voting Policies and Procedures and Proxy Voting Record

You may obtain a copy of the Fund's Proxy Voting Policy and Procedures and information regarding how the Fund voted proxies relating to portfolio securities during the most recent twelve-month period ended June 30, without charge, upon request, by calling toll free 1 (800) 548-7786 or by visiting our website at www.morganstanley.com/im. This information is also available on the SEC's website at www.sec.gov.

This report is submitted for the general information of the shareholders of the Portfolio. For more detailed information about the Portfolio, its fees and expenses and other pertinent information, please read its Prospectus. The Fund's Statement of Additional Information contains additional information about the Portfolio, including its Directors. It is available, without charge, by calling 1 (800) 548-7786.

This report is not authorized for distribution to prospective investors in the Portfolio unless preceded or accompanied by an effective Prospectus. Read the Prospectus carefully before investing.

Fund Performance Discussion

Financial Statements

PORTFOLIO MANAGERS: George R. Evans, CFA, and Robert B. Dunphy, CFA

AVERAGE ANNUAL TOTAL RETURNS FOR THE PERIODS ENDED 6/30/16

	Inception Date	6-Months	1-Year	5-Year	10-Year
Non-Service Shares	5/13/92	-2.59%	-5.59%	4.34%	5.17%
Service Shares	3/19/01	-2.72	-6.00	4.14	4.88
MSCI AC World ex-U.S. Index		-1.02	-10.24	0.10	1.87

Performance data quoted represents past performance, which does not guarantee future results. *The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance quoted. For performance data current to the most recent month end, call us at 1.800.988.8287. The Fund's total returns should not be expected to be the same as the returns of other funds, whether or not both funds have the same portfolio managers and/or similar names. The Fund's total returns include changes in share price and reinvested distributions but do not include the charges associated with the separate account products that offer this Fund. Such performance would have been lower if such charges were taken into account.*

The Fund's performance is compared to the performance of the MSCI AC World ex-U.S. Index. The MSCI AC World ex-U.S. Index is designed to measure the equity market performance of developed and emerging markets and excludes the U.S. The Index is unmanaged and cannot be purchased directly by investors. While index comparisons may be useful to provide a benchmark for the Fund's performance, it must be noted that the Fund's investments are not limited to the investments comprising the Index. Index performance includes reinvestment of income, but does not reflect transaction costs, fees, expenses or taxes. Index performance is shown for illustrative purposes only as a benchmark for the Fund's performance, and does not predict or depict performance of the Fund. The Fund's performance reflects the effects of the Fund's business and operating expenses.

Fund Performance Discussion

In a volatile market environment, the Fund's Non-Service shares generated a cumulative total return of -2.59%. On a relative basis, the Fund underperformed the MSCI AC World ex-U.S. Index (the "Index"), which returned -1.02%. The Fund's underperformance relative to the Index stemmed largely from an overweight position and stock selection in the consumer discretionary sector and an underweight position in the energy sector. Stock selection within the materials, information technology and telecommunication services sectors detracted from performance to a lesser degree. The Fund outperformed the Index most in the financials sector due to an underweight position. We are structurally and perennially underweight in the sector due to our bias against the business characteristics inherent in most financial companies. Financials stock prices reacted particularly negatively to the United Kingdom's ("UK") decision to exit the European Union ("EU"), commonly referred to as Brexit. The Fund also outperformed the Index in industrials as a result of stronger relative stock selection.

As we have often said before, volatility is our friend. We understand that it is uncomfortable for investors so we seek to dampen it in the Fund by investing in a large number of companies in relatively equal amounts. But down markets give us the opportunity to buy stocks at prices that we could not get when sentiment is optimistic. As the market has pulled back, we have bought more shares in companies we already own and taken the opportunity to acquire some new ones that we have coveted for some time. In addition, as long term, bottom up, micro-economic—as opposed to macroeconomic—stock pickers, we did not make changes to our portfolio in anticipation of any particular Brexit vote outcomes.

MARKET OVERVIEW

The first half of 2016 was a volatile time for global equity markets. China's slowing economy, falling crude oil prices, and the aggressive interest rate hike path indicated by the Federal Reserve (the "Fed") in its December 2015 communication, contributed to a tumultuous environment. March saw a temporary relief rally as communication from the Fed turned more accommodative in light of this weak start to the year. Oil prices and commodities started to pick up, but continued to experience volatility through the close of the reporting period. However, unanswered questions, including how quickly the Fed would raise interest rates and whether Britain would decide to exit the EU on its June 23 vote, made for an uncertain period. The UK surprised the markets by ultimately deciding to exit the EU. As a result, markets dropped sharply and remained volatile through the reporting period's end. See the Strategy & Outlook section of this report for more information on the Brexit and our views/outlook.

TOP INDIVIDUAL CONTRIBUTORS

Top contributors to the Fund's performance this period included Nippon Telegraph & Telephone Corporation, Dollarama, Inc. and CIMIC Group Ltd. Nippon Telegraph & Telephone Corporation is the incumbent telecommunications service company in Japan. It provides voice, data and video streaming services over both fixed and mobile networks. In addition, it is one of the largest providers of data warehouse services in the world. We have owned the company for nearly two years as part of our Data Deluge investment theme. The company continues to execute well on its development plans and the stock has continued to react favorably. Dollarama is the largest dollar store chain in Canada with more than 1,000 locations, with plans to expand well beyond that over the next several years. The stock price rose over the first half of the reporting period after the company announced fiscal fourth quarter sales rose 32% year over year, and same store sales rose 7.9% year over year. The company increased both its dividend and stock buyback program. Given the weakness of the Canadian economy, we believe consumers will remain highly value conscious. We believe Dollarama is well positioned for this. CIMIC Group is an Australian construction and engineering firm with considerable exposure to mining and infrastructure spending in Asia. The company has been working through a considerable restructuring in an effort to adapt to a far less robust environment both for mining and Asian infrastructure spending. The company released a quarterly report that showed some promise that these efforts are bearing fruit.

TOP INDIVIDUAL DETRACTORS

Detractors from performance this reporting period included William Hill plc, Essentra plc and Domino's Pizza Group plc. William Hill is a London-based bookmaker. Recent trends have been cyclically soft, especially for its online efforts, in addition to periodic regulatory noise, which affects the industry. We have been investors in the company for more than a dozen years and the returns have been good, despite recent weakness. We believe it has the potential to continue its long-term results. Essentra is an international supplier of specialty plastic packaging for health and personal care products, of fiber filters, and of customized protective components for use with industrial equipment. It also has a distribution business. During the reporting period, the company guided revenue and earnings expectations lower after losing a large filter customer. The stock price dropped as a result. In our opinion, the lower near-term revenue growth is fully reflected in the share price. We are positive on the longer-term outlook for the company and on its ability to trim expenses in the near term to maintain profitability at acceptable levels. Domino's Pizza Group is the master franchiser for Domino's Pizza stores in the UK, Ireland, Germany and Switzerland.

During the reporting period, the group acquired a significant stake in the Icelandic, Norwegian and Swedish franchises, with intent to become a majority owner. The company also announced a three for one stock split. After reaching new highs, the stock sold off in the wake of the Brexit vote, which acted as a catalyst for profit-taking. We remain owners.

STRATEGY & OUTLOOK

As expected, global markets had a negative reaction to the Brexit. The British exit from the EU may require companies to make adjustments in their operations, though the impact and timing will not be clear for some time. Furthermore, each company within each industry will not be affected in exactly the same way. Multi-national businesses always confront a wide variety of currency, regulatory, and trade restrictions. So, while the impact of Brexit is not yet clear, the issues it raises for companies are not. They deal with them as a routine part of managing global customer relationships and supply chains.

It has been our experience that exogenous shocks often provide opportunity. As Warren Buffett once noted, in the short run markets are a voting machine, and in the long run they are a weighing machine. Ultimately, the strength and durability of the economics of a business will drive the trajectory of its share price. This is unchanged by Brexit.

We want to remind investors that we are emphatically and insistently micro-economists. While we have opinions on macro-economic and political events, we do not base our investment decisions on them. Instead, we seek high-quality companies that are able to monetize long-term structural growth opportunities due to their meaningful and durable competitive advantages. We buy them when they are offered in the market at prices that we believe will enable us to realize a return on our capital above our hurdle rate. This is the discipline we will continue to follow.

The Fund's investment strategy and focus can change over time. The mention of specific fund holdings does not constitute a recommendation by OppenheimerFunds, Inc. or its affiliates.

Shares of Oppenheimer funds are not deposits or obligations of any bank, are not guaranteed by any bank, are not insured by the FDIC or any other agency, and involve investment risks, including the possible loss of the principal amount invested.

Fund Expenses

Fund Expenses. As a shareholder of the Fund, you incur two types of costs: (1) transaction costs and (2) ongoing costs, including management fees; distribution and service fees; and other Fund expenses. These examples are intended to help you understand your ongoing costs (in dollars) of investing in the Fund and to compare these costs with the ongoing costs of investing in other mutual funds.

The examples are based on an investment of $1,000.00 invested at the beginning of the period and held for the entire 6-month period ended June 30, 2016.

Actual Expenses. The first section of the table provides information about actual account values and actual expenses. You may use the information in this section for the class of shares you hold, together with the amount you invested, to estimate the expense that you paid over the period. Simply divide your account value by $1,000.00 (for example, an $8,600.00 account value divided by $1,000.00 = 8.60), then multiply the result by the number in the first section under the heading entitled "Expenses Paid During 6 Months Ended June 30, 2016" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes.

The second section of the table provides information about hypothetical account values and hypothetical expenses based on the Fund's actual expense ratio for each class of shares, and an assumed rate of return of 5% per year for each class before expenses, which is not the actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Fund and other funds. To do so, compare this 5% hypothetical example for the class of shares you hold with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight your ongoing costs only and do not reflect any charges associated with the separate accounts that offer this Fund. Therefore, the "hypothetical" lines of the table are useful in comparing ongoing costs only, and will not help you determine the relative total costs of owning different funds. In addition, if these separate account charges were included your costs would have been higher.

Actual	Beginning Account Value January 1, 2016	Ending Account Value June 30, 2016	Expenses Paid During 6 Months Ended June 30, 2016
Non-Service shares	$ 1,000.00	$ 974.10	$ 4.92
Service shares	1,000.00	972.80	6.15
Hypothetical (5% return before expenses)			
Non-Service shares	1,000.00	1,019.89	5.03
Service shares	1,000.00	1,018.65	6.29

Expenses are equal to the Fund's annualized expense ratio for that class, multiplied by the average account value over the period, multiplied by 182/366 (to reflect the one-half year period). Those annualized expense ratios, excluding indirect expenses from affiliated funds, based on the 6-month period ended June 30, 2016 are as follows:

Class	Expense Ratios
Non-Service shares	1.00%
Service shares	1.25

The expense ratios reflect voluntary and/or contractual waivers and/or reimbursements of expenses by the Fund's Manager. Some of these undertakings may be modified or terminated at any time, as indicated in the Fund's prospectus. The "Financial Highlights" tables in the Fund's financial statements, included in this report, also show the gross expense ratios, without such waivers or reimbursements and reduction to custodian expenses, if applicable.

Footnotes to Statement of Investments

1. Non-income producing security.

2. Rate shown is the 7-day yield at period end.

3. Is or was an affiliate, as defined in the Investment Company Act of 1940, as amended, at or during the reporting period, by virtue of the Fund owning at least 5% of the voting securities of the issuer or as a result of the Fund and the issuer having the same investment adviser. Transactions during the reporting period in which the issuer was an affiliate are as follows:

	Shares December 31, 2015	Gross Additions	Gross Reductions	Shares June 30, 2016
Oppenheimer Institutional Money Market Fund, Cl. E	4,009,537	34,479,814	34,494,449	3,994,902

	Value	Income
Oppenheimer Institutional Money Market Fund, Cl. E	$ 3,994,902	$ 13,933

1. December 30, 2011 represents the last business day of the Fund's reporting period. See Note 2 of the accompanying Notes.
2. Per share amounts calculated based on the average shares outstanding during the period.
3. Assumes an initial investment on the business day before the first day of the fiscal period, with all dividends and distributions reinvested in additional shares on the reinvestment date, and redemption at the net asset value calculated on the last business day of the fiscal period. Total returns are not annualized for periods less than one full year. Total return information does not reflect expenses that apply at the separate account level or to related insurance products. Inclusion of these charges would reduce the total return figures for all periods shown. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions or the redemption of fund shares.
4. Annualized for periods less than one full year.
5. Less than 0.005%.
6. Total expenses including indirect expenses from affiliated fund fees and expenses were as follows:

Six Months Ended June 30, 2016	1.09%
Year Ended December 31, 2015	1.08%
Year Ended December 31, 2014	1.07%
Year Ended December 31, 2013	1.09%
Year Ended December 31, 2012	1.13%
Year Ended December 30, 2011	1.09%

See accompanying Notes to Financial Statements.

1. December 30, 2011 represents the last business day of the Fund's reporting period. See Note 2 of the accompanying Notes.
2. Per share amounts calculated based on the average shares outstanding during the period.
3. Assumes an initial investment on the business day before the first day of the fiscal period, with all dividends and distributions reinvested in additional shares on the reinvestment date, and redemption at the net asset value calculated on the last business day of the fiscal period. Total returns are not annualized for periods less than one full year. Total return information does not reflect expenses that apply at the separate account level or to related insurance products. Inclusion of these charges would reduce the total return figures for all periods shown. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions or the redemption of fund shares.
4. Annualized for periods less than one full year.
5. Less than 0.005%.
6. Total expenses including indirect expenses from affiliated fund fees and expenses were as follows:

Six Months Ended June 30, 2016	1.34%
Year Ended December 31, 2015	1.33%
Year Ended December 31, 2014	1.32%
Year Ended December 31, 2013	1.34%
Year Ended December 31, 2012	1.38%
Year Ended December 30, 2011	1.34%

See accompanying Notes to Financial Statements.

1. Organization

Oppenheimer International Growth Fund/VA (the "Fund"), is a separate series of Oppenheimer Variable Account Funds, which is registered under the Investment Company Act of 1940 ("1940 Act"), as amended, as a diversified open-end management investment company. The Fund's investment objective is to seek capital appreciation. The Fund's investment adviser is OFI Global Asset Management, Inc. ("OFI Global" or the "Manager"), a wholly-owned subsidiary of OppenheimerFunds, Inc. ("OFI" or the "Sub-Adviser"). The Manager has entered into a sub-advisory agreement with OFI. Shares of the Fund are sold only to separate accounts of life insurance companies.

The Fund offers two classes of shares. Both classes are sold at their offering price, which is the net asset value per share, to separate investment accounts of participating insurance companies as an underlying investment for variable life insurance policies, variable annuity contracts or other investment products. The class of shares designated as Service shares is subject to a distribution and service plan. Both classes of shares have identical rights and voting privileges with respect to the Fund in general and exclusive voting rights on matters that affect that class alone. Earnings, net assets and net asset value per share may differ due to each class having its own expenses, such as transfer and shareholder servicing agent fees and shareholder communications, directly attributable to that class.

The following is a summary of significant accounting policies followed in the Fund's preparation of financial statements in accordance with accounting principles generally accepted in the United States ("U.S. GAAP").

2. Significant Accounting Policies

Security Valuation. All investments in securities are recorded at their estimated fair value, as described in Note 3.

Reporting Period End Date. The last day of the Fund's reporting period is the last day the New York Stock Exchange was open for trading during the period. The Fund's financial statements have been presented through that date to maintain consistency with the Fund's net asset value calculations used for shareholder transactions.

Foreign Currency Translation. The Fund's accounting records are maintained in U.S. dollars. The values of securities denominated in foreign currencies and amounts related to the purchase and sale of foreign securities and foreign investment income are translated into U.S. dollars as of the close of the New York Stock Exchange (the "Exchange"), normally 4:00 P.M. Eastern time, on each day the Exchange is open for trading. Foreign exchange rates may be valued primarily using a reliable bank, dealer or service authorized by the Board of Trustees.

Reported net realized gains and losses from foreign currency transactions arise from sales of portfolio securities, sales and maturities of short-term securities, sales of foreign currencies, exchange rate fluctuations between the trade and settlement dates on securities transactions, and the difference between the amounts of dividends, interest, and foreign withholding taxes recorded on the Fund's books and the U.S. dollar equivalent of the amounts actually received or paid. Net unrealized appreciation and depreciation on the translation of assets and liabilities denominated in foreign currencies arise from changes in the values of assets and liabilities, including investments in securities at fiscal period end, resulting from changes in exchange rates.

The effect of changes in foreign currency exchange rates on investments is separately identified from the fluctuations arising from changes in market values of securities held and reported with all other foreign currency gains and losses in the Fund's Statement of Operations.

Allocation of Income, Expenses, Gains and Losses. Income, expenses (other than those attributable to a specific class), gains and losses are allocated on a daily basis to each class of shares based upon the relative proportion of net assets represented by such class. Operating expenses directly attributable to a specific class are charged against the operations of that class.

Dividends and Distributions to Shareholders. Dividends and distributions to shareholders, which are determined in accordance with income tax regulations and may differ from U.S. GAAP, are recorded on the ex-dividend date. Income and capital gain distributions, if any, are declared and paid annually or at other times as deemed necessary by the Manager.

The tax character of distributions is determined as of the Fund's fiscal year end. Therefore, a portion of the Fund's distributions made to shareholders prior to the Fund's fiscal year end may ultimately be categorized as a tax return of capital.

Investment Income. Dividend income is recorded on the ex-dividend date or upon ex-dividend notification in the case of certain foreign dividends where the ex-dividend date may have passed. Non-cash dividends included in dividend income, if any, are recorded at the fair market value of the securities received. Interest income is recognized on an accrual basis. Discount and premium, which are included in interest income on the Statement of Operations, are amortized or accreted daily.

Custodian Fees. "Custodian fees and expenses" in the Statement of Operations may include interest expense incurred by the Fund on any cash overdrafts of its custodian account during the period. Such cash overdrafts may result from the effects of failed trades in portfolio securities and from cash outflows resulting from unanticipated shareholder redemption activity. The Fund pays interest to its custodian on such cash overdrafts, to the extent they are not offset by positive cash balances maintained by the Fund, at a rate equal to the Federal Funds Rate plus 0.50%. The "Reduction to custodian expenses" line item, if applicable, represents earnings on cash balances maintained by the Fund during the period. Such interest expense and other custodian fees may be paid with these earnings.

Security Transactions. Security transactions are recorded on the trade date. Realized gains and losses on securities sold are determined on the basis of identified cost.

2. Significant Accounting Policies (Continued)

Indemnifications. The Fund's organizational documents provide current and former Trustees and officers with a limited indemnification against liabilities arising in connection with the performance of their duties to the Fund. In the normal course of business, the Fund may also enter into contracts that provide general indemnifications. The Fund's maximum exposure under these arrangements is unknown as this would be dependent on future claims that may be made against the Fund. The risk of material loss from such claims is considered remote.

Federal Taxes. The Fund intends to comply with provisions of the Internal Revenue Code applicable to regulated investment companies and to distribute substantially all of its investment company taxable income to shareholders. Therefore, no federal income or excise tax provision is required. The Fund files income tax returns in U.S. federal and applicable state jurisdictions. The statute of limitations on the Fund's tax return filings generally remains open for the three preceding fiscal reporting period ends. The Fund has analyzed its tax positions for the fiscal year ended December 31, 2015, including open tax years, and does not believe there are any uncertain tax positions requiring recognition in the Fund's financial statements.

During the fiscal year ended December 31, 2015, the Fund did not utilize any capital loss carryforward to offset capital gains realized in that fiscal year. Capital loss carryforwards with no expiration, if any, must be utilized prior to those with expiration dates. Capital losses with no expiration will be carried forward to future years if not offset by gains.

At period end, it is estimated that the Fund will not have any capital loss carryforwards. The estimated capital loss carryforward represents the carryforward as of the end of the last fiscal year, increased or decreased by capital losses or gains realized in the first six months of the current fiscal year. During the reporting period, it is estimated that the Fund will not utilize any capital loss carryforward to offset realized capital gains.

Net investment income (loss) and net realized gain (loss) may differ for financial statement and tax purposes. The character of dividends and distributions made during the fiscal year from net investment income or net realized gains are determined in accordance with federal income tax requirements, which may differ from the character of net investment income or net realized gains presented in those financial statements in accordance with U.S. GAAP. Also, due to timing of dividends and distributions, the fiscal year in which amounts are distributed may differ from the fiscal year in which the income or net realized gain was recorded by the Fund.

The aggregate cost of securities and other investments and the composition of unrealized appreciation and depreciation of securities and other investments for federal income tax purposes at period end are noted in the following table. The primary difference between book and tax appreciation or depreciation of securities and other investments, if applicable, is attributable to the tax deferral of losses or tax realization of financial statement unrealized gain or loss.

Federal tax cost of securities	$ 362,640,893
Federal tax cost of other investments	3,300
Total federal tax cost	**$ 362,644,193**
Gross unrealized appreciation	$ 159,883,780
Gross unrealized depreciation	(48,116,630)
Net unrealized appreciation	**$ 111,767,150**

Certain foreign countries impose a tax on capital gains which is accrued by the Fund based on unrealized appreciation, if any, on affected securities. The tax is paid when the gain is realized.

Use of Estimates. The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates.

3. Securities Valuation

The Fund calculates the net asset value of its shares as of 4:00 P.M. Eastern time, on each day the New York Stock Exchange (the "Exchange") is open for trading, except in the case of a scheduled early closing of the Exchange, in which case the Fund will calculate net asset value of the shares as of the scheduled early closing time of the Exchange.

The Fund's Board has adopted procedures for the valuation of the Fund's securities and has delegated the day-to-day responsibility for valuation determinations under those procedures to the Manager. The Manager has established a Valuation Committee which is responsible for determining a "fair valuation" for any security for which market quotations are not "readily available." The Valuation Committee's fair valuation determinations are subject to review, approval and ratification by the Fund's Board at its next regularly scheduled meeting covering the calendar quarter in which the fair valuation was determined.

Valuation Methods and Inputs

Securities are valued using unadjusted quoted market prices, when available, as supplied primarily by third party pricing services or dealers.

The following methodologies are used to determine the market value or the fair value of the types of securities described below:

Securities traded on a registered U.S. securities exchange (including exchange-traded derivatives other than futures and futures options) are valued based on the last sale price of the security reported on the principal exchange on which it is traded, prior to the time when the Fund's assets are valued. In the absence of a sale, the security is valued at the mean between the bid and asked price on the principal exchange or, if not available from the principal exchange, obtained from two dealers. If bid and asked prices are not available from either the exchange or two dealers, the security is valued

3. Securities Valuation (Continued)

by using one of the following methodologies (listed in order of priority): (1) a bid from the principal exchange, (2) the mean between the bid and asked price as provided by a single dealer, or (3) a bid from a single dealer. A security of a foreign issuer traded on a foreign exchange, but not listed on a registered U.S. securities exchange, is valued based on the last sale price on the principal exchange on which the security is traded, as identified by the third party pricing service used by the Manager, prior to the time when the Fund's assets are valued. If the last sale price is unavailable, the security is valued at the most recent official closing price on the principal exchange on which it is traded. If the last sales price or official closing price for a foreign security is not available, the security is valued at the mean between the bid and asked price per the exchange or, if not available from the exchange, obtained from two dealers. If bid and asked prices are not available from either the exchange or two dealers, the security is valued by using one of the following methodologies (listed in order of priority): (1) a bid from the exchange, (2) the mean between the bid and asked price as provided by a single dealer, or (3) a bid from a single dealer.

Shares of a registered investment company that are not traded on an exchange are valued at that investment company's net asset value per share.

Corporate and government debt securities (of U.S. or foreign issuers) and municipal debt securities, event-linked bonds, loans, mortgage-backed securities, collateralized mortgage obligations, and asset-backed securities are valued at the mean between the "bid" and "asked" prices utilizing evaluated prices obtained from third party pricing services or broker-dealers who may use matrix pricing methods to determine the evaluated prices.

Short-term money market type debt securities with a remaining maturity of sixty days or less are valued at cost adjusted by the amortization of discount or premium to maturity (amortized cost), which approximates market value. Short-term debt securities with a remaining maturity in excess of sixty days are valued at the mean between the "bid" and "asked" prices utilizing evaluated prices obtained from third party pricing services or broker-dealers.

A description of the standard inputs that may generally be considered by the third party pricing vendors in determining their evaluated prices is provided below.

Security Type	Standard inputs generally considered by third-party pricing vendors
Corporate debt, government debt, municipal, mortgage-backed and asset-backed securities	Reported trade data, broker-dealer price quotations, benchmark yields, issuer spreads on comparable securities, the credit quality, yield, maturity, and other appropriate factors.
Loans	Information obtained from market participants regarding reported trade data and broker-dealer price quotations.
Event-linked bonds	Information obtained from market participants regarding reported trade data and broker-dealer price quotations.

If a market value or price cannot be determined for a security using the methodologies described above, or if, in the "good faith" opinion of the Manager, the market value or price obtained does not constitute a "readily available market quotation," or a significant event has occurred that would materially affect the value of the security, the security is fair valued either (i) by a standardized fair valuation methodology applicable to the security type or the significant event as previously approved by the Valuation Committee and the Fund's Board or (ii) as determined in good faith by the Manager's Valuation Committee. The Valuation Committee considers all relevant facts that are reasonably available, through either public information or information available to the Manager, when determining the fair value of a security. Fair value determinations by the Manager are subject to review, approval and ratification by the Fund's Board at its next regularly scheduled meeting covering the calendar quarter in which the fair valuation was determined. Those fair valuation standardized methodologies include, but are not limited to, valuing securities at the last sale price or initially at cost and subsequently adjusting the value based on: changes in company specific fundamentals, changes in an appropriate securities index, or changes in the value of similar securities which may be further adjusted for any discounts related to security-specific resale restrictions. When possible, such methodologies use observable market inputs such as unadjusted quoted prices of similar securities, observable interest rates, currency rates and yield curves. The methodologies used for valuing securities are not necessarily an indication of the risks associated with investing in those securities nor can it be assured that the Fund can obtain the fair value assigned to a security if it were to sell the security.

To assess the continuing appropriateness of security valuations, the Manager, or its third party service provider who is subject to oversight by the Manager, regularly compares prior day prices, prices on comparable securities, and sale prices to the current day prices and challenges those prices exceeding certain tolerance levels with the third party pricing service or broker source. For those securities valued by fair valuations, whether through a standardized fair valuation methodology or a fair valuation determination, the Valuation Committee reviews and affirms the reasonableness of the valuations based on such methodologies and fair valuation determinations on a regular basis after considering all relevant information that is reasonably available.

Classifications

Each investment asset or liability of the Fund is assigned a level at measurement date based on the significance and source of the inputs to its valuation. Various data inputs are used in determining the value of each of the Fund's investments as of the reporting period end. These data inputs are categorized in the following hierarchy under applicable financial accounting standards:

1) Level 1-unadjusted quoted prices in active markets for identical assets or liabilities (including securities actively traded on a securities exchange)
2) Level 2-inputs other than unadjusted quoted prices that are observable for the asset or liability (such as unadjusted quoted prices for similar assets and market corroborated inputs such as interest rates, prepayment speeds, credit risks, etc.)
3) Level 3-significant unobservable inputs (including the Manager's own judgments about assumptions that market participants would use in pricing

3. Securities Valuation (Continued)

the asset or liability).

The inputs used for valuing securities are not necessarily an indication of the risks associated with investing in those securities.

The Fund classifies each of its investments in those investment companies which are publicly offered as Level 1. Investment companies that are not publicly offered are measured using net asset value as a practical expedient, and are not classified in the fair value hierarchy.

The table below categorizes amounts that are included in the Fund's Statement of Assets and Liabilities at period end based on valuation input level:

	Level 1— Unadjusted Quoted Prices	Level 2— Other Significant Observable Inputs	Level 3— Significant Unobservable Inputs	Value
Assets Table				
Investments, at Value:				
Common Stocks				
Consumer Discretionary	$ 22,283,027	$ 79,616,216	$ —	$ 101,899,243
Consumer Staples	9,712,651	48,301,283	—	58,013,934
Energy	—	6,751,198	—	6,751,198
Financials	2,444,754	11,780,560	—	14,225,314
Health Care	—	54,664,340	—	54,664,340
Industrials	—	98,716,531	—	98,716,531
Information Technology	—	78,084,860	—	78,084,860
Materials	4,769,159	23,451,764	—	28,220,923
Telecommunication Services	—	30,068,172	—	30,068,172
Preferred Stock	80,478	—	—	80,478
Rights, Warrants and Certificates	—	2,270	—	2,270
Investment Company	3,994,902	—	—	3,994,902
Total Assets	**$ 43,284,971**	**$ 431,437,194**	**$ —**	**$ 474,722,165**

Forward currency exchange contracts and futures contracts, if any, are reported at their unrealized appreciation/depreciation at measurement date, which represents the change in the contract's value from trade date. All additional assets and liabilities included in the above table are reported at their market value at measurement date.

4. Investments and Risks

Risks of Foreign Investing. The Fund may invest in foreign securities which are subject to special risks. Securities traded in foreign markets may be less liquid and more volatile than those traded in U.S. markets. Foreign issuers are usually not subject to the same accounting and disclosure requirements that U.S. companies are subject to, which may make it difficult for the Fund to evaluate a foreign company's operations or financial condition. A change in the value of a foreign currency against the U.S. dollar will result in a change in the U.S. dollar value of investments denominated in that foreign currency and in the value of any income or distributions the Fund may receive on those investments. The value of foreign investments may be affected by exchange control regulations, foreign taxes, higher transaction and other costs, delays in the settlement of transactions, changes in economic or monetary policy in the United States or abroad, expropriation or nationalization of a company's assets, or other political and economic factors. In addition, due to the inter-relationship of global economies and financial markets, changes in political and economic factors in one country or region could adversely affect conditions in another country or region. Investments in foreign securities may also expose the Fund to time-zone arbitrage risk. Foreign securities may trade on weekends or other days when the Fund does not price its shares. At times, the Fund may emphasize investments in a particular country or region and may be subject to greater risks from adverse events that occur in that country or region. Foreign securities and foreign currencies held in foreign banks and securities depositories may be subject to limited or no regulatory oversight.

Investments in Affiliated Funds. The Fund is permitted to invest in other mutual funds advised by the Manager ("Affiliated Funds"). Affiliated Funds are open-end management investment companies registered under the 1940 Act, as amended. The Manager is the investment adviser of, and the Sub-Adviser provides investment and related advisory services to, the Affiliated Funds. When applicable, the Fund's investments in Affiliated Funds are included in the Statement of Investments. Shares of Affiliated Funds are valued at their net asset value per share. As a shareholder, the Fund is subject to its proportional share of the Affiliated Funds' expenses, including their management fee. The Manager will waive fees and/or reimburse Fund expenses in an amount equal to the indirect management fees incurred through the Fund's investment in the Affiliated Funds.

Each of the Affiliated Funds in which the Fund invests has its own investment risks, and those risks can affect the value of the Fund's investments and therefore the value of the Fund's shares. To the extent that the Fund invests more of its assets in one Affiliated Fund than in another, the Fund will have greater exposure to the risks of that Affiliated Fund.

Investment in Oppenheimer Institutional Money Market Fund. The Fund is permitted to invest daily available cash balances in a money market Affiliated Fund. The Fund may invest the available cash in Class E shares of Oppenheimer Institutional Money Market Fund ("IMMF") to seek current income while preserving liquidity or for defensive purposes. IMMF is regulated as a money market fund under the Investment Company Act of 1940, as amended.

4. Investments and Risks (Continued)

Equity Security Risk. Stocks and other equity securities fluctuate in price. The value of the Fund's portfolio may be affected by changes in the equity markets generally. Equity markets may experience significant short-term volatility and may fall sharply at times. Different markets may behave differently from each other and U.S. equity markets may move in the opposite direction from one or more foreign stock markets. Adverse events in any part of the equity or fixed-income markets may have unexpected negative effects on other market segments.

The prices of individual equity securities generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's securities. These factors may include, but are not limited to, poor earnings reports, a loss of customers, litigation against the company, general unfavorable performance of the company's sector or industry, or changes in government regulations affecting the company or its industry.

5. Market Risk Factors

The Fund's investments in securities and/or financial derivatives may expose the Fund to various market risk factors:

Commodity Risk. Commodity risk relates to the change in value of commodities or commodity indexes as they relate to increases or decreases in the commodities market. Commodities are physical assets that have tangible properties. Examples of these types of assets are crude oil, heating oil, metals, livestock, and agricultural products.

Credit Risk. Credit risk relates to the ability of the issuer of debt to meet interest and principal payments, or both, as they come due. In general, lower-grade, higher-yield debt securities are subject to credit risk to a greater extent than lower-yield, higher-quality securities.

Equity Risk. Equity risk relates to the change in value of equity securities as they relate to increases or decreases in the general market.

Foreign Exchange Rate Risk. Foreign exchange rate risk relates to the change in the U.S. dollar value of a security held that is denominated in a foreign currency. The U.S. dollar value of a foreign currency denominated security will decrease as the dollar appreciates against the currency, while the U.S. dollar value will increase as the dollar depreciates against the currency.

Interest Rate Risk. Interest rate risk refers to the fluctuations in value of fixed-income securities resulting from the inverse relationship between price and yield. For example, an increase in general interest rates will tend to reduce the market value of already issued fixed-income investments, and a decline in general interest rates will tend to increase their value. In addition, debt securities with longer maturities, which tend to have higher yields, are subject to potentially greater fluctuations in value from changes in interest rates than obligations with shorter maturities.

Volatility Risk. Volatility risk refers to the magnitude of the movement, but not the direction of the movement, in a financial instrument's price over a defined time period. Large increases or decreases in a financial instrument's price over a relative time period typically indicate greater volatility risk, while small increases or decreases in its price typically indicate lower volatility risk.

6. Shares of Beneficial Interest

The Fund has authorized an unlimited number of $0.001 par value shares of beneficial interest of each class. Transactions in shares of beneficial interest were as follows:

	Six Months Ended June 30, 2016		Year Ended December 31, 2015	
	Shares	Amount	Shares	Amount
Non-Service Shares				
Sold	8,941,085	$ 19,050,267	25,785,184	$ 60,862,122
Dividends and/or distributions reinvested	4,989,924	10,628,540	12,263,244	28,450,725
Redeemed	(11,901,469)	(25,506,906)	(48,734,993)	(113,512,248)
Net increase (decrease)	**2,029,540**	**$ 4,171,901**	**(10,686,565)**	**$ (24,199,401)**
Service Shares				
Sold	10,244,631	$ 22,831,385	20,290,959	$ 49,094,495
Dividends and/or distributions reinvested	2,468,940	5,481,045	5,341,754	12,873,626
Redeemed	(5,936,049)	(13,237,219)	(12,264,866)	(29,078,792)
Net increase	**6,777,522**	**$ 15,075,211**	**13,367,847**	**$ 32,889,329**

7. Purchases and Sales of Securities

The aggregate cost of purchases and proceeds from sales of securities, other than short-term obligations and investments in IMMF, for the reporting period were as follows:

	Purchases	Sales
Investment securities	$32,406,856	$27,355,413

8. Fees and Other Transactions with Affiliates

Management Fees. Under the investment advisory agreement, the Fund pays the Manager a management fee based on the daily net assets of the Fund at an annual rate as shown in the following table:

8. Fees and Other Transactions with Affiliates (Continued)

Fee Schedule	
Up to $250 million	1.00%
Next $250 million	0.90
Next $500 million	0.85
Over $1 billion	0.82

The Fund's effective management fee for the reporting period was 0.95% of average annual net assets before any applicable waivers.

Sub-Adviser Fees. The Manager has retained the Sub-Adviser to provide the day-to-day portfolio management of the Fund. Under the Sub-Advisory Agreement, the Manager pays the Sub-Adviser an annual fee in monthly installments, equal to a percentage of the investment management fee collected by the Manager from the Fund, which shall be calculated after any investment management fee waivers. The fee paid to the Sub-Adviser is paid by the Manager, not by the Fund.

Transfer Agent Fees. OFI Global (the "Transfer Agent") serves as the transfer and shareholder servicing agent for the Fund. The Fund pays the Transfer Agent a fee based on annual net assets. Fees incurred and average net assets for each class with respect to these services are detailed in the Statement of Operations and Financial Highlights, respectively.

Sub-Transfer Agent Fees. The Transfer Agent has retained Shareholder Services, Inc., a wholly-owned subsidiary of OFI (the "Sub-Transfer Agent"), to provide the day-to-day transfer agent and shareholder servicing of the Fund. Under the Sub-Transfer Agency Agreement, the Transfer Agent pays the Sub-Transfer Agent an annual fee in monthly installments, equal to a percentage of the transfer agent fee collected by the Transfer Agent from the Fund, which shall be calculated after any applicable fee waivers. The fee paid to the Sub-Transfer Agent is paid by the Transfer Agent, not by the Fund.

Trustees' Compensation. The Fund's Board of Trustees ("Board") has adopted a compensation deferral plan for Independent Trustees that enables Trustees to elect to defer receipt of all or a portion of the annual compensation they are entitled to receive from the Fund. For purposes of determining the amount owed to the Trustees under the plan, deferred amounts are treated as though equal dollar amounts had been invested in shares of the Fund or in other Oppenheimer funds selected by the Trustees. The Fund purchases shares of the funds selected for deferral by the Trustees in amounts equal to his or her deemed investment, resulting in a Fund asset equal to the deferred compensation liability. Such assets are included as a component of "Other" within the asset section of the Statement of Assets and Liabilities. Deferral of Trustees' fees under the plan will not affect the net assets of the Fund and will not materially affect the Fund's assets, liabilities or net investment income per share. Amounts will be deferred until distributed in accordance with the compensation deferral plan.

Distribution and Service Plan for Service Shares. The Fund has adopted a Distribution and Service Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act for Service shares to pay OppenheimerFunds Distributor, Inc. (the "Distributor"), for distribution related services, personal service and account maintenance for the Fund's Service shares. Under the Plan, payments are made periodically at an annual rate of 0.25% of the daily net assets of Service shares of the Fund. The Distributor currently uses all of those fees to compensate sponsors of the insurance product that offers Fund shares, for providing personal service and maintenance of accounts of their variable contract owners that hold Service shares. These fees are paid out of the Fund's assets on an on-going basis and increase operating expenses of the Service shares, which results in lower performance compared to the Fund's shares that are not subject to a service fee. Fees incurred by the Fund under the Plan are detailed in the Statement of Operations.

Waivers and Reimbursements of Expenses. The Manager has contractually agreed to limit the Fund's expenses after payments, waivers and/or reimbursements and reduction to custodian expenses, excluding expenses incurred directly or indirectly by the Fund as a result of investments in other investment companies, wholly-owned subsidiaries and pooled investment vehicles; so that those expenses, as percentages of daily net assets, will not exceed the annual rate of 1.00% for Non-Service shares and 1.25% for Service shares. The expense limitations do not include interest and fees from borrowing, and other expenses not incurred in the ordinary course of the Fund's business. During the reporting period, the Manager waived fees and/or reimbursed the Fund $133,638 and $74,542 for Non-Service and Service shares, respectively.

The Manager will waive fees and/or reimburse Fund expenses in an amount equal to the indirect management fees incurred through the Fund's investment in IMMF. During the reporting period, the Manager waived fees and/or reimbursed the Fund $3,074 for IMMF management fees.

Waivers and/or reimbursements may be modified or terminated as set forth according to the terms in the prospectus.

9. Borrowings and Other Financing

Joint Credit Facility. A number of mutual funds managed by the Manager participate in a $1.28 billion revolving credit facility (the "Facility") intended to provide short-term financing, if necessary, subject to certain restrictions in connection with atypical redemption activity. Expenses and fees related to the Facility are paid by the participating funds and are disclosed separately or as other expenses on the Statement of Operations. The Fund did not utilize the Facility during the reporting period.

10. Pending Litigation

In 2009, several putative class action lawsuits were filed and later consolidated before the U.S. District Court for the District of Colorado against

10. Pending Litigation (Continued)

OppenheimerFunds, Inc. ("OFI"), OppenheimerFunds Distributor, Inc. ("OFDI"), and Oppenheimer Rochester California Municipal Fund, a fund advised by OFI Global Asset Management, Inc. and distributed by the Distributor (the "California Fund"), in connection with the California Fund's investment performance. The plaintiffs asserted claims against OFI, OFDI and certain present and former trustees and officers of the California Fund under the federal securities laws, alleging, among other things, that the disclosure documents of the California Fund contained misrepresentations and omissions and the investment policies of the California Fund were not followed. Plaintiffs in the suit filed an amended complaint and defendants filed a motion to dismiss. In 2011, the court issued an order which granted in part and denied in part the defendants' motion to dismiss. In 2012, plaintiffs filed a motion, which defendants opposed, to certify a class and appoint class representatives and class counsel. In March 2015, the court granted plaintiffs' motion for class certification. In May 2015, the U.S. Court of Appeals for the Tenth Circuit vacated the class certification order and remanded the matter to the district court for further proceedings. In October 2015, the district court reaffirmed its order and determined that the suit will proceed as a class action. In December 2015, the Tenth Circuit denied defendants' petition to appeal the district court's reaffirmed class certification order.

OFI and OFDI believe the suit is without merit; that it is premature to render any opinion as to the likelihood of an outcome unfavorable to them in the suit; and that no estimate can yet be made as to the amount or range of any potential loss. Furthermore, OFI believes that the suit should not impair the ability of OFI or OFDI to perform their respective duties to the Fund and that the outcome of the suit should not have any material effect on the operations of any of the Oppenheimer funds.

PORTFOLIO PROXY VOTING POLICIES AND GUIDELINES; UPDATES TO STATEMENTS OF INVESTMENTS Unaudited

The Fund has adopted Portfolio Proxy Voting Policies and Guidelines under which the Fund votes proxies relating to securities ("portfolio proxies") held by the Fund. A description of the Fund's Portfolio Proxy Voting Policies and Guidelines is available (i) without charge, upon request, by calling the Fund toll-free at 1.800.525.7048, (ii) on the Fund's website at www.oppenheimerfunds.com, and (iii) on the SEC's website at www.sec.gov. In addition, the Fund is required to file Form N-PX, with its complete proxy voting record for the 12 months ended June 30th, no later than August 31st of each year. The Fund's voting record is available (i) without charge, upon request, by calling the Fund toll-free at 1.800.525.7048, and (ii) in the Form N-PX filing on the SEC's website at www.sec.gov.

The Fund files its complete schedule of portfolio holdings with the SEC for the first quarter and the third quarter of each fiscal year on Form N-Q. The Fund's Form N-Q filings are available on the SEC's website at www.sec.gov. Those forms may be reviewed and copied at the SEC's Public Reference Room in Washington, D.C. Information on the operation of the Public Reference Room may be obtained by calling 1-800-SEC-0330.

DISTRIBUTION SOURCES Unaudited

For any distribution that took place over the Fund's reporting period, the table below details on a per-share basis the percentage of the Fund's total distribution payment amount that was derived from the following sources: net income, net profit from the sale of securities, and other capital sources. This information is based upon income and capital gains using generally accepted accounting principles as of the date of each distribution. Because the Fund is actively managed, the relative amount of the Fund's total distributions derived from various sources over the calendar year may change. Please note that this information should not be used for tax reporting purposes as the tax character of distributable income may differ from the amounts used for this notification. You will receive IRS tax forms in the first quarter of each calendar year detailing the actual amount of the taxable and non-taxable portion of distributions paid to you during the tax year.

For the most current information, please go to oppenheimerfunds.com. Select your Fund, then the 'Detailed' tab; where 'Dividends' are shown, the Fund's latest pay date will be followed by the sources of any distribution, updated daily.

Dear PIMCO Variable Insurance Trust Shareholder,

Please find enclosed the Semiannual Report for the PIMCO Variable Insurance Trust covering the six-month reporting period ended June 30, 2016. The following pages contain specific details about the Portfolio's investment performance and a discussion of the factors that most affected performance over the reporting period.

Outside of the reporting period, PIMCO announced on July 19, 2016 that the firm's Managing Directors have selected Emmanuel (Manny) Roman as PIMCO's next Chief Executive Officer. PIMCO's current CEO Douglas Hodge will assume a new role as Managing Director and Senior Advisor when Mr. Roman joins PIMCO on November 1st.

The announcement of Mr. Roman as PIMCO's CEO is the culmination of a process undertaken by the firm to hire a senior executive who would add leadership and strategic insights combined with a deep appreciation of PIMCO's diversified global businesses, investment process and focus on superior investment performance and client-service. Mr. Roman's appointment has the full support of the firm's leadership including Mr. Hodge, PIMCO's President Jay Jacobs, the firm's Executive Committee and its Managing Directors. Mr. Roman has nearly 30 years of experience in the investment industry, with expertise in fixed income and proven executive leadership, most recently as CEO of Man Group PLC, one of the world's largest publicly-traded alternative asset managers and a leader in liquid, high-alpha investment strategies.

Highlights of the financial markets during the six-month fiscal reporting period include:

- The first segment of the reporting period through mid-February 2016 was marked by ongoing concerns over the global impact of a slowdown in the Chinese economy, which drove commodity prices and inflation expectations generally lower. By March, a recovery in the price of oil and expectations of lower interest rates for longer supported a rally in risk assets. The Bank of Japan ("BOJ") and the People's Bank of China, for example, indicated their intent for further policy easing, with the BOJ resorting to a negative interest rate policy in February 2016. The European Central Bank ("ECB") also resorted to unconventional monetary policy with additional easing measures and an expansion of its quantitative easing program by shifting its focus toward domestic credit, pushing government sovereign yields into negative territory. In June 2016, the ECB began purchasing corporate bonds to help invigorate economic growth and stimulate inflation in the region.
- In the U.S., concerns regarding the global impact of tightening financial conditions and renewed U.S. dollar strength kept the Federal Reserve ("Fed") on hold at their June 2016 meeting, after having slightly raised interest rates at their December 2015 meeting. In addition, the U.S. dollar appreciated against most European and emerging market currencies, while falling against the Japanese yen. The U.S. interest rate yield curve flattened as the ten-year U.S. Treasury yield rallied to all-time lows and short-term interest rates rose with the initial Fed rate hike in December 2015. Revised first quarter 2016 U.S. gross domestic product ("GDP") data released in late June was marginally stronger as retail sales, housing and consumer sentiment data indicated an improving economy.
- Market movements and news headlines at the end of the reporting period were dominated by the unexpected outcome of the U.K. referendum on June 23, 2016. Initial investor reaction to the Brexit vote was largely "risk-off" as various assets re-priced to the surprise outcome, with U.S. Treasuries, the Japanese yen and gold headlining a safe-haven rally. However, aside from the Pound Sterling and European and Japanese equities, most asset classes generally recovered in the ensuing week as investors reassessed the impact of the Brexit vote on global growth expectations.
- U.S. Treasuries, as represented by the Barclays U.S. Treasury Index, returned 5.37% for the reporting period. Yields declined across the majority of the U.S. Treasury yield curve as a more dovish tone from the Fed coupled with the surprise result of the U.K. referendum pushed expectations for policy normalization further into the future. The benchmark ten-year U.S. Treasury note yielded 1.49% at the end of the reporting period, down from 2.27% on December 31, 2015. The Barclays U.S. Aggregate Index, a widely used index of U.S. investment-grade bonds, returned 5.31% for the reporting period.
- U.S. Treasury Inflation-Protected Securities ("TIPS"), as represented by the Barclays U.S. TIPS Index, returned 6.24% over the reporting period. U.S. real interest rates followed nominal yields sharply lower as concerns surrounding China's growth prospects early in the reporting period coupled with uncertainty over the U.K. referendum created a strong flight-to-quality bid and more tempered expectations for near-term Fed rate hikes.

Despite posting positive absolute returns, U.S. TIPS were outpaced by comparable nominal U.S. Treasuries as market-based inflation expectations ended the period lower. U.S. breakeven inflation rates were pressured lower by low headline inflation data and outsized demand for safe-haven nominal U.S. Treasuries.

- Diversified commodities, as represented by the Bloomberg Commodity Index Total Return, returned 13.25% over the reporting period. Prices on broad commodities rebounded, led higher primarily by energy and precious metal prices. Crude oil prices rose markedly after reaching multi-year lows in January 2016, driven higher by strong demand and production outages. Within precious metals, gold prices were the beneficiary of strong safe-haven demand around risk-off events, particularly in June 2016 following the U.K.'s historic vote to leave the European Union. Agriculture commodity prices also advanced over the period, led by sugar prices which rallied on Brazilian rainfall, Indian import demand as well as strength in the Brazilian real.
- Agency mortgage-backed securities ("MBS"), as represented by the Barclays U.S. MBS Fixed Rate Index, returned 3.11% over the reporting period and underperformed like-duration U.S. Treasuries amid headwinds from heavy supply and refinancing concerns. Non-Agency MBS prices were higher and spreads tightened, as the sector continued to benefit from favorable technicals and stable fundamentals. Positive representation and warranty settlement developments also benefited the sector.
- U.S. investment grade credit, as represented by the Barclays U.S. Credit Index, returned 7.54% over the reporting period, as falling credit yields and a commodity-fueled rally drove returns over the reporting period. Developed market global high yield bonds, as measured by the BofA Merrill Lynch Developed Markets High Yield Constrained Index (USD Hedged), returned 8.02% over the reporting period. Strong performance from commodity sectors and risk-on sentiment drove returns, as asset sales and equity issuance strengthened balance sheets. Meanwhile, high yield bond mutual funds saw strong inflows, as investors continued to seek higher-yielding instruments.
- Emerging market ("EM") external debt, as represented by the JPMorgan Emerging Markets Bond Index (EMBI) Global, returned 10.90% over the reporting period. EM local bonds, as represented by the JPMorgan Government Bond Index-Emerging Markets Global Diversified Index (Unhedged), returned 14.02% over the reporting period. The slowdown in China continued apace, though policymakers have used expanded credit availability and a gradual depreciation of the Chinese currency to soften the landing. Higher commodity prices and improving terms of trade helped EM currencies broadly gain during the reporting period.
- Global equity markets showed mixed performance amid a period marked by economic uncertainty, increased volatility and concerns around the U.K. referendum. U.S. equities, as represented by the S&P 500 Index, returned 3.84% over the reporting period. EM equities, as represented by the MSCI Emerging Markets Index (Net Dividends in USD), returned 6.41% over the same period. In contrast, developed market equities outside the U.S., as represented by the MSCI EAFE Net Dividend Index (USD Unhedged), declined 4.42% over the reporting period.

Thank you once again for the trust you have placed in us. We value your commitment and will continue to work diligently to meet your broad investment and investment solution needs.

Sincerely,

Brent R. Harris

Brent R. Harris
Chairman of the Board,
PIMCO Variable Insurance Trust

August 22, 2016

Important Information About the PIMCO CommodityRealReturn® Strategy Portfolio

PIMCO Variable Insurance Trust (the "Trust") is an open-end management investment company currently consisting of twenty separate investment portfolios, including the PIMCO CommodityRealReturn® Strategy Portfolio (the "Portfolio"). The Portfolio is only available as a funding vehicle under variable life insurance policies or variable annuity contracts issued by insurance companies ("Variable Contracts"). Individuals may not purchase shares of the Portfolio directly. Shares of the Portfolio also may be sold to qualified pension and retirement plans outside of the separate account context.

We believe that bond funds have an important role to play in a well-diversified investment portfolio. It is important to note, however, that in an environment where interest rates may trend upward, rising rates would negatively impact the performance of most bond funds, and fixed-income securities and other instruments held by the Portfolio are likely to decrease in value. A wide variety of factors can cause interest rates to rise (e.g., central bank monetary policies, inflation rates, general economic conditions, etc.). In addition, changes in interest rates can be sudden and unpredictable, and there is no guarantee that Fund management will anticipate such movement accurately. The Portfolio may lose money as a result of movements in interest rates.

As of the date of this report, interest rates in the U.S. and many parts of the world, including certain European countries, are near historically low levels. As such, bond funds may currently face an increased exposure to the risks associated with a rising interest rate environment. This is especially true as the Fed ended its quantitative easing program and has begun, and may continue, to raise interest rates. Further, while bond markets have steadily grown over the past three decades, dealer inventories of corporate bonds are near historic lows in relation to market size. As a result, there has been a significant reduction in the ability of dealers to "make markets."

Bond funds and individual bonds with a longer duration (a measure used to determine the sensitivity of a security's price to changes in interest rates) tend to be more sensitive to changes in interest rates, usually making them more volatile than securities or funds with shorter durations. All of the factors mentioned above, individually or collectively, could lead to increased volatility and/or lower liquidity in the fixed income markets or negatively impact the Portfolio's performance or cause the Portfolio to incur losses. As a result, the Portfolio may experience increased shareholder redemptions which, among other things, could further reduce the net assets of the Portfolio.

The Portfolio may be subject to various risks as described in the Portfolio's prospectus. Some of these risks may include, but are not limited to, the following: interest rate risk, call risk, credit risk, high yield risk, market risk, issuer risk, liquidity risk, derivatives risk, commodity risk, equity risk, mortgage-related and other asset-backed securities risk, foreign (non-U.S.) investment risk, emerging markets risk, sovereign debt risk, currency risk, leveraging risk, management risk, tax risk, subsidiary risk, and short sale risk. A complete description of these and other risks is contained in the Portfolio's prospectus.

The Portfolio may use derivative instruments as part of an investment strategy, as described below, or for hedging purposes. Use of these instruments may involve certain costs and risks such as liquidity risk, interest rate risk, market risk, credit risk, leverage risk, management risk and the risk that the Portfolio may not be able to close out a position when it would be most advantageous to do so. Certain derivative transactions may have a leveraging effect on the Portfolio. For example, a small investment in a derivative instrument may have a significant impact on the Portfolio's exposure to interest rates, currency exchange rates or other investments. As a result, a relatively small price movement in an asset, instrument, or component of the index underlying a derivative instrument may cause an immediate and substantial loss or gain, which translates into heightened volatility for the Portfolio. The Portfolio may engage in such transactions regardless of whether the Portfolio owns the asset, instrument or components of the index underlying the derivative instrument. The Portfolio may invest a significant portion of its assets in these types of instruments. If it does, the Portfolio's investment exposure could far exceed the value of its portfolio securities and its investment performance could be primarily dependent upon securities it does not own. Investing in foreign (non-U.S.) securities may entail risk due to foreign (non-U.S.) economic and political developments; this risk may be increased when investing in emerging markets. For example, if the Portfolio invests in emerging market debt, it may face increased exposure to interest rate, liquidity, volatility, and redemption risk due to the specific economic, political, geographical, or legal background of the foreign (non-U.S.) issuer.

High yield bonds typically have a lower credit rating than other bonds. Lower-rated bonds generally involve a greater risk to principal than higher-rated bonds. Further, markets for lower-rated bonds are typically less liquid than for higher-rated bonds, and public information is usually less abundant in markets for lower-rated bonds. Thus, high yield investments increase the chance that the Portfolio will lose money. The credit quality of a particular security or group of securities does not ensure the stability or safety of the overall portfolio. Mortgage-related and asset-backed securities represent interests in "pools" of mortgages or other assets such as consumer loans or receivables. As a general matter, mortgage-related and asset-backed securities are subject to interest rate risk, extension risk, prepayment risk, and credit risk. These risks largely stem from the fact that returns on mortgage-related and asset-backed securities depend on the ability of the underlying assets to generate cash flow.

The geographical classification of foreign (non-U.S.) securities in this report are classified by the country of incorporation of a holding. In certain instances, a security's country of incorporation may be different from its country of economic exposure.

The Portfolio will seek to gain exposure to the commodity markets primarily through investments in leveraged or unleveraged commodity index-linked notes, which are derivative debt instruments with principal and/or coupon payments linked to the performance of commodity indices, and through investments in the PIMCO Cayman Commodity Portfolio I Ltd. (the "Subsidiary"), a wholly-owned subsidiary (as discussed below). The Portfolio may also invest in commodity-linked notes with principal and/or coupon payments linked to the value of particular commodities or commodity futures contracts, or a subset of commodities or commodity futures contracts. These notes are sometimes referred to as "structured notes" because the terms of these notes may be structured by the issuer and the purchaser of the notes. The value of these notes will rise or fall in response to changes in the underlying commodity or related index of investments. These notes expose the Portfolio economically to movements in commodity prices. The Portfolio is intended for long-term investors and an investment in the Portfolio should be no more than a small part of a typical diversified portfolio. The Portfolio's share price is expected to be more volatile than that of other funds. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, changes in interest rates, or factors affecting a particular industry or commodity, such as weather, disease, embargoes, and international economic, political and regulatory developments. These notes also are subject to risks, such as credit, market and interest rate risks, that in general affect the values of debt securities. In addition, these notes are often leveraged, increasing the volatility of each note's market value relative to changes in the underlying commodity, commodity futures contract or commodity index. Therefore, at maturity of the note, the Portfolio may receive more or less principal than it originally invested. The Portfolio might receive interest payments on the note that are more or less than the stated coupon interest payments. The Portfolio may also gain exposure to the commodity markets indirectly by investing in its Subsidiary, which will primarily invest in different commodity-linked derivative instruments than the Portfolio, including swap agreements, commodity options, futures and options on futures.

On the Portfolio Summary page in this Shareholder Report, the Average Annual Total Return table and Cumulative Returns chart measure performance assuming that any dividend and capital gain distributions were reinvested. The Cumulative Returns chart reflects only Administrative Class performance. Performance for Institutional Class, Class M and Advisor Class shares, if applicable, may be higher or lower based on each class's expense ratios. The Portfolio's total annual operating expense ratios on the Portfolio Summary page are as of the currently effective prospectus, as supplemented to date. The Portfolio measures its performance against a broad-based securities market index ("benchmark index"). The benchmark index does not take into account fees, expenses, or taxes. The Portfolio's past performance, before and after taxes, is not necessarily an indication of how the Portfolio will perform in the future.

The following table discloses the inception dates of the Portfolio and its respective share classes along with the Portfolio's diversification status as of period end:

Portfolio Name	Portfolio Inception	Institutional Class	Class M	Administrative Class	Advisor Class	Diversification Status
PIMCO CommodityRealReturn® Strategy Portfolio	06/30/04	04/30/12	11/10/14	06/30/04	02/28/06	Diversified

An investment in the Portfolio is not a bank deposit and is not guaranteed or insured by the Federal Deposit Insurance Corporation ("FDIC") or any other government agency. It is possible to lose money on investments in the Portfolio.

The Trustees are responsible generally for overseeing the management of the Trust. The Trustees authorize the Trust to enter into service agreements with the Adviser, the Distributor, the Administrator and other service providers in order to provide, and in some cases authorize service providers to procure through other parties, necessary or desirable services on behalf of the Trust and the Portfolio. Shareholders are not parties to or third-party beneficiaries of such service agreements. Neither this Portfolio's prospectus nor summary prospectus, the Trust's Statement of Additional Information ("SAI"), any contracts filed as exhibits to the Trust's registration statement, nor any other communications, disclosure documents or regulatory filings (including this report) from or on behalf of the Trust or the Portfolio creates a contract between or among any shareholder of the Portfolio, on the one hand, and the Trust, the Portfolio, a service provider to the Trust or the Portfolio, and/or the Trustees or officers of the Trust, on the other hand. The Trustees (or the Trust and its officers, service providers or other delegates acting under authority of the Trustees) may amend the most recent prospectus or use a new prospectus, summary prospectus or SAI with respect to the Portfolio or the Trust, and/or amend, file and/or issue any other communications, disclosure documents or regulatory filings, and may amend or enter into any contracts to which the Trust or the Portfolio is a party, and interpret the investment objective(s), policies, restrictions and contractual provisions applicable to the Portfolio, without shareholder input or approval, except in circumstances in which shareholder approval is specifically

required by law (such as changes to fundamental investment policies) or where a shareholder approval requirement is specifically disclosed in the Trust's then-current prospectus or SAI.

PIMCO has adopted written proxy voting policies and procedures ("Proxy Policy") as required by Rule 206(4)-6 under the Investment Advisers Act of 1940, as amended. The Proxy Policy has been adopted by the Trust as the policies and procedures that PIMCO will use when voting proxies on behalf of the Portfolio. A description of the policies and procedures that PIMCO uses to vote proxies relating to portfolio securities of the Portfolio, and information about how the Portfolio voted proxies relating to portfolio securities held during the most recent twelve-month period ended June 30, are available without charge, upon request, by calling the Trust at (888) 87-PIMCO, on the Portfolio's website at pvit.pimco-funds.com, and on the Securities and Exchange Commission's ("SEC") website at www.sec.gov.

The Portfolio files its complete schedule of portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. A copy of the Trust's Form N-Q is available on the SEC's website at www.sec.gov and may be reviewed and copied at the SEC's Public Reference Room in Washington, D.C., and is available without charge, upon request, by calling the Trust at (888) 87-PIMCO and on the Portfolio's website at pvit.pimco-funds.com. Information on the operation of the Public Reference Room may be obtained by calling 1-800-SEC-0330.

The Trust is distributed by PIMCO Investments LLC, 1633 Broadway, New York, New York 10019.

± Bloomberg Commodity Index Total Return is an unmanaged index composed of futures contracts on 20 physical commodities. The index is designed to be a highly liquid and diversified benchmark for commodities as an asset class.

It is not possible to invest directly in an unmanaged index.

Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Current performance may be lower or higher than performance shown. Investment return and the principal value of an investment will fluctuate. Shares may be worth more or less than original cost when redeemed. The Portfolio's performance does not reflect the deduction of additional charges and expenses imposed in connection with investing in Variable Contracts, which will reduce returns. For performance current to the most recent month-end, visit http://pvit.pimco-funds.com.

The Portfolio's total annual operating expense ratio as stated in the Portfolio's current prospectus, which includes the Acquired Fund Fees and Expenses (Underlying PIMCO Fund Expenses), as supplemented to date, is 1.02% for Institutional Class shares, 1.47% for Class M shares, 1.17% for Administrative Class shares, and 1.27% for Advisor Class shares.

Investment Objective and Strategy Overview

» PIMCO CommodityRealReturn® Strategy Portfolio seeks maximum real return, consistent with prudent investment management, by investing under normal circumstances in commodity-linked derivative instruments backed by a portfolio of inflation-indexed securities and other Fixed Income Instruments. "Fixed Income Instruments" include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. The Portfolio invests in commodity-linked derivative instruments, including commodity index-linked notes, swap agreements, commodity options, futures and options on futures, that provide exposure to the investment returns of the commodities markets without investing directly in physical commodities.

Portfolio Insights

Following are key factors impacting the Portfolio's performance during the reporting period:

» Exposure to commodities, through an investment in total return swaps on the Portfolio's commodity benchmark index, benefited absolute performance, as this index posted positive returns.

» The Portfolio's construction, which uses U.S. Treasury Inflation-Protected Securities ("TIPS") as collateral for the commodities exposure, benefited relative performance as TIPS outperformed the assumed U.S. Treasury Bill collateral rate embedded in the Bloomberg Commodity Index.

» An overweight to TIPS benefited relative performance, as U.S. TIPS posted positive returns.

» An underweight to long-term U.K. breakeven inflation spreads (or the yield differential between U.K. nominal gilts and like-maturity U.K. index-linked gilts) benefited relative performance, as 30-year breakeven inflation spreads fell.

» An underweight to U.K. nominal duration (or sensitivity to changes in market interest rates) detracted from relative performance, as yields fell.

» An underweight to U.S. nominal duration expressed via interest rate swaps detracted from relative performance, as interest rate swap yields fell across most maturities.

Expense Example PIMCO CommodityRealReturn® Strategy Portfolio (Consolidated)

Example

As a shareholder of the Portfolio, you incur two types of costs: (1) transaction costs and (2) ongoing costs, including management fees, distribution and/or service (12b-1) fees (if applicable), and other Portfolio expenses. The Example is intended to help you understand your ongoing costs (in dollars) of investing in the Portfolio and to compare these costs with the ongoing costs of investing in other mutual funds.

The Expense Example does not reflect any fees or other expenses imposed by the Variable Contracts. If it did, the expenses reflected in the Expense Example would be higher. The Example is based on an investment of $1,000 invested at the beginning of the period and held from January 1, 2016 to June 30, 2016 unless noted otherwise in the table and footnotes below.

Actual Expenses

The information in the table under the heading "Actual" provides information about actual account values and actual expenses. You may use the information in these rows, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.60), then multiply the result by the number in the appropriate column for your share class, in the column titled "Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes

The information in the table under the heading "Hypothetical (5% return before expenses)" provides information about hypothetical account values and hypothetical expenses based on the Portfolio's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Portfolio's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Portfolio and other portfolios. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other portfolios.

Please note that the expenses shown in the table are meant to highlight your ongoing costs only and do not reflect any transactional costs. Therefore, the information under the heading "Hypothetical (5% return before expenses)" is useful in comparing ongoing costs only, and will not help you determine the relative total costs of owning different portfolios. In addition, if these transactional costs were included, your costs would have been higher.

Expense ratios may vary period to period because of various factors, such as an increase in expenses that are not covered by the management fees such as fees and expenses of the independent trustees and their counsel, extraordinary expenses and interest expense.

	Actual			Hypothetical (5% return before expenses)			
	Beginning Account Value (01/01/16)	Ending Account Value (06/30/16)	Expenses Paid During Period*	Beginning Account Value (01/01/16)	Ending Account Value (06/30/16)	Expenses Paid During Period*	Net Annualized Expense Ratio**
Institutional Class	$ 1,000.00	$ 1,160.90	$ 5.55	$ 1,000.00	$ 1,019.32	$ 5.18	1.05%
Class M	1,000.00	1,157.70	7.91	1,000.00	1,017.12	7.40	1.50
Administrative Class	1,000.00	1,159.70	6.34	1,000.00	1,018.58	5.92	1.20
Advisor Class	1,000.00	1,158.90	6.86	1,000.00	1,018.10	6.42	1.30

* Expenses Paid During Period are equal to the net annualized expense ratio for the class, multiplied by the average account value over the period, multiplied by 179/366 (to reflect the one-half year period). Overall fees and expenses of investing in the Portfolio will be higher because the example does not reflect variable contract fees and expenses.

** Net Annualized Expense Ratio is reflective of any applicable contractual fee waivers and/or expense reimbursements or voluntary fee waivers. Details regarding fee waivers can be found in Note 9 in the Notes to Financial Statements.

Total Borrowings and Other Financing Transactions	**$ 50,598**	**$ 0**	**$ (176,739)**			

[4] Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from borrowings and other financing transactions can only be netted across transactions governed under the same master agreement with the same legal entity. The Portfolio and Subsidiary are recognized as two separate legal entities. As such, exposure cannot be netted. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

CERTAIN TRANSFERS ACCOUNTED FOR AS SECURED BORROWINGS

Remaining Contractual Maturity of the Agreements

	Overnight and Continuous	Up to 30 days	31-90 days	Greater Than 90 days	Total

(1) If the Portfolio is a buyer of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Portfolio will either (i) receive from the seller of protection an amount equal to the notional amount of the swap and deliver the referenced obligation or underlying securities comprising the referenced index or (ii) receive a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

(2) The maximum potential amount the Portfolio could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

(3) The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices' credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

FINANCIAL DERIVATIVE INSTRUMENTS: EXCHANGE-TRADED OR CENTRALLY CLEARED SUMMARY

The following is a summary of the market value and variation margin of Exchange-Traded or Centrally Cleared Financial Derivative Instruments as of June 30, 2016:

(i) Securities with an aggregate market value of $2,757 and cash of $2,712 have been pledged as collateral for exchange-traded and centrally cleared financial derivative instruments as of June 30, 2016.

	Financial Derivative Assets				Financial Derivative Liabilities			
	Market Value	Variation Margin Asset [1]			Market Value	Variation Margin Liability		
	Purchased Options	Futures	Swap Agreements	Total	Written Options	Futures	Swap Agreements	Total
PIMCO CommodityRealReturn® Strategy Portfolio [2]	$ 0	$ 56	$ 282	$ 338	$ 0	$ (61)	$ (45)	$ (106)
PIMCO Cayman Commodity Portfolio I, Ltd. (Subsidiary) [2]	89	493	1	583	(80)	(426)	0	(506)
Total Exchange-Traded or Centrally Cleared	**$ 89**	**$ 549**	**$ 283**	**$ 921**	**$ (80)**	**$ (487)**	**$ (45)**	**$ (612)**

[1] Unsettled variation margin asset of $1 for closed futures is outstanding at period end.

[2] The Portfolio and Subsidiary are recognized as two separate legal entities. As such, exposure cannot be netted. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

CREDIT DEFAULT SWAPS ON CREDIT INDICES - SELL PROTECTION [2]

Counterparty	Index/Tranches	Fixed Receive Rate	Maturity Date	Notional Amount [4]	Premiums (Received)	Unrealized Appreciation	Swap Agreements, at Value [5] Asset	Swap Agreements, at Value [5] Liability
DUB	CMBX.NA.AAA.8 Index	0.500%	10/17/2057	$ 800	$ (42)	$ 12	$ 0	$ (30)
GST	CMBX.NA.AAA.8 Index	0.500	10/17/2057	300	(17)	6	0	(11)
					$ (59)	$ 18	$ 0	$ (41)

[2] If the Portfolio is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Portfolio will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

[3] Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate or sovereign issues as of period end serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default for the credit derivative. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity's credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

[4] The maximum potential amount the Portfolio could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

[5] The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices' credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

[8] Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from OTC derivatives can only be netted across transactions governed under the same master agreement with the same legal entity. The Portfolio and Subsidiary are recognized as two separate legal entities. As such, exposure cannot be netted. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting agreements.

FAIR VALUE OF FINANCIAL DERIVATIVE INSTRUMENTS

The following is a summary of the fair valuation of the Portfolio's derivative instruments categorized by risk exposure. See Note 7, Principal Risks, in the Notes to Financial Statements on risks of the Portfolio.

Fair Values of Financial Derivative Instruments on the Consolidated Statement of Assets and Liabilities as of June 30, 2016:

	Derivatives not accounted for as hedging instruments: Commodity Contracts	Credit Contracts	Equity Contracts	Foreign Exchange Contracts	Interest RateContracts	Total
Financial Derivative Instruments - Assets						
Exchange-traded or centrally cleared

There were no significant transfers between Levels 1, 2, or 3 during the period ended June 30, 2016.

1. ORGANIZATION

PIMCO Variable Insurance Trust (the "Trust") was established as a Delaware business trust on October 3, 1997. The Trust is registered under the Investment Company Act of 1940, as amended (the "Act"), as an open-end management investment company. The Trust is designed to be used as an investment vehicle by separate accounts of insurance companies that fund variable annuity contracts and variable life insurance policies and by qualified pension and retirement plans. Information presented in these financial statements pertains to the Institutional Class, Class M, Administrative Class and Advisor Class shares of the PIMCO CommodityRealReturn® Strategy Portfolio (the "Portfolio") offered by the Trust. Pacific Investment Management Company LLC ("PIMCO") serves as the investment adviser (the "Adviser") for the Portfolio.

2. SIGNIFICANT ACCOUNTING POLICIES

The following is a summary of significant accounting policies consistently followed by the Portfolio in the preparation of its financial statements in conformity with accounting principles generally accepted in the United States of America ("U.S. GAAP"). The Portfolio is treated as an investment company under the reporting requirements of U.S. GAAP. The preparation of financial statements in accordance with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates.

(a) Securities Transactions and Investment Income Securities transactions are recorded as of the trade date for financial reporting purposes. Securities purchased or sold on a when-issued or delayed-delivery basis may be settled 15 days or more after the trade date. Realized gains (losses) from securities sold are recorded on the identified cost basis. Dividend income is recorded on the ex-dividend date, except certain dividends from foreign securities where the ex-dividend date may have passed, which are recorded as soon as the Portfolio is informed of the ex-dividend date. Interest income, adjusted for the accretion of discounts and amortization of premiums, is recorded on the accrual basis from settlement date, with the exception of securities with a forward starting effective date, where interest income is recorded on the accrual basis from effective date. For convertible securities, premiums attributable to the conversion feature are not amortized. Estimated tax liabilities on certain foreign securities are recorded on an accrual basis and are reflected as components of interest income or net change in unrealized appreciation (depreciation) on investments on the Consolidated Statement of Operations, as appropriate. Tax liabilities realized as a result of such security sales are reflected as a component of net realized gain (loss) on investments on the Consolidated Statement of Operations. Paydown gains (losses) on mortgage-related and other asset-backed securities are recorded as components of interest income on the Consolidated Statement of Operations. Income or short-term capital gain distributions received from registered investment companies are recorded as dividend income. Long-term capital gain distributions received from registered investment companies are recorded as realized gains.

Debt obligations may be placed on non-accrual status and related interest income may be reduced by ceasing current accruals and writing off interest receivable when the collection of all or a portion of interest has become doubtful based on consistently applied procedures. A debt obligation is removed from non-accrual status when the issuer resumes interest payments or when collectability of interest is probable.

(b) Cash and Foreign Currency The functional and reporting currency for the Portfolio is the U.S. dollar. The market values of foreign securities, currency holdings and other assets and liabilities denominated in foreign currencies are translated into U.S. dollars based on the current exchange rates each business day. Purchases and sales of securities and income and expense items denominated in foreign currencies, if any, are translated into U.S. dollars at the exchange rate in effect on the transaction date. The Portfolio does not separately report the effects of changes in foreign exchange rates from changes in market prices on securities held. Such changes are included in net realized gain (loss) and net change in unrealized appreciation (depreciation) from investments on the Consolidated Statement of Operations. The Portfolio may invest in foreign currency-denominated securities and may engage in foreign currency transactions either on a spot (cash) basis at the rate prevailing in the currency exchange market at the time or through a forward foreign currency contract (see Financial Derivative Instruments, if any). Realized foreign exchange gains (losses) arising from sales of spot foreign currencies, currency gains (losses) realized between the trade and settlement dates on securities transactions and the difference between the recorded amounts of dividends, interest, and foreign withholding taxes and the U.S. dollar equivalent of the amounts actually received or paid are included in net realized gain (loss) on foreign currency transactions on the Consolidated Statement of Operations. Net unrealized foreign exchange gains (losses) arising from changes in foreign exchange rates on foreign denominated assets and liabilities other than investments in securities held at the end of the reporting period are included in net change in unrealized appreciation (depreciation) on foreign currency assets and liabilities on the Consolidated Statement of Operations.

(c) Multiclass Operations Each class offered by the Trust has equal rights as to assets and voting privileges (except that shareholders of a class have exclusive voting rights regarding any matter relating solely to

that class of shares). Income and non-class specific expenses are allocated daily to each class on the basis of the relative net assets. Realized and unrealized capital gains (losses) are allocated daily based on the relative net assets of each class of the Portfolio. Class specific expenses, where applicable, currently include supervisory and administrative and distribution and servicing fees. Under certain circumstances, the per share net asset value ("NAV") of a class of the Portfolio's shares may be different from the per share NAV of another class of shares as a result of the different daily expense accruals applicable to each class of shares.

(d) Dividends and Distributions to Shareholders Dividends from net investment income, if any, are declared and distributed to shareholders quarterly. Net realized capital gains earned by the Portfolio, if any, will be distributed no less frequently than once each year.

Income dividends and capital gain distributions are determined in accordance with income tax regulations which may differ from U.S. GAAP. Differences between tax regulations and U.S. GAAP may cause timing differences between income and capital gain recognition. Examples of events that give rise to timing differences include wash sales, straddles and capital loss carryforwards. Further, the character of investment income and capital gains may be different for certain transactions under the two methods of accounting. Examples of transactions that may cause character differences include the treatment of paydowns on mortgage-backed securities, swaps, foreign currency transactions and contingent debt instruments. As a result, income dividends and capital gain distributions declared during a fiscal period may differ significantly from the net investment income (loss) and realized gains (losses) reported on the Portfolio's annual financial statements presented under U.S. GAAP.

Distributions classified as a tax basis return of capital, if any, are reflected on the Consolidated Statements of Changes in Net Assets and have been recorded to paid in capital. In addition, other amounts have been reclassified between undistributed (overdistributed) net investment income (loss), accumulated undistributed (overdistributed) net realized gain (loss) and/or paid in capital to more appropriately conform financial accounting to tax characterizations of dividend distributions.

(e) Consolidated Statement of Cash Flows U.S. GAAP requires entities providing financial statements that report both financial position and results of operations to also provide a Consolidated Statement of Cash Flows for each period for which results of operations are provided, but exempts investment companies meeting certain conditions. One of the conditions is that substantially all of the entity's investments were carried at fair value during the period and classified as Level 1 or Level 2 in the fair value hierarchy in accordance with the requirements of U.S. GAAP. Another condition is that the entity had little or no debt, based on the average debt outstanding during the period, in relation to average total assets. Portfolios with certain degrees of borrowing activity, typically through the use of reverse repurchase agreements or sale-buyback transactions, have been determined to be at a level requiring a Consolidated Statement of Cash Flows. The Consolidated Statement of Cash Flows has been prepared using the indirect method which requires net increase (decrease) in net assets resulting from operations to be adjusted to reconcile to net cash flows from operating activities.

(f) New Accounting Pronouncements In August 2014, the Financial Accounting Standards Board ("FASB") issued an Accounting Standards Update ("ASU"), ASU 2014-15 requiring management to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the entity's ability to continue as a going concern. The ASU is effective prospectively for annual periods ending after December 15, 2016, and interim periods thereafter. At this time, management is evaluating the implications of these changes on the financial statements.

In May 2015, the FASB issued ASU 2015-07 which removes the requirement to categorize within the fair value hierarchy all investments for which fair value is measured using the NAV per share practical expedient. The ASU also removes the requirement to make certain disclosures for all investments that are eligible to be measured at fair value using the NAV per share practical expedient. The ASU is effective for annual periods beginning after December 15, 2015 and interim periods within those annual periods. The ASU did not have an impact on the Portfolio's financial statements.

3. INVESTMENT VALUATION AND FAIR VALUE MEASUREMENTS

(a) Investment Valuation Policies The price of the Portfolio's shares is based on the Portfolio's NAV. The NAV of the Portfolio, or each of its share classes, as applicable, is determined by dividing the total value of portfolio investments and other assets attributable to the Portfolio or class, less any liabilities, by the total number of shares outstanding of the Portfolio or class.

On each day that the New York Stock Exchange ("NYSE") is open, Portfolio shares are ordinarily valued as of the close of regular trading ("NYSE Close"). Information that becomes known to the Portfolio or its agents after the time as of which NAV has been calculated on a particular day will not generally be used to retroactively adjust the price of a security or the NAV determined earlier that day. The Portfolio reserves the right to change the time its NAV is calculated if the Portfolio closes earlier, or as permitted by the SEC.

For purposes of calculating NAV, portfolio securities and other assets for which market quotes are readily available are valued at market value. Market value is generally determined on the basis of official closing prices or the last reported sales prices, or if no sales are reported, based on quotes obtained from established market makers or prices (including evaluated prices) supplied by the Portfolio's approved pricing services, quotation reporting systems and other third-party sources (together, "Pricing Services"). The Portfolio will normally use pricing data for domestic equity securities received shortly after the NYSE Close and does not normally take into account trading, clearances or settlements that take place after the NYSE Close. A foreign (non-U.S.) equity security traded on a foreign exchange or on more than one exchange is typically valued using pricing information from the exchange considered by the Adviser to be the primary exchange. A foreign (non-U.S.) equity security will be valued as of the close of trading on the foreign exchange, or the NYSE Close, if the NYSE Close occurs before the end of trading on the foreign exchange. Domestic and foreign (non-U.S.) fixed income securities, non-exchange traded derivatives, and equity options are normally valued on the basis of quotes obtained from brokers and dealers or Pricing Services using data reflecting the earlier closing of the principal markets for those securities. Prices obtained from Pricing Services may be based on, among other things, information provided by market makers or estimates of market values obtained from yield data relating to investments or securities with similar characteristics. Certain fixed income securities purchased on a delayed-delivery basis are marked to market daily until settlement at the forward settlement date. Exchange-traded options, except equity options, futures and options on futures are valued at the settlement price determined by the relevant exchange. Swap agreements are valued on the basis of bid quotes obtained from brokers and dealers or market-based prices supplied by Pricing Services or other pricing sources. With respect to any portion of the Portfolio's assets that are invested in one or more open-end management investment companies (other than exchange-traded funds ("ETFs")), the Portfolio's NAV will be calculated based upon the NAVs of such investments.

If a foreign (non-U.S.) equity security's value has materially changed after the close of the security's primary exchange or principal market but before the NYSE Close, the security may be valued at fair value based on procedures established and approved by the Board of Trustees of the Trust (the "Board"). Foreign (non-U.S.) equity securities that do not trade when the NYSE is open are also valued at fair value. With respect to foreign (non-U.S.) equity securities, the Portfolio may determine the fair value of investments based on information provided by Pricing Services and other third-party vendors, which may recommend fair value or adjustments with reference to other securities, indices or assets. In considering whether fair valuation is required and in determining fair values, the Portfolio may, among other things, consider significant events (which may be considered to include changes in the value of U.S. securities or securities indices) that occur after the close of the relevant market and before the NYSE Close. The Portfolio may utilize modeling tools provided by third-party vendors to determine fair values of non-U.S. securities. Foreign (non-U.S.) exchanges may permit trading in foreign (non-U.S.) equity securities on days when the Trust is not open for business, which may result in the Portfolio's portfolio investments being affected when shareholders are unable to buy or sell shares.

Senior secured floating rate loans for which an active secondary market exists to a reliable degree will be valued at the mean of the last available bid/ask prices in the market for such loans, as provided by a Pricing Service. Senior secured floating rate loans for which an active secondary market does not exist to a reliable degree will be valued at fair value, which is intended to approximate market value. In valuing a senior secured floating rate loan at fair value, the factors considered may include, but are not limited to, the following: (a) the creditworthiness of the borrower and any intermediate participants, (b) the terms of the loan, (c) recent prices in the market for similar loans, if any, and (d) recent prices in the market for instruments of similar quality, rate, period until next interest rate reset and maturity.

Investments valued in currencies other than the U.S. dollar are converted to the U.S. dollar using exchange rates obtained from Pricing Services. As a result, the value of such investments and, in turn, the NAV of the Portfolio's shares may be affected by changes in the value of currencies in relation to the U.S. dollar. The value of investments traded in markets outside the United States or denominated in currencies other than the U.S. dollar may be affected significantly on a day that the Trust is not open for business. As a result, to the extent that the Portfolio holds foreign (non-U.S.) investments, the value of those investments may change at times when shareholders are unable to buy or sell shares and the value of such investments will be reflected in the Portfolio's next calculated NAV.

Investments for which market quotes or market based valuations are not readily available are valued at fair value as determined in good faith by the Board or persons acting at their direction. The Board has adopted methods for valuing securities and other assets in circumstances where market quotes are not readily available, and has delegated to the Adviser the responsibility for applying the fair valuation methods. In the event that market quotes or market based valuations are not readily available, and the security or asset cannot be valued pursuant to a Board approved valuation method, the value of the security or asset will be determined in good faith by the Valuation Oversight Committee of the Board ("Valuation Oversight Committee"), generally based on recommendations provided by the Adviser. Market

quotes are considered not readily available in circumstances where there is an absence of current or reliable market-based data (e.g., trade information, bid/ask information, indicative market quotations ("Broker Quotes"), Pricing Services' prices), including where events occur after the close of the relevant market, but prior to the NYSE Close, that materially affect the values of the Portfolio's securities or assets. In addition, market quotes are considered not readily available when, due to extraordinary circumstances, the exchanges or markets on which the securities trade do not open for trading for the entire day and no other market prices are available. The Board has delegated to the Adviser the responsibility for monitoring significant events that may materially affect the values of the Portfolio's securities or assets and for determining whether the value of the applicable securities or assets should be reevaluated in light of such significant events.

When a Portfolio uses fair valuation to determine the value of a portfolio security or other asset for purposes of calculating its NAV, such investments will not be priced on the basis of quotes from the primary market in which they are traded, but rather may be priced by another method that the Board or persons acting at their direction believe reflects fair value. Fair valuation may require subjective determinations about the value of a security. While the Trust's policy is intended to result in a calculation of the Portfolio's NAV that fairly reflects security values as of the time of pricing, the Trust cannot ensure that fair values determined by the Board or persons acting at their direction would accurately reflect the price that a Portfolio could obtain for a security if it were to dispose of that security as of the time of pricing (for instance, in a forced or distressed sale). The prices used by a Portfolio may differ from the value that would be realized if the securities were sold. The Portfolio's use of fair valuation may also help to deter "stale price arbitrage" as discussed under the "Frequent or Excessive Purchases, Exchanges and Redemptions" section in the Portfolio's prospectus.

(b) Fair Value Hierarchy U.S. GAAP describes fair value as the price that the Portfolio would receive to sell an asset or pay to transfer a liability in an orderly transaction between market participants at the measurement date. It establishes a fair value hierarchy that prioritizes inputs to valuation methods and requires disclosure of the fair value hierarchy, separately for each major category of assets and liabilities, that segregates fair value measurements into levels (Level 1, 2, or 3). The inputs or methodology used for valuing securities are not necessarily an indication of the risks associated with investing in those securities. Levels 1, 2, and 3 of the fair value hierarchy are defined as follows:

- Level 1 — Inputs using (unadjusted) quoted prices in active markets or exchanges for identical assets and liabilities.
- Level 2 — Significant other observable inputs, which may include, but are not limited to, quoted prices for similar assets or liabilities in markets that are active, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the assets or liabilities (such as interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks and default rates) or other market corroborated inputs.
- Level 3 — Significant unobservable inputs based on the best information available in the circumstances, to the extent observable inputs are not available, which may include assumptions made by the Board or persons acting at their direction that are used in determining the fair value of investments.

In accordance with the requirements of U.S. GAAP, the amounts of transfers between Levels 1 and 2 and transfers into and out of Level 3, if material, are disclosed in the Notes to Consolidated Schedule of Investments for the Portfolio.

For fair valuations using significant unobservable inputs, U.S. GAAP requires a reconciliation of the beginning to ending balances for reported fair values that presents changes attributable to realized gain (loss), unrealized appreciation (depreciation), purchases and sales, accrued discounts (premiums), and transfers into and out of the Level 3 category during the period. The end of period timing recognition is used for the transfers between Levels of the Portfolio's assets and liabilities. Additionally, U.S. GAAP requires quantitative information regarding the significant unobservable inputs used in the determination of fair value of assets or liabilities categorized as Level 3 in the fair value hierarchy. In accordance with the requirements of U.S. GAAP, a fair value hierarchy, and if material, a Level 3 reconciliation and details of significant unobservable inputs, have been included in the Notes to Consolidated Schedule of Investments for the Portfolio.

(c) Valuation Techniques and the Fair Value Hierarchy
Level 1 and Level 2 trading assets and trading liabilities, at fair value The valuation methods (or "techniques") and significant inputs used in determining the fair values of portfolio securities or other assets and liabilities categorized as Level 1 and Level 2 of the fair value hierarchy are as follows:

Fixed income securities including corporate, convertible and municipal bonds and notes, U.S. government agencies, U.S. treasury obligations, sovereign issues, bank loans, convertible preferred securities and non-U.S. bonds are normally valued on the basis of quotes obtained from brokers and dealers or Pricing Services that use broker-dealer quotations, reported trades or valuation estimates from their internal pricing models. The Pricing Services' internal models use inputs that are observable such as issuer details, interest rates, yield curves, prepayment speeds, credit risks/spreads, default rates and quoted prices for similar assets. Securities that use similar valuation techniques and inputs as described above are categorized as Level 2 of the fair value hierarchy.

Fixed income securities purchased on a delayed-delivery basis or as a repurchase commitment in a sale-buyback transaction are marked to market daily until settlement at the forward settlement date and are categorized as Level 2 of the fair value hierarchy.

Mortgage-related and asset-backed securities are usually issued as separate tranches, or classes, of securities within each deal. These securities are also normally valued by Pricing Services that use broker-dealer quotations, reported trades or valuation estimates from their internal pricing models. The pricing models for these securities usually consider tranche-level attributes, current market data, estimated cash flows and market-based yield spreads for each tranche, and incorporate deal collateral performance, as available. Mortgage-related and asset-backed securities that use similar valuation techniques and inputs as described above are categorized as Level 2 of the fair value hierarchy.

Common stocks, ETFs, exchange-traded notes and financial derivative instruments, such as futures contracts, rights and warrants, or options on futures that are traded on a national securities exchange, are stated at the last reported sale or settlement price on the day of valuation. To the extent these securities are actively traded and valuation adjustments are not applied, they are categorized as Level 1 of the fair value hierarchy.

Valuation adjustments may be applied to certain securities that are solely traded on a foreign exchange to account for the market movement between the close of the foreign market and the NYSE Close. These securities are valued using Pricing Services that consider the correlation of the trading patterns of the foreign security to the intraday trading in the U.S. markets for investments. Securities using these valuation adjustments are categorized as Level 2 of the fair value hierarchy. Preferred securities and other equities traded on inactive markets or valued by reference to similar instruments are also categorized as Level 2 of the fair value hierarchy.

Investments in registered open-end investment companies (other than ETFs) will be valued based upon the NAVs of such investments and are categorized as Level 1 of the fair value hierarchy. Investments in unregistered open-end investment companies will be calculated based upon the NAVs of such investments and are considered Level 1 provided that the NAVs are observable, calculated daily and are the value at which both purchases and sales will be conducted. Investments in privately held investment funds with significant restrictions on redemption where the inputs to the NAVs are observable will be valued based upon the NAVs of such investments and are categorized as Level 2 of the fair value hierarchy.

Short-term debt instruments (such as commercial paper) having a remaining maturity of 60 days or less may be valued at amortized cost, so long as the amortized cost of such short-term debt instrument is approximately the same as the fair value of the instrument as determined without the use of amortized cost valuation. Prior to July 31, 2015, short-term debt investments having a maturity of 60 days or less and repurchase agreements were generally valued at amortized cost which approximates fair value. Short-term debt instruments having a remaining maturity of 60 days or less are categorized as Level 2 of the fair value hierarchy.

Equity exchange-traded options and over the counter financial derivative instruments, such as forward foreign currency contracts, options contracts, or swap agreements, derive their value from underlying asset prices, indices, reference rates, and other inputs or a combination of these factors. Other than swap agreements, which are valued using a broker-dealer bid quotation or on market-based prices provided by Pricing Services or other pricing sources, these contracts are normally valued on the basis of quotes obtained from a quotation reporting system, established market makers or Pricing Services (normally determined as of the NYSE Close). Depending on the product and the terms of the transaction, financial derivative instruments can be valued by Pricing Services using a series of techniques, including simulation pricing models. The pricing models use inputs that are observed from actively quoted markets such as quoted prices, issuer details, indices, bid/ask spreads, interest rates, implied volatilities, yield curves, dividends and exchange rates. Financial derivative instruments that use similar valuation techniques and inputs as described above are categorized as Level 2 of the fair value hierarchy.

Centrally cleared swaps listed or traded on a multilateral or trade facility platform, such as a registered exchange, are valued at the daily settlement price determined by the respective exchange (if available). For centrally cleared credit default swaps, the clearing facility requires its members to provide actionable price levels across complete term structures. These levels along with external third-party prices are used to produce daily settlement prices. These securities are categorized as Level 2 of the fair value hierarchy. Centrally cleared interest rate swaps are valued using a pricing model that references the underlying rates including the overnight index swap rate and London Interbank Offered Rate ("LIBOR") forward rate to produce the daily settlement price. These securities are categorized as Level 2 of the fair value hierarchy.

Level 3 trading assets and trading liabilities, at fair value When a fair valuation method is applied by the Adviser that uses significant unobservable inputs, investments will be priced by a method that the Board or persons acting at their direction believe reflects fair value and are categorized as Level 3 of the fair value hierarchy.

The validity of the fair value is reviewed by the Adviser on a periodic basis and may be amended in accordance with the Trust's valuation procedures.

4. SECURITIES AND OTHER INVESTMENTS

(a) Investments in Affiliates

The Portfolio may invest in the PIMCO Short-Term Floating NAV Portfolio III ("Central Fund") to the extent permitted by the Act and rules thereunder. The Central Fund is a registered investment company created for use solely by the series of the Trust and other series of registered investment companies advised by the Adviser, in connection with their cash management activities. The main investments of the Central Fund are money market and short maturity fixed income instruments. The Central Fund may incur expenses related to its investment activities, but does not pay Investment Advisory Fees or Supervisory and Administrative Fees to the Adviser. The Central Fund is considered to be affiliated with the Portfolio. The table below shows the Portfolio's transactions in and earnings from investments in the affiliated Fund for the period ended June 30, 2016 (amounts in thousands†):

Investments in PIMCO Short-Term Floating NAV Portfolio III

Market Value 12/31/2015	Purchases at Cost	Proceeds from Sales	Net Realized Gain (Loss)	Change in Unrealized Appreciation (Depreciation)	Market Value 06/30/2016	Dividend Income [1]	Realized Net Capital Gain Distributions [1]
$ 6,627	$ 281,936	$ (247,475)	$ (11)	$ 24	$ 41,101	$ 36	$ 0

† A zero balance may reflect actual amounts rounding to less than one thousand.

(1) The tax characterization of distributions is determined in accordance with Federal income tax regulations. The actual tax characterization of distributions paid are determined at the end of the fiscal year. See Note 2(d) in the Notes to Financial Statements for more information.

(b) Investments in Securities

Delayed-Delivery Transactions The Portfolio may purchase or sell securities on a delayed-delivery basis. These transactions involve a commitment by the Portfolio to purchase or sell securities for a predetermined price or yield, with payment and delivery taking place beyond the customary settlement period. When delayed-delivery transactions are outstanding, the Portfolio will designate or receive as collateral liquid assets in an amount sufficient to meet the purchase price or respective obligations. When purchasing a security on a delayed-delivery basis, the Portfolio assumes the rights and risks of ownership of the security, including the risk of price and yield fluctuations, and takes such fluctuations into account when determining its NAV. The Portfolio may dispose of or renegotiate a delayed-delivery transaction after it is entered into, which may result in a realized gain (loss). When the Portfolio has sold a security on a delayed-delivery basis, the Portfolio does not participate in future gains (losses) with respect to the security.

Inflation-Indexed Bonds The Portfolio may invest in inflation-indexed bonds. Inflation-indexed bonds are fixed income securities whose principal value is periodically adjusted to the rate of inflation. The interest rate on these bonds is generally fixed at issuance at a rate lower than typical bonds. Over the life of an inflation-indexed bond, however, interest will be paid based on a principal value which is adjusted for inflation. Any increase or decrease in the principal amount of an inflation-indexed bond will be included as interest income on the Consolidated Statement of Operations, even though investors do not receive their principal until maturity.

Mortgage-Related and Other Asset-Backed Securities The Portfolio may invest in mortgage-related and other asset-backed securities that directly or indirectly represent a participation in, or are secured by and payable from, loans on real property. Mortgage-related securities are created from pools of residential or commercial mortgage loans, including mortgage loans made by savings and loan institutions, mortgage bankers, commercial banks and others. These securities provide a monthly payment which consists of both interest and principal. Interest may be determined by fixed or adjustable rates. The rate of prepayments on underlying mortgages will affect the price and volatility of a mortgage-related security, and may have the effect of shortening or extending the effective duration of the security relative to what was anticipated at the time of purchase. The timely payment of principal and interest of certain mortgage-related securities is guaranteed with the full faith and credit of the U.S. Government. Pools created and guaranteed by non-governmental issuers, including government-sponsored corporations, may be supported by various forms of insurance or guarantees, but there can be no assurance that private insurers or guarantors can meet their obligations under the insurance policies or guarantee arrangements. Many of the risks of investing in mortgage-related securities secured by commercial mortgage loans reflect the effects of local and other economic conditions on real estate markets, the ability of tenants to make lease payments, and the ability of a property to attract and retain tenants. These securities may be less liquid and may exhibit greater price volatility than other types of mortgage-related or other asset-backed securities. Other asset-backed securities are created from many types of assets, including auto loans, credit card receivables, home equity loans, and student loans.

Collateralized Debt Obligations ("CDOs") include Collateralized Bond Obligations ("CBOs"), Collateralized Loan Obligations ("CLOs") and other similarly structured securities. CBOs and CLOs are types of asset-backed securities. A CBO is a trust which is backed by a diversified pool of high risk, below investment grade fixed income securities. A CLO is a trust typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. The risks of an investment in a CDO depend largely on the type of the collateral securities and the class of the CDO in which the Portfolio invests. In addition to the normal risks associated with fixed income securities discussed elsewhere in this report and the Portfolio's prospectus and statement of additional information (e.g., prepayment risk, credit risk, liquidity risk, market risk, structural risk, legal risk and interest rate risk (which may be exacerbated if the interest rate payable on a structured financing changes based on multiples of changes in interest rates or inversely to changes in interest rates)), CBOs, CLOs and other CDOs carry additional risks including, but not limited to, (i) the possibility that distributions from collateral securities will not be adequate to make interest or other payments, (ii) the quality of the collateral may decline in value or default, (iii) the Portfolio may invest in CBOs, CLOs, or other CDOs that are subordinate to other classes, and (iv) the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer or unexpected investment results.

Collateralized Mortgage Obligations ("CMOs") are debt obligations of a legal entity that are collateralized by whole mortgage loans or private mortgage bonds and divided into classes. CMOs are structured into multiple classes, often referred to as "tranches," with each class bearing a different stated maturity and entitled to a different schedule for payments of principal and interest, including prepayments. CMOs may be less liquid and may exhibit greater price volatility than other types of mortgage-related or asset-backed securities.

U.S. Government Agencies or Government-Sponsored Enterprises The Portfolio may invest in securities of U.S. Government agencies or government-sponsored enterprises. U.S. Government securities are obligations of and, in certain cases, guaranteed by, the U.S. Government, its agencies or instrumentalities. Some U.S. Government securities, such as Treasury bills, notes and bonds, and securities guaranteed by the Government National Mortgage Association ("GNMA" or "Ginnie Mae"), are supported by the full faith and credit of the U.S. Government; others, such as those of the Federal Home Loan Banks, are supported by the right of the issuer to borrow from the U.S. Department of the Treasury (the "U.S. Treasury"); and others, such as those of the Federal National Mortgage Association ("FNMA" or "Fannie Mae"), are supported by the discretionary authority of the U.S. Government to purchase the agency's obligations. U.S. Government securities may include zero coupon securities. Zero coupon securities do not distribute interest on a current basis and tend to be subject to a greater risk than interest-paying securities.

Government-related guarantors (*i.e.,* not backed by the full faith and credit of the U.S. Government) include FNMA and the Federal Home Loan Mortgage Corporation ("FHLMC" or "Freddie Mac"). FNMA is a government-sponsored corporation. FNMA purchases conventional (*i.e.,* not insured or guaranteed by any government agency) residential mortgages from a list of approved seller/servicers which include state and federally chartered savings and loan associations, mutual savings banks, commercial banks and credit unions and mortgage bankers. Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA, but are not backed by the full faith and credit of the U.S. Government. FHLMC issues Participation Certificates ("PCs"), which are pass-through securities, each representing an undivided interest in a pool of residential mortgages. FHLMC guarantees the timely payment of interest and ultimate collection of principal, but PCs are not backed by the full faith and credit of the U.S. Government.

The Portfolio may engage in strategies where it seeks to extend the expiration or maturity of a position, such as a To Be Announced ("TBA") security on an underlying asset, by closing out the position before expiration and opening a new position with respect to the same underlying asset with a later expiration date. TBA securities purchased or sold are reflected on the Consolidated Statement of Assets and Liabilities as an asset or liability, respectively.

5. BORROWINGS AND OTHER FINANCING TRANSACTIONS

The following disclosures contain information on the Portfolio's ability to lend or borrow cash or securities to the extent permitted under the Act, which may be viewed as borrowing or financing transactions by the Portfolio. The location of these instruments in the Portfolio's financial statements is described below. For a detailed description of credit and counterparty risks that can be associated with borrowings and other financing transactions, please see Note 7, Principal Risks.

(a) Repurchase Agreements The Portfolio may engage in repurchase agreements. Under the terms of a typical repurchase agreement, the Portfolio purchases an underlying debt obligation (collateral) subject to an obligation of the seller to repurchase, and the Portfolio to resell, the obligation at an agreed-upon price and time. The underlying securities for all repurchase agreements are held by the Portfolio's custodian or designated subcustodians under tri-party repurchase agreements. The market value of the collateral must be equal to or exceed the total

amount of the repurchase obligations, including interest. Repurchase agreements, if any, including accrued interest, are included on the Consolidated Statement of Assets and Liabilities. Interest earned is recorded as a component of interest income on the Consolidated Statement of Operations. In periods of increased demand for collateral, the Portfolio may pay a fee for the receipt of collateral, which may result in interest expense to the Portfolio.

(b) Sale-Buybacks The Portfolio may enter into financing transactions referred to as 'sale-buybacks'. A sale-buyback transaction consists of a sale of a security by the Portfolio to a financial institution, the counterparty, with a simultaneous agreement to repurchase the same or substantially the same security at an agreed-upon price and date. The Portfolio is not entitled to receive principal and interest payments, if any, made on the security sold to the counterparty during the term of the agreement. The agreed-upon proceeds for securities to be repurchased by the Portfolio are reflected as a liability on the Consolidated Statement of Assets and Liabilities. The Portfolio will recognize net income represented by the price differential between the price received for the transferred security and the agreed-upon repurchase price. This is commonly referred to as the 'price drop'. A price drop consists of (i) the foregone interest and inflationary income adjustments, if any, the Portfolio would have otherwise received had the security not been sold and (ii) the negotiated financing terms between the Portfolio and counterparty. Foregone interest and inflationary income adjustments, if any, are recorded as components of interest income on the Consolidated Statement of Operations. Interest payments based upon negotiated financing terms made by the Portfolio to counterparties are recorded as a component of interest expense on the Consolidated Statement of Operations. In periods of increased demand for the security, the Portfolio may receive a fee for use of the security by the counterparty, which may result in interest income to the Portfolio. The Portfolio will segregate assets determined to be liquid by the Adviser or will otherwise cover its obligations under sale-buyback transactions.

(c) Short Sales The Portfolio may enter into short sales transactions. A short sale is a transaction in which the Portfolio sells securities it may not own in anticipation of a decline in the fair value of the securities. Securities sold in short sale transactions and the interest payable on such securities, if any, are reflected as a liability on the Consolidated Statement of Assets and Liabilities. The Portfolio is obligated to deliver securities at the trade price at the time the short position is covered. Possible losses from short sales may be unlimited, whereas losses from purchases cannot exceed the total amount invested.

6. FINANCIAL DERIVATIVE INSTRUMENTS

The following disclosures contain information on how and why the Portfolio uses financial derivative instruments, and how financial derivative instruments affect the Portfolio's financial position, results of operations and cash flows. The location and fair value amounts of these instruments on the Consolidated Statement of Assets and Liabilities and the net realized gain (loss) and net change in unrealized appreciation (depreciation) on the Consolidated Statement of Operations, each categorized by type of financial derivative contract and related risk exposure, are included in a table in the Notes to Consolidated Schedule of Investments. The financial derivative instruments outstanding as of period end and the amounts of net realized gain (loss) and net change in unrealized appreciation (depreciation) on financial derivative instruments during the period, as disclosed in the Notes to Consolidated Schedule of Investments, serve as indicators of the volume of financial derivative activity for the Portfolio.

(a) Forward Foreign Currency Contracts The Portfolio may enter into forward foreign currency contracts in connection with settling planned purchases or sales of securities, to hedge the currency exposure associated with some or all of the Portfolio's securities or as a part of an investment strategy. A forward foreign currency contract is an agreement between two parties to buy and sell a currency at a set price on a future date. The market value of a forward foreign currency contract fluctuates with changes in foreign currency exchange rates. Forward foreign currency contracts are marked to market daily, and the change in value is recorded by the Portfolio as an unrealized gain (loss). Realized gains (losses) are equal to the difference between the value of the contract at the time it was opened and the value at the time it was closed and are recorded upon delivery or receipt of the currency. These contracts may involve market risk in excess of the unrealized gain (loss) reflected on the Consolidated Statement of Assets and Liabilities. In addition, the Portfolio could be exposed to risk if the counterparties are unable to meet the terms of the contracts or if the value of the currency changes unfavorably to the U.S. dollar. To mitigate such risk, cash or securities may be exchanged as collateral pursuant to the terms of the underlying contracts.

(b) Futures Contracts The Portfolio may enter into futures contracts. The Portfolio may use futures contracts to manage its exposure to the securities markets or to movements in interest rates and currency values. The primary risks associated with the use of futures contracts are the imperfect correlation between the change in market value of the securities held by the Portfolio and the prices of futures contracts and the possibility of an illiquid market. Futures contracts are valued based upon their quoted daily settlement prices. Upon entering into a futures contract, the Portfolio is required to deposit with its futures broker an amount of cash, U.S. Government and Agency Obligations, or select sovereign debt, in accordance with the initial margin requirements of the broker or exchange. Futures contracts are marked to market daily and based on such movements in the price of the

contracts, an appropriate payable or receivable for the change in value may be posted or collected by the Portfolio ("Futures Variation Margin"). Gains (losses) are recognized but not considered realized until the contracts expire or close. Futures contracts involve, to varying degrees, risk of loss in excess of the Futures Variation Margin included within exchange traded or centrally cleared financial derivative instruments on the Consolidated Statement of Assets and Liabilities.

(c) Options Contracts The Portfolio may write or purchase options to enhance returns or to hedge an existing position or future investment. The Portfolio may write call and put options on securities and financial derivative instruments it owns or in which it may invest. Writing put options tends to increase the Portfolio's exposure to the underlying instrument. Writing call options tends to decrease the Portfolio's exposure to the underlying instrument. When the Portfolio writes a call or put, an amount equal to the premium received is recorded as a liability and subsequently marked to market to reflect the current value of the option written. These liabilities are included on the Consolidated Statement of Assets and Liabilities. Premiums received from writing options which expire are treated as realized gains. Premiums received from writing options which are exercised or closed are added to the proceeds or offset against amounts paid on the underlying futures, swap, security or currency transaction to determine the realized gain (loss). Certain options may be written with premiums to be determined on a future date. The premiums for these options are based upon implied volatility parameters at specified terms. The Portfolio as a writer of an option has no control over whether the underlying instrument may be sold ("call") or purchased ("put") and as a result bears the market risk of an unfavorable change in the price of the instrument underlying the written option. There is the risk the Portfolio may not be able to enter into a closing transaction because of an illiquid market.

The Portfolio may also purchase put and call options. Purchasing call options tends to increase the Portfolio's exposure to the underlying instrument. Purchasing put options tends to decrease the Portfolio's exposure to the underlying instrument. The Portfolio pays a premium which is included as an asset on the Consolidated Statement of Assets and Liabilities and subsequently marked to market to reflect the current value of the option. Premiums paid for purchasing options which expire are treated as realized losses. Certain options may be purchased with premiums to be determined on a future date. The premiums for these options are based upon implied volatility parameters at specified terms. The risk associated with purchasing put and call options is limited to the premium paid. Premiums paid for purchasing options which are exercised or closed are added to the amounts paid or offset against the proceeds on the underlying investment transaction to determine the realized gain (loss) when the underlying transaction is executed.

Credit Default Swaptions The Portfolio may write or purchase credit default swaptions to hedge exposure to the credit risk of an investment without making a commitment to the underlying instrument. A credit default swaption is an option to sell or buy credit protection to a specific reference by entering into a pre-defined swap agreement by some specified date in the future.

Foreign Currency Options The Portfolio may write or purchase foreign currency options. Purchasing foreign currency options gives the Portfolio the right, but not the obligation to buy or sell the currency with specified amounts of currency and a rate of exchange that may be exercised by a certain date. These options may be used as a short or long hedge against possible variations in foreign exchange rates or to gain exposure to foreign currencies.

Inflation-Capped Options The Portfolio may write or purchase inflation-capped options to enhance returns or for hedging opportunities. The purpose of purchasing inflation-capped options is to protect the Portfolio from inflation erosion above a certain rate on a given notional exposure. A floor can be used to give downside protection to investments in inflation-linked products.

Interest Rate-Capped Options The Portfolio may write or purchase interest rate-capped options to enhance returns or for hedging opportunities. The purpose of purchasing interest rate-capped options is to protect the Portfolio from floating rate risk above a certain rate on a given notional exposure. A floor can be used to give downside protection to investments in interest rate linked products.

Interest Rate Swaptions The Portfolio may write or purchase interest rate swaptions which are options to enter into a pre-defined swap agreement by some specified date in the future. The writer of the swaption becomes the counterparty to the swap if the buyer exercises. The interest rate swaption agreement will specify whether the buyer of the swaption will be a fixed-rate receiver or a fixed-rate payer upon exercise.

Options on Commodity Futures Contracts The Portfolio may write or purchase options on commodity futures contracts ("Commodity Option"). The underlying instrument for the Commodity Option is not the commodity itself, but rather a futures contract for that commodity. The exercise of a Commodity Option will not include physical delivery of the underlying commodity but will result in a cash transfer amount of the difference between the current market value of the underlying futures contract and the strike price. For an option that is in-the-money, the Portfolio will normally offset its position rather than exercise the option to retain any remaining time value.

Options on Indices The Portfolio may write or purchase options on indices ("Index Option"). An Index Option uses a specified index as the underlying instrument for the option contract. The exercise for an Index

Option will not include physical delivery of the underlying index but will result in a cash transfer of the amount of the difference between the settlement price of the underlying index and the strike price.

Options on Securities The Portfolio may write or purchase options on securities. An option uses a specified security as the underlying instrument for the option contract. The Portfolio may write or purchase options to enhance returns or to hedge an existing position or future investment.

(d) Swap Agreements The Portfolio may invest in swap agreements. Swap agreements are bilaterally negotiated agreements between the Portfolio and a counterparty to exchange or swap investment cash flows, assets, foreign currencies or market-linked returns at specified, future intervals. Swap agreements may be privately negotiated in the over the counter market ("OTC swaps") or may be cleared through a third party, known as a central counterparty or derivatives clearing organization ("Centrally Cleared Swaps"). The Portfolio may enter into asset, credit default, cross-currency, interest rate, total return, variance and other forms of swap agreements to manage its exposure to credit, currency, interest rate, commodity, equity and inflation risk. In connection with these agreements, securities or cash may be identified as collateral or margin in accordance with the terms of the respective swap agreements to provide assets of value and recourse in the event of default or bankruptcy/insolvency.

Centrally Cleared Swaps are marked to market daily based upon valuations as determined from the underlying contract or in accordance with the requirements of the central counterparty or derivatives clearing organization. Changes in market value, if any, are reflected as a component of net change in unrealized appreciation (depreciation) on the Consolidated Statement of Operations. Daily changes in valuation of centrally cleared swaps ("Swap Variation Margin"), if any, are disclosed within centrally cleared financial derivative instruments on the Consolidated Statement of Assets and Liabilities. OTC swap payments received or paid at the beginning of the measurement period are included on the Consolidated Statement of Assets and Liabilities and represent premiums paid or received upon entering into the swap agreement to compensate for differences between the stated terms of the swap agreement and prevailing market conditions (credit spreads, currency exchange rates, interest rates, and other relevant factors). Upfront premiums received (paid) are initially recorded as liabilities (assets) and subsequently marked to market to reflect the current value of the swap. These upfront premiums are recorded as realized gain (loss) on the Consolidated Statement of Operations upon termination or maturity of the swap. A liquidation payment received or made at the termination of the swap is recorded as realized gain (loss) on the Consolidated Statement of Operations. Net periodic payments received or paid by the Portfolio are included as part of realized gain (loss) on the Consolidated Statement of Operations.

For purposes of applying the Portfolio's investment policies and restrictions, swap agreements are generally valued by the Portfolio at market value. In the case of a credit default swap (see below), however, in applying certain of the Portfolio's investment policies and restrictions, the Portfolio will value the credit default swap at its notional value or its full exposure value (*i.e.,* the sum of the notional amount for the contract plus the market value), but may value the credit default swap at market value for purposes of applying certain of the Portfolio's other investment policies and restrictions. For example, the Portfolio may value credit default swaps at full exposure value for purposes of the Portfolio's credit quality guidelines (if any) because such value reflects the Portfolio's actual economic exposure during the term of the credit default swap agreement. In this context, both the notional amount and the market value may be positive or negative depending on whether the Portfolio is selling or buying protection through the credit default swap. The manner in which certain securities or other instruments are valued by the Portfolio for purposes of applying investment policies and restrictions may differ from the manner in which those investments are valued by other types of investors.

Entering into swap agreements involves, to varying degrees, elements of interest, credit, market and documentation risk in excess of the amounts recognized on the Consolidated Statement of Assets and Liabilities. Such risks involve the possibility that there will be no liquid market for these agreements, that the counterparty to the agreements may default on its obligation to perform or disagree as to the meaning of contractual terms in the agreements and that there may be unfavorable changes in interest rates.

The Portfolio's maximum risk of loss from counterparty credit risk is the discounted net value of the cash flows to be received from the counterparty over the contract's remaining life, to the extent that amount is positive. The risk may be mitigated by having a master netting arrangement between the Portfolio and the counterparty and by the posting of collateral to the Portfolio to cover the Portfolio's exposure to the counterparty.

Commodity Forward Swap Agreements The Portfolio may invest in commodity forward swap agreements ("Commodity Forwards") to gain or mitigate exposure to the underlying referenced commodity. Commodity Forwards involve commitments between two parties where cash flows are exchanged at a future date based on the difference between a fixed and variable price with respect to the number of units of the commodity. At the maturity date, a net cash flow is exchanged, where the payoff amount is equivalent to the difference between the fixed and variable price of the underlying commodity multiplied by the number of units. To the extent the difference between the fixed and variable price of the underlying referenced commodity exceeds or falls

short of the offsetting payment obligation, the Portfolio will receive a payment from or make a payment to the counterparty.

Credit Default Swap Agreements A Portfolio may use credit default swaps on corporate, loan, sovereign, U.S. municipal or U.S. Treasury issues to provide a measure of protection against defaults of the issuers (*i.e.,* to reduce risk where a Portfolio owns or has exposure to the referenced obligation) or to take an active long or short position with respect to the likelihood of a particular issuer's default. Credit default swap agreements involve one party making a stream of payments (referred to as the buyer of protection) to another party (the seller of protection) in exchange for the right to receive a specified return in the event that the referenced entity, obligation or index, as specified in the swap agreement, undergoes a certain credit event. As a seller of protection on credit default swap agreements, the Portfolio will generally receive from the buyer of protection a fixed rate of income throughout the term of the swap provided that there is no credit event. As the seller, the Portfolio would effectively add leverage to its portfolio because, in addition to its total net assets, the Portfolio would be subject to investment exposure on the notional amount of the swap.

If the Portfolio is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Portfolio will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation, other deliverable obligations or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index. If the Portfolio is a buyer of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Portfolio will either (i) receive from the seller of protection an amount equal to the notional amount of the swap and deliver the referenced obligation, other deliverable obligations or underlying securities comprising the referenced index or (ii) receive a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index. Recovery values are estimated by market makers considering either industry standard recovery rates or entity specific factors and considerations until a credit event occurs. If a credit event has occurred, the recovery value is determined by a facilitated auction whereby a minimum number of allowable broker bids, together with a specified valuation method, are used to calculate the settlement value. The ability to deliver other obligations may result in a cheapest-to-deliver option (the buyer of protection's right to choose the deliverable obligation with the lowest value following a credit event).

Credit default swap agreements on credit indices involve one party making a stream of payments to another party in exchange for the right to receive a specified return in the event of a write-down, principal shortfall, interest shortfall or default of all or part of the referenced entities comprising the credit index. A credit index is a basket of credit instruments or exposures designed to be representative of some part of the credit market as a whole. These indices are made up of reference credits that are judged by a poll of dealers to be the most liquid entities in the credit default swap market based on the sector of the index. Components of the indices may include, but are not limited to, investment grade securities, high yield securities, asset-backed securities, emerging markets, and/or various credit ratings within each sector. Credit indices are traded using credit default swaps with standardized terms including a fixed spread and standard maturity dates. An index credit default swap references all the names in the index, and if there is a default, the credit event is settled based on that name's weight in the index. The composition of the indices changes periodically, usually every six months, and for most indices, each name has an equal weight in the index. The Portfolio may use credit default swaps on credit indices to hedge a portfolio of credit default swaps or bonds, which is less expensive than it would be to buy many credit default swaps to achieve a similar effect. Credit default swaps on indices are instruments for protecting investors owning bonds against default, and traders use them to speculate on changes in credit quality.

Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate, loan, sovereign, U.S. municipal or U.S. Treasury issues as of period end, if any, are disclosed in the Notes to Consolidated Schedule of Investments. They serve as an indicator of the current status of payment/performance risk and represent the likelihood or risk of default for the reference entity. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity's credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement. For credit default swap agreements on asset-backed securities and credit indices, the quoted market prices and resulting values serve as the indicator of the current status of the payment/performance risk. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced entity's credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

The maximum potential amount of future payments (undiscounted) that the Portfolio as a seller of protection could be required to make under a

credit default swap agreement equals the notional amount of the agreement. Notional amounts of each individual credit default swap agreement outstanding as of period end for which the Portfolio is the seller of protection are disclosed in the Notes to Consolidated Schedule of Investments. These potential amounts would be partially offset by any recovery values of the respective referenced obligations, upfront payments received upon entering into the agreement, or net amounts received from the settlement of buy protection credit default swap agreements entered into by the Portfolio for the same referenced entity or entities.

Interest Rate Swap Agreements The Portfolio is subject to interest rate risk exposure in the normal course of pursuing its investment objectives. Because the Portfolio holds fixed rate bonds, the value of these bonds may decrease if interest rates rise. To help hedge against this risk and to maintain its ability to generate income at prevailing market rates, the Portfolio may enter into interest rate swap agreements. Interest rate swap agreements involve the exchange by the Portfolio with another party for their respective commitment to pay or receive interest on the notional amount of principal. Certain forms of interest rate swap agreements may include: (i) interest rate caps, under which, in return for a premium, one party agrees to make payments to the other to the extent that interest rates exceed a specified rate, or "cap", (ii) interest rate floors, under which, in return for a premium, one party agrees to make payments to the other to the extent that interest rates fall below a specified rate, or "floor", (iii) interest rate collars, under which a party sells a cap and purchases a floor or vice versa in an attempt to protect itself against interest rate movements exceeding given minimum or maximum levels, (iv) callable interest rate swaps, under which the buyer pays an upfront fee in consideration for the right to early terminate the swap transaction in whole, at zero cost and at a predetermined date and time prior to the maturity date, (v) spreadlocks, which allow the interest rate swap users to lock in the forward differential (or spread) between the interest rate swap rate and a specified benchmark, or (vi) basis swaps, under which two parties can exchange variable interest rates based on different segments of money markets.

Total Return Swap Agreements The Portfolio may enter into total return swap agreements to gain or mitigate exposure to the underlying reference asset. Total return swap agreements involve commitments where single or multiple cash flows are exchanged based on the price of an underlying reference asset and on a fixed or variable interest rate. Total return swap agreements may involve commitments to pay interest in exchange for a market-linked return. One counterparty pays out the total return of a specific reference asset, which may include an underlying equity, index, or bond, and in return receives a fixed or variable rate. At the maturity date, a net cash flow is exchanged where the total return is equivalent to the return of the underlying reference less a financing rate, if any. As a receiver, the Portfolio would receive payments based on any net positive total return and would owe payments in the event of a net negative total return. As the payer, the Portfolio would owe payments on any net positive total return, and would receive payments in the event of a net negative total return.

Volatility Swap Agreements The Portfolio also may enter into forward volatility agreements, also known as volatility swaps. In a volatility swap, the counterparties agree to make payments in connection with changes in the volatility (*i.e.,* the magnitude of change over a specified period of time) of an underlying referenced instrument, such as a currency, rate, index, security or other financial instrument. Volatility swaps permit the parties to attempt to hedge volatility risk and/or take positions on the projected future volatility of an underlying referenced instrument. For example, the Portfolio may enter into a volatility swap in order to take the position that the referenced instrument's volatility will increase over a particular period of time. If the referenced instrument's volatility does increase over the specified time, the Portfolio will receive payment from its counterparty based upon the amount by which the referenced instrument's realized volatility level exceeds a volatility level agreed upon by the parties. If the referenced instrument's volatility does not increase over the specified time, the Portfolio will make a payment to the counterparty based upon the amount by which the referenced instrument's realized volatility level falls below the volatility level agreed upon by the parties. At the maturity date, a net cash flow is exchanged, where the payoff amount is equivalent to the difference between the realized price volatility of the referenced instrument and the strike multiplied by the notional amount. As a receiver of the realized price volatility, the Portfolio would receive the payoff amount when the realized price volatility of the referenced instrument is greater than the strike and would owe the payoff amount when the volatility is less than the strike. As a payer of the realized price volatility, the Portfolio would owe the payoff amount when the realized price volatility of the referenced instrument is greater than the strike and would receive the payoff amount when the volatility is less than the strike. Payments on a volatility swap will be greater if they are based upon the mathematical square of volatility (*i.e.,* the measured volatility multiplied by itself, which is referred to as "variance"). This type of volatility swap is frequently referred to as a variance swap.

7. PRINCIPAL RISKS

In the normal course of business, the Portfolio trades financial instruments and enters into financial transactions where risk of potential loss exists due to such things as changes in the market (market risk) or failure or inability of the other party to a transaction to perform (credit and counterparty risk). See below for a detailed description of select principal risks. For a more comprehensive list of

potential risks the Portfolio may be subject to, please see the Important Information About the Portfolio.

Market Risks The Portfolio's investments in financial derivative instruments and other financial instruments expose the Portfolio to various risks such as, but not limited to, interest rate, foreign (non-U.S.) currency, equity and commodity risks.

Interest rate risk is the risk that fixed income securities and other instruments held by the Portfolio will decline in value because of an increase in interest rates. As nominal interest rates rise, the value of certain fixed income securities held by the Portfolio is likely to decrease. A nominal interest rate can be described as the sum of a real interest rate and an expected inflation rate. Interest rate changes can be sudden and unpredictable, and the Portfolio may lose money if these changes are not anticipated by the Portfolio's management. The Portfolio may not be able to hedge against changes in interest rates or may choose not to do so for cost or other reasons. In addition, any hedges may not work as intended.

Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates that incorporates a security's yield, coupon, final maturity and call features, among other characteristics. Convexity is an additional measure of interest rate sensitivity that measures the rate of change of duration in response to changes in interest rates. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. A wide variety of factors can cause interest rates to rise (e.g., central bank monetary policies, inflation rates, general economic conditions, etc.). At present, the U.S. and many parts of the world, including certain European countries, are experiencing near historically low interest rates. The Portfolio may be subject to heightened interest rate risk because the Fed has ended its quantitative easing program and has begun, and may continue, to raise interest rates. Further, while bond markets have steadily grown over the past three decades, dealer "market making" ability has not kept pace and in some cases has decreased. Given the importance of intermediary "market making" in creating a robust and active market, fixed income securities are currently facing increased volatility and liquidity risks. All of these factors, collectively and/or individually, could cause the Portfolio to lose value. If the Portfolio lost enough value, the Portfolio could face increased shareholder redemptions, which could force the Portfolio to liquidate investments at disadvantageous times or prices, thereby adversely affecting the Portfolio.

To the extent that the Portfolio may invest in securities and instruments that are economically tied to Russia, the Portfolio is subject to various risks such as, but not limited to political, economic, legal, market and currency risks. The risks include uncertain political and economic policies, short-term market volatility, poor accounting standards, corruption and crime, an inadequate regulatory system, and unpredictable taxation. Investments in Russia are particularly subject to the risk that further economic sanctions may be imposed by the United States and/or other countries. Such sanctions — which may impact companies in many sectors, including energy, financial services and defense, among others — may negatively impact the Portfolio's performance and/or ability to achieve its investment objective. The Russian securities market, as compared to U.S. markets, has significant price volatility, less liquidity, a smaller market capitalization and a smaller number of traded securities. Adverse currency exchange rates are a risk and there may be a lack of available currency hedging instruments. Investments in Russia may be subject to the risk of nationalization or expropriation of assets. Oil, natural gas, metals, and timber account for a significant portion of Russia's exports, leaving the country vulnerable to swings in world prices.

If the Portfolio invests directly in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, foreign (non-U.S.) currencies, or in financial derivative instruments that provide exposure to foreign (non-U.S.) currencies, it will be subject to the risk that those currencies will decline in value relative to the base currency of the Portfolio, or, in the case of hedging positions, that the Portfolio's base currency will decline in value relative to the currency being hedged. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates, intervention (or the failure to intervene) by U.S. or foreign governments, central banks or supranational entities such as the International Monetary Fund, or by the imposition of currency controls or other political developments in the United States or abroad. As a result, the Portfolio's investments in foreign currency-denominated securities may reduce the Portfolio's returns.

The market values of equities, such as common stocks and preferred securities or equity related investments such as futures and options, have historically risen and fallen in periodic cycles and may decline due to general market conditions which are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. They may also decline due to factors which affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry. Different types of equity securities may react differently to these developments. Equity securities and equity related investments generally have greater market price volatility than fixed income securities.

The Portfolio's investments in commodity-linked financial derivative instruments may subject the Portfolio to greater market price volatility than investments in traditional securities. The value of commodity-linked

financial derivative instruments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments.

Credit and Counterparty Risks The Portfolio will be exposed to credit risk to parties with whom it trades and will also bear the risk of settlement default. The Portfolio minimizes concentrations of credit risk by undertaking transactions with a large number of customers and counterparties on recognized and reputable exchanges, where applicable. Over the counter ("OTC") derivative transactions are subject to the risk that a counterparty to the transaction will not fulfill its contractual obligations to the other party, as many of the protections afforded to centrally cleared derivative transactions might not be available for OTC derivative transactions. For financial derivative instruments traded on exchanges or clearinghouses, the primary credit risk is the creditworthiness of the Portfolio's clearing broker or the exchange or clearinghouse itself. The Portfolio could lose money if the issuer or guarantor of a fixed income security, or the counterparty to a financial derivative instruments contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations. Securities and financial derivative instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings.

Similar to credit risk, the Portfolio may be exposed to counterparty risk, or the risk that an institution or other entity with which the Portfolio has unsettled or open transactions will default. PIMCO, as the Adviser, minimizes counterparty risks to the Portfolio through a number of ways. Prior to entering into transactions with a new counterparty, the PIMCO Counterparty Risk Committee conducts an extensive credit review of such counterparty and must approve the use of such counterparty. Furthermore, pursuant to the terms of the underlying contract, to the extent that unpaid amounts owed to the Portfolio exceed a predetermined threshold, such counterparty shall advance collateral to the Portfolio in the form of cash or securities equal in value to the unpaid amount owed to the Portfolio. The Portfolio may invest such collateral in securities or other instruments and will typically pay interest to the counterparty on the collateral received. If the unpaid amount owed to the Portfolio subsequently decreases, the Portfolio would be required to return to the counterparty all or a portion of the collateral previously advanced. PIMCO's attempts to minimize counterparty risk may, however, be unsuccessful.

All transactions in listed securities are settled/paid for upon delivery using approved counterparties. The risk of default is considered minimal, as delivery of securities sold is only made once the Portfolio has received payment. Payment is made on a purchase once the securities have been delivered by the counterparty. The trade will fail if either party fails to meet its obligation.

Master Netting Arrangements The Portfolio may be subject to various netting arrangements ("Master Agreements") with select counterparties. Master Agreements govern the terms of certain transactions, and reduce the counterparty risk associated with relevant transactions by specifying credit protection mechanisms and providing standardization that improves legal certainty. Each type of Master Agreement governs certain types of transactions. Different types of transactions may be traded out of different legal entities or affiliates of a particular organization, resulting in the need for multiple agreements with a single counterparty. As the Master Agreements are specific to unique operations of different asset types, they allow the Portfolio to close out and net its total exposure to a counterparty in the event of a default with respect to all the transactions governed under a single Master Agreement with a counterparty. For financial reporting purposes the Consolidated Statement of Assets and Liabilities generally presents derivative assets and liabilities on a gross basis, which reflects the full risks and exposures prior to netting.

Master Agreements can also help limit counterparty risk by specifying collateral posting arrangements at pre-arranged exposure levels. Under most Master Agreements, collateral is routinely transferred if the total net exposure to certain transactions (net of existing collateral already in place) governed under the relevant Master Agreement with a counterparty in a given account exceeds a specified threshold, which typically ranges from zero to $250,000 depending on the counterparty and the type of Master Agreement. United States Treasury Bills and U.S. dollar cash are generally the preferred forms of collateral, although other forms of AAA rated paper or sovereign securities may be used depending on the terms outlined in the applicable Master Agreement. Securities and cash pledged as collateral are reflected as assets on the Consolidated Statement of Assets and Liabilities as either a component of Investments at value (securities) or Deposits with counterparty. Cash collateral received is not typically held in a segregated account and as such is reflected as a liability on the Consolidated Statement of Assets and Liabilities as Deposits from counterparty. The market value of any securities received as collateral is not reflected as a component of NAV. The Portfolio's overall exposure to counterparty risk can change substantially within a short period, as it is affected by each transaction subject to the relevant Master Agreement.

Master Repurchase Agreements and Global Master Repurchase Agreements (individually and collectively "Master Repo Agreements") govern repurchase, reverse repurchase, and sale-buyback transactions between the Portfolio and select counterparties. Master Repo Agreements maintain provisions for, among other things, initiation, income payments, events of default, and maintenance of collateral. The market value of

transactions under the Master Repo Agreement, collateral pledged or received, and the net exposure by counterparty as of period end are disclosed in the Notes to Consolidated Schedule of Investments.

Master Securities Forward Transaction Agreements ("Master Forward Agreements") govern certain forward settling transactions, such as To-Be-Announced securities, delayed-delivery or sale-buyback transactions by and between the Portfolio and select counterparties. The Master Forward Agreements maintain provisions for, among other things, transaction initiation and confirmation, payment and transfer, events of default, termination, and maintenance of collateral. The market value of forward settling transactions, collateral pledged or received, and the net exposure by counterparty as of period end is disclosed in the Notes to Consolidated Schedule of Investments.

Customer Account Agreements and related addenda govern cleared derivatives transactions such as futures, options on futures, and cleared OTC derivatives. Such transactions require posting of initial margin as determined by each relevant clearing agency which is segregated in an account at a futures commission merchant ("FCM") registered with the Commodity Futures Trading Commission ("CFTC"). In the United States, counterparty risk may be reduced as creditors of an FCM cannot have a claim to Portfolio assets in the segregated account. Portability of exposure reduces risk to the Portfolio. Variation margin, or changes in market value, are exchanged daily, but may not be netted between futures and cleared OTC derivatives unless the parties have agreed to a separate arrangement in respect of portfolio margining. The market value or accumulated unrealized appreciation (depreciation), initial margin posted, and any unsettled variation margin as of period end is disclosed in the Notes to Consolidated Schedule of Investments.

International Swaps and Derivatives Association, Inc. Master Agreements and Credit Support Annexes ("ISDA Master Agreements") govern bilateral OTC derivative transactions entered into by the Portfolio with select counterparties. ISDA Master Agreements maintain provisions for general obligations, representations, agreements, collateral posting and events of default or termination. Events of termination include conditions that may entitle counterparties to elect to terminate early and cause settlement of all outstanding transactions under the applicable ISDA Master Agreement. Any election to terminate early could be material to the financial statements. In limited circumstances, the ISDA Master Agreement may contain additional provisions that add counterparty protection beyond coverage of existing daily exposure if the counterparty has a decline in credit quality below a predefined level. These amounts, if any, may be segregated with a third-party custodian. The market value of OTC financial derivative instruments, collateral received or pledged, and net exposure by counterparty as of period end are disclosed in the Notes to Consolidated Schedule of Investments.

8. BASIS FOR CONSOLIDATION

PIMCO Cayman Commodity Portfolio I, Ltd. (the "Commodity Subsidiary"), a Cayman Islands exempted company, was incorporated as a wholly owned subsidiary acting as an investment vehicle for the Portfolio in order to effect certain investments for the Portfolio consistent with the Portfolio's investment objectives and policies as specified in its prospectus and statement of additional information. The Portfolio's investment portfolio has been consolidated and includes the portfolio holdings of the Portfolio and the Commodity Subsidiary. The consolidated financial statements include the accounts of the Portfolio and the Commodity Subsidiary. All inter-company transactions and balances have been eliminated. A subscription agreement was entered into between the Portfolio and the Commodity Subsidiary, comprising the entire issued share capital of the Commodity Subsidiary, with the intent that the Portfolio will remain the sole shareholder and retain all rights. Under the Memorandum and Articles of Association, shares issued by the Commodity Subsidiary confer upon a shareholder the right to receive notice of, to attend and to vote at general meetings of the Commodity Subsidiary and shall confer upon the shareholder rights in a winding-up or repayment of capital and the right to participate in the profits or assets of the Commodity Subsidiary. See the table below for details regarding the structure, incorporation and relationship as of period end of the Commodity Subsidiary to the Portfolio (amounts in thousands):

Date of Incorporation	07/21/2006
Subscription Agreement	08/01/2006
Consolidated Portfolio Net Assets	$ 402,732
Subsidiary % of Portfolio Net Assets	23.0%
Subsidiary Financial Statement Information	
Total assets	$ 93,605
Total liabilities	1,048
Net assets	$ 92,557
Total income	293
Net investment income (loss)	27
Net realized gain (loss)	48,858
Net change in unrealized appreciation (depreciation)	(1,540)
Increase (decrease) in net assets resulting from operations	$ 47,345

9. FEES AND EXPENSES

(a) Investment Advisory Fee PIMCO is a majority-owned subsidiary of Allianz Asset Management of America L.P. ("Allianz Asset Management") and serves as the Adviser to the Trust, pursuant to an investment advisory contract. The Adviser receives a monthly fee from the Portfolio at an annual rate based on average daily net assets (the "Investment Advisory Fee"). The Investment Advisory Fee for all classes is charged at an annual rate of 0.49%.

(b) Supervisory and Administrative Fee PIMCO serves as administrator (the "Administrator") and provides supervisory and administrative services to the Trust for which it receives a monthly supervisory and administrative fee based on each share class's average daily net assets (the "Supervisory and Administrative Fee"). As the Administrator, PIMCO bears the costs of various third-party services, including audit, custodial, portfolio accounting, legal, transfer agency and printing costs.

The Supervisory and Administrative Fee for all classes, as applicable, is charged at the annual rate as noted in the following table:

	Supervisory and Administrative Fee
Institutional Class	0.25%
Class M	0.25%
Administrative Class	0.25%
Advisor Class	0.25%

(c) Distribution and Servicing Fees PIMCO Investments LLC ("PI"), a wholly-owned subsidiary of PIMCO, serves as the distributor ("Distributor") of the Trust's shares. The Trust has adopted an Administrative Services Plan with respect to the Administrative Class shares of the Portfolio pursuant to Rule 12b-1 under the Act (the "Administrative Plan"). Under the terms of the Administrative Plan, the Trust is permitted to compensate the Distributor, out of the Administrative Class assets of the Portfolio, in an amount up to 0.15% on an annual basis of the average daily net assets of that class, for providing or procuring through financial intermediaries administrative, recordkeeping and investor services for Administrative Class shareholders of the Portfolio.

The Trust has adopted a separate Distribution and Servicing Plan for each of the Advisor Class and Class M shares of the Portfolio (the "Distribution and Servicing Plans"). The Distribution and Servicing Plans have been adopted pursuant to Rule 12b-1 under the Act. The Distribution and Servicing Plans permit the Portfolio to compensate the Distributor for providing or procuring through financial intermediaries distribution, administrative, recordkeeping, shareholder and/or related services with respect to Advisor Class and Class M shares. The Distribution and Servicing Plans permit the Portfolio to make total payments at an annual rate of up to 0.25% of its average daily net assets attributable to its Advisor Class or Class M shares, respectively. The Distribution and Servicing Plan for Class M shares also permits the Portfolio to compensate the Distributor for providing or procuring administrative, recordkeeping, and other investor services at an annual rate of up to 0.20% of its average daily net assets attributable to its Class M shares.

	Distribution Fee	Servicing Fee
Class M	0.25%	0.20%
Administrative Class	—	0.15%
Advisor Class	0.25%	—

(d) Portfolio Expenses PIMCO provides or procures supervisory and administrative services for shareholders and also bears the costs of various third-party services required by the Portfolios, including audit, custodial, portfolio accounting, legal, transfer agency and printing costs. The Trust is responsible for the following expenses: (i) taxes and governmental fees; (ii) brokerage fees and commissions and other portfolio transaction expenses; (iii) the costs of borrowing money, including interest expense; (iv) fees and expenses of the Trustees who are not "interested persons" of PIMCO or the Trust, and any counsel retained exclusively for their benefit; (v) extraordinary expense, including costs of litigation and indemnification expenses; (vi) organizational expenses; and (vii) any expenses allocated or allocable to a specific class of shares, which include service fees payable with respect to the Administrative Class Shares, and may include certain other expenses as permitted by the Trust's Multi-Class Plan adopted pursuant to Rule 18f-3 under the Act and subject to review and approval by the Trustees. The ratio of expenses to average net assets per share class, as disclosed on the Financial Highlights, may differ from the annual portfolio operating expenses per share class.

Each Trustee, other than those affiliated with PIMCO or its affiliates, receives an annual retainer of $35,000, plus $3,600 for each Board meeting attended in person, $750 for each committee meeting attended and $750 for each Board meeting attended telephonically, plus reimbursement of related expenses. In addition, the audit committee chair receives an additional annual retainer of $5,000, the valuation oversight committee lead receives an additional annual retainer of $3,250 (to the extent there are co-leads of the valuation oversight committee, the annual retainer will be split evenly between the co-leads, so that each co-lead individually receives an additional retainer of $1,625) and the governance committee chair receives an additional annual retainer of $1,500. The Lead Independent Trustee receives an annual retainer of $3,500.

These expenses are allocated on a pro rata basis to each Portfolio of the Trust according to its respective net assets except PIMCO All Asset Portfolio. The Trust pays no compensation directly to any Trustee or any other officer who is affiliated with the Administrator, all of whom receive remuneration for their services to the Trust from the Administrator or its affiliates.

(e) Acquired Fund Fees and Expenses The Commodity Subsidiary has entered into a separate contract with PIMCO for the management of the Commodity Subsidiary's portfolio pursuant to which the Commodity Subsidiary pays PIMCO a management fee and administrative services fee at the annual rates of 0.49% and 0.20%, respectively, of its net assets. PIMCO has contractually agreed to waive the Investment Advisory Fee and the Supervisory and Administrative Fee it receives from the Portfolio in an amount equal to the management fee and

administrative services fee, respectively, paid to PIMCO by the Commodity Subsidiary. This waiver may not be terminated by PIMCO and will remain in effect for as long as PIMCO's contract with the Commodity Subsidiary is in place. The waiver is reflected on the Consolidated Statement of Operations as a component of Waiver and/or Reimbursement by PIMCO. For the period ended June 30, 2016, the amount was $245,763.

10. RELATED PARTY TRANSACTIONS

The Adviser, Administrator, and Distributor are related parties. Fees payable to these parties are disclosed in Note 9, Fees and Expenses, and the accrued related party fee amounts are disclosed on the Consolidated Statement of Assets and Liabilities.

The Portfolio is permitted to purchase or sell securities from or to certain related affiliated portfolios under specified conditions outlined in procedures adopted by the Board. The procedures have been designed to ensure that any purchase or sale of securities by the Portfolio from or to another fund or portfolio that are, or could be, considered an affiliate, or an affiliate of an affiliate, by virtue of having a common investment adviser (or affiliated investment advisers), common Trustees and/or common officers complies with Rule 17a-7 under the Act. Further, as defined under the procedures, each transaction is effected at the current market price. During the period ended June 30, 2016, the Portfolio engaged in purchases and sales of securities pursuant to Rule 17a-7 under the Act (amounts in thousands):

Purchases	Sales
$ 9,745	$ 2,314

11. GUARANTEES AND INDEMNIFICATIONS

Under the Trust's organizational documents, each Trustee, officer, employee or other agent of the Trust (including the Trust's investment manager) is indemnified, to the extent permitted by the Act, against certain liabilities that may arise out of performance of their duties to the Portfolio. Additionally, in the normal course of business, the Portfolio enters into contracts that contain a variety of indemnification clauses. The Portfolio's maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Portfolio that have not yet occurred. However, the Portfolio has not had prior claims or losses pursuant to these contracts.

12. PURCHASES AND SALES OF SECURITIES

The length of time the Portfolio has held a particular security is not generally a consideration in investment decisions. A change in the securities held by the Portfolio is known as "portfolio turnover." The Portfolio may engage in frequent and active trading of portfolio securities to achieve its investment objective, particularly during periods of volatile market movements. High portfolio turnover may involve correspondingly greater transaction costs to the Portfolio, including brokerage commissions or dealer mark-ups and other transaction costs on the sale of securities and reinvestments in other securities. Such sales may also result in realization of taxable capital gains, including short-term capital gains (which are generally taxed at ordinary income tax rates). The transaction costs and tax effects associated with portfolio turnover may adversely affect the Portfolio's performance. The portfolio turnover rates are reported in the Financial Highlights.

Purchases and sales of securities (excluding short-term investments) for the period ended June 30, 2016, were as follows (amounts in thousands):

U S Government/ Agency		All Other	
Purchases	Sales	Purchases	Sales
$ 365,496	$ 321,957	$ 46,171	$ 54,959

13. SHARES OF BENEFICIAL INTEREST

The Portfolio may issue an unlimited number of shares of beneficial interest with a $0.001 par value. Changes in shares of beneficial interest were as follows (shares and amounts in thousands):

	Six Months Ended 06/30/2016		Year Ended 12/31/2015	
	Shares	Amount	Shares~	Amount
Receipts for shares sold				
Institutional Class	38	$ 267	201	$ 1,746
Class M	20	137	48	414
Administrative Class	3,823	27,580	10,540	87,701
Advisor Class	2,075	15,193	3,748	32,173
Issued as reinvestment of distributions				
Institutional Class	2	13	14	124
Class M	0	1	1	4
Administrative Class	143	1,065	1,437	12,616
Advisor Class	60	451	592	5,255

	Six Months Ended 06/30/2016		Year Ended 12/31/2015	
	Shares	Amount	Shares~	Amount
Cost of shares redeemed				
Institutional Class	(40)	$ (279)	(81)	$ (686)
Class M	(6)	(45)	(7)	(60)
Administrative Class	(5,077)	(36,425)	(8,191)	(69,298)
Advisor Class	(1,248)	(9,140)	(1,833)	(15,594)
Net increase (decrease) resulting from Portfolio share transactions	(210)	$ (1,182)	6,469	$ 54,395

~ A one for two reverse share split, effective August 7, 2015, has been retroactively applied.

As of June 30, 2016, one shareholder owned 10% or more of the Portfolio's total outstanding shares comprising 16% of the Portfolio, and the shareholder is a related party of the Portfolio. Related parties may include, but are not limited to, the investment manager and its affiliates, affiliated broker dealers, fund of funds and directors or employees of the Trust or Adviser.

14. REGULATORY AND LITIGATION MATTERS

The Portfolio is not named as a defendant in any material litigation or arbitration proceedings and is not aware of any material litigation or claim pending or threatened against it.

PIMCO has received a Wells Notice from the staff of the U.S. Securities and Exchange Commission ("SEC") that relates to the PIMCO Total Return Active Exchange-Traded Fund ("BOND"), a series of PIMCO ETF Trust. The notice indicates the staff's preliminary determination to recommend that the SEC commence a civil action against PIMCO stemming from a non-public investigation relating to BOND. A Wells Notice is neither a formal allegation of wrongdoing nor a finding that any law was violated.

This matter principally pertains to the valuation of smaller sized positions in non-agency mortgage-backed securities purchased by BOND between its inception on February 29, 2012 and June 30, 2012, BOND's performance disclosures for that period, and PIMCO's compliance policies and procedures related to these matters.

The Wells process provides PIMCO with the opportunity to demonstrate to the SEC staff why it believes its conduct was appropriate, in keeping with industry standards, and that no action should be taken. PIMCO believes that this matter is unlikely to have a material adverse effect on any Portfolio or on PIMCO's ability to provide investment management services to any Portfolio.

The foregoing speaks only as of the date of this report.

15. FEDERAL INCOME TAX MATTERS

The Portfolio intends to qualify as a regulated investment company under Subchapter M of the Internal Revenue Code (the "Code") and distribute all of its taxable income and net realized gains, if applicable, to shareholders. Accordingly, no provision for Federal income taxes has been made.

The Portfolio may be subject to local withholding taxes, including those imposed on realized capital gains. Any applicable foreign capital gains tax is accrued daily based upon net unrealized gains, and may be payable following the sale of any applicable investments.

In accordance with U.S. GAAP, the Adviser has reviewed the Portfolio's tax positions for all open tax years. As of June 30, 2016, the Portfolio has recorded no liability for net unrecognized tax benefits relating to uncertain income tax positions it has taken or expects to take in future tax returns.

The Portfolio files U.S. tax returns. While the statute of limitations remains open to examine the Portfolio's U.S. tax returns filed for the fiscal years ending in 2013-2015, no examinations are in progress or anticipated at this time. The Portfolio is not aware of any tax positions for which it is reasonably possible that the total amounts of unrecognized tax benefits will significantly change in the next twelve months.

The Portfolio may gain exposure to the commodities markets primarily through index-linked notes, and may invest in other commodity-linked derivative investments, including commodity swap agreements, options, futures contracts, options on futures contracts and foreign funds investing in similar commodity-linked derivatives.

One of the requirements for favorable tax treatment as a regulated investment company under the Code is that the Portfolio must derive at least 90% of its gross income from certain qualifying sources of income. The IRS has issued a revenue ruling which holds that income derived from commodity index-linked swaps is not qualifying income under Subchapter M of the Code. The IRS has also issued private letter rulings in which the IRS specifically concluded that income from certain commodity index-linked notes is qualifying income. The IRS has also issued private rulings in which the IRS specifically concluded that income derived from investment in a subsidiary, which invests primarily in commodity-linked swaps, will also be qualifying income. Based on the reasoning in such rulings, the Portfolio will continue to seek to gain exposure to the commodity markets primarily through investments in commodity-linked notes and through investments in its Subsidiary.

It should be noted, however, that the IRS currently has suspended the issuance of such rulings pending further review. There can be no assurance that the IRS will not change its position that income derived from commodity-linked notes and wholly-owned subsidiaries is qualifying income. Furthermore, the tax treatment of commodity-linked notes, other commodity-linked derivatives, and the Portfolio's investments in its Subsidiary may otherwise be adversely affected by future legislation, Treasury Regulations and/or guidance issued by the IRS. Such developments could affect the character, timing and/or amount of the Portfolio's taxable income or any distributions made by the Portfolio or result in the inability of the Portfolio to operate as described in its Prospectus.

If, during a taxable year, the Commodity Subsidiary's taxable losses (and other deductible items) exceed its income and gains, the net loss will not pass through to the Portfolio as a deductible amount for income tax purposes. In the event that the Commodity Subsidiary's taxable gains exceed its losses and other deductible items during a taxable year, the net gain will pass through to the Portfolio as income for Federal income tax purposes.

Shares of the Portfolio currently are sold to segregated asset accounts ("Separate Accounts") of insurance companies that fund variable annuity contracts and variable life insurance policies ("Variable Contracts"). Please refer to the prospectus for the Separate Account and Variable Contract for information regarding Federal income tax treatment of distributions to the Separate Account.

Under the Regulated Investment Company Act of 2010, a fund is permitted to carry forward any new capital losses for an unlimited period. Additionally, such capital losses that are carried forward will retain their character as either short-term or long-term capital losses rather than being considered all short-term under previous law.

As of December 31, 2015, the Portfolio had the following post-effective capital losses with no expiration (amounts in thousands):

	Short-Term	Long-Term
PIMCO CommodityRealReturn® Strategy Portfolio	$ 9,795	$ 16,179

As of June 30, 2016, the aggregate cost and the net unrealized appreciation (depreciation) of investments for federal income tax purposes are as follows (amounts in thousands†):

Federal Tax Cost	Aggregate Gross Unrealized Appreciation	Aggregate Gross Unrealized (Depreciation)	Net Unrealized Appreciation (Depreciation) (1)
$ 611,143	$ 0	$ (15,246)	$ (15,246)

(1) Primary differences, if any, between book and tax net unrealized appreciation (depreciation) are attributable to wash sale loss deferrals for federal income tax purposes.

† A zero balance may reflect actual amounts rounding to less than one thousand.

Dear PIMCO Variable Insurance Trust Shareholder,

Please find enclosed the Semiannual Report for the PIMCO Variable Insurance Trust covering the six-month reporting period ended June 30, 2016. The following pages contain specific details about the Portfolio's investment performance and a discussion of the factors that most affected performance over the reporting period.

Outside of the reporting period, PIMCO announced on July 19, 2016 that the firm's Managing Directors have selected Emmanuel (Manny) Roman as PIMCO's next Chief Executive Officer. PIMCO's current CEO Douglas Hodge will assume a new role as Managing Director and Senior Advisor when Mr. Roman joins PIMCO on November 1st.

The announcement of Mr. Roman as PIMCO's CEO is the culmination of a process undertaken by the firm to hire a senior executive who would add leadership and strategic insights combined with a deep appreciation of PIMCO's diversified global businesses, investment process and focus on superior investment performance and client-service. Mr. Roman's appointment has the full support of the firm's leadership including Mr. Hodge, PIMCO's President Jay Jacobs, the firm's Executive Committee and its Managing Directors. Mr. Roman has nearly 30 years of experience in the investment industry, with expertise in fixed income and proven executive leadership, most recently as CEO of Man Group PLC, one of the world's largest publicly-traded alternative asset managers and a leader in liquid, high-alpha investment strategies.

Highlights of the financial markets during the six-month fiscal reporting period include:

- The first segment of the reporting period through mid-February 2016 was marked by ongoing concerns over the global impact of a slowdown in the Chinese economy, which drove commodity prices and inflation expectations generally lower. By March, a recovery in the price of oil and expectations of lower interest rates for longer supported a rally in risk assets. The Bank of Japan ("BOJ") and the People's Bank of China, for example, indicated their intent for further policy easing, with the BOJ resorting to a negative interest rate policy in February 2016. The European Central Bank ("ECB") also resorted to unconventional monetary policy with additional easing measures and an expansion of its quantitative easing program by shifting its focus toward domestic credit, pushing government sovereign yields into negative territory. In June 2016, the ECB began purchasing corporate bonds to help invigorate economic growth and stimulate inflation in the region.
- In the U.S., concerns regarding the global impact of tightening financial conditions and renewed U.S. dollar strength kept the Federal Reserve ("Fed") on hold at their June 2016 meeting, after having slightly raised interest rates at their December 2015 meeting. In addition, the U.S. dollar appreciated against most European and emerging market currencies, while falling against the Japanese yen. The U.S. interest rate yield curve flattened as the ten-year U.S. Treasury yield rallied to all-time lows and short-term interest rates rose with the initial Fed rate hike in December 2015. Revised first quarter 2016 U.S. gross domestic product ("GDP") data released in late June was marginally stronger as retail sales, housing and consumer sentiment data indicated an improving economy.
- Market movements and news headlines at the end of the reporting period were dominated by the unexpected outcome of the U.K. referendum on June 23, 2016. Initial investor reaction to the Brexit vote was largely "risk-off" as various assets re-priced to the surprise outcome, with U.S. Treasuries, the Japanese yen and gold headlining a safe-haven rally. However, aside from the Pound Sterling and European and Japanese equities, most asset classes generally recovered in the ensuing week as investors reassessed the impact of the Brexit vote on global growth expectations.
- U.S. Treasuries, as represented by the Barclays U.S. Treasury Index, returned 5.37% for the reporting period. Yields declined across the majority of the U.S. Treasury yield curve as a more dovish tone from the Fed coupled with the surprise result of the U.K. referendum pushed expectations for policy normalization further into the future. The benchmark ten-year U.S. Treasury note yielded 1.49% at the end of the reporting period, down from 2.27% on December 31, 2015. The Barclays U.S. Aggregate Index, a widely used index of U.S. investment-grade bonds, returned 5.31% for the reporting period.
- U.S. Treasury Inflation-Protected Securities ("TIPS"), as represented by the Barclays U.S. TIPS Index, returned 6.24% over the reporting period. U.S. real interest rates followed nominal yields sharply lower as concerns surrounding China's growth prospects early in the reporting period coupled with uncertainty over the U.K. referendum created a strong flight-to-quality bid and more tempered expectations for near-term Fed rate hikes.

Despite posting positive absolute returns, U.S. TIPS were outpaced by comparable nominal U.S. Treasuries as market-based inflation expectations ended the period lower. U.S. breakeven inflation rates were pressured lower by low headline inflation data and outsized demand for safe-haven nominal U.S. Treasuries.

- Diversified commodities, as represented by the Bloomberg Commodity Index Total Return, returned 13.25% over the reporting period. Prices on broad commodities rebounded, led higher primarily by energy and precious metal prices. Crude oil prices rose markedly after reaching multi-year lows in January 2016, driven higher by strong demand and production outages. Within precious metals, gold prices were the beneficiary of strong safe-haven demand around risk-off events, particularly in June 2016 following the U.K.'s historic vote to leave the European Union. Agriculture commodity prices also advanced over the period, led by sugar prices which rallied on Brazilian rainfall, Indian import demand as well as strength in the Brazilian real.
- Agency mortgage-backed securities ("MBS"), as represented by the Barclays U.S. MBS Fixed Rate Index, returned 3.11% over the reporting period and underperformed like-duration U.S. Treasuries amid headwinds from heavy supply and refinancing concerns. Non-Agency MBS prices were higher and spreads tightened, as the sector continued to benefit from favorable technicals and stable fundamentals. Positive representation and warranty settlement developments also benefited the sector.
- U.S. investment grade credit, as represented by the Barclays U.S. Credit Index, returned 7.54% over the reporting period, as falling credit yields and a commodity-fueled rally drove returns over the reporting period. Developed market global high yield bonds, as measured by the BofA Merrill Lynch Developed Markets High Yield Constrained Index (USD Hedged), returned 8.02% over the reporting period. Strong performance from commodity sectors and risk-on sentiment drove returns, as asset sales and equity issuance strengthened balance sheets. Meanwhile, high yield bond mutual funds saw strong inflows, as investors continued to seek higher-yielding instruments.
- Emerging market ("EM") external debt, as represented by the JPMorgan Emerging Markets Bond Index (EMBI) Global, returned 10.90% over the reporting period. EM local bonds, as represented by the JPMorgan Government Bond Index-Emerging Markets Global Diversified Index (Unhedged), returned 14.02% over the reporting period. The slowdown in China continued apace, though policymakers have used expanded credit availability and a gradual depreciation of the Chinese currency to soften the landing. Higher commodity prices and improving terms of trade helped EM currencies broadly gain during the reporting period.
- Global equity markets showed mixed performance amid a period marked by economic uncertainty, increased volatility and concerns around the U.K. referendum. U.S. equities, as represented by the S&P 500 Index, returned 3.84% over the reporting period. EM equities, as represented by the MSCI Emerging Markets Index (Net Dividends in USD), returned 6.41% over the same period. In contrast, developed market equities outside the U.S., as represented by the MSCI EAFE Net Dividend Index (USD Unhedged), declined 4.42% over the reporting period.

Thank you once again for the trust you have placed in us. We value your commitment and will continue to work diligently to meet your broad investment and investment solution needs.

Sincerely,

Brent R. Harris

Brent R. Harris
Chairman of the Board,
PIMCO Variable Insurance Trust
August 22, 2016

Past performance is no guarantee of future results. Unless otherwise noted, index returns reflect the reinvestment of income dividends and capital gains, if any, but do not reflect fees, brokerage commissions or other expenses of investing. It is not possible to invest directly in an unmanaged index.

Important Information About the PIMCO All Asset Portfolio

PIMCO Variable Insurance Trust (the "Trust") is an open-end management investment company currently consisting of twenty separate investment portfolios, including the PIMCO All Asset Portfolio (the "Portfolio"). The Portfolio is only available as a funding vehicle under variable life insurance policies or variable annuity contracts issued by insurance companies ("Variable Contracts"). Individuals may not purchase shares of the Portfolio directly. Shares of the Portfolio also may be sold to qualified pension and retirement plans outside of the separate account context.

The Portfolio is a "fund of funds," which is a term used to describe mutual funds that pursue their investment objective by investing in other mutual funds instead of investing directly in stocks or bonds of other issuers. Under normal circumstances, the Portfolio invests substantially all of its assets in Institutional Class or, as applicable, Class M shares of any funds of the PIMCO Funds and PIMCO Equity Series, affiliated open-end investment companies, except funds of funds, and shares of any actively-managed funds of the PIMCO ETF Trust, an affiliated investment company (collectively, "Underlying PIMCO Funds"). The cost of investing in these Funds will generally be higher than the cost of investing in a mutual fund that invests directly in individual stocks and bonds.

In an environment where interest rates may trend upward, rising rates would negatively impact the performance of most bond funds, and fixed-income securities and other instruments held by the Portfolio are likely to decrease in value. A wide variety of factors can cause interest rates to rise (e.g., central bank monetary policies, inflation rates, general economic conditions, etc.). In addition, changes in interest rates can be sudden and unpredictable, and there is no guarantee that Fund management will anticipate such movement accurately. The Portfolio may lose money as a result of movements in interest rates.

As of the date of this report, interest rates in the U.S. and many parts of the world, including certain European countries, are near historically low levels. As such, bond funds may currently face an increased exposure to the risks associated with a rising interest rate environment. This is especially true as the Fed ended its quantitative easing program and has begun, and may continue, to raise interest rates. Further, while bond markets have steadily grown over the past three decades, dealer inventories of corporate bonds are near historic lows in relation to market size. As a result, there has been a significant reduction in the ability of dealers to "make markets."

Bond funds and individual bonds with a longer duration (a measure used to determine the sensitivity of a security's price to changes in interest rates) tend to be more sensitive to changes in interest rates, usually making them more volatile than securities or funds with shorter durations. All of the factors mentioned above, individually or collectively, could lead to increased volatility and/or lower liquidity in the fixed income markets, or negatively impact the Portfolio's performance, or cause the Portfolio to incur losses. As a result, the Portfolio may experience increased shareholder redemptions, which among other things, could further reduce the net assets of the Portfolio.

The Portfolio may be subject to various risks as described in the Portfolio's prospectus. Some of these risks may include, but are not limited to, the following: allocation risk, fund of funds risk, market trading risk, municipal project-specific risk, municipal bond risk, interest rate risk, call risk, credit risk, high yield risk, distressed company risk, market risk, issuer risk, liquidity risk, derivatives risk, futures contract risk, model risk, commodity risk, equity risk, mortgage-related and other asset-backed securities risk, foreign (non-U.S.) investment risk, real estate risk, emerging markets risk, sovereign debt risk, currency risk, leveraging risk, smaller company risk, issuer non-diversification risk, management risk, short sale risk, tax risk, subsidiary risk, value investing risk, arbitrage risk and convertible securities risk. A complete description of these and other risks is contained in the Portfolio's prospectus.

An Underlying PIMCO Fund may use derivative instruments for hedging purposes or as part of an investment strategy. Use of these instruments may involve certain costs and risks such as liquidity risk, interest rate risk, market risk, credit risk, leverage risk, management risk and the risk that the Underlying PIMCO Fund may not be able to close out a position when it would be most advantageous to do so. Certain derivative transactions may have a leveraging effect on an Underlying PIMCO Fund. For example, a small investment in a derivative instrument may have a significant impact on an Underlying PIMCO Fund's exposure to interest rates, currency exchange rates or other investments. As a result, a relatively small price movement in an asset, instrument or component of the index underlying a derivative instrument may cause an immediate and substantial loss or gain in the Underlying PIMCO Fund, which translates into heightened volatility for the Portfolio. An Underlying PIMCO Fund may engage in such transactions regardless of whether the Fund owns the asset, instrument or components of the index underlying the derivative instrument. An Underlying PIMCO Fund may invest a significant portion of its assets in these types of instruments. If it does, the Underlying PIMCO Fund's investment exposure could far exceed the value of its portfolio securities and its investment performance could be primarily dependent upon securities it does not own. An Underlying PIMCO Fund's investment in foreign (non-U.S.) securities may entail risk due to foreign (non-U.S.) economic and political developments; this risk may be increased when investing in emerging markets. For example, if an Underlying PIMCO Fund invests in emerging market debt, it may face increased exposure to interest rate, liquidity, volatility, and redemption risk due to the specific economic, political, geographical, or legal background of the foreign (non-U.S.) issuer.

High yield bonds typically have a lower credit rating than other bonds. Lower-rated bonds generally involve a greater risk to principal than higher-rated bonds. Further, markets for lower-rated bonds are typically less liquid than for higher-rated bonds, and public information is usually less abundant in markets for lower-rated bonds. Thus, high yield investments increase the chance that the Portfolio will lose money. The credit quality of a particular security or group of securities does not ensure the stability or safety of the overall portfolio. Mortgage-related and asset-backed securities represent interests in "pools" of mortgages or other assets such as consumer loans or receivables. As a general matter, mortgage-related and asset-backed securities are subject to interest rate risk, extension risk, prepayment risk, and credit risk. These risks largely stem from the fact that returns on mortgage-related and asset-backed securities depend on the ability of the underlying assets to generate cash flow.

The geographical classification of foreign (non-U.S.) securities in this report are classified by the country of incorporation of a holding. In certain instances, a security's country of incorporation may be different from its country of economic exposure.

On the Portfolio Summary page in this Shareholder Report, the Average Annual Total Return table and Cumulative Returns chart measure performance assuming that any dividend and capital gain distributions were reinvested. The Cumulative Returns chart reflects only Administrative Class performance. Performance for Institutional Class, Class M and Advisor Class shares, if applicable, may be higher or lower based on each class's expense ratios. The Portfolio's total annual operating expense ratios on the Portfolio Summary page are as of the currently effective prospectus, as supplemented to date. The Portfolio measures its performance against a broad-based securities market index ("benchmark index"). The benchmark index does not take into account fees, expenses, or taxes. The Portfolio's past performance, before and after taxes, is not necessarily an indication of how the Portfolio will perform in the future.

The following table discloses the inception dates of the Portfolio and its respective share classes along with the Portfolio's diversification status as of period end:

Portfolio Name	Portfolio Inception	Institutional Class	Class M	Administrative Class	Advisor Class	Diversification Status
PIMCO All Asset Portfolio	04/30/03	01/31/06	04/30/04	04/30/03	04/30/04	Diversified

An investment in the Portfolio is not a bank deposit and is not guaranteed or insured by the Federal Deposit Insurance Corporation ("FDIC") or any other government agency. It is possible to lose money on investments in the Portfolio.

The Trustees are responsible generally for overseeing the management of the Trust. The Trustees authorize the Trust to enter into service agreements with the Adviser, the Distributor, the Administrator and other service providers in order to provide, and in some cases authorize service providers to procure through other parties, necessary or desirable services on behalf of the Trust and the Portfolio. Shareholders are not parties to or third-party beneficiaries of such service agreements. Neither this Portfolio's prospectus nor summary prospectus, the Trust's Statement of Additional Information ("SAI"), any contracts filed as exhibits to the Trust's registration statement, nor any other communications, disclosure documents or regulatory filings (including this report) from or on behalf of the Trust or the Portfolio creates a contract between or among any shareholder of the Portfolio, on the one hand, and the Trust, the Portfolio, a service provider to the Trust or the Portfolio, and/or the Trustees or officers of the Trust, on the other hand. The Trustees (or the Trust and its officers, service providers or other delegates acting under authority of the Trustees) may amend the most recent prospectus or use a new prospectus, summary prospectus or SAI with respect to the Portfolio or the Trust, and/or amend, file and/or issue any other communications, disclosure documents or regulatory filings, and may amend or enter into any contracts to which the Trust or the Portfolio is a party, and interpret the investment objective(s), policies, restrictions and contractual provisions applicable to the Portfolio, without shareholder input or approval, except in circumstances in which shareholder approval is specifically required by law (such as changes to fundamental investment policies) or where a shareholder approval requirement is specifically disclosed in the Trust's then-current prospectus or SAI.

PIMCO has adopted written proxy voting policies and procedures ("Proxy Policy") as required by Rule 206(4)-6 under the Investment Advisers Act of 1940, as amended. The Proxy Policy has been adopted by the Trust as the policies and procedures that PIMCO will use when voting proxies on behalf of the Portfolio. A description of the policies and procedures that PIMCO uses to vote proxies relating to portfolio securities of the Portfolio, and information about how the Portfolio voted proxies relating to portfolio securities held during the most recent twelve-month period ended June 30, are available without charge, upon request, by calling the Trust at (888) 87-PIMCO, on the Portfolio's website at pvit.pimco-funds.com, and on the Securities and Exchange Commission's ("SEC") website at www.sec.gov.

The Portfolio files its complete schedule of portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. A

copy of the Trust's Form N-Q is available on the SEC's website at www.sec.gov and may be reviewed and copied at the SEC's Public Reference Room in Washington, D.C., and is available without charge, upon request, by calling the Trust at (888) 87-PIMCO and on the Portfolio's website at pvit.pimco-funds.com. Information on the operation of the Public Reference Room may be obtained by calling 1-800-SEC-0330.

The Trust is distributed by PIMCO Investments LLC, 1633 Broadway, New York, New York 10019.

[1] % of Investments, at value.

[§] Top 10 Holdings and % of Investments excludes securities sold short, financial derivative instruments, and short-term instruments, if any.

Investment Objective and Strategy Overview

» PIMCO All Asset Portfolio seeks maximum real return, consistent with preservation of real capital and prudent investment management, by investing under normal circumstances substantially all of its assets in Institutional Class or Class M shares of any funds of the PIMCO Funds and PIMCO Equity Series, affiliated open-end investment companies, except other funds of funds, and shares of any actively-managed funds of the PIMCO ETF Trust, an affiliated investment company (collectively, the "Underlying PIMCO Funds"). The Portfolio invests its assets in shares of the Underlying PIMCO Funds and does not invest directly in stocks or bonds of other issuers. Research Affiliates, LLC, the Portfolio's asset allocation sub-adviser, determines how the Portfolio allocates and reallocates its assets among the Underlying PIMCO Funds. In doing so, the asset allocation sub-adviser seeks concurrent exposure to a broad spectrum of asset classes. The Portfolio will not invest in the Short Strategy Underlying PIMCO Funds, which seek to gain a negative exposure to an asset class such as equities or commodities. In addition to investing in the Underlying PIMCO Funds, at the discretion of PIMCO and without shareholder approval, the Portfolio may invest in additional Underlying PIMCO Funds created in the future.

Average Annual Total Return for the period ended June 30, 2016

		6 Months*	1 Year	5 Years	10 Years	Inception**
	PIMCO All Asset Portfolio Institutional Class	9.30%	(0.28)%	2.46%	4.67%	4.28%
	PIMCO All Asset Portfolio Class M	9.12%	(0.63)%	2.02%	4.21%	4.87%
—	PIMCO All Asset Portfolio Administrative Class	9.21%	(0.43)%	2.31%	4.52%	5.48%
	PIMCO All Asset Portfolio Advisor Class	9.18%	(0.53)%	2.21%	4.42%	5.08%
·····	Barclays U.S. TIPS: 1-10 Year Index±	4.97%	3.33%	1.55%	4.02%	4.02%***
—	Consumer Price Index + 500 Basis Points±±	3.25%	6.05%	6.31%	6.75%	7.06%***

All Portfolio returns are net of fees and expenses.

* Cumulative return.

** For class inception dates please refer to the Important Information.

*** Average annual total return since 04/30/2003.

± Barclays U.S. TIPS: 1-10 Year Index is an unmanaged market index comprised of U.S. Treasury Inflation-Protected Securities having a maturity of at least 1 year and less than 10 years.

±± CPI + 500 Basis Points benchmark is created by adding 5% to the annual percentage change in the Consumer Price Index ("CPI"). This index reflects seasonally adjusted returns. The Consumer Price Index is an unmanaged index representing the rate of inflation of the U.S. consumer prices as determined by the U.S. Bureau of Labor Statistics. There can be no guarantee that the CPI or other indexes will reflect the exact level of inflation at any given time.

It is not possible to invest directly in an unmanaged index.

Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Current performance may be lower or higher than performance shown. Investment return and the principal value of an investment will fluctuate. Shares may be worth more or less than original cost when redeemed. The Portfolio's performance does not reflect the deduction of additional charges and expenses imposed in connection with investing in Variable Contracts, which will reduce returns. For performance current to the most recent month-end, visit http://pvit.pimco-funds.com.

The Portfolio's total annual operating expense ratio as stated in the Portfolio's current prospectus, which includes the Acquired Fund Fees and Expenses (Underlying PIMCO Fund Expenses), as supplemented to date, is 1.255% for Institutional Class shares, 1.705% for Class M shares, 1.405% for Administrative Class shares, and 1.505% for Advisor Class shares.

Portfolio Insights

Following are key factors impacting the Portfolio's performance during the reporting period:

» Exposure to emerging market equities, primarily through the Fundamental Emerging Markets Fund, the PIMCO RAE Fundamental PLUS EMG Fund and the PIMCO RAE Low Volatility PLUS EMG Fund, benefited performance, as these Underlying PIMCO Funds gained value.

» Exposure to emerging market bonds and currencies, primarily through the PIMCO Emerging Local Bond Fund and the PIMCO Emerging Markets Currency Fund, benefited performance, as these Underlying PIMCO Funds gained value.

» Commodities exposure, primarily through the PIMCO CommoditiesPLUS® Strategy Fund and the PIMCO CommodityRealReturn Strategy Fund®, benefited performance, as these Underlying PIMCO Funds gained value.

» Allocations to alternative strategies, primarily through the PIMCO RAE Worldwide Long/ Short PLUS Fund, benefited performance, as this Underlying PIMCO Fund gained value.

» Credit exposure, primarily through the PIMCO High Yield Fund and the PIMCO High Yield Spectrum Fund, benefited performance, as these Underlying PIMCO Funds gained value.

» Holdings of U.S. Treasury Inflation-Protected Securities, primarily through the PIMCO Real Return Asset Fund, benefited performance, as this Underlying PIMCO Fund gained value.

Example

As a shareholder of the Portfolio, you incur two types of costs: (1) transaction costs and (2) ongoing costs, including management fees, distribution and/or service (12b-1) fees (if applicable), and other Portfolio expenses. The Example is intended to help you understand your ongoing costs (in dollars) of investing in the Portfolio and to compare these costs with the ongoing costs of investing in other mutual funds.

The Expense Example does not reflect any fees or other expenses imposed by the Variable Contracts. If it did, the expenses reflected in the Expense Example would be higher. The Example is based on an investment of $1,000 invested at the beginning of the period and held from January 1, 2016 to June 30, 2016 unless noted otherwise in the table and footnotes below.

Actual Expenses

The information in the table under the heading "Actual" provides information about actual account values and actual expenses. You may use the information in these rows, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.60), then multiply the result by the number in the appropriate column for your share class, in the column titled "Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes

The information in the table under the heading "Hypothetical (5% return before expenses)" provides information about hypothetical account values and hypothetical expenses based on the Portfolio's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Portfolio's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Portfolio and other portfolios. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other portfolios.

Please note that the expenses shown in the table are meant to highlight your ongoing costs only and do not reflect any transactional costs. Therefore, the information under the heading "Hypothetical (5% return before expenses)" is useful in comparing ongoing costs only, and will not help you determine the relative total costs of owning different portfolios. In addition, if these transactional costs were included, your costs would have been higher.

Expense ratios may vary period to period because of various factors, such as an increase in expenses that are not covered by the management fees such as fees and expenses of the independent trustees and their counsel, extraordinary expenses and interest expense.

	Actual			Hypothetical (5% return before expenses)			
	Beginning Account Value (01/01/16)	Ending Account Value (06/30/16)	Expenses Paid During Period*	Beginning Account Value (01/01/16)	Ending Account Value (06/30/16)	Expenses Paid During Period*	Net Annualized Expense Ratio**
Institutional Class	$ 1,000.00	$ 1,093.00	$ 1.36	$ 1,000.00	$ 1,023.16	$ 1.31	0.27%
Class M	1,000.00	1,091.20	3.66	1,000.00	1,020.96	3.53	0.72
Administrative Class	1,000.00	1,092.10	2.12	1,000.00	1,022.42	2.05	0.42
Advisor Class	1,000.00	1,091.80	2.63	1,000.00	1,021.93	2.55	0.52

* Expenses Paid During Period are equal to the net annualized expense ratio for the class, multiplied by the average account value over the period, multiplied by 179/366 (to reflect the one-half year period). Overall fees and expenses of investing in the Portfolio will be higher because the example does not reflect variable contract fees and expenses.

** Net Annualized Expense Ratio is reflective of any applicable contractual fee waivers and/or expense reimbursements or voluntary fee waivers. Details regarding fee waivers can be found in Note 6 in the Notes to Financial Statements.

(b) REPURCHASE AGREEMENTS:

Counterparty	Lending Rate	Settlement Date	Maturity Date	Principal Amount	Collateralized By	Collateral (Received)	Repurchase Agreements, at Value	Repurchase Agreement Proceeds to be Received (1)
SSB	0.010%	06/30/2016	07/01/2016	$ 1,002	U.S. Treasury Notes 1.000% due 05/15/2018	$ (1,024)	$ 1,002	$ 1,002
Total Repurchase Agreements						**$ (1,024)**	**$ 1,002**	**$ 1,002**

(1) Includes accrued interest.

BORROWINGS AND OTHER FINANCING TRANSACTIONS SUMMARY

The following is a summary by counterparty of the market value of Borrowings and Other Financing Transactions and collateral (received) as of June 30, 2016:

Counterparty	Repurchase Agreement Proceeds to be Received	Payable for Reverse Repurchase Agreements	Payable for Sale-Buyback Transactions	Total Borrowings and Other Financing Transactions	Collateral (Received)	Net Exposure [2]
Global/Master Repurchase Agreement						
SSB	$ 1,002	$ 0	$ 0	$ 1,002	$ (1,024)	$ (22)
Total Borrowings and Other Financing Transactions	**$ 1,002**	**$ 0**	**$ 0**			

[2] Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from borrowings and other financing transactions can only be netted across transactions governed under the same master agreement with the same legal entity. See Note 5, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

FAIR VALUE MEASUREMENTS

The following is a summary of the fair valuations according to the inputs used as of June 30, 2016 in valuing the Portfolio's assets and liabilities:

Category and Subcategory	Level 1	Level 2	Level 3	Fair Value at 06/30/2016
Investments in Securities, at Value				
Short-Term Instruments				
Repurchase Agreements	$ 0	$ 1,002	$ 0	$ 1,002
	$ 0	$ 1,002	$ 0	$ 1,002

Category and Subcategory	Level 1	Level 2	Level 3	Fair Value at 06/30/2016
Investments in Affiliates, at Value				
Mutual Funds	$ 829,844	$ 0	$ 0	$ 829,844
Exchange-Traded Funds	844	0	0	844
Short-Term Instruments				
Mutual Funds	2,702	0	0	2,702
Central Funds Used for Cash Management Purposes	101	0	0	101
	$ 833,491	$ 0	$ 0	$ 833,491
Total Investments	$ 833,491	$ 1,002	$ 0	$ 834,493

There were no significant transfers between Levels 1, 2, or 3 during the period ended June 30, 2016.

1. ORGANIZATION

PIMCO Variable Insurance Trust (the "Trust") was established as a Delaware business trust on October 3, 1997. The Trust is registered under the Investment Company Act of 1940, as amended (the "Act"), as an open-end management investment company. The Trust is designed to be used as an investment vehicle by separate accounts of insurance companies that fund variable annuity contracts and variable life insurance policies and by qualified pension and retirement plans. Information presented in these financial statements pertains to the Institutional Class, Class M, Administrative Class and Advisor Class shares of the PIMCO All Asset Portfolio (the "Portfolio") offered by the Trust. Pacific Investment Management Company LLC ("PIMCO") serves as the investment adviser (the "Adviser") for the Portfolio. Research Affiliates, LLC ("Research Affiliates") serves as the asset allocation sub-adviser to the Portfolio.

The Portfolio may invest substantially all of its assets in Institutional Class, or as applicable, Class M shares of any funds of the PIMCO Funds and PIMCO Equity Series, except other fund of funds, and shares of any actively-managed funds of the PIMCO ETF Trust (the "Underlying PIMCO Funds"). The Portfolio's investment in a particular Underlying PIMCO Fund normally will not exceed 50% of its total assets. The Portfolio's combined investments in the Equity-Related Underlying PIMCO Funds (as set forth in the Portfolio's current prospectus) normally will not exceed 50% of its total assets. In addition, the Portfolio's combined investments in the Inflation-Related Underlying PIMCO Funds (as set forth in the Portfolio's current prospectus), which seek to gain exposure to an asset class such as U.S. Treasury Inflation-Protected Securities ("TIPS"), commodities, or real estate, normally will not exceed 75% of its total assets.

The Portfolio's assets are not allocated according to a predetermined blend of shares of the Underlying PIMCO Funds. Instead, when making allocation decisions among the Underlying PIMCO Funds, the Portfolio's asset allocation sub-adviser considers various quantitative and qualitative data relating to the U.S. and foreign economies and securities markets. Such data includes projected growth trends in the U.S. and foreign economies, forecasts for interest rates and the relationship between short and long-term interest rates (yield curve), current and projected trends in inflation, relative valuation levels in the equity and fixed income markets and various segments within those markets, the outlook and projected growth of various industrial sectors, information relating to business cycles, borrowing needs and the cost of capital, political trends data relating to trade balances and labor information. The Portfolio's asset allocation sub-adviser has the flexibility to reallocate the Portfolio's assets among any or all of the asset class exposures represented by the Underlying PIMCO Funds based on its ongoing analyses of the equity, fixed income and commodity markets. While these analyses are performed daily, material shifts in asset class exposures typically take place over longer periods of time.

2. SIGNIFICANT ACCOUNTING POLICIES

The following is a summary of significant accounting policies consistently followed by the Portfolio in the preparation of its financial statements in conformity with accounting principles generally accepted in the United States of America ("U.S. GAAP"). The Portfolio is treated as an investment company under the reporting requirements of U.S. GAAP. The preparation of financial statements in accordance with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates.

(a) Securities Transactions and Investment Income Securities transactions are recorded as of the trade date for financial reporting purposes. Realized gains (losses) from securities sold are recorded on the identified cost basis. Dividend income is recorded on the ex-dividend date, except certain dividends from foreign securities where the ex-dividend date may have passed, which are recorded as soon as the Portfolio is informed of the ex-dividend date. Interest income, adjusted for the accretion of discounts and amortization of premiums, is recorded on the accrual basis from settlement date, with the exception of securities with a forward starting effective date, where interest income is recorded on the accrual basis from effective date. For convertible securities, premiums attributable to the conversion feature are not amortized. Estimated tax liabilities on certain foreign securities are recorded on an accrual basis and are reflected as components of interest income or net change in unrealized appreciation (depreciation) on investments on the Statement of Operations, as appropriate. Tax liabilities realized as a result of such security sales are reflected as a component of net realized gain (loss) on investments on the Statement of Operations. Income or short-term capital gain distributions received from registered investment companies are recorded as dividend income. Long-term capital gain distributions received from registered investment companies are recorded as realized gains.

(b) Multiclass Operations Each class offered by the Trust has equal rights as to assets and voting privileges (except that shareholders of a class have exclusive voting rights regarding any matter relating solely to that class of shares). Income and non-class specific expenses are allocated daily to each class on the basis of the relative net assets. Realized and unrealized capital gains (losses) are allocated daily based on the relative net assets of each class of the Portfolio. Class specific expenses, where applicable, currently include supervisory and administrative and distribution and servicing fees. Under certain circumstances, the per share net asset value ("NAV") of a class of the Portfolio's shares may be different from the per share NAV of another class of shares as a result of the different daily expense accruals applicable to each class of shares.

(c) Dividends and Distributions to Shareholders Dividends from net investment income, if any, are declared and distributed to shareholders quarterly. Net realized capital gains earned by the Portfolio, if any, will be distributed no less frequently than once each year.

Income dividends and capital gain distributions are determined in accordance with income tax regulations which may differ from U.S. GAAP. Differences between tax regulations and U.S. GAAP may cause timing differences between income and capital gain recognition. Examples of events that give rise to timing differences include wash sales, straddles and capital loss carryforwards. Further, the character of investment income and capital gains may be different for certain transactions under the two methods of accounting. Examples of transactions that may cause character differences include the treatment of paydowns on mortgage-backed securities, swaps, foreign currency transactions and contingent debt instruments. As a result, income dividends and capital gain distributions declared during a fiscal period may differ significantly from the net investment income (loss) and realized gains (losses) reported on the Portfolio's annual financial statements presented under U.S. GAAP.

Distributions classified as a tax basis return of capital, if any, are reflected on the Statements of Changes in Net Assets and have been recorded to paid in capital. In addition, other amounts have been reclassified between undistributed (overdistributed) net investment income (loss), accumulated undistributed (overdistributed) net realized gain (loss) and/or paid in capital to more appropriately conform financial accounting to tax characterizations of dividend distributions.

(d) New Accounting Pronouncements In August 2014, the Financial Accounting Standards Board ("FASB") issued an Accounting Standards Update ("ASU"), ASU 2014-15 requiring management to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the entity's ability to continue as a going concern. The ASU is effective prospectively for annual periods ending after December 15, 2016, and interim periods thereafter. At this time, management is evaluating the implications of these changes on the financial statements.

In May 2015, the FASB issued ASU 2015-07 which removes the requirement to categorize within the fair value hierarchy all investments for which fair value is measured using the NAV per share practical expedient. The ASU also removes the requirement to make certain disclosures for all investments that are eligible to be measured at fair value using the NAV per share practical expedient. The ASU is effective for annual periods beginning after December 15, 2015 and interim periods within those annual periods. The ASU did not have an impact on the Portfolio's financial statements.

3. INVESTMENT VALUATION AND FAIR VALUE MEASUREMENTS

(a) Investment Valuation Policies The price of the Portfolio's shares is based on the Portfolio's NAV. The NAV of the Portfolio, or each of its share classes, as applicable, is determined by dividing the total value of portfolio investments and other assets attributable to the Portfolio or class, less any liabilities, by the total number of shares outstanding of the Portfolio or class. On each day that the New York Stock Exchange ("NYSE") is open, Portfolio and Underlying PIMCO Fund shares are ordinarily valued as of the close of regular trading ("NYSE Close"). Information that becomes known to the Portfolio or an Underlying PIMCO Fund or its agents after the time as of which NAV has been calculated on a particular day will not generally be used to retroactively adjust the price of a security or the NAV determined earlier that day. The Portfolio reserves the right to change the time its NAV is calculated if the Portfolio closes earlier, or as permitted by the SEC.

The assets of the Portfolio consist of shares of the Underlying PIMCO Funds, which are valued at their respective NAVs at the time of valuation of the Portfolio's shares. For purposes of calculating the NAV of the Underlying PIMCO Funds, portfolio securities and other assets for which market quotes are readily available are valued at market value. Market value is generally determined on the basis of official closing prices or the last reported sales prices, or if no sales are reported, based on quotes obtained from established market makers or prices (including evaluated prices) supplied by the Portfolio's approved pricing services, quotation reporting systems and other third-party sources (together, "Pricing Services"). The Portfolio will normally use pricing data for domestic equity securities received shortly after the NYSE Close and does not normally take into account trading, clearances or settlements that take place after the NYSE Close. A foreign (non-U.S.) equity security traded on a foreign exchange or on more than one exchange is typically valued using pricing information from the exchange considered by the Adviser to be the primary exchange. A foreign (non-U.S.) equity security will be valued as of the close of trading on the foreign exchange, or the NYSE Close, if the NYSE Close occurs before the end of trading on the foreign exchange. Domestic and foreign (non-U.S.) fixed income securities, non-exchange traded derivatives, and equity options are normally valued on the basis of quotes obtained from brokers and dealers or Pricing Services using data reflecting the earlier closing of the principal markets for those securities. Prices obtained from Pricing Services may be based on, among other things, information provided by market makers or estimates of market values obtained from yield data relating to investments or securities with similar characteristics. Certain fixed income securities purchased on a delayed-delivery basis are marked to market daily until settlement at the forward settlement date. Exchange-traded options, except equity options, futures and options on futures

are valued at the settlement price determined by the relevant exchange. Swap agreements are valued on the basis of bid quotes obtained from brokers and dealers or market-based prices supplied by Pricing Services or other pricing sources. With respect to any portion of an Underlying PIMCO Fund's assets that are invested in one or more open-end management investment companies (other than exchange-traded funds ("ETFs")), the Underlying PIMCO Fund's NAV will be calculated based upon the NAVs of such investments.

If a foreign (non-U.S.) equity security's value has materially changed after the close of the security's primary exchange or principal market but before the NYSE Close, the security may be valued at fair value based on procedures established and approved by the Board of Trustees of the Trust (the "Board"). Foreign (non-U.S.) equity securities that do not trade when the NYSE is open are also valued at fair value. With respect to foreign (non-U.S.) equity securities, the Portfolio may determine the fair value of investments based on information provided by Pricing Services and other third-party vendors, which may recommend fair value or adjustments with reference to other securities, indices or assets. In considering whether fair valuation is required and in determining fair values, the Portfolio may, among other things, consider significant events (which may be considered to include changes in the value of U.S. securities or securities indices) that occur after the close of the relevant market and before the NYSE Close. The Portfolio may utilize modeling tools provided by third-party vendors to determine fair values of non-U.S. securities. Foreign (non-U.S.) exchanges may permit trading in foreign (non-U.S.) equity securities on days when the Trust is not open for business, which may result in the Portfolio's portfolio investments being affected when shareholders are unable to buy or sell shares.

Senior secured floating rate loans for which an active secondary market exists to a reliable degree will be valued at the mean of the last available bid/ask prices in the market for such loans, as provided by a Pricing Service. Senior secured floating rate loans for which an active secondary market does not exist to a reliable degree will be valued at fair value, which is intended to approximate market value. In valuing a senior secured floating rate loan at fair value, the factors considered may include, but are not limited to, the following: (a) the creditworthiness of the borrower and any intermediate participants, (b) the terms of the loan, (c) recent prices in the market for similar loans, if any, and (d) recent prices in the market for instruments of similar quality, rate, period until next interest rate reset and maturity.

Investments valued in currencies other than the U.S. dollar are converted to the U.S. dollar using exchange rates obtained from Pricing Services. As a result, the value of such investments and, in turn, the NAV of an Underlying PIMCO Fund's shares may be affected by changes in the value of currencies in relation to the U.S. dollar. The value of investments traded in markets outside the United States or denominated in currencies other than the U.S. dollar may be affected significantly on a day that the Trust is not open for business. As a result, to the extent that the Portfolio invests in Underlying PIMCO Funds that hold foreign (non-U.S.) investments, the value of those investments may change at times when shareholders are unable to buy or sell shares and the value of such investments will be reflected in the Portfolio's next calculated NAV.

Investments for which market quotes or market based valuations are not readily available are valued at fair value as determined in good faith by the Board or persons acting at their direction. The Board has adopted methods for valuing securities and other assets in circumstances where market quotes are not readily available, and has delegated to the Adviser the responsibility for applying the fair valuation methods. In the event that market quotes or market based valuations are not readily available, and the security or asset cannot be valued pursuant to a Board approved valuation method, the value of the security or asset will be determined in good faith by the Valuation Oversight Committee of the Board ("Valuation Oversight Committee"), generally based on recommendations provided by the Adviser. Market quotes are considered not readily available in circumstances where there is an absence of current or reliable market-based data (e.g., trade information, bid/ask information, indicative market quotations ("Broker Quotes"), Pricing Services' prices), including where events occur after the close of the relevant market, but prior to the NYSE Close, that materially affect the values of an Underlying PIMCO Fund's securities or assets. In addition, market quotes are considered not readily available when, due to extraordinary circumstances, the exchanges or markets on which the securities trade do not open for trading for the entire day and no other market prices are available. The Board has delegated to the Adviser the responsibility for monitoring significant events that may materially affect the values of the Portfolio's securities or assets and for determining whether the value of the applicable securities or assets should be reevaluated in light of such significant events.

When an Underlying PIMCO Fund uses fair valuation to determine the value of a portfolio security or other asset for purposes of calculating its NAV, such investments will not be priced on the basis of quotes from the primary market in which they are traded, but rather may be priced by another method that the Board or persons acting at their direction believe reflects fair value. Fair valuation may require subjective determinations about the value of a security. While the Trust's policy is intended to result in a calculation of the Portfolio's and Underlying PIMCO Funds' NAVs that fairly reflects security values as of the time of pricing, the Trust cannot ensure that fair values determined by the Board or persons acting at their direction would accurately reflect the price that an Underlying PIMCO Fund could obtain for a security if it were to dispose of that security as of the time of pricing (for instance,

in a forced or distressed sale). The prices used by an Underlying PIMCO Fund may differ from the value that would be realized if the securities were sold. An Underlying PIMCO Fund's use of fair valuation may also help to deter "stale price arbitrage" as discussed under the "Frequent or Excessive Purchases, Exchanges and Redemptions" section in the Portfolio's prospectus.

(b) Fair Value Hierarchy U.S. GAAP describes fair value as the price that the Portfolio would receive to sell an asset or pay to transfer a liability in an orderly transaction between market participants at the measurement date. It establishes a fair value hierarchy that prioritizes inputs to valuation methods and requires disclosure of the fair value hierarchy, separately for each major category of assets and liabilities, that segregates fair value measurements into levels (Level 1, 2, or 3). The inputs or methodology used for valuing securities are not necessarily an indication of the risks associated with investing in those securities. Levels 1, 2, and 3 of the fair value hierarchy are defined as follows:

- Level 1 — Inputs using (unadjusted) quoted prices in active markets or exchanges for identical assets and liabilities.
- Level 2 — Significant other observable inputs, which may include, but are not limited to, quoted prices for similar assets or liabilities in markets that are active, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the assets or liabilities (such as interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks and default rates) or other market corroborated inputs.
- Level 3 — Significant unobservable inputs based on the best information available in the circumstances, to the extent observable inputs are not available, which may include assumptions made by the Board or persons acting at their direction that are used in determining the fair value of investments.

In accordance with the requirements of U.S. GAAP, the amounts of transfers between Levels 1 and 2 and transfers into and out of Level 3, if material, are disclosed in the Notes to Schedule of Investments for the Portfolio.

For fair valuations using significant unobservable inputs, U.S. GAAP requires a reconciliation of the beginning to ending balances for reported fair values that presents changes attributable to realized gain (loss), unrealized appreciation (depreciation), purchases and sales, accrued discounts (premiums), and transfers into and out of the Level 3 category during the period. The end of period timing recognition is used for the transfers between Levels of the Portfolio's assets and liabilities. Additionally, U.S. GAAP requires quantitative information regarding the significant unobservable inputs used in the determination of fair value of assets or liabilities categorized as Level 3 in the fair value hierarchy. In accordance with the requirements of U.S. GAAP, a fair value hierarchy, and if material, a Level 3 reconciliation and details of significant unobservable inputs, have been included in the Notes to Schedule of Investments for the Portfolio.

The validity of the fair value is reviewed by the Adviser on a periodic basis and may be amended in accordance with the Trust's valuation procedures.

4. SECURITIES AND OTHER INVESTMENTS

(a) Investments in Affiliates

The Portfolio invests under normal circumstances substantially all of its assets in Underlying PIMCO Funds which are considered to be affiliated with the Portfolio. The Portfolio may invest in the PIMCO Short-Term Floating NAV Portfolio III ("Central Fund") to the extent permitted by the Act and rules thereunder. The Central Fund is a registered investment company created for use solely by the series of the Trust and other series of registered investment companies advised by the Adviser, in connection with their cash management activities. The main investments of the Central Fund are money market and short maturity fixed income instruments. The Central Fund may incur expenses related to its investment activities, but does not pay Investment Advisory Fees or Supervisory and Administrative Fees to the Adviser. The Central Fund is considered to be affiliated with the Portfolio. The table below shows the Portfolio's transactions in and earnings from investments in the affiliated Funds for the period ended June 30, 2016 (amounts in thousands†):

Underlying PIMCO Funds	Market Value 12/31/2015	Purchases at Cost	Proceeds from Sales	Net Realized Gain (Loss)	Change in Unrealized Appreciation (Depreciation)	Market Value 06/30/2016	Dividend Income [1]	Realized Net Capital Gain Distributions [1]

† A zero balance may reflect actual amounts rounding to less than one thousand.

(1) The tax characterization of distributions is determined in accordance with Federal income tax regulations. The actual tax characterization of distributions paid are determined at the end of the fiscal year. See Note 2(c) in the Notes to Financial Statements for more information.

(b) Investments in Securities

Exchange Traded Funds The Portfolio (and certain Underlying PIMCO Funds) may invest in ETFs, which typically are index-based investment companies that hold substantially all of their assets in securities representing their specific index, but may also be actively-managed investment companies. Shares of ETFs trade throughout the day on an exchange and represent an investment in a portfolio of securities and other assets. As a shareholder of another investment company, the Portfolio (and Underlying PIMCO Funds) would bear their pro rata portion of the other investment company's expenses, including advisory fees, in addition to the expenses the Portfolio (and Underlying PIMCO Funds) bear directly in connection with their own operations. Investments in ETFs entail certain risks; in particular, investments in index ETFs involve the risk that the ETF's performance may not track the performance of the index the ETF is designed to track.

(c) Repurchase Agreements The Portfolio may engage in repurchase agreements. Under the terms of a typical repurchase agreement, the Portfolio purchases an underlying debt obligation (collateral) subject to an obligation of the seller to repurchase, and the Portfolio to resell, the obligation at an agreed-upon price and time. The underlying securities for all repurchase agreements are held by the Portfolio's custodian or designated subcustodians under tri-party repurchase agreements. The market value of the collateral must be equal to or exceed the total amount of the repurchase obligations, including interest. Repurchase agreements, if any, including accrued interest, are included on the Statement of Assets and Liabilities. Interest earned is recorded as a component of interest income on the Statement of Operations. In periods of increased demand for collateral, the Portfolio may pay a fee for the receipt of collateral, which may result in interest expense to the Portfolio.

5. PRINCIPAL RISKS

In the normal course of business, the Portfolio (or Underlying PIMCO Funds) trade financial instruments and enter into financial transactions where risk of potential loss exists due to such things as changes in the market (market risk) or failure or inability of the other party to a transaction to perform (credit and counterparty risk). See below for a detailed description of select principal risks. For a more comprehensive list of potential risks the Portfolio may be subject to, please see the Important Information About the Portfolio.

Investments in Mutual Funds To the extent that the Portfolio invests substantially all of its assets in Underlying PIMCO Funds, the risks associated with investing in the Portfolio will be closely related to the risks associated with the securities and other investments held by the Underlying PIMCO Funds. The ability of the Portfolio to achieve its investment objective may depend upon the ability of the Underlying PIMCO Funds to achieve their respective investment objectives. There can be no assurance that the investment objective of any Underlying PIMCO Fund will be achieved. The NAV of the Portfolio will fluctuate in response to changes in the respective NAV of the Underlying PIMCO Funds in which it invests. The extent to which the investment performance and risks associated with the Portfolio correlate to those of a particular Underlying PIMCO Fund will depend upon the extent to which the assets of the Portfolio are allocated from time to time for investment in the Underlying PIMCO Funds, which will vary. Investing in Underlying PIMCO Funds involves certain additional expenses and tax results that would not be present in a direct investment in the Underlying PIMCO Funds.

The Portfolio's investment performance depends upon how its assets are allocated and reallocated according to the Portfolio's asset allocation targets and ranges. A principal risk of investing in the Portfolio is that the Portfolio's asset allocation sub-adviser will make less than optimal or poor asset allocation decisions. The asset allocation sub-adviser attempts to identify investment allocations for the Underlying PIMCO Funds that will provide consistent, quality performance for the Portfolio, but there is no guarantee that such allocation techniques will produce the desired results.

Market Risks The Portfolio's (or Underlying PIMCO Funds') investments in financial derivative instruments and other financial instruments expose the Portfolio to various risks such as, but not limited to, interest rate, foreign (non-U.S.) currency, equity and commodity risks.

The market values of equities, such as common stocks and preferred securities or equity related investments such as futures and options, have historically risen and fallen in periodic cycles and may decline due to general market conditions which are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. They may also decline due to factors which affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry. Different types of equity securities may react differently to these developments. Equity securities and equity related investments generally have greater market price volatility than fixed income securities.

Interest rate risk is the risk that fixed income securities and other instruments held by the Portfolio (or Underlying PIMCO Funds) will decline in value because of an increase in interest rates. As nominal interest rates rise, the value of certain fixed income securities held by the Portfolio (or Underlying PIMCO Funds) is likely to decrease. A nominal interest rate can be described as the sum of a real interest rate and an expected inflation rate. Interest rate changes can be sudden and unpredictable, and the Portfolio (or Underlying PIMCO Funds) may lose money if these changes are not anticipated by Portfolio (or Underlying PIMCO Funds) management. The Portfolio (or Underlying PIMCO Funds) may not be able to hedge against changes in interest rates or may choose not to do so for cost or other reasons. In addition, any hedges may not work as intended.

Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates that incorporates a security's yield, coupon, final maturity and call features, among other characteristics. Convexity is an additional measure of interest rate sensitivity that measures the rate of change of duration in response to changes in interest rates. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. A wide variety of factors can cause interest rates to rise (e.g., central bank monetary policies, inflation rates, general economic conditions, etc.). At present, the U.S. and many parts of the world, including certain European countries, are

experiencing near historically low interest rates. The Portfolio may be subject to heightened interest rate risk because the Fed has ended its quantitative easing program and has begun, and may continue, to raise interest rates. Further, while bond markets have steadily grown over the past three decades, dealer "market making" ability has not kept pace and in some cases has decreased. Given the importance of intermediary "market making" in creating a robust and active market, fixed income securities are currently facing increased volatility and liquidity risks. All of these factors, collectively and/or individually, could cause the Portfolio (or Underlying PIMCO Funds) to lose value. If the Portfolio (or Underlying PIMCO Funds) lost enough value, the Portfolio (or Underlying PIMCO Funds) could face increased shareholder redemptions, which could force the Portfolio (or Underlying PIMCO Funds) to liquidate investments at disadvantageous times or prices, thereby adversely affecting the Portfolio (or Underlying PIMCO Funds).

To the extent that the Portfolio (or Underlying PIMCO Funds) may invest in securities and instruments that are economically tied to Russia, the Portfolio (or Underlying PIMCO Funds) is subject to various risks such as, but not limited to political, economic, legal, market and currency risks. The risks include uncertain political and economic policies, short-term market volatility, poor accounting standards, corruption and crime, an inadequate regulatory system, and unpredictable taxation. Investments in Russia are particularly subject to the risk that further economic sanctions may be imposed by the United States and/or other countries. Such sanctions — which may impact companies in many sectors, including energy, financial services and defense, among others — may negatively impact the Portfolio's (or Underlying PIMCO Funds') performance and/or ability to achieve its investment objective. The Russian securities market, as compared to U.S. markets, has significant price volatility, less liquidity, a smaller market capitalization and a smaller number of traded securities. Adverse currency exchange rates are a risk and there may be a lack of available currency hedging instruments. Investments in Russia may be subject to the risk of nationalization or expropriation of assets. Oil, natural gas, metals, and timber account for a significant portion of Russia's exports, leaving the country vulnerable to swings in world prices.

If the Portfolio (or Underlying PIMCO Funds) invests directly in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, foreign (non-U.S.) currencies, or in financial derivative instruments that provide exposure to foreign (non-U.S.) currencies, it will be subject to the risk that those currencies will decline in value relative to the base currency of the Portfolio (or Underlying PIMCO Funds), or, in the case of hedging positions, that the Portfolio's (or Underlying PIMCO Funds') base currency will decline in value relative to the currency being hedged. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates, intervention (or the failure to intervene) by U.S. or foreign governments, central banks or supranational entities such as the International Monetary Fund, or by the imposition of currency controls or other political developments in the United States or abroad. As a result, the Portfolio's (or Underlying PIMCO Funds') investments in foreign currency-denominated securities may reduce the Portfolio's (or Underlying PIMCO Funds') returns.

The Portfolio's (or Underlying PIMCO Funds') investments in commodity-linked financial derivative instruments may subject the Portfolio (or Underlying PIMCO Funds) to greater market price volatility than investments in traditional securities. The value of commodity-linked financial derivative instruments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments.

Credit and Counterparty Risks The Portfolio (or Underlying PIMCO Funds) will be exposed to credit risk to parties with whom it trades and will also bear the risk of settlement default. The Portfolio (or Underlying PIMCO Funds) minimizes concentrations of credit risk by undertaking transactions with a large number of customers and counterparties on recognized and reputable exchanges where applicable. Over the counter ("OTC") derivative transactions are subject to the risk that a counterparty to the transaction will not fulfill its contractual obligations to the other party, as many of the protections afforded to centrally cleared derivative transactions might not be available for OTC derivative transactions. For financial derivative instruments traded on exchanges or clearinghouses, the primary credit risk is the creditworthiness of the Portfolio's clearing broker or the exchange or clearinghouse itself. The Portfolio (or Underlying PIMCO Funds) could lose money if the issuer or guarantor of a fixed income security, or the counterparty to a financial derivative instruments contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations. Securities and financial derivative instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings.

Similar to credit risk, the Portfolio (or Underlying PIMCO Funds) may be exposed to counterparty risk, or the risk that an institution or other entity with which the Portfolio (or Underlying PIMCO Funds) has unsettled or open transactions will default. PIMCO, as the Adviser, minimizes counterparty risks to the Portfolio (or Underlying PIMCO Funds) through a number of ways. Prior to entering into transactions with a new counterparty, the PIMCO Counterparty Risk Committee conducts an extensive credit review of such counterparty and must approve the use of such counterparty. Furthermore, pursuant to the terms of the underlying contract, to the extent that unpaid amounts owed to the Portfolio (or Underlying PIMCO Funds) exceed a

predetermined threshold, such counterparty shall advance collateral to the Portfolio (or Underlying PIMCO Funds) in the form of cash or securities equal in value to the unpaid amount owed to the Portfolio (or Underlying PIMCO Funds). The Portfolio (or Underlying PIMCO Funds) may invest such collateral in securities or other instruments and will typically pay interest to the counterparty on the collateral received. If the unpaid amount owed to the Portfolio (or Underlying PIMCO Funds) subsequently decreases, the Portfolio (or Underlying PIMCO Funds) would be required to return to the counterparty all or a portion of the collateral previously advanced. PIMCO's attempts to minimize counterparty risk may, however, be unsuccessful.

All transactions in listed securities are settled/paid for upon delivery using approved counterparties. The risk of default is considered minimal, as delivery of securities sold is only made once the Portfolio (or Underlying PIMCO Funds) has received payment. Payment is made on a purchase once the securities have been delivered by the counterparty. The trade will fail if either party fails to meet its obligation.

Master Netting Arrangements The Portfolio may be subject to various netting arrangements ("Master Agreements") with select counterparties. Master Agreements govern the terms of certain transactions, and reduce the counterparty risk associated with relevant transactions by specifying credit protection mechanisms and providing standardization that improves legal certainty. Each type of Master Agreement governs certain types of transactions. Different types of transactions may be traded out of different legal entities or affiliates of a particular organization, resulting in the need for multiple agreements with a single counterparty. As the Master Agreements are specific to unique operations of different asset types, they allow the Portfolio to close out and net its total exposure to a counterparty in the event of a default with respect to all the transactions governed under a single Master Agreement with a counterparty. For financial reporting purposes the Statement of Assets and Liabilities generally presents derivative assets and liabilities on a gross basis, which reflects the full risks and exposures prior to netting.

Master Agreements can also help limit counterparty risk by specifying collateral posting arrangements at pre-arranged exposure levels. Under most Master Agreements, collateral is routinely transferred if the total net exposure to certain transactions (net of existing collateral already in place) governed under the relevant Master Agreement with a counterparty in a given account exceeds a specified threshold, which typically ranges from zero to $250,000 depending on the counterparty and the type of Master Agreement. United States Treasury Bills and U.S. dollar cash are generally the preferred forms of collateral, although other forms of AAA rated paper or sovereign securities may be used depending on the terms outlined in the applicable Master Agreement. Securities and cash pledged as collateral are reflected as assets on the Statement of Assets and Liabilities as either a component of Investments at value (securities) or Deposits with counterparty. Cash collateral received is not typically held in a segregated account and as such is reflected as a liability on the Statement of Assets and Liabilities as Deposits from counterparty. The market value of any securities received as collateral is not reflected as a component of NAV. The Portfolio's overall exposure to counterparty risk can change substantially within a short period, as it is affected by each transaction subject to the relevant Master Agreement.

Master Repurchase Agreements and Global Master Repurchase Agreements (individually and collectively "Master Repo Agreements") govern repurchase, reverse repurchase, and sale-buyback transactions between the Portfolio and select counterparties. Master Repo Agreements maintain provisions for, among other things, initiation, income payments, events of default, and maintenance of collateral. The market value of transactions under the Master Repo Agreement, collateral pledged or received, and the net exposure by counterparty as of period end are disclosed in the Notes to Schedule of Investments.

Master Securities Forward Transaction Agreements ("Master Forward Agreements") govern certain forward settling transactions, such as To-Be-Announced securities, delayed-delivery or sale-buyback transactions by and between the Portfolio and select counterparties. The Master Forward Agreements maintain provisions for, among other things, transaction initiation and confirmation, payment and transfer, events of default, termination, and maintenance of collateral. The market value of forward settling transactions, collateral pledged or received, and the net exposure by counterparty as of period end is disclosed in the Notes to Schedule of Investments.

Customer Account Agreements and related addenda govern cleared derivatives transactions such as futures, options on futures, and cleared OTC derivatives. Such transactions require posting of initial margin as determined by each relevant clearing agency which is segregated in an account at a futures commission merchant ("FCM") registered with the Commodity Futures Trading Commission ("CFTC"). In the United States, counterparty risk may be reduced as creditors of an FCM cannot have a claim to Portfolio assets in the segregated account. Portability of exposure reduces risk to the Portfolio. Variation margin, or changes in market value, are exchanged daily, but may not be netted between futures and cleared OTC derivatives unless the parties have agreed to a separate arrangement in respect of portfolio margining. The market value or accumulated unrealized appreciation (depreciation), initial margin posted, and any unsettled variation margin as of period end is disclosed in the Notes to Schedule of Investments.

International Swaps and Derivatives Association, Inc. Master Agreements and Credit Support Annexes ("ISDA Master Agreements") govern bilateral OTC derivative transactions entered into by the

Portfolio with select counterparties. ISDA Master Agreements maintain provisions for general obligations, representations, agreements, collateral posting and events of default or termination. Events of termination include conditions that may entitle counterparties to elect to terminate early and cause settlement of all outstanding transactions under the applicable ISDA Master Agreement. Any election to terminate early could be material to the financial statements. In limited circumstances, the ISDA Master Agreement may contain additional provisions that add counterparty protection beyond coverage of existing daily exposure if the counterparty has a decline in credit quality below a predefined level. These amounts, if any, may be segregated with a third-party custodian. The market value of OTC financial derivative instruments, collateral received or pledged, and net exposure by counterparty as of period end are disclosed in the Notes to Schedule of Investments.

6. FEES AND EXPENSES

(a) Investment Advisory Fee PIMCO is a majority-owned subsidiary of Allianz Asset Management of America L.P. ("Allianz Asset Management") and serves as the Adviser to the Trust, pursuant to an investment advisory contract. The Adviser receives a monthly fee from the Portfolio at an annual rate based on average daily net assets (the "Investment Advisory Fee"). The Investment Advisory Fee for all classes is charged at an annual rate of 0.175%.

(b) Supervisory and Administrative Fee PIMCO serves as administrator (the "Administrator") and provides supervisory and administrative services to the Trust for which it receives a monthly supervisory and administrative fee based on each share class's average daily net assets (the "Supervisory and Administrative Fee"). As the Administrator, PIMCO bears the costs of various third-party services, including audit, custodial, portfolio accounting, legal, transfer agency and printing costs.

The Supervisory and Administrative Fee for all classes, as applicable, is charged at the annual rate as noted in the following table:

	Supervisory and Administrative Fee
Institutional Class	0.25%
Class M	0.25%
Administrative Class	0.25%
Advisor Class	0.25%

(c) Distribution and Servicing Fees PIMCO Investments LLC ("PI"), a wholly-owned subsidiary of PIMCO, serves as the distributor ("Distributor") of the Trust's shares. The Trust has adopted an Administrative Services Plan with respect to the Administrative Class shares of the Portfolio pursuant to Rule 12b-1 under the Act (the "Administrative Plan"). Under the terms of the Administrative Plan, the Trust is permitted to compensate the Distributor, out of the Administrative Class assets of the Portfolio, in an amount up to 0.15% on an annual basis of the average daily net assets of that class, for providing or procuring through financial intermediaries administrative, recordkeeping and investor services for Administrative Class shareholders of the Portfolio.

The Trust has adopted a separate Distribution and Servicing Plan for each of the Advisor Class and Class M shares of the Portfolio (the "Distribution and Servicing Plans"). The Distribution and Servicing Plans have been adopted pursuant to Rule 12b-1 under the Act. The Distribution and Servicing Plans permit the Portfolio to compensate the Distributor for providing or procuring through financial intermediaries distribution, administrative, recordkeeping, shareholder and/or related services with respect to Advisor Class and Class M shares. The Distribution and Servicing Plans permit the Portfolio to make total payments at an annual rate of up to 0.25% of its average daily net assets attributable to its Advisor Class or Class M shares, respectively. The Distribution and Servicing Plan for Class M shares also permits the Portfolio to compensate the Distributor for providing or procuring administrative, recordkeeping, and other investor services at an annual rate of up to 0.20% of its average daily net assets attributable to its Class M shares.

	Distribution Fee	Servicing Fee
Class M	0.25%	0.20%
Administrative Class	—	0.15%
Advisor Class	0.25%	—

(d) Portfolio Expenses PIMCO provides or procures supervisory and administrative services for shareholders and also bears the costs of various third-party services required by the Portfolios, including audit, custodial, portfolio accounting, legal, transfer agency and printing costs. The Trust is responsible for the following expenses: (i) taxes and governmental fees; (ii) brokerage fees and commissions and other portfolio transaction expenses; (iii) the costs of borrowing money, including interest expense; (iv) fees and expenses of the Trustees who are not "interested persons" of PIMCO or the Trust, and any counsel retained exclusively for their benefit; (v) extraordinary expense, including costs of litigation and indemnification expenses; (vi) organizational expenses; and (vii) any expenses allocated or allocable to a specific class of shares, which include service fees payable with respect to the Administrative Class Shares, and may include certain other expenses as permitted by the Trust's Multi-Class Plan adopted pursuant to Rule 18f-3 under the Act and subject to review and approval by the Trustees. The ratio of expenses to average net assets per share class, as disclosed on the Financial Highlights, may differ from the annual portfolio operating expenses per share class.

Each Trustee, other than those affiliated with PIMCO or its affiliates, receives an annual retainer of $35,000, plus $3,600 for each Board meeting attended in person, $750 for each committee meeting attended and $750 for each Board meeting attended telephonically,

plus reimbursement of related expenses. In addition, the audit committee chair receives an additional annual retainer of $5,000, the valuation oversight committee lead receives an additional annual retainer of $3,250 (to the extent there are co-leads of the valuation oversight committee, the annual retainer will be split evenly between the co-leads, so that each co-lead individually receives an additional retainer of $1,625) and the governance committee chair receives an additional annual retainer of $1,500. The Lead Independent Trustee receives an annual retainer of $3,500.

These expenses are allocated on a pro rata basis to each Portfolio of the Trust according to its respective net assets except PIMCO All Asset Portfolio. The Trust pays no compensation directly to any Trustee or any other officer who is affiliated with the Administrator, all of whom receive remuneration for their services to the Trust from the Administrator or its affiliates.

(e) Acquired Fund Fees and Expenses The Underlying PIMCO Fund expenses for the Portfolio are based upon an allocation of the Portfolio's assets among the Underlying PIMCO Funds and upon the total annual operating expenses of the Institutional Class shares or, as applicable, Class M shares of these Underlying PIMCO Funds. Underlying PIMCO Fund expenses will vary with changes in the expenses of the Underlying PIMCO Funds, as well as the allocation of the Portfolio's assets.

PIMCO has contractually agreed, through May 1, 2017 to reduce its Investment Advisory Fee to the extent that the Underlying PIMCO Fund expenses attributable to Investment Advisory Fees and Supervisory and Administrative Fees exceed 0.64% of the total assets invested in Underlying PIMCO Funds. PIMCO may recoup these waivers and reimbursements for a period not exceeding three years, provided that total expenses, including such recoupment, do not exceed the annual expense limit. The recoverable amount to PIMCO at June 30, 2016 was $4,963,441.

7. RELATED PARTY TRANSACTIONS

The Adviser, Administrator, and Distributor are related parties. Fees payable to these parties are disclosed in Note 6, Fees and Expenses, and the accrued related party fee amounts are disclosed on the Statement of Assets and Liabilities.

8. GUARANTEES AND INDEMNIFICATIONS

Under the Trust's organizational documents, each Trustee, officer, employee or other agent of the Trust (including the Trust's investment manager) is indemnified, to the extent permitted by the Act, against certain liabilities that may arise out of performance of their duties to the Portfolio. Additionally, in the normal course of business, the Portfolio enters into contracts that contain a variety of indemnification clauses. The Portfolio's maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Portfolio that have not yet occurred. However, the Portfolio has not had prior claims or losses pursuant to these contracts.

9. PURCHASES AND SALES OF SECURITIES

The length of time the Portfolio has held a particular security is not generally a consideration in investment decisions. A change in the securities held by the Portfolio is known as "portfolio turnover." The Portfolio may engage in frequent and active trading of portfolio securities to achieve its investment objective, particularly during periods of volatile market movements. High portfolio turnover may involve correspondingly greater transaction costs to the Portfolio, including brokerage commissions or dealer mark-ups and other transaction costs on the sale of securities and reinvestments in other securities. Such sales may also result in realization of taxable capital gains, including short-term capital gains (which are generally taxed at ordinary income tax rates). The transaction costs and tax effects associated with portfolio turnover may adversely affect the Portfolio's performance. The portfolio turnover rates are reported in the Financial Highlights.

Purchases and sales of securities (excluding short-term investments) for the period ended June 30, 2016, were as follows (amounts in thousands†):

U S Government/ Agency		All Other	
Purchases	Sales	Purchases	Sales
$ 0	$ 0	$ 324,879	$ 394,232

† A zero balance may reflect actual amounts rounding to less than one thousand.

10. SHARES OF BENEFICIAL INTEREST

The Portfolio may issue an unlimited number of shares of beneficial interest with a $0.001 par value. Changes in shares of beneficial interest were as follows (shares and amounts in thousands):

	Six Months Ended 06/30/2016		Year Ended 12/31/2015	
	Shares	Amount	Shares	Amount
Receipts for shares sold				
Institutional Class	36	$ 336	283	$ 2,854
Class M	325	3,100	746	7,633
Administrative Class	1,759	16,620	4,112	41,925
Advisor Class	1,629	15,698	1,190	12,058
Issued as reinvestment of distributions				
Institutional Class	4	43	27	256
Class M	42	410	236	2,274
Administrative Class	430	4,094	2,159	20,554
Advisor Class	172	1,653	876	8,418
Cost of shares redeemed				
Institutional Class	(36)	(340)	(712)	(7,094)
Class M	(1,314)	(12,572)	(1,821)	(18,712)
Administrative Class	(7,318)	(67,884)	(16,924)	(170,478)
Advisor Class	(3,203)	(29,987)	(8,825)	(89,731)
Net increase (decrease) resulting from Portfolio share transactions	(7,474)	$ (68,829)	(18,653)	$ (190,043)

As of June 30, 2016, two shareholders each owned 10% or more of the Portfolio's total outstanding shares comprising 61% of the Portfolio. One shareholder is a related party and comprises 47% of the Portfolio. Related parties may include, but are not limited to, the investment manager and its affiliates, affiliated broker dealers, fund of funds and directors or employees of the Trust or Adviser.

11. REGULATORY AND LITIGATION MATTERS

The Portfolio is not named as a defendant in any material litigation or arbitration proceedings and is not aware of any material litigation or claim pending or threatened against it.

PIMCO has received a Wells Notice from the staff of the U.S. Securities and Exchange Commission ("SEC") that relates to the PIMCO Total Return Active Exchange-Traded Fund ("BOND"), a series of PIMCO ETF Trust. The notice indicates the staff's preliminary determination to recommend that the SEC commence a civil action against PIMCO stemming from a non-public investigation relating to BOND. A Wells Notice is neither a formal allegation of wrongdoing nor a finding that any law was violated.

This matter principally pertains to the valuation of smaller sized positions in non-agency mortgage-backed securities purchased by BOND between its inception on February 29, 2012 and June 30, 2012, BOND's performance disclosures for that period, and PIMCO's compliance policies and procedures related to these matters.

The Wells process provides PIMCO with the opportunity to demonstrate to the SEC staff why it believes its conduct was appropriate, in keeping with industry standards, and that no action should be taken. PIMCO believes that this matter is unlikely to have a material adverse effect on any Portfolio or on PIMCO's ability to provide investment management services to any Portfolio.

The foregoing speaks only as of the date of this report.

12. FEDERAL INCOME TAX MATTERS

The Portfolio intends to qualify as a regulated investment company under Subchapter M of the Internal Revenue Code (the "Code") and distribute all of its taxable income and net realized gains, if applicable, to shareholders. Accordingly, no provision for Federal income taxes has been made.

The Portfolio may be subject to local withholding taxes, including those imposed on realized capital gains. Any applicable foreign capital gains tax is accrued daily based upon net unrealized gains, and may be payable following the sale of any applicable investments.

In accordance with U.S. GAAP, the Adviser has reviewed the Portfolio's tax positions for all open tax years. As of June 30, 2016, the Portfolio has recorded no liability for net unrecognized tax benefits relating to uncertain income tax positions it has taken or expects to take in future tax returns.

The Portfolio files U.S. tax returns. While the statute of limitations remains open to examine the Portfolio's U.S. tax returns filed for the fiscal years ending in 2013-2015, no examinations are in progress or anticipated at this time. The Portfolio is not aware of any tax positions for which it is reasonably possible that the total amounts of unrecognized tax benefits will significantly change in the next twelve months.

The Portfolio, through the Underlying PIMCO Funds may gain exposure to the commodities markets primarily through index-linked notes, and may invest in other commodity-linked derivative investments, including commodity swap agreements, options, futures contracts, options on futures contracts and foreign funds investing in similar commodity-linked derivatives.

One of the requirements for favorable tax treatment as a regulated investment company under the Code is that the Portfolio must derive at least 90% of its gross income from certain qualifying sources of income. The IRS has issued a revenue ruling which holds that income derived from commodity index-linked swaps is not qualifying income under Subchapter M of the Code. The IRS has also issued private letter rulings in which the IRS specifically concluded that income from certain commodity index-linked notes is qualifying income. The IRS has also issued private rulings in which the IRS specifically concluded that income derived from investment in a subsidiary, which invests primarily in commodity-linked swaps, will also be qualifying income. Based on the reasoning in such rulings, the Portfolio will continue to seek to gain exposure to the commodity markets through indirect investments in a Subsidiary.

It should be noted, however, that the IRS currently has suspended the issuance of such rulings pending further review. There can be no assurance that the IRS will not change its position that income derived from commodity-linked notes and wholly-owned subsidiaries is qualifying income. Furthermore, the tax treatment of commodity-linked notes, other commodity-linked derivatives, and the Portfolio's indirect investments in the Subsidiaries of the Underlying PIMCO Funds may otherwise be adversely affected by future legislation, Treasury Regulations and/or guidance issued by the IRS. Such developments could affect the character, timing and/or amount of the Portfolio's taxable income or any distributions made by the Portfolio or result in the inability of the Portfolio to operate as described in its Prospectus. If, during a taxable year, the Underlying PIMCO Fund's Commodity Subsidiary's taxable losses (and other deductible items) exceed its income and gains, the net loss will not pass through to the Underlying PIMCO Fund as a deductible amount for income tax purposes. In the event that the Commodity Subsidiary's taxable gains exceed its losses and other deductible items during a taxable year, the net gain will pass through to the Underlying PIMCO Fund as income for Federal income tax purposes.

If, during a taxable year, the Underlying PIMCO Fund's Commodity Subsidiary's taxable losses (and other deductible items) exceed its income and gains, the net loss will not pass through to the Underlying PIMCO Fund as a deductible amount for income tax purposes. In the event that the Commodity Subsidiary's taxable gains exceed its losses and other deductible items during a taxable year, the net gain will pass through to the Underlying PIMCO Fund as income for Federal income tax purposes.

Shares of the Portfolio currently are sold to segregated asset accounts ("Separate Accounts") of insurance companies that fund variable annuity contracts and variable life insurance policies ("Variable Contracts"). Please refer to the prospectus for the Separate Account and Variable Contract for information regarding Federal income tax treatment of distributions to the Separate Account.

As of December 31, 2015, the Portfolio had accumulated capital losses expiring in the following years (amounts in thousands). The Portfolio will resume capital gain distributions in the future to the extent gains are realized in excess of accumulated capital losses.

	Expiration of Accumulated Capital Losses		
	12/31/2016	12/31/2017	12/31/2018
PIMCO All Asset Portfolio	$ —	$ 129,163	$ —

Under the Regulated Investment Company Act of 2010, a portfolio is permitted to carry forward any new capital losses for an unlimited period. Additionally, such capital losses that are carried forward will retain their character as either short-term or long-term capital losses rather than being considered all short-term under previous law.

As of December 31, 2015, the Portfolio had the following post-effective capital losses with no expiration (amounts in thousands):

	Short-Term	Long-Term
PIMCO All Asset Portfolio	$ 17,938	$ 9,838

As of June 30, 2016, the aggregate cost and the net unrealized appreciation (depreciation) of investments for federal income tax purposes are as follows (amounts in thousands):

Federal Tax Cost	Aggregate Gross Unrealized Appreciation	Aggregate Gross Unrealized (Depreciation)	Net Unrealized Appreciation (Depreciation) [1]
$ 879,708	$ 25,238	$ (70,453)	$ (45,215)

[1] Primary differences, if any, between book and tax net unrealized appreciation (depreciation) are attributable to wash sale loss deferrals for federal income tax purposes.

Dear PIMCO Variable Insurance Trust Shareholder,

Please find enclosed the Semiannual Report for the PIMCO Variable Insurance Trust covering the six-month reporting period ended June 30, 2016. The following pages contain specific details about the Portfolio's investment performance and a discussion of the factors that most affected performance over the reporting period.

Outside of the reporting period, PIMCO announced on July 19, 2016 that the firm's Managing Directors have selected Emmanuel (Manny) Roman as PIMCO's next Chief Executive Officer. PIMCO's current CEO Douglas Hodge will assume a new role as Managing Director and Senior Advisor when Mr. Roman joins PIMCO on November 1st.

The announcement of Mr. Roman as PIMCO's CEO is the culmination of a process undertaken by the firm to hire a senior executive who would add leadership and strategic insights combined with a deep appreciation of PIMCO's diversified global businesses, investment process and focus on superior investment performance and client-service. Mr. Roman's appointment has the full support of the firm's leadership including Mr. Hodge, PIMCO's President Jay Jacobs, the firm's Executive Committee and its Managing Directors. Mr. Roman has nearly 30 years of experience in the investment industry, with expertise in fixed income and proven executive leadership, most recently as CEO of Man Group PLC, one of the world's largest publicly-traded alternative asset managers and a leader in liquid, high-alpha investment strategies.

Highlights of the financial markets during the six-month fiscal reporting period include:

- The first segment of the reporting period through mid-February 2016 was marked by ongoing concerns over the global impact of a slowdown in the Chinese economy, which drove commodity prices and inflation expectations generally lower. By March, a recovery in the price of oil and expectations of lower interest rates for longer supported a rally in risk assets. The Bank of Japan ("BOJ") and the People's Bank of China, for example, indicated their intent for further policy easing, with the BOJ resorting to a negative interest rate policy in February 2016. The European Central Bank ("ECB") also resorted to unconventional monetary policy with additional easing measures and an expansion of its quantitative easing program by shifting its focus toward domestic credit, pushing government sovereign yields into negative territory. In June 2016, the ECB began purchasing corporate bonds to help invigorate economic growth and stimulate inflation in the region.
- In the U.S., concerns regarding the global impact of tightening financial conditions and renewed U.S. dollar strength kept the Federal Reserve ("Fed") on hold at their June 2016 meeting, after having slightly raised interest rates at their December 2015 meeting. In addition, the U.S. dollar appreciated against most European and emerging market currencies, while falling against the Japanese yen. The U.S. interest rate yield curve flattened as the ten-year U.S. Treasury yield rallied to all-time lows and short-term interest rates rose with the initial Fed rate hike in December 2015. Revised first quarter 2016 U.S. gross domestic product ("GDP") data released in late June was marginally stronger as retail sales, housing and consumer sentiment data indicated an improving economy.
- Market movements and news headlines at the end of the reporting period were dominated by the unexpected outcome of the U.K. referendum on June 23, 2016. Initial investor reaction to the Brexit vote was largely "risk-off" as various assets re-priced to the surprise outcome, with U.S. Treasuries, the Japanese yen and gold headlining a safe-haven rally. However, aside from the Pound Sterling and European and Japanese equities, most asset classes generally recovered in the ensuing week as investors reassessed the impact of the Brexit vote on global growth expectations.
- U.S. Treasuries, as represented by the Barclays U.S. Treasury Index, returned 5.37% for the reporting period. Yields declined across the majority of the U.S. Treasury yield curve as a more dovish tone from the Fed coupled with the surprise result of the U.K. referendum pushed expectations for policy normalization further into the future. The benchmark ten-year U.S. Treasury note yielded 1.49% at the end of the reporting period, down from 2.27% on December 31, 2015. The Barclays U.S. Aggregate Index, a widely used index of U.S. investment-grade bonds, returned 5.31% for the reporting period.
- U.S. Treasury Inflation-Protected Securities ("TIPS"), as represented by the Barclays U.S. TIPS Index, returned 6.24% over the reporting period. U.S. real interest rates followed nominal yields sharply lower as concerns surrounding China's growth prospects early in the reporting period coupled with uncertainty over the U.K.

referendum created a strong flight-to-quality bid and more tempered expectations for near-term Fed rate hikes. Despite posting positive absolute returns, U.S. TIPS were outpaced by comparable nominal U.S. Treasuries as market-based inflation expectations ended the period lower. U.S. breakeven inflation rates were pressured lower by low headline inflation data and outsized demand for safe-haven nominal U.S. Treasuries.

- Diversified commodities, as represented by the Bloomberg Commodity Index Total Return, returned 13.25% over the reporting period. Prices on broad commodities rebounded, led higher primarily by energy and precious metal prices. Crude oil prices rose markedly after reaching multi-year lows in January 2016, driven higher by strong demand and production outages. Within precious metals, gold prices were the beneficiary of strong safe-haven demand around risk-off events, particularly in June 2016 following the U.K.'s historic vote to leave the European Union. Agriculture commodity prices also advanced over the period, led by sugar prices which rallied on Brazilian rainfall, Indian import demand as well as strength in the Brazilian real.
- Agency mortgage-backed securities ("MBS"), as represented by the Barclays U.S. MBS Fixed Rate Index, returned 3.11% over the reporting period and underperformed like-duration U.S. Treasuries amid headwinds from heavy supply and refinancing concerns. Non-Agency MBS prices were higher and spreads tightened, as the sector continued to benefit from favorable technicals and stable fundamentals. Positive representation and warranty settlement developments also benefited the sector.
- U.S. investment grade credit, as represented by the Barclays U.S. Credit Index, returned 7.54% over the reporting period, as falling credit yields and a commodity-fueled rally drove returns over the reporting period. Developed market global high yield bonds, as measured by the BofA Merrill Lynch Developed Markets High Yield Constrained Index (USD Hedged), returned 8.02% over the reporting period. Strong performance from commodity sectors and risk-on sentiment drove returns, as asset sales and equity issuance strengthened balance sheets. Meanwhile, high yield bond mutual funds saw strong inflows, as investors continued to seek higher-yielding instruments.
- Emerging market ("EM") external debt, as represented by the JPMorgan Emerging Markets Bond Index (EMBI) Global, returned 10.90% over the reporting period. EM local bonds, as represented by the JPMorgan Government Bond Index-Emerging Markets Global Diversified Index (Unhedged), returned 14.02% over the reporting period. The slowdown in China continued apace, though policymakers have used expanded credit availability and a gradual depreciation of the Chinese currency to soften the landing. Higher commodity prices and improving terms of trade helped EM currencies broadly gain during the reporting period.
- Global equity markets showed mixed performance amid a period marked by economic uncertainty, increased volatility and concerns around the U.K. referendum. U.S. equities, as represented by the S&P 500 Index, returned 3.84% over the reporting period. EM equities, as represented by the MSCI Emerging Markets Index (Net Dividends in USD), returned 6.41% over the same period. In contrast, developed market equities outside the U.S., as represented by the MSCI EAFE Net Dividend Index (USD Unhedged), declined 4.42% over the reporting period.

Thank you once again for the trust you have placed in us. We value your commitment and will continue to work diligently to meet your broad investment and investment solution needs.

Sincerely,

Brent R. Harris

Brent R. Harris
Chairman of the Board,
PIMCO Variable Insurance Trust

August 22, 2016

Past performance is no guarantee of future results. Unless otherwise noted, index returns reflect the reinvestment of income dividends and capital gains, if any, but do not reflect fees, brokerage commissions or other expenses of investing. It is not possible to invest directly in an unmanaged index.

Important Information About the PIMCO Real Return Portfolio

PIMCO Variable Insurance Trust (the "Trust") is an open-end management investment company currently consisting of twenty separate investment portfolios, including the PIMCO Real Return Portfolio (the "Portfolio"). The Portfolio is only available as a funding vehicle under variable life insurance policies or variable annuity contracts issued by insurance companies ("Variable Contracts"). Individuals may not purchase shares of the Portfolio directly. Shares of the Portfolio also may be sold to qualified pension and retirement plans outside of the separate account context.

We believe that bond funds have an important role to play in a well-diversified investment portfolio. It is important to note, however, that in an environment where interest rates may trend upward, rising rates would negatively impact the performance of most bond funds, and fixed-income securities and other instruments held by the Portfolio are likely to decrease in value. A wide variety of factors can cause interest rates to rise (e.g., central bank monetary policies, inflation rates, general economic conditions, etc.). In addition, changes in interest rates can be sudden and unpredictable, and there is no guarantee that Fund management will anticipate such movement accurately. The Portfolio may lose money as a result of movements in interest rates.

As of the date of this report, interest rates in the U.S. and many parts of the world, including certain European countries, are near historically low levels. As such, bond funds may currently face an increased exposure to the risks associated with a rising interest rate environment. This is especially true as the Fed ended its quantitative easing program and has begun, and may continue, to raise interest rates. Further, while bond markets have steadily grown over the past three decades, dealer inventories of corporate bonds are near historic lows in relation to market size. As a result, there has been a significant reduction in the ability of dealers to "make markets."

Bond funds and individual bonds with a longer duration (a measure used to determine the sensitivity of a security's price to changes in interest rates) tend to be more sensitive to changes in interest rates, usually making them more volatile than securities or funds with shorter durations. All of the factors mentioned above, individually or collectively, could lead to increased volatility and/or lower liquidity in the fixed income markets or negatively impact the Portfolio's performance or cause the Portfolio to incur losses. As a result, the Portfolio may experience increased shareholder redemptions, which, among other things, could further reduce the net assets of the Portfolio.

The Portfolio may be subject to various risks as described in the Portfolio's prospectus. Some of these risks may include, but are not limited to, the following: interest rate risk, call risk, credit risk, high yield risk, market risk, issuer risk, liquidity risk, derivatives risk, equity risk, mortgage-related and other asset-backed securities risk, foreign (non-U.S.) investment risk, emerging markets risk, sovereign debt risk, currency risk, leveraging risk, management risk and short sale risk. A complete description of these and other risks is contained in the Portfolio's prospectus.

The Portfolio may use derivative instruments for hedging purposes or as part of an investment strategy. Use of these instruments may involve certain costs and risks such as liquidity risk, interest rate risk, market risk, credit risk, leverage risk, management risk and the risk that the Portfolio may not be able to close out a position when it would be most advantageous to do so. Certain derivative transactions may have a leveraging effect on the Portfolio. For example, a small investment in a derivative instrument may have a significant impact on the Portfolio's exposure to interest rates, currency exchange rates or other investments. As a result, a relatively small price movement in an asset, instrument or component of the index underlying a derivative instrument may cause an immediate and substantial loss or gain, which translates into heightened volatility for the Portfolio. The Portfolio may engage in such transactions regardless of whether the Portfolio owns the asset, instrument or components of the index underlying the derivative instrument. The Portfolio may invest a significant portion of its assets in these types of instruments. If it does, the Portfolio's investment exposure could far exceed the value of its portfolio securities and its investment performance could be primarily dependent upon securities it does not own. Investing in foreign (non-U.S.) securities may entail risk due to foreign (non-U.S.) economic and political developments; this risk may be increased when investing in emerging markets. For example, if the Portfolio invests in emerging market debt, it may face increased exposure to interest rate, liquidity, volatility, and redemption risk due to the specific economic, political, geographical, or legal background of the foreign (non-U.S.) issuer.

High yield bonds typically have a lower credit rating than other bonds. Lower-rated bonds generally involve a greater risk to principal than higher-rated bonds. Further, markets for lower-rated bonds are typically less liquid than for higher-rated bonds, and public information is usually less abundant in markets for lower-rated bonds. Thus, high yield investments increase the chance that the Portfolio will lose money. The credit quality of a particular security or group of securities does not ensure the stability or safety of the overall portfolio. Mortgage-related and asset-backed securities represent interests in "pools" of mortgages or other assets such as consumer loans or receivables. As a general matter, mortgage-related and asset-backed securities are subject to interest rate risk, extension risk, prepayment risk, and credit risk. These risks largely stem from the fact that returns on mortgage-related and asset-backed securities depend on the ability of the underlying assets to generate cash flow.

The geographical classification of foreign (non-U.S.) securities in this report are classified by the country of incorporation of a holding. In certain instances, a security's country of incorporation may be different from its country of economic exposure.

On the Portfolio Summary page in this Shareholder Report, the Average Annual Total Return table and Cumulative Returns chart measure performance assuming that any dividend and capital gain distributions were reinvested. The Cumulative Returns chart reflects only Administrative Class performance. Performance for Institutional Class, Class M and Advisor Class shares, if applicable, may be higher or lower based on each class's expense ratios. The Portfolio's total annual operating expense ratios on the Portfolio Summary page are as of the currently effective prospectus, as supplemented to date. The Portfolio measures its performance against a broad-based securities market index ("benchmark index"). The benchmark index does not take into account fees, expenses, or taxes. The Portfolio's past performance, before and after taxes, is not necessarily an indication of how the Portfolio will perform in the future.

The following table discloses the inception dates of the Portfolio and its respective share classes along with the Portfolio's diversification status as of period end:

Portfolio Name	Portfolio Inception	Institutional Class	Class M	Administrative Class	Advisor Class	Diversification Status
PIMCO Real Return Portfolio	09/30/99	04/10/00	—	09/30/99	02/28/06	Diversified

An investment in the Portfolio is not a bank deposit and is not guaranteed or insured by the Federal Deposit Insurance Corporation ("FDIC") or any other government agency. It is possible to lose money on investments in the Portfolio.

The Trustees are responsible generally for overseeing the management of the Trust. The Trustees authorize the Trust to enter into service agreements with the Adviser, the Distributor, the Administrator and other service providers in order to provide, and in some cases authorize service providers to procure through other parties, necessary or desirable services on behalf of the Trust and the Portfolio. Shareholders are not parties to or third-party beneficiaries of such service agreements. Neither this Portfolio's prospectus nor summary prospectus, the Trust's Statement of Additional Information ("SAI"), any contracts filed as exhibits to the Trust's registration statement, nor any other communications, disclosure documents or regulatory filings (including this report) from or on behalf of the Trust or the Portfolio creates a contract between or among any shareholder of the Portfolio, on the one hand, and the Trust, the Portfolio, a service provider to the Trust or the Portfolio, and/or the Trustees or officers of the Trust, on the other hand. The Trustees (or the Trust and its officers, service providers or other delegates acting under authority of the Trustees) may amend the most recent prospectus or use a new prospectus, summary prospectus or SAI with respect to the Portfolio or the Trust, and/or amend, file and/or issue any other communications, disclosure documents or regulatory filings, and may amend or enter into any contracts to which the Trust or the Portfolio is a party, and interpret the investment objective(s), policies, restrictions and contractual provisions applicable to the Portfolio, without shareholder input or approval, except in circumstances in which shareholder approval is specifically required by law (such as changes to fundamental investment policies) or where a shareholder approval requirement is specifically disclosed in the Trust's then-current prospectus or SAI.

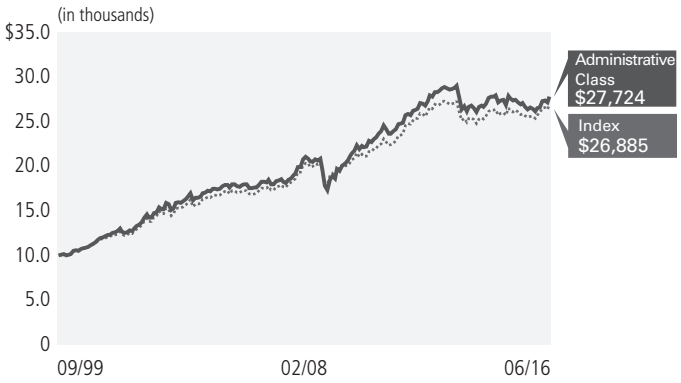
PIMCO has adopted written proxy voting policies and procedures ("Proxy Policy") as required by Rule 206(4)-6 under the Investment Advisers Act of 1940, as amended. The Proxy Policy has been adopted by the Trust as the policies and procedures that PIMCO will use when voting proxies on behalf of the Portfolio. A description of the policies and procedures that PIMCO uses to vote proxies relating to portfolio securities of the Portfolio, and information about how the Portfolio voted proxies relating to portfolio securities held during the most recent twelve-month period ended June 30, are available without charge, upon request, by calling the Trust at (888) 87-PIMCO, on the Portfolio's website at pvit.pimco-funds.com, and on the Securities and Exchange Commission's ("SEC") website at www.sec.gov.

The Portfolio files its complete schedule of portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. A copy of the Trust's Form N-Q is available on the SEC's website at www.sec.gov and may be reviewed and copied at the SEC's Public Reference Room in Washington, D.C., and is available without charge, upon request, by calling the Trust at (888) 87-PIMCO and on the Portfolio's website at pvit.pimco-funds.com. Information on the operation of the Public Reference Room may be obtained by calling 1-800-SEC-0330.

The Trust is distributed by PIMCO Investments LLC, 1633 Broadway, New York, New York 10019.

PIMCO Real Return Portfolio

Cumulative Returns Through June 30, 2016



$10,000 invested at the end of the month when the Portfolio's Administrative Class commenced operations.

Allocation Breakdown†

U.S. Treasury Obligations	64.8%
Short-Term Instruments‡	12.8%
Corporate Bonds & Notes	7.1%
Sovereign Issues	6.1%
U.S. Government Agencies	5.0%
Other	4.2%

† % of Investments, at value as of 06/30/2016. Financial derivative instruments, if any, are excluded.

‡ Includes Central Funds used for Cash Management Purposes.

Investment Objective and Strategy Overview

» PIMCO Real Return Portfolio seeks maximum real return, consistent with preservation of real capital and prudent investment management, by investing under normal circumstances at least 80% of its net assets in inflation-indexed bonds of varying maturities issued by the U.S. and non-U.S. governments, their agencies or instrumentalities and corporations, which may be represented by forwards or derivatives such as options, futures contracts or swap agreements. Assets not invested in inflation-indexed bonds may be invested in other types of Fixed Income Instruments. "Fixed Income Instruments" include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. Inflation-indexed bonds are fixed income securities that are structured to provide protection against inflation.

Average Annual Total Return for the period ended June 30, 2016

		6 Months*	1 Year	5 Years	10 Years	Inception**
	PIMCO Real Return Portfolio Institutional Class	6.22%	3.38%	2.39%	4.81%	6.32%
—	PIMCO Real Return Portfolio Administrative Class	6.14%	3.22%	2.23%	4.66%	6.28%
	PIMCO Real Return Portfolio Advisor Class	6.09%	3.12%	2.13%	4.55%	4.21%
·····	Barclays U.S. TIPS Index±	6.24%	4.35%	2.63%	4.75%	6.08%***

All Portfolio returns are net of fees and expenses.

* Cumulative return.

** For class inception dates please refer to the Important Information.

*** Average annual total return since 09/30/1999.

± Barclays U.S. TIPS Index is an unmanaged market index comprised of all U.S. Treasury Inflation-Protected Securities rated investment grade (Baa3 or better), have at least one year to final maturity, and at least $250 million par amount outstanding.

It is not possible to invest directly in an unmanaged index.

Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Current performance may be lower or higher than performance shown. Investment return and the principal value of an investment will fluctuate. Shares may be worth more or less than original cost when redeemed. The Portfolio's performance does not reflect the deduction of additional charges and expenses imposed in connection with investing in Variable Contracts, which will reduce returns. For performance current to the most recent month-end, visit http://pvit.pimco-funds.com.

The Portfolio's total annual operating expense ratio as stated in the Portfolio's current prospectus, as supplemented to date, is 0.63% for Institutional Class shares, 0.78% for Administrative Class shares, and 0.88% for Advisor Class shares.

Portfolio Insights

Following are key factors impacting the Portfolio's performance during the reporting period:

» An underweight to U.K. nominal duration (or sensitivity to changes in market interest rates) detracted from relative performance, as yields in Britain fell.

» An underweight to U.S. nominal duration expressed via interest rate swaps detracted from relative performance, as interest rate swap yields fell across most maturities.

» An underweight to German nominal duration detracted from relative performance, as German yields fell.

» Exposure to U.S. Treasury Inflation-Protected Securities ("TIPS") benefited absolute performance, as U.S. TIPS posted positive returns.

» An overweight to TIPS benefited relative performance, as U.S. TIPS posted positive returns.

» An underweight to long-term U.K. breakeven inflation spreads (or the yield differential between U.K. nominal gilts and like-maturity U.K. index-linked gilts) benefited relative performance, as 30-year breakeven inflation spreads fell.

Example

As a shareholder of the Portfolio, you incur two types of costs: (1) transaction costs and (2) ongoing costs, including management fees, distribution and/or service (12b-1) fees (if applicable), and other Portfolio expenses. The Example is intended to help you understand your ongoing costs (in dollars) of investing in the Portfolio and to compare these costs with the ongoing costs of investing in other mutual funds.

The Expense Example does not reflect any fees or other expenses imposed by the Variable Contracts. If it did, the expenses reflected in the Expense Example would be higher. The Example is based on an investment of $1,000 invested at the beginning of the period and held from January 1, 2016 to June 30, 2016 unless noted otherwise in the table and footnotes below.

Actual Expenses

The information in the table under the heading "Actual" provides information about actual account values and actual expenses. You may use the information in these rows, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by $1,000 (for example, an $8,600 account value divided by $1,000 = 8.60), then multiply the result by the number in the appropriate column for your share class, in the column titled "Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes

The information in the table under the heading "Hypothetical (5% return before expenses)" provides information about hypothetical account values and hypothetical expenses based on the Portfolio's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Portfolio's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Portfolio and other portfolios. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other portfolios.

Please note that the expenses shown in the table are meant to highlight your ongoing costs only and do not reflect any transactional costs. Therefore, the information under the heading "Hypothetical (5% return before expenses)" is useful in comparing ongoing costs only, and will not help you determine the relative total costs of owning different portfolios. In addition, if these transactional costs were included, your costs would have been higher.

Expense ratios may vary period to period because of various factors, such as an increase in expenses that are not covered by the management fees such as fees and expenses of the independent trustees and their counsel, extraordinary expenses and interest expense.

	Actual			Hypothetical (5% return before expenses)			
	Beginning Account Value (01/01/16)	Ending Account Value (06/30/16)	Expenses Paid During Period*	Beginning Account Value (01/01/16)	Ending Account Value (06/30/16)	Expenses Paid During Period*	Net Annualized Expense Ratio**
Institutional Class	$ 1,000.00	$ 1,062.20	$ 3.78	$ 1,000.00	$ 1,020.79	$ 3.71	0.75%
Administrative Class	1,000.00	1,061.40	4.54	1,000.00	1,020.05	4.45	0.90
Advisor Class	1,000.00	1,060.90	5.04	1,000.00	1,019.56	4.94	1.00

* Expenses Paid During Period are equal to the net annualized expense ratio for the class, multiplied by the average account value over the period, multiplied by 179/366 (to reflect the one-half year period). Overall fees and expenses of investing in the Portfolio will be higher because the example does not reflect variable contract fees and expenses.

** Net Annualized Expense Ratio is reflective of any applicable contractual fee waivers and/or expense reimbursements or voluntary fee waivers. Details regarding fee waivers can be found in Note 8 in the Notes to Financial Statements.

NOTES TO SCHEDULE OF INVESTMENTS (AMOUNTS IN THOUSANDS*, EXCEPT NUMBER OF CONTRACTS):

* A zero balance may reflect actual amounts rounding to less than one thousand.

^ Security is in default.

(a) Coupon represents a weighted average yield to maturity.

(b) Zero coupon security.

(c) Principal amount of security is adjusted for inflation.

(d) Perpetual maturity; date shown, if applicable, represents next contractual call date.

SWAP AGREEMENTS:

CREDIT DEFAULT SWAPS ON CREDIT INDICES - BUY PROTECTION [1]

Index/Tranches	Fixed (Pay) Rate	Maturity Date	Notional Amount [2]	Market Value [3]	Unrealized (Depreciation)	Variation Margin Asset	Variation Margin Liability
CDX.HY-26 5-Year Index	(5.000)%	06/20/2021	$ 48,100	$ (1,618)	$ (690)	$ 0	$ (221)

(1) If the Portfolio is a buyer of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Portfolio will either (i) receive from the seller of protection an amount equal to the notional amount of the swap and deliver the referenced obligation or underlying securities comprising the referenced index or (ii) receive a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

(2) The maximum potential amount the Portfolio could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

(3) The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices' credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

CREDIT DEFAULT SWAPS ON CREDIT INDICES - SELL PROTECTION [2]

Counterparty	Index/Tranches	Fixed Receive Rate	Maturity Date	Notional Amount [4]	Premiums (Received)	Unrealized Appreciation	Swap Agreements, at Value [5]	
							Asset	Liability
DUB	CMBX.NA.AAA.8 Index	0.500%	10/17/2057	$ 4,300	$ (224)	$ 64	$ 0	$ (160)
GST	CMBX.NA.AAA.8 Index	0.500	10/17/2057	1,400	(73)	21	0	(52)
					$ (297)	$ 85	$ 0	$ (212)

[2] If the Portfolio is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Portfolio will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

[3] Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate or sovereign issues as of period end serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default for the credit derivative. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity's credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

[4] The maximum potential amount the Portfolio could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

[5] The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices' credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

FINANCIAL DERIVATIVE INSTRUMENTS: OVER THE COUNTER SUMMARY

The following is a summary by counterparty of the market value of OTC financial derivative instruments and collateral (received)/pledged as of June 30, 2016:

(j) Securities with an aggregate market value of $41,833 have been pledged as collateral for financial derivative instruments as governed by International Swaps and Derivatives Association, Inc. master agreements as of June 30, 2016.

	Financial Derivative Assets				Financial Derivative Liabilities						
Counterparty	Forward Foreign Currency Contracts	Purchased Options	Swap Agreements	Total Over the Counter	Forward Foreign Currency Contracts	Written Options	Swap Agreements	Total Over the Counter	Net Market Value of OTC Derivatives	Collateral (Received)/ Pledged	Net Exposure [6]

[6] Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from OTC financial derivative instruments can only be netted across transactions governed under the same master agreement with the same legal entity. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

FAIR VALUE OF FINANCIAL DERIVATIVE INSTRUMENTS

The following is a summary of the fair valuation of the Portfolio's derivative instruments categorized by risk exposure. See Note 7, Principal Risks, in the Notes to Financial Statements on risks of the Portfolio.

Fair Values of Financial Derivative Instruments on the Statement of Assets and Liabilities as of June 30, 2016:

	Derivatives not accounted for as hedging instruments: Commodity Contracts	Credit Contracts	Equity Contracts	Foreign Exchange Contracts	Interest Rate Contracts	Total
Financial Derivative Instruments - Assets						
Exchange-traded or centrally cleared						
Futures	$ 71	$ 0	$ 0	$ 0	$ 410	$ 481
Swap Agreements *	0	0	0	0	1,919	1,919
	$ 71	$ 0	$ 0	$ 0	$ 2,329	$ 2,400
Over the counter						
Forward Foreign Currency Contracts	$ 0	$ 0	$ 0	$ 9,892	$ 0	$ 9,892

Totals	$ 503,981	$ 3,577,810	$ 0	$ 4,081,791

There were no significant transfers between Levels 1, 2, or 3 during the period ended June 30, 2016.

1. ORGANIZATION

PIMCO Variable Insurance Trust (the "Trust") was established as a Delaware business trust on October 3, 1997. The Trust is registered under the Investment Company Act of 1940, as amended (the "Act"), as an open-end management investment company. The Trust is designed to be used as an investment vehicle by separate accounts of insurance companies that fund variable annuity contracts and variable life insurance policies and by qualified pension and retirement plans. Information presented in these financial statements pertains to the Institutional Class, Administrative Class, and Advisor Class shares of the PIMCO Real Return Portfolio (the "Portfolio") offered by the Trust. Pacific Investment Management Company LLC ("PIMCO") serves as the investment adviser (the "Adviser") for the Portfolio.

2. SIGNIFICANT ACCOUNTING POLICIES

The following is a summary of significant accounting policies consistently followed by the Portfolio in the preparation of its financial statements in conformity with accounting principles generally accepted in the United States of America ("U.S. GAAP"). The Portfolio is treated as an investment company under the reporting requirements of U.S. GAAP. The preparation of financial statements in accordance with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increases and decreases in net assets from operations during the reporting period. Actual results could differ from those estimates.

(a) Securities Transactions and Investment Income Securities transactions are recorded as of the trade date for financial reporting purposes. Securities purchased or sold on a when-issued or delayed-delivery basis may be settled 15 days or more after the trade date. Realized gains (losses) from securities sold are recorded on the identified cost basis. Dividend income is recorded on the ex-dividend date, except certain dividends from foreign securities where the ex-dividend date may have passed, which are recorded as soon as the Portfolio is informed of the ex-dividend date. Interest income, adjusted for the accretion of discounts and amortization of premiums, is recorded on the accrual basis from settlement date, with the exception of securities with a forward starting effective date, where interest income is recorded on the accrual basis from effective date. For convertible securities, premiums attributable to the conversion feature are not amortized. Estimated tax liabilities on certain foreign securities are recorded on an accrual basis and are reflected as components of interest income or net change in unrealized appreciation (depreciation) on investments on the Statement of Operations, as appropriate. Tax liabilities realized as a result of such security sales are reflected as a component of net realized gain (loss) on investments on the Statement of Operations. Paydown gains (losses) on mortgage-related and other asset-backed securities are recorded as components of interest income on the Statement of Operations. Income or short-term capital gain distributions received from registered investment companies are recorded as dividend income. Long-term capital gain distributions received from registered investment companies are recorded as realized gains.

Debt obligations may be placed on non-accrual status and related interest income may be reduced by ceasing current accruals and writing off interest receivable when the collection of all or a portion of interest has become doubtful based on consistently applied procedures. A debt obligation is removed from non-accrual status when the issuer resumes interest payments or when collectability of interest is probable.

(b) Cash and Foreign Currency The functional and reporting currency for the Portfolio is the U.S. dollar. The market values of foreign securities, currency holdings and other assets and liabilities denominated in foreign currencies are translated into U.S. dollars based on the current exchange rates each business day. Purchases and sales of securities and income and expense items denominated in foreign currencies, if any, are translated into U.S. dollars at the exchange rate in effect on the transaction date. The Portfolio does not separately report the effects of changes in foreign exchange rates from changes in market prices on securities held. Such changes are included in net realized gain (loss) and net change in unrealized appreciation (depreciation) from investments on the Statement of Operations. The Portfolio may invest in foreign currency-denominated securities and may engage in foreign currency transactions either on a spot (cash) basis at the rate prevailing in the currency exchange market at the time or through a forward foreign currency contract (see Financial Derivative Instruments, if any). Realized foreign exchange gains (losses) arising from sales of spot foreign currencies, currency gains (losses) realized between the trade and settlement dates on securities transactions and the difference between the recorded amounts of dividends, interest, and foreign withholding taxes and the U.S. dollar equivalent of the amounts actually received or paid are included in net realized gain (loss) on foreign currency transactions on the Statement of Operations. Net unrealized foreign exchange gains (losses) arising from changes in foreign exchange rates on foreign denominated assets and liabilities other than investments in securities held at the end of the reporting period are included in net change in unrealized appreciation (depreciation) on foreign currency assets and liabilities on the Statement of Operations.

(c) Multiclass Operations Each class offered by the Trust has equal rights as to assets and voting privileges (except that shareholders of a class have exclusive voting rights regarding any matter relating solely to that class of shares). Income and non-class specific expenses are allocated daily to each class on the basis of the relative net assets.

Realized and unrealized capital gains (losses) are allocated daily based on the relative net assets of each class of the Portfolio. Class specific expenses, where applicable, currently include supervisory and administrative and distribution and servicing fees. Under certain circumstances, the per share net asset value ("NAV") of a class of the Portfolio's shares may be different from the per share NAV of another class of shares as a result of the different daily expense accruals applicable to each class of shares.

(d) Dividends and Distributions to Shareholders Dividends from net investment income, if any, are declared daily and distributed to shareholders monthly. Net realized capital gains earned by the Portfolio, if any, will be distributed no less frequently than once each year.

Income dividends and capital gain distributions are determined in accordance with income tax regulations which may differ from U.S. GAAP. Differences between tax regulations and U.S. GAAP may cause timing differences between income and capital gain recognition. Examples of events that give rise to timing differences include wash sales, straddles and capital loss carryforwards. Further, the character of investment income and capital gains may be different for certain transactions under the two methods of accounting. Examples of transactions that may cause character differences include the treatment of paydowns on mortgage-backed securities, swaps, foreign currency transactions and contingent debt instruments. As a result, income dividends and capital gain distributions declared during a fiscal period may differ significantly from the net investment income (loss) and realized gains (losses) reported on the Portfolio's annual financial statements presented under U.S. GAAP.

Distributions classified as a tax basis return of capital, if any, are reflected on the Statements of Changes in Net Assets and have been recorded to paid in capital. In addition, other amounts have been reclassified between undistributed (overdistributed) net investment income (loss), accumulated undistributed (overdistributed) net realized gain (loss) and/or paid in capital to more appropriately conform financial accounting to tax characterizations of dividend distributions.

(e) Statement of Cash Flows U.S. GAAP requires entities providing financial statements that report both financial position and results of operations to also provide a Statement of Cash Flows for each period for which results of operations are provided, but exempts investment companies meeting certain conditions. One of the conditions is that substantially all of the entity's investments were carried at fair value during the period and classified as Level 1 or Level 2 in the fair value hierarchy in accordance with the requirements of U.S. GAAP. Another condition is that the entity had little or no debt, based on the average debt outstanding during the period, in relation to average total assets. Portfolios with certain degrees of borrowing activity, typically through the use of reverse repurchase agreements or sale-buyback transactions, have been determined to be at a level requiring a Statement of Cash Flows. The Statement of Cash Flows has been prepared using the indirect method which requires net increase (decrease) in net assets resulting from operations to be adjusted to reconcile to net cash flows from operating activities.

(f) New Accounting Pronouncements In August 2014, the Financial Accounting Standards Board ("FASB") issued an Accounting Standards Update ("ASU"), ASU 2014-15 requiring management to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the entity's ability to continue as a going concern. The ASU is effective prospectively for annual periods ending after December 15, 2016, and interim periods thereafter. At this time, management is evaluating the implications of these changes on the financial statements.

In May 2015, the FASB issued ASU 2015-07 which removes the requirement to categorize within the fair value hierarchy all investments for which fair value is measured using the NAV per share practical expedient. The ASU also removes the requirement to make certain disclosures for all investments that are eligible to be measured at fair value using the NAV per share practical expedient. The ASU is effective for annual periods beginning after December 15, 2015 and interim periods within those annual periods. The ASU did not have an impact on the Portfolio's financial statements.

3. INVESTMENT VALUATION AND FAIR VALUE MEASUREMENTS

(a) Investment Valuation Policies The price of the Portfolio's shares is based on the Portfolio's NAV. The NAV of the Portfolio, or each of its share classes, as applicable, is determined by dividing the total value of portfolio investments and other assets attributable to the Portfolio or class, less any liabilities, by the total number of shares outstanding of the Portfolio or class.

On each day that the New York Stock Exchange ("NYSE") is open, Portfolio shares are ordinarily valued as of the close of regular trading ("NYSE Close"). Information that becomes known to the Portfolio or its agents after the time as of which NAV has been calculated on a particular day will not generally be used to retroactively adjust the price of a security or the NAV determined earlier that day. The Portfolio reserves the right to change the time its NAV is calculated if the Portfolio closes earlier, or as permitted by the SEC.

For purposes of calculating NAV, portfolio securities and other assets for which market quotes are readily available are valued at market value. Market value is generally determined on the basis of official

closing prices or the last reported sales prices, or if no sales are reported, based on quotes obtained from established market makers or prices (including evaluated prices) supplied by the Portfolio's approved pricing services, quotation reporting systems and other third-party sources (together, "Pricing Services"). The Portfolio will normally use pricing data for domestic equity securities received shortly after the NYSE Close and does not normally take into account trading, clearances or settlements that take place after the NYSE Close. A foreign (non-U.S.) equity security traded on a foreign exchange or on more than one exchange is typically valued using pricing information from the exchange considered by the Adviser to be the primary exchange. A foreign (non-U.S.) equity security will be valued as of the close of trading on the foreign exchange, or the NYSE Close, if the NYSE Close occurs before the end of trading on the foreign exchange. Domestic and foreign (non-U.S.) fixed income securities, non-exchange traded derivatives, and equity options are normally valued on the basis of quotes obtained from brokers and dealers or Pricing Services using data reflecting the earlier closing of the principal markets for those securities. Prices obtained from Pricing Services may be based on, among other things, information provided by market makers or estimates of market values obtained from yield data relating to investments or securities with similar characteristics. Certain fixed income securities purchased on a delayed-delivery basis are marked to market daily until settlement at the forward settlement date. Exchange-traded options, except equity options, futures and options on futures are valued at the settlement price determined by the relevant exchange. Swap agreements are valued on the basis of bid quotes obtained from brokers and dealers or market-based prices supplied by Pricing Services or other pricing sources. With respect to any portion of the Portfolio's assets that are invested in one or more open-end management investment companies (other than exchange-traded funds ("ETFs")), the Portfolio's NAV will be calculated based upon the NAVs of such investments.

If a foreign (non-U.S.) equity security's value has materially changed after the close of the security's primary exchange or principal market but before the NYSE Close, the security may be valued at fair value based on procedures established and approved by the Board of Trustees of the Trust (the "Board"). Foreign (non-U.S.) equity securities that do not trade when the NYSE is open are also valued at fair value. With respect to foreign (non-U.S.) equity securities, the Portfolio may determine the fair value of investments based on information provided by Pricing Services and other third-party vendors, which may recommend fair value or adjustments with reference to other securities, indices or assets. In considering whether fair valuation is required and in determining fair values, the Portfolio may, among other things, consider significant events (which may be considered to include changes in the value of U.S. securities or securities indices) that occur after the close of the relevant market and before the NYSE Close. The Portfolio may utilize modeling tools provided by third-party vendors to determine fair values of non-U.S. securities. Foreign (non-U.S.) exchanges may permit trading in foreign (non-U.S.) equity securities on days when the Trust is not open for business, which may result in the Portfolio's portfolio investments being affected when shareholders are unable to buy or sell shares.

Senior secured floating rate loans for which an active secondary market exists to a reliable degree will be valued at the mean of the last available bid/ask prices in the market for such loans, as provided by a Pricing Service. Senior secured floating rate loans for which an active secondary market does not exist to a reliable degree will be valued at fair value, which is intended to approximate market value. In valuing a senior secured floating rate loan at fair value, the factors considered may include, but are not limited to, the following: (a) the creditworthiness of the borrower and any intermediate participants, (b) the terms of the loan, (c) recent prices in the market for similar loans, if any, and (d) recent prices in the market for instruments of similar quality, rate, period until next interest rate reset and maturity.

Investments valued in currencies other than the U.S. dollar are converted to the U.S. dollar using exchange rates obtained from Pricing Services. As a result, the value of such investments and, in turn, the NAV of the Portfolio's shares may be affected by changes in the value of currencies in relation to the U.S. dollar. The value of investments traded in markets outside the United States or denominated in currencies other than the U.S. dollar may be affected significantly on a day that the Trust is not open for business. As a result, to the extent that the Portfolio holds foreign (non-U.S.) investments, the value of those investments may change at times when shareholders are unable to buy or sell shares and the value of such investments will be reflected in the Portfolio's next calculated NAV.

Investments for which market quotes or market based valuations are not readily available are valued at fair value as determined in good faith by the Board or persons acting at their direction. The Board has adopted methods for valuing securities and other assets in circumstances where market quotes are not readily available, and has delegated to the Adviser the responsibility for applying the fair valuation methods. In the event that market quotes or market based valuations are not readily available, and the security or asset cannot be valued pursuant to a Board approved valuation method, the value of the security or asset will be determined in good faith by the Valuation Oversight Committee of the Board ("Valuation Oversight Committee"), generally based on recommendations provided by the Adviser. Market quotes are considered not readily available in circumstances where there is an absence of current or reliable market-based data (e.g., trade information, bid/ask information, indicative market quotations ("Broker

Quotes"), Pricing Services' prices), including where events occur after the close of the relevant market, but prior to the NYSE Close, that materially affect the values of the Portfolio's securities or assets. In addition, market quotes are considered not readily available when, due to extraordinary circumstances, the exchanges or markets on which the securities trade do not open for trading for the entire day and no other market prices are available. The Board has delegated to the Adviser the responsibility for monitoring significant events that may materially affect the values of the Portfolio's securities or assets and for determining whether the value of the applicable securities or assets should be reevaluated in light of such significant events.

When a Portfolio uses fair valuation to determine the value of a portfolio security or other asset for purposes of calculating its NAV, such investments will not be priced on the basis of quotes from the primary market in which they are traded, but rather may be priced by another method that the Board or persons acting at their direction believe reflects fair value. Fair valuation may require subjective determinations about the value of a security. While the Trust's policy is intended to result in a calculation of the Portfolio's NAV that fairly reflects security values as of the time of pricing, the Trust cannot ensure that fair values determined by the Board or persons acting at their direction would accurately reflect the price that a Portfolio could obtain for a security if it were to dispose of that security as of the time of pricing (for instance, in a forced or distressed sale). The prices used by a Portfolio may differ from the value that would be realized if the securities were sold. The Portfolio's use of fair valuation may also help to deter "stale price arbitrage" as discussed under the "Frequent or Excessive Purchases, Exchanges and Redemptions" section in the Portfolio's prospectus.

(b) Fair Value Hierarchy U.S. GAAP describes fair value as the price that the Portfolio would receive to sell an asset or pay to transfer a liability in an orderly transaction between market participants at the measurement date. It establishes a fair value hierarchy that prioritizes inputs to valuation methods and requires disclosure of the fair value hierarchy, separately for each major category of assets and liabilities, that segregates fair value measurements into levels (Level 1, 2, or 3). The inputs or methodology used for valuing securities are not necessarily an indication of the risks associated with investing in those securities. Levels 1, 2, and 3 of the fair value hierarchy are defined as follows:

- Level 1 — Inputs using (unadjusted) quoted prices in active markets or exchanges for identical assets and liabilities.
- Level 2 — Significant other observable inputs, which may include, but are not limited to, quoted prices for similar assets or liabilities in markets that are active, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the assets or liabilities (such as interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks and default rates) or other market corroborated inputs.
- Level 3 — Significant unobservable inputs based on the best information available in the circumstances, to the extent observable inputs are not available, which may include assumptions made by the Board or persons acting at their direction that are used in determining the fair value of investments.

In accordance with the requirements of U.S. GAAP, the amounts of transfers between Levels 1 and 2 and transfers into and out of Level 3, if material, are disclosed in the Notes to Schedule of Investments for the Portfolio.

For fair valuations using significant unobservable inputs, U.S. GAAP requires a reconciliation of the beginning to ending balances for reported fair values that presents changes attributable to realized gain (loss), unrealized appreciation (depreciation), purchases and sales, accrued discounts (premiums), and transfers into and out of the Level 3 category during the period. The end of period timing recognition is used for the transfers between Levels of the Portfolio's assets and liabilities. Additionally, U.S. GAAP requires quantitative information regarding the significant unobservable inputs used in the determination of fair value of assets or liabilities categorized as Level 3 in the fair value hierarchy. In accordance with the requirements of U.S. GAAP, a fair value hierarchy, and if material, a Level 3 reconciliation and details of significant unobservable inputs, have been included in the Notes to Schedule of Investments for the Portfolio.

(c) Valuation Techniques and the Fair Value Hierarchy
Level 1 and Level 2 trading assets and trading liabilities, at fair value The valuation methods (or "techniques") and significant inputs used in determining the fair values of portfolio securities or other assets and liabilities categorized as Level 1 and Level 2 of the fair value hierarchy are as follows:

Fixed income securities including corporate, convertible and municipal bonds and notes, U.S. government agencies, U.S. treasury obligations, sovereign issues, bank loans, convertible preferred securities and non-U.S. bonds are normally valued on the basis of quotes obtained from brokers and dealers or Pricing Services that use broker-dealer quotations, reported trades or valuation estimates from their internal pricing models. The Pricing Services' internal models use inputs that are observable such as issuer details, interest rates, yield curves, prepayment speeds, credit risks/spreads, default rates and quoted prices for similar assets. Securities that use similar valuation techniques and inputs as described above are categorized as Level 2 of the fair value hierarchy.

Fixed income securities purchased on a delayed-delivery basis or as a repurchase commitment in a sale-buyback transaction are marked to market daily until settlement at the forward settlement date and are categorized as Level 2 of the fair value hierarchy.

Mortgage-related and asset-backed securities are usually issued as separate tranches, or classes, of securities within each deal. These securities are also normally valued by Pricing Services that use broker-dealer quotations, reported trades or valuation estimates from their internal pricing models. The pricing models for these securities usually consider tranche-level attributes, current market data, estimated cash flows and market-based yield spreads for each tranche, and incorporate deal collateral performance, as available. Mortgage-related and asset-backed securities that use similar valuation techniques and inputs as described above are categorized as Level 2 of the fair value hierarchy.

Common stocks, ETFs, exchange-traded notes and financial derivative instruments, such as futures contracts, rights and warrants, or options on futures that are traded on a national securities exchange, are stated at the last reported sale or settlement price on the day of valuation. To the extent these securities are actively traded and valuation adjustments are not applied, they are categorized as Level 1 of the fair value hierarchy.

Valuation adjustments may be applied to certain securities that are solely traded on a foreign exchange to account for the market movement between the close of the foreign market and the NYSE Close. These securities are valued using Pricing Services that consider the correlation of the trading patterns of the foreign security to the intraday trading in the U.S. markets for investments. Securities using these valuation adjustments are categorized as Level 2 of the fair value hierarchy. Preferred securities and other equities traded on inactive markets or valued by reference to similar instruments are also categorized as Level 2 of the fair value hierarchy.

Investments in registered open-end investment companies (other than ETFs) will be valued based upon the NAVs of such investments and are categorized as Level 1 of the fair value hierarchy. Investments in unregistered open-end investment companies will be calculated based upon the NAVs of such investments and are considered Level 1 provided that the NAVs are observable, calculated daily and are the value at which both purchases and sales will be conducted. Investments in privately held investment funds with significant restrictions on redemption where the inputs to the NAVs are observable will be valued based upon the NAVs of such investments and are categorized as Level 2 of the fair value hierarchy.

Short-term debt instruments (such as commercial paper) having a remaining maturity of 60 days or less may be valued at amortized cost, so long as the amortized cost of such short-term debt instrument is approximately the same as the fair value of the instrument as determined without the use of amortized cost valuation. Prior to July 31, 2015, short-term debt investments having a maturity of 60 days or less and repurchase agreements were generally valued at amortized cost which approximates fair value. Short-term debt instruments having a remaining maturity of 60 days or less are categorized as Level 2 of the fair value hierarchy.

Equity exchange-traded options and over the counter financial derivative instruments, such as forward foreign currency contracts, options contracts, or swap agreements, derive their value from underlying asset prices, indices, reference rates, and other inputs or a combination of these factors. Other than swap agreements, which are valued using a broker-dealer bid quotation or on market-based prices provided by Pricing Services or other pricing sources, these contracts are normally valued on the basis of quotes obtained from a quotation reporting system, established market makers or Pricing Services (normally determined as of the NYSE Close). Depending on the product and the terms of the transaction, financial derivative instruments can be valued by Pricing Services using a series of techniques, including simulation pricing models. The pricing models use inputs that are observed from actively quoted markets such as quoted prices, issuer details, indices, bid/ask spreads, interest rates, implied volatilities, yield curves, dividends and exchange rates. Financial derivative instruments that use similar valuation techniques and inputs as described above are categorized as Level 2 of the fair value hierarchy.

Centrally cleared swaps listed or traded on a multilateral or trade facility platform, such as a registered exchange, are valued at the daily settlement price determined by the respective exchange (if available). For centrally cleared credit default swaps, the clearing facility requires its members to provide actionable price levels across complete term structures. These levels along with external third-party prices are used to produce daily settlement prices. These securities are categorized as Level 2 of the fair value hierarchy. Centrally cleared interest rate swaps are valued using a pricing model that references the underlying rates including the overnight index swap rate and London Interbank Offered Rate ("LIBOR") forward rate to produce the daily settlement price. These securities are categorized as Level 2 of the fair value hierarchy.

The validity of the fair value is reviewed by the Adviser on a periodic basis and may be amended in accordance with the Trust's valuation procedures.

4. SECURITIES AND OTHER INVESTMENTS

(a) Investments in Affiliates

The Portfolio may invest in the PIMCO Short-Term Floating NAV Portfolio III ("Central Fund") to the extent permitted by the Act and rules thereunder. The Central Fund is a registered investment company

created for use solely by the series of the Trust and other series of registered investment companies advised by the Adviser, in connection with their cash management activities. The main investments of the Central Fund are money market and short maturity fixed income instruments. The Central Fund may incur expenses related to its investment activities, but does not pay Investment Advisory Fees or Supervisory and Administrative Fees to the Adviser. The Central Fund is considered to be affiliated with the Portfolio. The table below shows the Portfolio's transactions in and earnings from investments in the affiliated Fund for the period ended June 30, 2016 (amounts in thousands†):

Investments in PIMCO Short-Term Floating NAV Portfolio III

Market Value 12/31/2015	Purchases at Cost	Proceeds from Sales	Net Realized Gain (Loss)	Change in Unrealized Appreciation (Depreciation)	Market Value 06/30/2016	Dividend Income (1)	Realized Net Capital Gain Distributions (1)
$ 36,839	$ 4,047,254	$ (3,580,400)	$ 49	$ 186	$ 503,928	$ 554	$ 0

† A zero balance may reflect actual amounts rounding to less than one thousand.

(1) The tax characterization of distributions is determined in accordance with Federal income tax regulations. The actual tax characterization of distributions paid are determined at the end of the fiscal year. See Note 2(d) in the Notes to Financial Statements for more information.

(b) Investments in Securities

Delayed-Delivery Transactions The Portfolio may purchase or sell securities on a delayed-delivery basis. These transactions involve a commitment by the Portfolio to purchase or sell securities for a predetermined price or yield, with payment and delivery taking place beyond the customary settlement period. When delayed-delivery transactions are outstanding, the Portfolio will designate or receive as collateral liquid assets in an amount sufficient to meet the purchase price or respective obligations. When purchasing a security on a delayed-delivery basis, the Portfolio assumes the rights and risks of ownership of the security, including the risk of price and yield fluctuations, and takes such fluctuations into account when determining its NAV. The Portfolio may dispose of or renegotiate a delayed-delivery transaction after it is entered into, which may result in a realized gain (loss). When the Portfolio has sold a security on a delayed-delivery basis, the Portfolio does not participate in future gains (losses) with respect to the security.

Inflation-Indexed Bonds The Portfolio may invest in inflation-indexed bonds. Inflation-indexed bonds are fixed income securities whose principal value is periodically adjusted to the rate of inflation. The interest rate on these bonds is generally fixed at issuance at a rate lower than typical bonds. Over the life of an inflation-indexed bond, however, interest will be paid based on a principal value which is adjusted for inflation. Any increase or decrease in the principal amount of an inflation-indexed bond will be included as interest income on the Statement of Operations, even though investors do not receive their principal until maturity.

Loan Participations, Assignments and Originations The Portfolio may invest in direct debt instruments which are interests in amounts owed to lenders or lending syndicates by corporate, governmental, or other borrowers. The Portfolio's investments in loans may be in the form of participations in loans or assignments of all or a portion of loans from third parties or investments in or originations of loans by the Portfolio. A loan is often administered by a bank or other financial institution (the "agent") that acts as agent for all holders. The agent administers the terms of the loan, as specified in the loan agreement. The Portfolio may invest in multiple series or tranches of a loan, which may have varying terms and carry different associated risks. When the Portfolio purchases assignments from agents it acquires direct rights against the borrowers of the loans. These loans may include participations in bridge loans, which are loans taken out by borrowers for a short period (typically less than one year) pending arrangement of more permanent financing through, for example, the issuance of bonds, frequently high yield bonds issued for the purpose of acquisitions.

The types of loans and related investments in which the Portfolio may invest include, among others, senior loans, subordinated loans (including second lien loans, B-Notes and mezzanine loans), whole loans, commercial real estate and other commercial loans and structured loans. The Portfolio may originate loans or acquire direct interests in loans through primary loan distributions and/or in private transactions. In the case of subordinated loans, there may be significant indebtedness ranking ahead of the borrower's obligation to the holder of such a loan, including in the event of the borrower's insolvency. Mezzanine loans are typically secured by a pledge of an equity interest in the mortgage borrower that owns the real estate rather than an interest in a mortgage.

Investments in loans may include unfunded loan commitments, which are contractual obligations for funding. Unfunded loan commitments may include revolving credit facilities, which may obligate the Portfolio to supply additional cash to the borrower on demand. Unfunded loan commitments represent a future obligation in full, even though a percentage of the committed amount may not be utilized by the borrower. When investing in a loan participation, the Portfolio has the right to receive payments of principal, interest and any fees to which it is entitled only from the agent selling the loan agreement and only upon receipt of payments by the agent from the borrower. The Portfolio

may receive a commitment fee based on the undrawn portion of the underlying line of credit portion of a loan. In certain circumstances, the Portfolio may receive a penalty fee upon the prepayment of a loan by a borrower. Fees earned or paid are recorded as a component of interest income or interest expense, respectively, on the Statement of Operations. As of June 30, 2016, the Portfolio had no unfunded loan commitments outstanding.

Mortgage-Related and Other Asset-Backed Securities The Portfolio may invest in mortgage-related and other asset-backed securities that directly or indirectly represent a participation in, or are secured by and payable from, loans on real property. Mortgage-related securities are created from pools of residential or commercial mortgage loans, including mortgage loans made by savings and loan institutions, mortgage bankers, commercial banks and others. These securities provide a monthly payment which consists of both interest and principal. Interest may be determined by fixed or adjustable rates. The rate of prepayments on underlying mortgages will affect the price and volatility of a mortgage-related security, and may have the effect of shortening or extending the effective duration of the security relative to what was anticipated at the time of purchase. The timely payment of principal and interest of certain mortgage-related securities is guaranteed with the full faith and credit of the U.S. Government. Pools created and guaranteed by non-governmental issuers, including government-sponsored corporations, may be supported by various forms of insurance or guarantees, but there can be no assurance that private insurers or guarantors can meet their obligations under the insurance policies or guarantee arrangements. Many of the risks of investing in mortgage-related securities secured by commercial mortgage loans reflect the effects of local and other economic conditions on real estate markets, the ability of tenants to make lease payments, and the ability of a property to attract and retain tenants. These securities may be less liquid and may exhibit greater price volatility than other types of mortgage-related or other asset-backed securities. Other asset-backed securities are created from many types of assets, including auto loans, credit card receivables, home equity loans, and student loans.

Collateralized Debt Obligations ("CDOs") include Collateralized Bond Obligations ("CBOs"), Collateralized Loan Obligations ("CLOs") and other similarly structured securities. CBOs and CLOs are types of asset-backed securities. A CBO is a trust which is backed by a diversified pool of high risk, below investment grade fixed income securities. A CLO is a trust typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. The risks of an investment in a CDO depend largely on the type of the collateral securities and the class of the CDO in which the Portfolio invests. In addition to the normal risks associated with fixed income securities discussed elsewhere in this report and the Portfolio's prospectus and statement of additional information (e.g., prepayment risk, credit risk, liquidity risk, market risk, structural risk, legal risk and interest rate risk (which may be exacerbated if the interest rate payable on a structured financing changes based on multiples of changes in interest rates or inversely to changes in interest rates)), CBOs, CLOs and other CDOs carry additional risks including, but not limited to, (i) the possibility that distributions from collateral securities will not be adequate to make interest or other payments, (ii) the quality of the collateral may decline in value or default, (iii) the Portfolio may invest in CBOs, CLOs, or other CDOs that are subordinate to other classes, and (iv) the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer or unexpected investment results.

Collateralized Mortgage Obligations ("CMOs") are debt obligations of a legal entity that are collateralized by whole mortgage loans or private mortgage bonds and divided into classes. CMOs are structured into multiple classes, often referred to as "tranches," with each class bearing a different stated maturity and entitled to a different schedule for payments of principal and interest, including prepayments. CMOs may be less liquid and may exhibit greater price volatility than other types of mortgage-related or asset-backed securities.

U.S. Government Agencies or Government-Sponsored Enterprises The Portfolio may invest in securities of U.S. Government agencies or government-sponsored enterprises. U.S. Government securities are obligations of and, in certain cases, guaranteed by, the U.S. Government, its agencies or instrumentalities. Some U.S. Government securities, such as Treasury bills, notes and bonds, and securities guaranteed by the Government National Mortgage Association ("GNMA" or "Ginnie Mae"), are supported by the full faith and credit of the U.S. Government; others, such as those of the Federal Home Loan Banks, are supported by the right of the issuer to borrow from the U.S. Department of the Treasury (the "U.S. Treasury"); and others, such as those of the Federal National Mortgage Association ("FNMA" or "Fannie Mae"), are supported by the discretionary authority of the U.S. Government to purchase the agency's obligations. U.S. Government securities may include zero coupon securities. Zero coupon securities do not distribute interest on a current basis and tend to be subject to a greater risk than interest-paying securities.

Government-related guarantors (*i.e.*, not backed by the full faith and credit of the U.S. Government) include FNMA and the Federal Home Loan Mortgage Corporation ("FHLMC" or "Freddie Mac"). FNMA is a government-sponsored corporation. FNMA purchases conventional (*i.e.*, not insured or guaranteed by any government agency) residential

mortgages from a list of approved seller/servicers which include state and federally chartered savings and loan associations, mutual savings banks, commercial banks and credit unions and mortgage bankers. Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA, but are not backed by the full faith and credit of the U.S. Government. FHLMC issues Participation Certificates ("PCs"), which are pass-through securities, each representing an undivided interest in a pool of residential mortgages. FHLMC guarantees the timely payment of interest and ultimate collection of principal, but PCs are not backed by the full faith and credit of the U.S. Government.

The Portfolio may engage in strategies where it seeks to extend the expiration or maturity of a position, such as a To Be Announced ("TBA") security on an underlying asset, by closing out the position before expiration and opening a new position with respect to the same underlying asset with a later expiration date. TBA securities purchased or sold are reflected on the Statement of Assets and Liabilities as an asset or liability, respectively.

5. BORROWINGS AND OTHER FINANCING TRANSACTIONS

The following disclosures contain information on the Portfolio's ability to lend or borrow cash or securities to the extent permitted under the Act, which may be viewed as borrowing or financing transactions by the Portfolio. The location of these instruments in the Portfolio's financial statements is described below. For a detailed description of credit and counterparty risks that can be associated with borrowings and other financing transactions, please see Note 7, Principal Risks.

(a) Repurchase Agreements The Portfolio may engage in repurchase agreements. Under the terms of a typical repurchase agreement, the Portfolio purchases an underlying debt obligation (collateral) subject to an obligation of the seller to repurchase, and the Portfolio to resell, the obligation at an agreed-upon price and time. The underlying securities for all repurchase agreements are held by the Portfolio's custodian or designated subcustodians under tri-party repurchase agreements. The market value of the collateral must be equal to or exceed the total amount of the repurchase obligations, including interest. Repurchase agreements, if any, including accrued interest, are included on the Statement of Assets and Liabilities. Interest earned is recorded as a component of interest income on the Statement of Operations. In periods of increased demand for collateral, the Portfolio may pay a fee for the receipt of collateral, which may result in interest expense to the Portfolio.

(b) Reverse Repurchase Agreements The Portfolio may enter into reverse repurchase agreements. In a reverse repurchase agreement, the Portfolio delivers a security in exchange for cash to a financial institution, the counterparty, with a simultaneous agreement to repurchase the same or substantially the same security at an agreed upon price and date. In an open maturity reverse repurchase agreement, there is no pre-determined repurchase date and the agreement can be terminated by the Portfolio or counterparty at any time. The Portfolio is entitled to receive principal and interest payments, if any, made on the security delivered to the counterparty during the term of the agreement. Cash received in exchange for securities delivered plus accrued interest payments to be made by the Portfolio to counterparties are reflected as a liability on the Statement of Assets and Liabilities. Interest payments made by the Portfolio to counterparties are recorded as a component of interest expense on the Statement of Operations. In periods of increased demand for the security, the Portfolio may receive a fee for use of the security by the counterparty, which may result in interest income to the Portfolio. The Portfolio will segregate assets determined to be liquid by the Adviser or will otherwise cover its obligations under reverse repurchase agreements.

(c) Sale-Buybacks The Portfolio may enter into financing transactions referred to as 'sale-buybacks'. A sale-buyback transaction consists of a sale of a security by the Portfolio to a financial institution, the counterparty, with a simultaneous agreement to repurchase the same or substantially the same security at an agreed-upon price and date. The Portfolio is not entitled to receive principal and interest payments, if any, made on the security sold to the counterparty during the term of the agreement. The agreed-upon proceeds for securities to be repurchased by the Portfolio are reflected as a liability on the Statement of Assets and Liabilities. The Portfolio will recognize net income represented by the price differential between the price received for the transferred security and the agreed-upon repurchase price. This is commonly referred to as the 'price drop'. A price drop consists of (i) the foregone interest and inflationary income adjustments, if any, the Portfolio would have otherwise received had the security not been sold and (ii) the negotiated financing terms between the Portfolio and counterparty. Foregone interest and inflationary income adjustments, if any, are recorded as components of interest income on the Statement of Operations. Interest payments based upon negotiated financing terms made by the Portfolio to counterparties are recorded as a component of interest expense on the Statement of Operations. In periods of increased demand for the security, the Portfolio may receive a fee for use of the security by the counterparty, which may result in interest income to the Portfolio. The Portfolio will segregate assets determined to be liquid by the Adviser or will otherwise cover its obligations under sale-buyback transactions.

(d) Short Sales The Portfolio may enter into short sales transactions. A short sale is a transaction in which the Portfolio sells securities it may not own in anticipation of a decline in the fair value of the securities.

Securities sold in short sale transactions and the interest payable on such securities, if any, are reflected as a liability on the Statement of Assets and Liabilities. The Portfolio is obligated to deliver securities at the trade price at the time the short position is covered. Possible losses from short sales may be unlimited, whereas losses from purchases cannot exceed the total amount invested.

6. FINANCIAL DERIVATIVE INSTRUMENTS

The following disclosures contain information on how and why the Portfolio uses financial derivative instruments, and how financial derivative instruments affect the Portfolio's financial position, results of operations and cash flows. The location and fair value amounts of these instruments on the Statement of Assets and Liabilities and the net realized gain (loss) and net change in unrealized appreciation (depreciation) on the Statement of Operations, each categorized by type of financial derivative contract and related risk exposure, are included in a table in the Notes to Schedule of Investments. The financial derivative instruments outstanding as of period end and the amounts of net realized gain (loss) and net change in unrealized appreciation (depreciation) on financial derivative instruments during the period, as disclosed in the Notes to Schedule of Investments, serve as indicators of the volume of financial derivative activity for the Portfolio.

(a) Forward Foreign Currency Contracts The Portfolio may enter into forward foreign currency contracts in connection with settling planned purchases or sales of securities, to hedge the currency exposure associated with some or all of the Portfolio's securities or as a part of an investment strategy. A forward foreign currency contract is an agreement between two parties to buy and sell a currency at a set price on a future date. The market value of a forward foreign currency contract fluctuates with changes in foreign currency exchange rates. Forward foreign currency contracts are marked to market daily, and the change in value is recorded by the Portfolio as an unrealized gain (loss). Realized gains (losses) are equal to the difference between the value of the contract at the time it was opened and the value at the time it was closed and are recorded upon delivery or receipt of the currency. These contracts may involve market risk in excess of the unrealized gain (loss) reflected on the Statement of Assets and Liabilities. In addition, the Portfolio could be exposed to risk if the counterparties are unable to meet the terms of the contracts or if the value of the currency changes unfavorably to the U.S. dollar. To mitigate such risk, cash or securities may be exchanged as collateral pursuant to the terms of the underlying contracts.

(b) Futures Contracts The Portfolio may enter into futures contracts. The Portfolio may use futures contracts to manage its exposure to the securities markets or to movements in interest rates and currency values. The primary risks associated with the use of futures contracts are the imperfect correlation between the change in market value of the securities held by the Portfolio and the prices of futures contracts and the possibility of an illiquid market. Futures contracts are valued based upon their quoted daily settlement prices. Upon entering into a futures contract, the Portfolio is required to deposit with its futures broker an amount of cash, U.S. Government and Agency Obligations, or select sovereign debt, in accordance with the initial margin requirements of the broker or exchange. Futures contracts are marked to market daily and based on such movements in the price of the contracts, an appropriate payable or receivable for the change in value may be posted or collected by the Portfolio ("Futures Variation Margin"). Gains (losses) are recognized but not considered realized until the contracts expire or close. Futures contracts involve, to varying degrees, risk of loss in excess of the Futures Variation Margin included within exchange traded or centrally cleared financial derivative instruments on the Statement of Assets and Liabilities.

(c) Options Contracts The Portfolio may write or purchase options to enhance returns or to hedge an existing position or future investment. The Portfolio may write call and put options on securities and financial derivative instruments it owns or in which it may invest. Writing put options tends to increase the Portfolio's exposure to the underlying instrument. Writing call options tends to decrease the Portfolio's exposure to the underlying instrument. When the Portfolio writes a call or put, an amount equal to the premium received is recorded as a liability and subsequently marked to market to reflect the current value of the option written. These liabilities are included on the Statement of Assets and Liabilities. Premiums received from writing options which expire are treated as realized gains. Premiums received from writing options which are exercised or closed are added to the proceeds or offset against amounts paid on the underlying futures, swap, security or currency transaction to determine the realized gain (loss). Certain options may be written with premiums to be determined on a future date. The premiums for these options are based upon implied volatility parameters at specified terms. The Portfolio as a writer of an option has no control over whether the underlying instrument may be sold ("call") or purchased ("put") and as a result bears the market risk of an unfavorable change in the price of the instrument underlying the written option. There is the risk the Portfolio may not be able to enter into a closing transaction because of an illiquid market.

The Portfolio may also purchase put and call options. Purchasing call options tends to increase the Portfolio's exposure to the underlying instrument. Purchasing put options tends to decrease the Portfolio's exposure to the underlying instrument. The Portfolio pays a premium which is included as an asset on the Statement of Assets and Liabilities and subsequently marked to market to reflect the current value of the option. Premiums paid for purchasing options which expire are treated

as realized losses. Certain options may be purchased with premiums to be determined on a future date. The premiums for these options are based upon implied volatility parameters at specified terms. The risk associated with purchasing put and call options is limited to the premium paid. Premiums paid for purchasing options which are exercised or closed are added to the amounts paid or offset against the proceeds on the underlying investment transaction to determine the realized gain (loss) when the underlying transaction is executed.

Credit Default Swaptions The Portfolio may write or purchase credit default swaptions to hedge exposure to the credit risk of an investment without making a commitment to the underlying instrument. A credit default swaption is an option to sell or buy credit protection to a specific reference by entering into a pre-defined swap agreement by some specified date in the future.

Foreign Currency Options The Portfolio may write or purchase foreign currency options. Purchasing foreign currency options gives the Portfolio the right, but not the obligation to buy or sell the currency with specified amounts of currency and a rate of exchange that may be exercised by a certain date. These options may be used as a short or long hedge against possible variations in foreign exchange rates or to gain exposure to foreign currencies.

Inflation-Capped Options The Portfolio may write or purchase inflation-capped options to enhance returns or for hedging opportunities. The purpose of purchasing inflation-capped options is to protect the Portfolio from inflation erosion above a certain rate on a given notional exposure. A floor can be used to give downside protection to investments in inflation-linked products.

Interest Rate-Capped Options The Portfolio may write or purchase interest rate-capped options to enhance returns or for hedging opportunities. The purpose of purchasing interest rate-capped options is to protect the Portfolio from floating rate risk above a certain rate on a given notional exposure. A floor can be used to give downside protection to investments in interest rate linked products.

Interest Rate Swaptions The Portfolio may write or purchase interest rate swaptions which are options to enter into a pre-defined swap agreement by some specified date in the future. The writer of the swaption becomes the counterparty to the swap if the buyer exercises. The interest rate swaption agreement will specify whether the buyer of the swaption will be a fixed-rate receiver or a fixed-rate payer upon exercise.

(d) Swap Agreements The Portfolio may invest in swap agreements. Swap agreements are bilaterally negotiated agreements between the Portfolio and a counterparty to exchange or swap investment cash flows, assets, foreign currencies or market-linked returns at specified, future intervals. Swap agreements may be privately negotiated in the over the counter market ("OTC swaps") or may be cleared through a third party, known as a central counterparty or derivatives clearing organization ("Centrally Cleared Swaps"). The Portfolio may enter into asset, credit default, cross-currency, interest rate, total return, variance and other forms of swap agreements to manage its exposure to credit, currency, interest rate, commodity, equity and inflation risk. In connection with these agreements, securities or cash may be identified as collateral or margin in accordance with the terms of the respective swap agreements to provide assets of value and recourse in the event of default or bankruptcy/insolvency.

Centrally Cleared Swaps are marked to market daily based upon valuations as determined from the underlying contract or in accordance with the requirements of the central counterparty or derivatives clearing organization. Changes in market value, if any, are reflected as a component of net change in unrealized appreciation (depreciation) on the Statement of Operations. Daily changes in valuation of centrally cleared swaps ("Swap Variation Margin"), if any, are disclosed within centrally cleared financial derivative instruments on the Statement of Assets and Liabilities. OTC swap payments received or paid at the beginning of the measurement period are included on the Statement of Assets and Liabilities and represent premiums paid or received upon entering into the swap agreement to compensate for differences between the stated terms of the swap agreement and prevailing market conditions (credit spreads, currency exchange rates, interest rates, and other relevant factors). Upfront premiums received (paid) are initially recorded as liabilities (assets) and subsequently marked to market to reflect the current value of the swap. These upfront premiums are recorded as realized gain (loss) on the Statement of Operations upon termination or maturity of the swap. A liquidation payment received or made at the termination of the swap is recorded as realized gain (loss) on the Statement of Operations. Net periodic payments received or paid by the Portfolio are included as part of realized gain (loss) on the Statement of Operations.

For purposes of applying the Portfolio's investment policies and restrictions, swap agreements are generally valued by the Portfolio at market value. In the case of a credit default swap (see below), however, in applying certain of the Portfolio's investment policies and restrictions, the Portfolio will value the credit default swap at its notional value or its full exposure value (*i.e.*, the sum of the notional amount for the contract plus the market value), but may value the credit default swap at market value for purposes of applying certain of the Portfolio's other investment policies and restrictions. For example, the Portfolio may value credit default swaps at full exposure value for purposes of the Portfolio's credit quality guidelines (if any) because such value reflects the Portfolio's actual economic exposure during the

term of the credit default swap agreement. In this context, both the notional amount and the market value may be positive or negative depending on whether the Portfolio is selling or buying protection through the credit default swap. The manner in which certain securities or other instruments are valued by the Portfolio for purposes of applying investment policies and restrictions may differ from the manner in which those investments are valued by other types of investors.

Entering into swap agreements involves, to varying degrees, elements of interest, credit, market and documentation risk in excess of the amounts recognized on the Statement of Assets and Liabilities. Such risks involve the possibility that there will be no liquid market for these agreements, that the counterparty to the agreements may default on its obligation to perform or disagree as to the meaning of contractual terms in the agreements and that there may be unfavorable changes in interest rates.

The Portfolio's maximum risk of loss from counterparty credit risk is the discounted net value of the cash flows to be received from the counterparty over the contract's remaining life, to the extent that amount is positive. The risk may be mitigated by having a master netting arrangement between the Portfolio and the counterparty and by the posting of collateral to the Portfolio to cover the Portfolio's exposure to the counterparty.

Credit Default Swap Agreements A Portfolio may use credit default swaps on corporate, loan, sovereign, U.S. municipal or U.S. Treasury issues to provide a measure of protection against defaults of the issuers (*i.e.*, to reduce risk where a Portfolio owns or has exposure to the referenced obligation) or to take an active long or short position with respect to the likelihood of a particular issuer's default. Credit default swap agreements involve one party making a stream of payments (referred to as the buyer of protection) to another party (the seller of protection) in exchange for the right to receive a specified return in the event that the referenced entity, obligation or index, as specified in the swap agreement, undergoes a certain credit event. As a seller of protection on credit default swap agreements, the Portfolio will generally receive from the buyer of protection a fixed rate of income throughout the term of the swap provided that there is no credit event. As the seller, the Portfolio would effectively add leverage to its portfolio because, in addition to its total net assets, the Portfolio would be subject to investment exposure on the notional amount of the swap.

If the Portfolio is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Portfolio will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation, other deliverable obligations or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index. If the Portfolio is a buyer of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Portfolio will either (i) receive from the seller of protection an amount equal to the notional amount of the swap and deliver the referenced obligation, other deliverable obligations or underlying securities comprising the referenced index or (ii) receive a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index. Recovery values are estimated by market makers considering either industry standard recovery rates or entity specific factors and considerations until a credit event occurs. If a credit event has occurred, the recovery value is determined by a facilitated auction whereby a minimum number of allowable broker bids, together with a specified valuation method, are used to calculate the settlement value. The ability to deliver other obligations may result in a cheapest-to-deliver option (the buyer of protection's right to choose the deliverable obligation with the lowest value following a credit event).

Credit default swap agreements on credit indices involve one party making a stream of payments to another party in exchange for the right to receive a specified return in the event of a write-down, principal shortfall, interest shortfall or default of all or part of the referenced entities comprising the credit index. A credit index is a basket of credit instruments or exposures designed to be representative of some part of the credit market as a whole. These indices are made up of reference credits that are judged by a poll of dealers to be the most liquid entities in the credit default swap market based on the sector of the index. Components of the indices may include, but are not limited to, investment grade securities, high yield securities, asset-backed securities, emerging markets, and/or various credit ratings within each sector. Credit indices are traded using credit default swaps with standardized terms including a fixed spread and standard maturity dates. An index credit default swap references all the names in the index, and if there is a default, the credit event is settled based on that name's weight in the index. The composition of the indices changes periodically, usually every six months, and for most indices, each name has an equal weight in the index. The Portfolio may use credit default swaps on credit indices to hedge a portfolio of credit default swaps or bonds, which is less expensive than it would be to buy many credit default swaps to achieve a similar effect. Credit default swaps on indices are instruments for protecting investors owning bonds against default, and traders use them to speculate on changes in credit quality.

Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate, loan, sovereign, U.S. municipal or U.S. Treasury issues as of period end, if any, are disclosed in the Notes to Schedule of Investments. They serve as an indicator of the current status of payment/performance risk and represent the likelihood or risk of default for the reference entity. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity's credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement. For credit default swap agreements on asset-backed securities and credit indices, the quoted market prices and resulting values serve as the indicator of the current status of the payment/performance risk. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced entity's credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

The maximum potential amount of future payments (undiscounted) that the Portfolio as a seller of protection could be required to make under a credit default swap agreement equals the notional amount of the agreement. Notional amounts of each individual credit default swap agreement outstanding as of period end for which the Portfolio is the seller of protection are disclosed in the Notes to Schedule of Investments. These potential amounts would be partially offset by any recovery values of the respective referenced obligations, upfront payments received upon entering into the agreement, or net amounts received from the settlement of buy protection credit default swap agreements entered into by the Portfolio for the same referenced entity or entities.

Interest Rate Swap Agreements The Portfolio is subject to interest rate risk exposure in the normal course of pursuing its investment objectives. Because the Portfolio holds fixed rate bonds, the value of these bonds may decrease if interest rates rise. To help hedge against this risk and to maintain its ability to generate income at prevailing market rates, the Portfolio may enter into interest rate swap agreements. Interest rate swap agreements involve the exchange by the Portfolio with another party for their respective commitment to pay or receive interest on the notional amount of principal. Certain forms of interest rate swap agreements may include: (i) interest rate caps, under which, in return for a premium, one party agrees to make payments to the other to the extent that interest rates exceed a specified rate, or "cap", (ii) interest rate floors, under which, in return for a premium, one party agrees to make payments to the other to the extent that interest rates fall below a specified rate, or "floor", (iii) interest rate collars, under which a party sells a cap and purchases a floor or vice versa in an attempt to protect itself against interest rate movements exceeding given minimum or maximum levels, (iv) callable interest rate swaps, under which the buyer pays an upfront fee in consideration for the right to early terminate the swap transaction in whole, at zero cost and at a predetermined date and time prior to the maturity date, (v) spreadlocks, which allow the interest rate swap users to lock in the forward differential (or spread) between the interest rate swap rate and a specified benchmark, or (vi) basis swaps, under which two parties can exchange variable interest rates based on different segments of money markets.

7. PRINCIPAL RISKS

In the normal course of business, the Portfolio trades financial instruments and enters into financial transactions where risk of potential loss exists due to such things as changes in the market (market risk) or failure or inability of the other party to a transaction to perform (credit and counterparty risk). See below for a detailed description of select principal risks. For a more comprehensive list of potential risks the Portfolio may be subject to, please see the Important Information About the Portfolio.

Market Risks The Portfolio's investments in financial derivative instruments and other financial instruments expose the Portfolio to various risks such as, but not limited to, interest rate, foreign (non-U.S.) currency, equity and commodity risks.

Interest rate risk is the risk that fixed income securities and other instruments held by the Portfolio will decline in value because of an increase in interest rates. As nominal interest rates rise, the value of certain fixed income securities held by the Portfolio is likely to decrease. A nominal interest rate can be described as the sum of a real interest rate and an expected inflation rate. Interest rate changes can be sudden and unpredictable, and the Portfolio may lose money if these changes are not anticipated by the Portfolio's management. The Portfolio may not be able to hedge against changes in interest rates or may choose not to do so for cost or other reasons. In addition, any hedges may not work as intended.

Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates that incorporates a security's yield, coupon, final maturity and call features, among other characteristics. Convexity is an additional measure of interest rate sensitivity that measures the rate of change of duration in response to changes in interest rates. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. A wide variety of factors can cause interest rates to rise (e.g., central bank monetary policies,

inflation rates, general economic conditions, etc.). At present, the U.S. and many parts of the world, including certain European countries, are experiencing near historically low interest rates. The Portfolio may be subject to heightened interest rate risk because the Fed has ended its quantitative easing program and has begun, and may continue, to raise interest rates. Further, while bond markets have steadily grown over the past three decades, dealer "market making" ability has not kept pace and in some cases has decreased. Given the importance of intermediary "market making" in creating a robust and active market, fixed income securities are currently facing increased volatility and liquidity risks. All of these factors, collectively and/or individually, could cause the Portfolio to lose value. If the Portfolio lost enough value, the Portfolio could face increased shareholder redemptions, which could force the Portfolio to liquidate investments at disadvantageous times or prices, thereby adversely affecting the Portfolio.

To the extent that the Portfolio may invest in securities and instruments that are economically tied to Russia, the Portfolio is subject to various risks such as, but not limited to political, economic, legal, market and currency risks. The risks include uncertain political and economic policies, short-term market volatility, poor accounting standards, corruption and crime, an inadequate regulatory system, and unpredictable taxation. Investments in Russia are particularly subject to the risk that further economic sanctions may be imposed by the United States and/or other countries. Such sanctions — which may impact companies in many sectors, including energy, financial services and defense, among others — may negatively impact the Portfolio's performance and/or ability to achieve its investment objective. The Russian securities market, as compared to U.S. markets, has significant price volatility, less liquidity, a smaller market capitalization and a smaller number of traded securities. Adverse currency exchange rates are a risk and there may be a lack of available currency hedging instruments. Investments in Russia may be subject to the risk of nationalization or expropriation of assets. Oil, natural gas, metals, and timber account for a significant portion of Russia's exports, leaving the country vulnerable to swings in world prices.

If the Portfolio invests directly in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, foreign (non-U.S.) currencies, or in financial derivative instruments that provide exposure to foreign (non-U.S.) currencies, it will be subject to the risk that those currencies will decline in value relative to the base currency of the Portfolio, or, in the case of hedging positions, that the Portfolio's base currency will decline in value relative to the currency being hedged. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates, intervention (or the failure to intervene) by U.S. or foreign governments, central banks or supranational entities such as the International Monetary Fund, or by the imposition of currency controls or other political developments in the United States or abroad. As a result, the Portfolio's investments in foreign currency-denominated securities may reduce the Portfolio's returns.

The market values of equities, such as common stocks and preferred securities or equity related investments such as futures and options, have historically risen and fallen in periodic cycles and may decline due to general market conditions which are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. They may also decline due to factors which affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry. Different types of equity securities may react differently to these developments. Equity securities and equity related investments generally have greater market price volatility than fixed income securities.

Credit and Counterparty Risks The Portfolio will be exposed to credit risk to parties with whom it trades and will also bear the risk of settlement default. The Portfolio minimizes concentrations of credit risk by undertaking transactions with a large number of customers and counterparties on recognized and reputable exchanges, where applicable. Over the counter ("OTC") derivative transactions are subject to the risk that a counterparty to the transaction will not fulfill its contractual obligations to the other party, as many of the protections afforded to centrally cleared derivative transactions might not be available for OTC derivative transactions. For financial derivative instruments traded on exchanges or clearinghouses, the primary credit risk is the creditworthiness of the Portfolio's clearing broker or the exchange or clearinghouse itself. The Portfolio could lose money if the issuer or guarantor of a fixed income security, or the counterparty to a financial derivative instruments contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations. Securities and financial derivative instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings.

Similar to credit risk, the Portfolio may be exposed to counterparty risk, or the risk that an institution or other entity with which the Portfolio has unsettled or open transactions will default. PIMCO, as the Adviser, minimizes counterparty risks to the Portfolio through a number of ways. Prior to entering into transactions with a new counterparty, the PIMCO Counterparty Risk Committee conducts an extensive credit review of such counterparty and must approve the use of such counterparty. Furthermore, pursuant to the terms of the underlying contract, to the extent that unpaid amounts owed to the Portfolio exceed a predetermined threshold, such counterparty shall advance collateral to

the Portfolio in the form of cash or securities equal in value to the unpaid amount owed to the Portfolio. The Portfolio may invest such collateral in securities or other instruments and will typically pay interest to the counterparty on the collateral received. If the unpaid amount owed to the Portfolio subsequently decreases, the Portfolio would be required to return to the counterparty all or a portion of the collateral previously advanced. PIMCO's attempts to minimize counterparty risk may, however, be unsuccessful.

All transactions in listed securities are settled/paid for upon delivery using approved counterparties. The risk of default is considered minimal, as delivery of securities sold is only made once the Portfolio has received payment. Payment is made on a purchase once the securities have been delivered by the counterparty. The trade will fail if either party fails to meet its obligation.

Master Netting Arrangements The Portfolio may be subject to various netting arrangements ("Master Agreements") with select counterparties. Master Agreements govern the terms of certain transactions, and reduce the counterparty risk associated with relevant transactions by specifying credit protection mechanisms and providing standardization that improves legal certainty. Each type of Master Agreement governs certain types of transactions. Different types of transactions may be traded out of different legal entities or affiliates of a particular organization, resulting in the need for multiple agreements with a single counterparty. As the Master Agreements are specific to unique operations of different asset types, they allow the Portfolio to close out and net its total exposure to a counterparty in the event of a default with respect to all the transactions governed under a single Master Agreement with a counterparty. For financial reporting purposes the Statement of Assets and Liabilities generally presents derivative assets and liabilities on a gross basis, which reflects the full risks and exposures prior to netting.

Master Agreements can also help limit counterparty risk by specifying collateral posting arrangements at pre-arranged exposure levels. Under most Master Agreements, collateral is routinely transferred if the total net exposure to certain transactions (net of existing collateral already in place) governed under the relevant Master Agreement with a counterparty in a given account exceeds a specified threshold, which typically ranges from zero to $250,000 depending on the counterparty and the type of Master Agreement. United States Treasury Bills and U.S. dollar cash are generally the preferred forms of collateral, although other forms of AAA rated paper or sovereign securities may be used depending on the terms outlined in the applicable Master Agreement. Securities and cash pledged as collateral are reflected as assets on the Statement of Assets and Liabilities as either a component of Investments at value (securities) or Deposits with counterparty. Cash collateral received is not typically held in a segregated account and as such is reflected as a liability on the Statement of Assets and Liabilities as Deposits from counterparty. The market value of any securities received as collateral is not reflected as a component of NAV. The Portfolio's overall exposure to counterparty risk can change substantially within a short period, as it is affected by each transaction subject to the relevant Master Agreement.

Master Repurchase Agreements and Global Master Repurchase Agreements (individually and collectively "Master Repo Agreements") govern repurchase, reverse repurchase, and sale-buyback transactions between the Portfolio and select counterparties. Master Repo Agreements maintain provisions for, among other things, initiation, income payments, events of default, and maintenance of collateral. The market value of transactions under the Master Repo Agreement, collateral pledged or received, and the net exposure by counterparty as of period end are disclosed in the Notes to Schedule of Investments.

Master Securities Forward Transaction Agreements ("Master Forward Agreements") govern certain forward settling transactions, such as To-Be-Announced securities, delayed-delivery or sale-buyback transactions by and between the Portfolio and select counterparties. The Master Forward Agreements maintain provisions for, among other things, transaction initiation and confirmation, payment and transfer, events of default, termination, and maintenance of collateral. The market value of forward settling transactions, collateral pledged or received, and the net exposure by counterparty as of period end is disclosed in the Notes to Schedule of Investments.

Customer Account Agreements and related addenda govern cleared derivatives transactions such as futures, options on futures, and cleared OTC derivatives. Such transactions require posting of initial margin as determined by each relevant clearing agency which is segregated in an account at a futures commission merchant ("FCM") registered with the Commodity Futures Trading Commission ("CFTC"). In the United States, counterparty risk may be reduced as creditors of an FCM cannot have a claim to Portfolio assets in the segregated account. Portability of exposure reduces risk to the Portfolio. Variation margin, or changes in market value, are exchanged daily, but may not be netted between futures and cleared OTC derivatives unless the parties have agreed to a separate arrangement in respect of portfolio margining. The market value or accumulated unrealized appreciation (depreciation), initial margin posted, and any unsettled variation margin as of period end is disclosed in the Notes to Schedule of Investments.

International Swaps and Derivatives Association, Inc. Master Agreements and Credit Support Annexes ("ISDA Master Agreements") govern bilateral OTC derivative transactions entered into by the Portfolio with select counterparties. ISDA Master Agreements maintain provisions for general obligations, representations, agreements,

collateral posting and events of default or termination. Events of termination include conditions that may entitle counterparties to elect to terminate early and cause settlement of all outstanding transactions under the applicable ISDA Master Agreement. Any election to terminate early could be material to the financial statements. In limited circumstances, the ISDA Master Agreement may contain additional provisions that add counterparty protection beyond coverage of existing daily exposure if the counterparty has a decline in credit quality below a predefined level. These amounts, if any, may be segregated with a third-party custodian. The market value of OTC financial derivative instruments, collateral received or pledged, and net exposure by counterparty as of period end are disclosed in the Notes to Schedule of Investments.

8. FEES AND EXPENSES

(a) Investment Advisory Fee PIMCO is a majority-owned subsidiary of Allianz Asset Management of America L.P. ("Allianz Asset Management") and serves as the Adviser to the Trust, pursuant to an investment advisory contract. The Adviser receives a monthly fee from the Portfolio at an annual rate based on average daily net assets (the "Investment Advisory Fee"). The Investment Advisory Fee for all classes is charged at an annual rate of 0.25%.

(b) Supervisory and Administrative Fee PIMCO serves as administrator (the "Administrator") and provides supervisory and administrative services to the Trust for which it receives a monthly supervisory and administrative fee based on each share class's average daily net assets (the "Supervisory and Administrative Fee"). As the Administrator, PIMCO bears the costs of various third-party services, including audit, custodial, portfolio accounting, legal, transfer agency and printing costs.

The Supervisory and Administrative Fee for all classes, as applicable, is charged at the annual rate as noted in the following table:

	Supervisory and Administrative Fee
Institutional Class	0.25%
Administrative Class	0.25%
Advisor Class	0.25%

(c) Distribution and Servicing Fees PIMCO Investments LLC ("PI"), a wholly-owned subsidiary of PIMCO, serves as the distributor ("Distributor") of the Trust's shares. The Trust has adopted an Administrative Services Plan with respect to the Administrative Class shares of the Portfolio pursuant to Rule 12b-1 under the Act (the "Administrative Plan"). Under the terms of the Administrative Plan, the Trust is permitted to compensate the Distributor, out of the Administrative Class assets of the Portfolio, in an amount up to 0.15% on an annual basis of the average daily net assets of that class, for providing or procuring through financial intermediaries administrative, recordkeeping and investor services for Administrative Class shareholders of the Portfolio.

The Trust has adopted a separate Distribution and Servicing Plan for the Advisor Class shares of the Portfolio (the "Distribution and Servicing Plan"). The Distribution and Servicing Plan has been adopted pursuant to Rule 12b-1 under the Act. The Distribution and Servicing Plan permits the Portfolio to compensate the Distributor for providing or procuring through financial intermediaries distribution, administrative, recordkeeping, shareholder and/or related services with respect to Advisor Class shares. The Distribution and Servicing Plan permits the Portfolio to make total payments at an annual rate of up to 0.25% of its average daily net assets attributable to its Advisor Class shares.

	Distribution Fee	Servicing Fee
Administrative Class	—	0.15%
Advisor Class	0.25%	—

(d) Portfolio Expenses PIMCO provides or procures supervisory and administrative services for shareholders and also bears the costs of various third-party services required by the Portfolios, including audit, custodial, portfolio accounting, legal, transfer agency and printing costs. The Trust is responsible for the following expenses: (i) taxes and governmental fees; (ii) brokerage fees and commissions and other portfolio transaction expenses; (iii) the costs of borrowing money, including interest expense; (iv) fees and expenses of the Trustees who are not "interested persons" of PIMCO or the Trust, and any counsel retained exclusively for their benefit; (v) extraordinary expense, including costs of litigation and indemnification expenses; (vi) organizational expenses; and (vii) any expenses allocated or allocable to a specific class of shares, which include service fees payable with respect to the Administrative Class Shares, and may include certain other expenses as permitted by the Trust's Multi-Class Plan adopted pursuant to Rule 18f-3 under the Act and subject to review and approval by the Trustees. The ratio of expenses to average net assets per share class, as disclosed on the Financial Highlights, may differ from the annual portfolio operating expenses per share class.

Each Trustee, other than those affiliated with PIMCO or its affiliates, receives an annual retainer of $35,000, plus $3,600 for each Board meeting attended in person, $750 for each committee meeting attended and $750 for each Board meeting attended telephonically, plus reimbursement of related expenses. In addition, the audit committee chair receives an additional annual retainer of $5,000, the valuation oversight committee lead receives an additional annual retainer of $3,250 (to the extent there are co-leads of the valuation oversight committee, the annual retainer will be split evenly between the co-leads, so that each co-lead individually receives an additional retainer of $1,625) and the governance committee chair receives an

additional annual retainer of $1,500. The Lead Independent Trustee receives an annual retainer of $3,500.

These expenses are allocated on a pro rata basis to each Portfolio of the Trust according to its respective net assets except PIMCO All Asset Portfolio. The Trust pays no compensation directly to any Trustee or any other officer who is affiliated with the Administrator, all of whom receive remuneration for their services to the Trust from the Administrator or its affiliates.

9. RELATED PARTY TRANSACTIONS

The Adviser, Administrator, and Distributor are related parties. Fees payable to these parties are disclosed in Note 8, Fees and Expenses, and the accrued related party fee amounts are disclosed on the Statement of Assets and Liabilities.

The Portfolio is permitted to purchase or sell securities from or to certain related affiliated portfolios under specified conditions outlined in procedures adopted by the Board. The procedures have been designed to ensure that any purchase or sale of securities by the Portfolio from or to another fund or portfolio that are, or could be, considered an affiliate, or an affiliate of an affiliate, by virtue of having a common investment adviser (or affiliated investment advisers), common Trustees and/or common officers complies with Rule 17a-7 under the Act. Further, as defined under the procedures, each transaction is effected at the current market price. During the period ended June 30, 2016, the Portfolio engaged in purchases and sales of securities pursuant to Rule 17a-7 under the Act (amounts in thousands):

Purchases	Sales
$ 42,686	$ 7,809

10. GUARANTEES AND INDEMNIFICATIONS

Under the Trust's organizational documents, each Trustee, officer, employee or other agent of the Trust (including the Trust's investment manager) is indemnified, to the extent permitted by the Act, against certain liabilities that may arise out of performance of their duties to the Portfolio. Additionally, in the normal course of business, the Portfolio enters into contracts that contain a variety of indemnification clauses. The Portfolio's maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Portfolio that have not yet occurred. However, the Portfolio has not had prior claims or losses pursuant to these contracts.

11. PURCHASES AND SALES OF SECURITIES

The length of time the Portfolio has held a particular security is not generally a consideration in investment decisions. A change in the securities held by the Portfolio is known as "portfolio turnover." The Portfolio may engage in frequent and active trading of portfolio securities to achieve its investment objective, particularly during periods of volatile market movements. High portfolio turnover may involve correspondingly greater transaction costs to the Portfolio, including brokerage commissions or dealer mark-ups and other transaction costs on the sale of securities and reinvestments in other securities. Such sales may also result in realization of taxable capital gains, including short-term capital gains (which are generally taxed at ordinary income tax rates). The transaction costs and tax effects associated with portfolio turnover may adversely affect the Portfolio's performance. The portfolio turnover rates are reported in the Financial Highlights.

Purchases and sales of securities (excluding short-term investments) for the period ended June 30, 2016, were as follows (amounts in thousands):

U S Government/Agency		All Other	
Purchases	Sales	Purchases	Sales
$ 1,762,702	$ 1,707,531	$ 263,859	$ 366,541

12. SHARES OF BENEFICIAL INTEREST

The Portfolio may issue an unlimited number of shares of beneficial interest with a $0.001 par value. Changes in shares of beneficial interest were as follows (shares and amounts in thousands):

	Six Months Ended 06/30/2016		Year Ended 12/31/2015	
	Shares	Amount	Shares	Amount
Receipts for shares sold				
Institutional Class	2,504	$ 30,962	3,239	$ 41,220
Administrative Class	8,836	108,576	15,642	199,728
Advisor Class	892	10,925	5,974	76,807
Issued as reinvestment of distributions				
Institutional Class	124	1,539	616	7,388
Administrative Class	1,536	19,098	7,320	87,630
Advisor Class	386	4,802	1,799	21,499

	Six Months Ended 06/30/2016		Year Ended 12/31/2015	
	Shares	Amount	Shares	Amount
Cost of shares redeemed				
Institutional Class	(6,368)	$ (79,226)	(2,327)	$ (29,633)
Administrative Class	(26,414)	(324,349)	(39,005)	(498,829)
Advisor Class	(2,805)	(34,321)	(2,346)	(29,871)
Net increase (decrease) resulting from Portfolio share transactions	(21,309)	$ (261,994)	(9,088)	$ (124,061)

As of June 30, 2016, three shareholders each owned 10% or more of the Portfolio's total outstanding shares comprising 50% of the Portfolio. One shareholder is a related party and comprises 16% of the Portfolio. Related parties may include, but are not limited to, the investment manager and its affiliates, affiliated broker dealers, fund of funds and directors or employees of the Trust or Adviser.

13. REGULATORY AND LITIGATION MATTERS

The Portfolio is not named as a defendant in any material litigation or arbitration proceedings and is not aware of any material litigation or claim pending or threatened against it.

PIMCO has received a Wells Notice from the staff of the U.S. Securities and Exchange Commission ("SEC") that relates to the PIMCO Total Return Active Exchange-Traded Fund ("BOND"), a series of PIMCO ETF Trust. The notice indicates the staff's preliminary determination to recommend that the SEC commence a civil action against PIMCO stemming from a non-public investigation relating to BOND. A Wells Notice is neither a formal allegation of wrongdoing nor a finding that any law was violated.

This matter principally pertains to the valuation of smaller sized positions in non-agency mortgage-backed securities purchased by BOND between its inception on February 29, 2012 and June 30, 2012, BOND's performance disclosures for that period, and PIMCO's compliance policies and procedures related to these matters.

The Wells process provides PIMCO with the opportunity to demonstrate to the SEC staff why it believes its conduct was appropriate, in keeping with industry standards, and that no action should be taken. PIMCO believes that this matter is unlikely to have a material adverse effect on any Portfolio or on PIMCO's ability to provide investment management services to any Portfolio.

The foregoing speaks only as of the date of this report.

14. FEDERAL INCOME TAX MATTERS

The Portfolio intends to qualify as a regulated investment company under Subchapter M of the Internal Revenue Code (the "Code") and distribute all of its taxable income and net realized gains, if applicable, to shareholders. Accordingly, no provision for Federal income taxes has been made.

The Portfolio may be subject to local withholding taxes, including those imposed on realized capital gains. Any applicable foreign capital gains tax is accrued daily based upon net unrealized gains, and may be payable following the sale of any applicable investments.

In accordance with U.S. GAAP, the Adviser has reviewed the Portfolio's tax positions for all open tax years. As of June 30, 2016, the Portfolio has recorded no liability for net unrecognized tax benefits relating to uncertain income tax positions it has taken or expects to take in future tax returns.

The Portfolio files U.S. tax returns. While the statute of limitations remains open to examine the Portfolio's U.S. tax returns filed for the fiscal years ending in 2013-2015, no examinations are in progress or anticipated at this time. The Portfolio is not aware of any tax positions for which it is reasonably possible that the total amounts of unrecognized tax benefits will significantly change in the next twelve months.

Shares of the Portfolio currently are sold to segregated asset accounts ("Separate Accounts") of insurance companies that fund variable annuity contracts and variable life insurance policies ("Variable Contracts"). Please refer to the prospectus for the Separate Account and Variable Contract for information regarding Federal income tax treatment of distributions to the Separate Account.

As of December 31, 2015, the Portfolio had accumulated capital losses expiring in the following years (amounts in thousands). The Portfolio will resume capital gain distributions in the future to the extent gains are realized in excess of accumulated capital losses.

Under the Regulated Investment Company Act of 2010, a fund is permitted to carry forward any new capital losses for an unlimited period. Additionally, such capital losses that are carried forward will retain their character as either short-term or long-term capital losses rather than being considered all short-term under previous law.

As of December 31, 2015 the Portfolio had the following post-effective capital losses with no expiration (amounts in thousands):

	Short-Term	Long-Term
PIMCO Real Return Portfolio	$ 38,568	$ 52,195

As of June 30, 2016, the aggregate cost and the net unrealized appreciation (depreciation) of investments for federal income tax purposes are as follows (amounts in thousands):

Federal Tax Cost	Aggregate Gross Unrealized Appreciation	Aggregate Gross Unrealized (Depreciation)	Net Unrealized Appreciation (Depreciation) [1]
$ 4,083,542	$ 82,222	$ (39,536)	$ 42,686

[1] Primary differences, if any, between book and tax net unrealized appreciation (depreciation) are attributable to wash sale loss deferrals for federal income tax purposes.

Putnam INVESTMENTS

Message from the Trustees

Dear Shareholder:

As summer comes to a close, we note that despite multiple headwinds and uncertainties both at home and overseas, the overall trajectory of the equity markets has been somewhat positive so far in 2016.

It is heartening that markets have recovered from various international and domestic challenges. We know volatile markets can be unsettling, but if recent events are any indication, we believe it is important not to overreact to short-term developments and to focus instead on the long term.

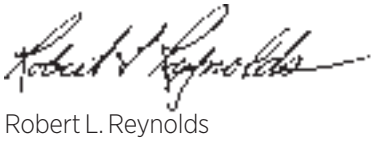
We believe the global environment continues to be supportive of stocks. Central banks around the world stand ready to add more stimulus and liquidity, if necessary, while the underpinnings of the U.S. economy remain solid, in our view. Overseas, higher hurdles to growth exist, but we believe that market gyrations may present investment opportunities. Within fixed income, yields have fallen — and in some cases have gone further into negative territory — as investors seek safety from turbulent markets, notably after the United Kingdom's vote to depart the European Union.

At Putnam, our portfolio managers seek positive returns in every kind of market environment, backed by our network of global analysts and their own experience navigating changing conditions. They, and we, share a deep conviction that an active approach based on fundamental research can play a valuable role in your portfolio. In the following pages, you will find an overview of your fund's performance for the reporting period ended June 30, 2016, as well as an outlook for the coming months.

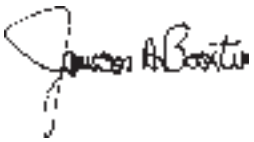
As always, it may be helpful for you to consult with your financial advisor, who can assist you in determining if your portfolio remains aligned with your long-term goals, time horizon, and tolerance for risk.

Thank you for investing with Putnam.

Respectfully yours,



Robert L. Reynolds
President and Chief Executive Officer
Putnam Investments



Jameson A. Baxter
Chair, Board of Trustees

August 8, 2016

Performance summary (as of 6/30/16)

Investment objective

High current income, with a secondary objective of capital growth when consistent with achieving high current income

Net asset value June 30, 2016

Class IA: $6.07	Class IB: $6.02

Total return at net asset value

(as of 6/30/16)	Class IA shares*	Class IB shares†	JPMorgan Developed High Yield Index‡
6 months	8.01%	8.01%	9.34%
1 year	–0.12	–0.35	1.49
5 years	28.21	26.81	35.10
Annualized	5.10	4.87	6.20
10 years	89.30	84.88	111.12
Annualized	6.59	6.34	7.76
Life	685.70	643.87	—
Annualized	7.53	7.32	—

For a portion of the periods, the fund had expense limitations, without which returns would have been lower.

* Class inception date: February 1, 1988.

† Class inception date: April 30, 1998.

‡ The fund's benchmark, the JPMorgan Developed High Yield Index, was introduced on 12/31/94, which post-dates the inception of the fund's class IA shares.

The JPMorgan Developed High Yield Index is an unmanaged index of high-yield fixed-income securities issued in developed countries.

Data represent past performance. Past performance does not guarantee future results. More recent returns may be less or more than those shown. Investment return and principal value will fluctuate, and you may have a gain or a loss when you sell your shares. Performance information does not reflect any deduction for taxes a shareholder may owe on fund distributions or on the redemption of fund shares. All total return figures are at net asset value and exclude contract charges and expenses, which are added to the variable annuity contracts to determine total return at unit value. Had these charges and expenses been reflected, performance would have been lower. Performance of class IB shares before their inception is derived from the historical performance of class IA shares, adjusted to reflect the higher operating expenses applicable to such shares. For more recent performance, contact your variable annuity provider who can provide you with performance that reflects the charges and expenses at your contract level.

Portfolio composition

Consumer cyclicals	21.0%
Communication services	12.6%
Basic materials	11.3%
Energy	10.4%
Financials	9.9%
Health care	9.4%
Capital goods	7.8%
Utilities	5.7%
Consumer staples	5.0%
Technology	4.7%
Transportation	0.8%
Non-cash investments	–3.0%
Cash and net other assets	1.4%

Allocations are shown as a percentage of the fund's net assets. Cash and net other assets, if any, represent the market value weights of cash, derivatives, short-term securities, and other unclassified assets in the portfolio. Summary information may differ from the portfolio schedule included in the financial statements due to the inclusion of derivative securities, any interest accruals, the use of different classifications of securities for presentation purposes, and rounding. Holdings and allocations may vary over time.

Allocations may not total 100% because the table includes the notional value of certain derivatives (the economic value for purposes of calculating periodic payment obligations), in addition to the market value of securities.

Credit quality

A	0.6%
BBB	7.6%
BB	37.6%
B	37.7%
CCC or below	11.3%
Not rated	3.8%
Cash and net other assets	1.4%

Credit qualities are shown as a percentage of net assets. A bond rated BBB or higher (A-3 or higher, for short-term debt) is considered investment grade. This chart reflects the highest security rating provided by one or more of Standard & Poor's, Moody's, and Fitch. Ratings and portfolio credit quality may vary over time.

Cash and net other assets, if any, represent the market value weights of cash, derivatives, and short-term securities in the portfolio. The fund itself has not been rated by an independent rating agency.

What was the environment like for high-yield bonds during the six-month reporting period ended June 30, 2016?

U.S. high-yield bonds strongly advanced for the six-month reporting period, sharply reversing course after ending 2015 with their first calendar-year decline since 2008. As measured by the JPMorgan Developed High Yield Index, the high-yield market gained 9.34%, struggling early on but surging alongside stocks beginning in mid-February as demand for risk assets improved and credit spreads tightened. The upturn coincided with improvement in the price of oil, as U.S. crude prices rose from about $33 per barrel in late January — a near 13-year low — to roughly $48 by period-end. Additional factors that boosted the high-yield market included signs of stabilization in the global economy, generally positive industry fundamentals and enormous monetary support from major central banks worldwide.

The rally in high-yield bonds was temporarily disrupted in June, as the surprise referendum vote by the United Kingdom to exit the European Union reverberated throughout global markets. As investors reassessed the Brexit outcome in the days immediately following the vote, the asset class rebounded.

Gains were broad-based across industries, with a wide gap between top and bottom performers. Reflecting the recovery in commodities prices, metals/mining led the way, advancing roughly 28%, followed by energy, which rose about 22%.

Meanwhile, traditionally defensive areas of the market struggled to keep pace amid the resource-fueled rally. Food and beverages, for example, returned a solid 5% but still trailed the broader market. Automotive, financials and health care also lagged the broader market.

As investor risk sentiment improved during the period, bonds rated Caa and below outperformed the broader market, as did split B-rated securities. At the same time, the larger, higher-quality B-rated and Ba-rated tiers showed modest muted gains.

What factors had the biggest influence on the fund's relative performance during the period?

At the sector/industry level, overweight positions in telecommunications and utilities, along with beneficial overall positioning in gaming/lodging/leisure, contributed the most versus the benchmark. On the downside, underweight allocations in energy and metals/mining, combined with adverse positioning in technology, hampered the fund's relative return, as did having lighter-than-benchmark exposure to lower-quality bonds.

In terms of individual holdings, overweights in oil and gas exploration and production company SM Energy and wireless communications provider Sprint Communications were the top relative contributors to relative fund performance.

What is your outlook for the coming months?

Looking at fundamentals, earnings for high-yield issuers in the first quarter of 2016 were better than expected, with companies posting the best earnings growth in six quarters. The 12-month default rate rose during the reporting period, but this increase was driven by issuers in commodity-related sectors, which accounted for roughly 85% of all defaults. Excluding energy and metals/mining, the default rate was only 0.53%. All told, we believe most high-yield issuers — excluding those in commodity-sensitive sectors — have been in reasonably good shape from a credit perspective, especially when viewed in light of what we believe will be a supportive economic backdrop.

We expect to see some typical seasonal weakness in the coming months, but a summer slowdown shouldn't be confused with cyclical weakness, in our view. However, we expect that macroeconomic and political factors may stoke continued volatility in the markets. Thus, an event like Brexit, which added a large dose of uncertainty to the global capital markets, may temper investors' appetite for risk. That said, we also recognize that investors will continue to search for yield, which we think may bolster the case for high-yield bonds.

How do you plan to position the fund in light of this outlook?

We plan to maintain broad diversification across market sectors. At period-end, the majority of the fund's holdings were in split Ba-rated or B-rated bonds, which occupy the middle tier of high-yield credit quality. From a sector/industry perspective, we favored housing, telecommunications, gaming/lodging/leisure, broadcasting, and utilities. By contrast, the fund was underweight in energy, technology, food and beverages, metals/mining, and services.

Lastly, we plan to hold a slightly higher-than-normal cash allocation in the portfolio to provide a cushion against bouts of market volatility, as well as any disruptions in the market's supply/demand environment.

The views expressed in this report are exclusively those of Putnam Management and are subject to change. They are not meant as investment advice. Please note that the holdings discussed in this report may not have been held by the fund for the entire period. Portfolio composition is subject to review in accordance with the fund's investment strategy and may vary in the future.

Consider these risks before investing: Bond prices may fall or fail to rise over time for several reasons, including general financial market conditions, changing market perceptions of the risk of default, changes in government intervention, and factors related to a specific issuer or industry. These factors may also lead to periods of high volatility and reduced liquidity in the bond markets. Lower-rated bonds may offer higher yields in return for more risk. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Interest-rate risk is generally greater for longer-term bonds, and credit risk is generally greater for below-investment-grade bonds. Risks associated with derivatives include increased investment exposure (which may be considered leverage) and, in the case of over-the-counter instruments, the potential inability to terminate

or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. Unlike bonds, funds that invest in bonds have fees and expenses. You can lose money by investing in the fund.

Your fund's manager

Portfolio Manager **Paul D. Scanlon,** CFA, is a Co-Head of Fixed Income at Putnam. He joined Putnam in 1999 and has been in the investment industry since 1986.

In addition to Paul, your fund's portfolio managers are Norman P. Boucher and Robert L. Salvin.

Your fund's managers may also manage other accounts advised by Putnam Management or an affiliate, including retail mutual fund counterparts to the funds in Putnam Variable Trust.

Understanding your fund's expenses

As an investor in a variable annuity product that invests in a registered investment company, you pay ongoing expenses, such as management fees, distribution fees (12b-1 fees), and other expenses. In the most recent six-month period, your fund's expenses were limited; had expenses not been limited, they would have been higher. Using the following information, you can estimate how these expenses affect your investment and compare them with the expenses of other funds. You may also pay one-time transaction expenses, which are not shown in this section and would result in higher total expenses. Charges and expenses at the insurance company separate account level are not reflected. For more information, see your fund's prospectus or talk to your financial representative.

Review your fund's expenses

The two left-hand columns of the Expenses per $1,000 table show the expenses you would have paid on a $1,000 investment in your fund from 1/1/16 to 6/30/16. They also show how much a $1,000 investment would be worth at the close of the period, *assuming actual returns and expenses*. To estimate the ongoing expenses you paid over the period, divide your account value by $1,000, then multiply the result by the number in the first line for the class of shares you own.

Compare your fund's expenses with those of other funds

The two right-hand columns of the Expenses per $1,000 table show your fund's expenses based on a $1,000 investment, *assuming a hypothetical 5% annualized return*. You can use this information to compare the ongoing expenses (but not transaction expenses or total costs) of investing in the fund with those of other funds. All shareholder reports of mutual funds and funds serving as variable annuity vehicles will provide this information to help you make this comparison. Please note that you cannot use this information to estimate your actual ending account balance and expenses paid during the period.

Expense ratios

	Class IA	Class IB
Total annual operating expenses for the fiscal year ended 12/31/15	0.70%	0.95%
Annualized expense ratio for the six-month period ended 6/30/16	0.72%	0.97%

Fiscal-year expense information in this table is taken from the most recent prospectus, is subject to change, and may differ from that shown for the annualized expense ratio and in the financial highlights of this report.

Expenses are shown as a percentage of average net assets.

Expenses per $1,000

	Expenses and value for a $1,000 investment, assuming actual returns for the 6 months ended 6/30/16		Expenses and value for a $1,000 investment, assuming a hypothetical 5% annualized return for the 6 months ended 6/30/16	
	Class IA	Class IB	Class IA	Class IB
Expenses paid per $1,000*†	$3.72	$5.02	$3.62	$4.87
Ending value (after expenses)	$1,080.10	$1,080.10	$1,021.28	$1,020.04

*Expenses for each share class are calculated using the fund's annualized expense ratio for each class, which represents the ongoing expenses as a percentage of average net assets for the six months ended 6/30/16. The expense ratio may differ for each share class.

†Expenses based on actual returns are calculated by multiplying the expense ratio by the average account value for the period; then multiplying the result by the number of days in the period; and then dividing that result by the number of days in the year. Expenses based on a hypothetical 5% return are calculated by multiplying the expense ratio by the average account value for the six-month period; then multiplying the result by the number of days in the six-month period; and then dividing that result by the number of days in the year.
